Three main successive stages may be clearly distinguished in the religion which is recorded in three corresponding phases of Vedic literature, viz., in (a) the Vedas, (b) the Brāhmaṇas together with the Śrātras, (c) the Upaniṣads.

(a) The religion of the four Vedas, regarded as a whole, is concerned with the worship of gods largely represented by the personification of the powers of nature; the propitiation of demoniac beings comes only to a limited extent within its sphere. The oldest and most important of the four Vedas, the Rigveda, from which considerable portions of the others are borrowed, is a collection of metrical hymns containing a large mythological element. These hymns are mainly invocations of the gods meant to accompany the libation of soma juice and the fire sacrifice of melted butter. The polytheism of this Veda assumes in its latest hymns a pantheistic colouring. Only a very few of its hymns are connected with witchcraft.

The hymns of the Atharvaveda, on the other hand, consist largely of spells meant for magical application, while their religion is pronounced pantheism. The contents of the two other Vedas are entirely sacrificial in purpose. The Śāmaveda is almost exclusively composed of verses borrowed from the Rigveda to be applied in the ritual of the Soma sacrifice. The Yajurveda consists of ritual formulas, largely in prose, which, not being directly addressed to the gods, are practically of a magical type. The religious phase which it represents is, in spirit, identical with that of the Brāhmaṇas.

(b) The Brāhmaṇas are discursive theological treatises in prose dealing with the Vedic ritual; while the Śrātras, text-books composed in a very concise style, largely condense and systematize the contents of the Brāhmaṇas and add much matter on domestic and everyday observances. The main difference in the mythology of the Brāhmaṇas, as compared with the Rigveda, is their recognition of a father-god as chief of the deities; while the general character of their religious belief is explicit pantheism. As to cult, they represent a ritual system which, in complexity of detail, far surpasses anything the world has elsewhere known, and is almost rivalled by that part of the Brāhmaṇas, as a continuation of their speculative side, the Upaniṣads really represent a new religion.
which is in virtual opposition to their ritual or practical side. This now, purely pantheistic religion, is characterized by the doctrine of transmigration, a doctrine unknown to the Veda, and only incident in one of the Brāhmaṇas. A world-soul takes the place of the father-god of the Brāhmaṇas. He is the main object of speculation, and the identity with it of the individual soul is the great fundamental doctrine of the Upaniṣads. The religious aim now is no longer to secure a happy and blissful after-life by sacriﬁcing correctly to the gods, but the release, as a result of true knowledge, from rebirth by absorption in the world-soul.

3. VEDIC RELIGIOUS BELIEFS.

The following account of Vedic beliefs, which are almost entirely mythological, starts from the statements of the Rigveda, to which the subsequent developments of the Vedic period are, if of sufficient importance, in each case added.

(a) COSMOGONIC BELIEFS.—Judged by their fragmentary references to the origin of the world, the poets of the Rigveda usually regarded it as having been mechanistically produced like a building, the material being wood, and heaven and earth being supported by posts. The agents in the construction are regularly either the gods in general or various individual gods.

The last book of the Rigveda, however, contains a few cosmogonic hymns which represent other views. One of these (x. 80), though among the latest of the period, preserves a very primitive belief. It accounts for the origin of the world from the body of a primeval giant, whom the gods sacriﬁced. His head became the sky, his navel the earth, and his heart the earth; while from his various members the four castes were produced. This being, called Purusa, or man, and interpreted pantheistically in the hymn itself as ‘all this, both what has become and what shall be,’ reappears as the world-soul in the Atharvaveda and the Upaniṣads.

There are, again, two cosmogonic hymns of the Rigveda which explain the origin of the universe, philosophically rather than mythologically, as a kind of evolution of the existent (sat) from the non-existent (asat). In another hymn of the same type, the agency of a creator (dhiitā) is, after the evolution of the ocean through heat (tapas), introduced. The ocean was cloud, heaven, earth, air, and ether. There is also a hymn (x. 121) in which heaven and earth and the great waters are described as the creation of Hiranya-garbha, the golden germ, who is said to have arisen in the beginning, to be the one god above all gods, and is ﬁnally invoked as Prajāpati, lord of all created things. It is to be noted that in the cosmogonic hymns the waters are commonly thought of as coming into existence ﬁrst. In the Atharvaveda the all-god appears as a creator under several new names, especially as Skambha, ‘support’; also as Prāna, ‘breath’; Kāma, ‘desire,’ and others.

The cosmogony of the Brāhmaṇas requires the agency of the creator Prajāpati, who is not, however, always the starting-point. Sometimes the waters come ﬁrst; on them floats the golden germ (hiranyagarbha), from which arises the spirit that produces the universe. This contradiction is due to the theories of evolution and of creation being combined. One cosmogonic myth of the Brāhmaṇas describes how the submerged earth was raised by a boar. The latter in post-Vedic mythology developed into an avatār of Viṣṇu.

(b) COSMOGONIC BELIEFS.—Heaven and earth are ordinarily regarded in the Rigveda as the parents of the gods in general. It is only very rarely that other gods are spoken of as parents of the rest: thus Dāyavaṇa, the son and the brother of the gods, and both Brahmāṇaspati and Soma are mentioned as their father. The cosmogonic hymns connect the origin of the gods chiefly with the elements of water; but they also describe the gods as born after the creation of the universe.

(c) ORIGIN OF MAN.—The Vedic beliefs regarding the origin of the human race were somewhat ﬂuctuating, the ultimate theory of origin, however, always thought to be divine. Agni, the god of fire, is at least once said to have begotten the race of men, and certain families of seers are regarded as independently descended through their founders from the gods. Usually, however, the human race is traced to a ﬁrst man, either Manu or Yama, both of whom are sons of Vivasvān, a solar deity.

4. THE VEDIC GODS.

The Vedic Indian believed in the existence of a large number of supernatural beings, varying in character from the all-good, all-knowing, all-powerful and all-loving gods, to the gods of natural phenomena of the universe. A distinction was made between the gods or by ritual expedients. The divine powers, again, may be classed as higher gods, whose power pervades the world and controls the great phenomena of nature; and as lesser divinities, whose activities are restricted to a limited sphere or are conducted on a smaller scale: for instance, tutelary deities and elves. The divine nature is further shared by men of days gone by: ancient heroes who are associated with the deeds of the gods, and ancestors who live with the gods and receive worship like them. Finally, at the bottom of the scale, we ﬁnd many inanimate objects which are deified, being invoked and worshipped like divine beings.

A. THE HIGHER GODS.

The gods are usually stated in the Rigveda and Atharvaveda, as well as the Brāhmaṇas, to be thirty-three in number; but there are occasional deviations or inconsistencies in regard to this belief. Troops of deities, such as the storm-gods, are, of course, not regarded as included in this number. The sun-god, Soma, is divided into three groups of eleven, distributed in earth, air, and heaven, the three divisions of the universe. These three groups, now containing eighty-one, are the deities of nature. Certain deities are, moreover, described as the offspring of others. The Atharvaveda and the Brāhmaṇas also expressly state that the gods were originally mortal, adding that they overcame death by the practice of austerity. The same thing is implied in the Rigveda, where the gods are said to have acquired immortality by drinking Soma or by receiving it as a gift from Agni and Sāvitr. In the post-Vedic view, the immortality of the gods was limited to a cosmic age.

Their physical attributes.—The gods of the Veda are anthropomorphic in appearance. The parts of their bodies, which are frequently mentioned, are in many cases, however, little more than figurative
illuminations of the phenomena of nature represented by the deity. Thus the arms of the sun are said to be more than his rays; and the tongue and limbs of Agni merely denote his flames. Some of the gods appear equipped as warriors, especially Indra; others are described as priests, especially Agni and Brahman. All of them drive through the air in luminous cars, drawn chiefly by steeds, but sometimes by other animals.

**Their food.**—The favourite food of men is also that of them, consisting of milk, butter, grain, and the flesh of sheep, goat, or cattle. It is offered to them in the sacrifice; this is either conveyed to them in heaven by the god of fire, or they come in their cars to partake of it on the litter of grass prepared for their reception. Their favourite beverage is the exhilarating juice of the Soma plant.

**Their abode.**—The home of the gods is described as heaven, the third heaven, or the highest step of Vayu (the zenith), where, cheered by draughts of Soma, they live a life of bliss.

**Their attributes.**—The most prominent characteristic of the Vedic gods is power; for they are constantly described as ‘great’ and ‘mighty.’ They regulate the order of nature and vanquish the great powers of evil. They hold sway over all creatures; no one can thwart their ordinances or live beyond the time they appoint; and the fulfillment of wishes is dependent on them. Their omniscience, which is restricted within narrow limits, is seldom referred to. It is an attribute which is emphasized in the case of Varuna only.

The Vedic gods are benevolent beings who bestow prosperity on mankind, the only one in whom injurious traits appear being Rudra. They are, moreover, moral authorities to the standard of an early stage of civilization. They are described as ‘true’ and ‘not deceitful,’ being friends and protectors of the honest and righteous, but punishing sin and guilt. They are not, however, above employing craft against the hostile, and occasionally practise deceit even without the justification of a good end.

Since, in most cases, the Vedic gods have not yet become dissociated from the physical phenomena which they represent, their figures are indefinite in outline and deficient in individuality. Having many features, such as power, brilliance, benevolence, in common with others, each god exhibits very few distinctive attributes. This vagueness is further increased by the practice of invoking deities in pairs—a practice making both gods share characteristics properly belonging to one alone. When nearly every power can thus be attributed to every god, the identification of one deity with another becomes easy. There are, in fact, several such identifications in the Rigveda. The idea is even found in more than one late passage that various deities are but different forms of a single divine being. This idea, however, never developed into monotheism, for none of the regular sacrifices of the Vedic period were offered to a single god. Finally, in other late hymns of the Rigveda, we find the deities Aditi and Prajapati identified not only with all the gods, but with nature as well. This brings us to the beginning of that pantheism which became characteristic of later Indian thought.

**Henotheism.**—The practice of invoking individual gods as the highest, frequent even in the older Rigveda, gives rise to Max Müller’s theory of the ‘henotheism’ or ‘kathenotheism’ of that Veda, which he defines as ‘the belief in individual gods alternately regarded as the one true god, the Rigveda presenting for the moment treated as an independent and supreme deity, alone present to the mind. Criticism has, however, shown that we have here only to do with an exaggerated form of praise which does not amount to actual pantheism.

The Vedic gods may most conveniently be classified as deities of heaven, air, and earth, according to the threefold division suggested by the Rigveda itself.

1. **CELESTIAL GODS.**—The historically oldest among the gods of the sky, as going back to the Indo-European period and identical with the Greek Zeus, is Dyaus Pitar (the Sky God, Dyaus-pitar = Zeu스 páytr, Jörr-píter). Dyaus is generally coupled with Prthivi, Earth, when the two are celebrated as universal parents. He is once described as armed with a bolt, and, in another passage, as making the clouds in allusion to the lightening sky.

Another and much more prominent deity of the sky is Varuna, the greatest of the Vedic gods besides Indra. He, too, dates from an earlier period, for in name he is probably identical with the Greek Οὐρανός, and in character he is allied to the Avestic Ahura Mazda. Varuna is the guardian of physical and moral order (rta). By his ordinance heaven and earth are held apart; he regulates the course of sun, moon, and stars; he causes the rivers to flow and the clouds to fertilize the earth with rain. He is the avenger of men’s wrongs and false dealing. He is angry with sinners, whose he severely punishes, binding them with his fetters. But he is gracious to the penitent, releasing men not only from their own sins, but from those committed by their fathers. The prayer for forgiveness of guilt is characteristic of the Varuna hymns, which in general are the most exalted and solemn in the Rigveda. With the development of Prajapati as creator and supreme god in the later Vedas, the importance of Varuna waned, till in the post-Vedic period he retained only the dominion of the waters as god of the sea.

Five gods represent various aspects of solar activity. The oldest of these, Mitra, the ‘friend,’ probably a personification of the sun’s beneficent power, is an inheritance from the Indo-Iranian period, being identical with the Persian sun-god Mithra, whose cult became so widely diffused in the Roman empire during the 3rd and 4th centuries A.D. In the Rigveda he has almost entirely lost his individuality, and is hardly ever invoked except in connection with Varuna.

Suña, etymologically allied to the Greek Ημέρα is the most concrete of the solar deities, this being the regular name of the luminary. He is the husband of Dawn. His car, often referred to, is generally described as drawn by seven steeds. He is the soul of all that moves or is fixed, all creatures depending on him. He prolongs life, and drives away disease. His eye and his all-seeing power are often spoken of; and he is besought to declare men sinless to Mitra and Varuna.

Savitr, the ‘stimulator,’ represents the quickening activity of the sun. Bestowing immortality on the gods as well as length of life on man, he also conducts the spirits of the dead to where the righteous dwell. To him is addressed the most famous stanza of the Rigveda (lii. 62. 10), with which he was in ancient times invoked at the beginning of Vedic study, and which is still repeated by every orthodox Brähman in his morning prayers. It is called the Śatásīrṇī from the deity, or the Gaṇeṣṭīrṇī from the god.

‘May we attain that excellent Glory of Savitr the god,
That he may stimulate our thoughts.’

Pusan, the horse god, is probably the most bountiful power of the sun, appearing chiefly as a pastoral deity, who protects cattle and guides
them with his good. He is a guardian of paths; and, knowing the ways of heaven, he conducts the dead to the abode of the fathers.

Indra occupies a subordinate position in the Rigveda, and less frequently invoked than the four gods just mentioned. Visnu is historically the most important of the solar deities; for he has become (in modern Hinduism) the chief god of modern Hinduism. His three strides, typifying doubtless the course of the sun through the three divisions of the universe, constitute the central feature in his most high-styled myth, viz., the apas or heaven, the abode of the gods. He is frequently said to have taken his three strides for the benefit of man.

This general trait is illustrated by the Brāhmaṇa myth in which Visnu assumes the form of a dwarf as an artiste to recover the earth, now in possession of demons, by taking his three strides. Visnu’s characteristic benevolence was in post-Vedic mythology further developed in the doctrine of his avatāra (‘descents to earth’), or incarnations for the good of humanity.

Ugās (equated to Ḥīra and Auvera), goddess of dawn, the daughter of Dyaus, is the only female deity invoked with frequency in the Rigveda, and is also the mother of graces. Being a poetical rather than a religious figure, she did not, like the other gods, receive a share in the Soma offering.

The Adhvaryus (‘lords of steeds’), twin gods of morning, sons of Dyaus, eternally young and hand-some, are addressed in many hymns. They very frequently receive the epithet nāsastva, ‘true.’ Ugās is born at the yoking of their chariot, while their spouse Stryā, daughter of the sun, accompanies them. They are characterized successively to deities. Delivering from distress in general and from shipwreck in particular, they are also divine physicians. They have several traits in common with the two famous horsemen of Greek mythology, the Asklepios, sons of Zeus and brothers of Helen. The origin of these twin deities is obscure; it is perhaps most likely that they represent either the twilight, half dark, half light, or the morning and evening star.

2. ATMOSPHERIC GODS.—Indra is the dominant deity in the aerial sphere. While Varuṇa is the great moral ruler, Indra is the mighty warrior. Indra is, indeed, the favourite and national god of the Vedic Indian. An indication of this is the fact that more than one-fourth of the Rigveda is devoted to Indra; it is a mythological creation of an earlier period; for Indra is a demon in the Avesta. Though he is more anthropomorphic than any other Vedic god, his original character is still tolerably clear. He is primarily the thundergod, and his conquest of the demon Vṛtra is the central feature of the mythology which surrounds him. Hence Vṛtra-han, ‘slayer of Vṛtra,’ is his chief and specific epithet. Armed with his bolt (vyṛtra), claimed by copious draughts of Soma, and aided by the Maruts, or storm-gods, Indra engages in the fray. The fight is terrific; for heaven and earth tremble with fear as the conflict rages. The constant repetition of the theme corresponds to the perpetual renewal of the phenomena of the thunderstorm which underlie the myth. The result of the victory is the release of the waters for man and the recovery of the light of the sun. Indra thus became a god of battle whose aid is constantly invoked in conflicts with earthly foes. He is often described as the protector of the Aryan colour, and vanquisher of the black race. One of his chief myths is the Orthopedia (the straight one) (which in the Pali form of Sakka became his regular name in Buddhist literature). Certain immoral traits appear in Indra’s character. He occasionally indulges in acts of capricious violence, such as slaying his father or shattering the ear of Dawn. He is greatly addicted to Soma, which he drinks in enormous quantities to stimulate him in his boisterous exploits. One entire hymn in the Rigveda (x. 119) consists of a monologue in which Indra, inebriated with Soma, boasts of his greatness and power. While Varuṇa, after the period of the Rigveda, gradually recedes, Indra, in the Brāhmaṇas became the chief of the Indian deities (svetavya), and even maintained this position in the Purāṇas, though, of course, subordinated to the Trinity Brahmā-Varuṇa-Siva.

Three of the less important deities, if they are connected with lightning, Tīrtha, a somewhat obscure god with the epithet āptaya, ‘watery,’ mentioned only in detached verses of the Rigveda, seems to represent the ‘third’ (trītva = Greek τρίτον) form of fire. He goes back to the Indo-Iranian period, both his name and his epithet occurring in the Avesta. In the Rigveda he appears as a preserver of Soma, who aids Indra in slaying Vṛtra and the three-headed demon Viśvārūpā, or performs the latter exploit himself. He kindles the celestial fire, and even appears as a form of fire. His house is hidden and remote. As almost all traits with the same name are ascribed to him by the latter at an early period. In the Brāhmaṇas he appears as one of three sons of Agni, the other two being Ekata and Dvīta. In the epic poetry Agni is the name of his wife.

Apaṁ napat, ‘son of waters,’ also goes back to the Indo-Iranian period. Rarely mentioned in the Rigveda, he is described as clothed in lightning and shining without fuel in the waters. He thus represents the lightning form of fire as produced from the thundercloud.

Mātarīvān is referred to only in scattered verses of the Rigveda as a divine being who (like the Greek Prometheus) brought down the hidden fire from heaven to earth. He was originally, in all likelihood, conceived as an aerial form of Agni, with whom he is sometimes actually identified. His character then underwent a transformation; for in the later Vedas, the Brāhmaṇas, and the post-Vedic literature he appears as a wind-god.

It is somewhat remarkable that Rudra, the early form of the post-Vedic Siva, who in the Rigveda occupies a very subordinate position, like that of Visnu, should have risen to parallel pre-emminence with Visnu in a later age. Rudra is usually described as armed with bow and arrows, but sometimes he appears with the universal creative and conserving shaft. He is fierce and destructive like a wild beast, being ‘the ruddy, noisy of heaven.’ The most striking feature of the hymns addressed to him is his fear of his terrible shafts and deprecation of his wrath. For he slays men and cattle, and assails with disease. He is, indeed, the one malignant deity of the Vedas. His malevolence, however, unlike that of a demon, is not the only side of his character. For he is a healer as well as a destroyer, being even lauded as the greatest of physicians. Thus he is often besought not only to preserve from calamity, but to bestow welfare on man and beast. The euphemistic epithet Siva, ‘auspicious,’ which begins to be applied to him in the Rigveda, grows more frequent in the later Vedas, till it finally becomes his regular name in post-Vedic mythology. With the increased use of this epithet, the malevolence of Rudra becomes more pronounced in the later Vedas. The White Yajurveda, which adds various disgraceful attributes, furnishes the transition to the terrible and war-like exploits. One characteristic of the orthopedia, the straight one, of Rudra is somewhat obscure; but the inference from the evidence of the Rigveda seems to be justified that he originally represented the destructive agency of the thunderstorm. His un-
canny and balfeul traits have, however, also been explained as starting from the conception of a deity as a god hast, whence storm and disease attack man and beast.

The sons of Rudra and Pṛṇi (the ‘mottled’ cloud-cow) are the Maruts, or storm-gods, also called Rudras, and are said to be thirty seven or thrice sixty deities, the constant allies of Indra in his conflicts. They are described as like fires at their birth, and as ‘born from the laughter of light’ or as ‘washed with fire’ were armed with spears and battle-axes, wearing helmets and decked with golden ornaments. Their headlong course is often graphically depicted. They ride on golden cars which gleam with lightning: with their bellies they rend the mountains and shatter the lonely trees of the forest. They share to some extent the destructive as well as the beneficent traits of their father Rudra. Their lightning-bolt slays men and kine. But they also bring healing remedies, apparently the rains with which they fertilize the earth.

The god of wind is not a prominent deity in the Rigveda. Under the more anthropomorphic form of Vāyu he is chiefly associated with Indra. As VāTa (the ordinary name of wind), he is described in a more concrete manner (often in connexion with the verb an, ‘to blow,’ from which the word is derived), being couched only with the less anthropomorphic god Parjanya.

A personification of the rain-cloud is Parjanya, son of Dyaus. He is not a prominent deity, being invoked in only three hymns of the Rigveda; which, however, describe his activity in the rainstorm very vividly. He quickens the earth with rain, causing abundant vegetation to spring up. He also bestows fertility on the animal world. For thus comes to be spoken of as ‘our divine father.’

The waters, Apah, are praised as divine powers in four hymns of the Rigveda. They are celestial, abiding in the home of the gods. The aerial waters are the mothers of one of the forms of Agni, Apaṇ napti, son of waters. But, as flowing in channels and having the sea for their goal, the waters are also terrestrials (cf. 3). They are young wives, mothers, goddesses who bestow boons to animal and human life. They not only bear away defilement, but cleanse from moral guilt, the sins of violence, cursing, and lying. They also grant remedies, health and immortality.

3. Terrestrial Deities.—Rivers are not infrequently personified and invoked in the Rigveda. Thus the Sindhu (Indus) is celebrated as a goddess in one hymn, and the Viśā (Bīsá) and Satudri (Sutlej), sister streams of the Panjāb, in another. The most important and oftentimes lauded is, however, the Sarasvatī. Though the personification goes much further here than in the case of other streams, the connexion of the goddess with the river is never lost sight of in the Rigveda. In the Brāhmaṇas, Sarasvatī has become identified with the goddess of speech, and in Hindu mythology she appears further modified as the goddess of eloquence and wisdom, invoked as a Muse, and regarded as the wife of Brahmā.

Earth, or Prthivī, the broad, nearly always associated with Dyaus, is often spoken of as a mother. The personification is rudimentary, the attributes of the goddess being chiefly those of the physical earth.

By far the most important of the terrestrial deities, and the most frequently invoked of the Vedic gods, being celebrated in about one-fifth of the hymns of the Rigveda, it is only natural that the personification of the abode of the Vedic ritual, should engross the thoughts of the poets to such an extent. Agni-a (Lat. ignis) being also the ordinary name for fire, the anthropomorphism has not proceeded far. The bodily presence of Agni in the sacrifices is made in connexion with the various aspects of the sacrificial fire. Thus Agni is called ‘butter-backed,’ ‘butter-faced,’ and ‘butter-haired,’ with reference (to the oblation aga (beetle) cast on the flames. His teeth, jaws, and tongues are associated with the action of burning. Agni is borne on a brilliant car, drawn by two or more steeds, which he yokes to bring the gods, for he is the charioteer of the sacrifice.

Beyond his sacrificial activities, little is said about the deeds of Agni. It is otherwise mainly his various births, forms, and abodes that occupy the thoughts of the Vedic poets. Agni is usually called the son of Dyaus and Prthivī, sometimes also the offspring of Tvaṣṭra and the waters. But owing to the daily production of Agni from the two firesticks, they, too, are his parents. He is then a newborn infant, also called ‘son of strength’ because of the powerful friction required to kindle the flame. He wakes at dawn, for the fire is lit every morning. He is thus the youngest of the gods; but he is also old, having conducted the first sacrifice.

As not only terrestrial, but sprung from the aerial water and having been sent down from heaven, Agni is often spoken of as having a triple character. This threefold Agni is the earliest Indian trinity, probably the prototype not only of the later Rigvedic triad of Sun, Wind, Fire, connected with the three divisions of the universe, but also of the triad Sun, Indra, Fire, which, though not Rigvedic, is still ancient. There may be a historical connexion between this triad and the conception of the three charioteers of Brahmā–Viṣṇu–Śiva. This triad of fires may, further, have suggested, and would explain, the division of a single sacrificial fire into the three which form an essential feature in the cult of the Brāhmaṇas.

As kindled in innumerable dwellings, Agni is also said to have many births. He assumes various divine forms and has many names; in him are comprehended all the gods, whom he surrounds as a felly the spokes. Though scattered in many places, he is one and the same king. It was probably from such speculations on the nature of Agni that the idea of immortality was made to the conception of a unity pervading the many manifestations of the divine which has been noted above (p. 609).

As the deity most intimately associated with the everyday life of man, Agni is spoken of as an immortal who has taken up his abode among mortals in human dwellings, and is constantly called a ‘guest’ and ‘lord of the house.’ Being the conductor of the sacrifice as well as the summoner of the gods, he is very frequently described as a ‘messenger,’ who moves between heaven and earth. Agni is, however, most characteristically called a ‘priest,’ usually by the generic terms puraj and purajīra; or specifically ‘domestic priest’ (purajhita), oftenest of all ‘invoker’ or ‘chief priest’ (hotri). He is, in fact, the great priest among the Vedic gods, as Indra is the great warrior. Agni is a mighty benefactor of his worshippers, whose enemies he consumes. The benefit which he confers are chiefly domestic welfare and general prosperity, while those which Indra grants are mostly the rewards of victory.

Agni is the very origin of the in the Rigveda as a ‘goblin-slayer,’ a trait surviving from what is perhaps the oldest phase of the cult of fire as warding off the attack of evil spirits.

Since the origin of sacrifice, by the side of fire-worship, the other main feature in the ritual of the Rigveda, the personification of the juice of
the Soma plant is naturally one of its most prominent deities. Judged by the number of hymns addressed to him, Soma is third in importance among the Vedic gods coming next to Agni from this point of view. Since the plant and the juice are constantly before the eyes of the priests as they sing the praises of the god, the personification is vigorous. The imagination of the poets dwells chiefly on the processes of pressing and straining, which it overlays with ecstatic imagery and mystical fancies of almost infinite variety.

Of rarer occurrence than Vedic Soma is the Soma of the Upanisads, which is spoken of as 'lord of plants' or as their king, being also designated 'lord of the forest.' There are many references to Soma growing on the mountains. Heaven, however, is regarded as its true and original home; and the myth of its having been brought down to earth by an eagle (īyena) is often alluded to.

The mental stimulation produced by drinking Soma is expressed by one of the poems of the Rigveda with the words: 'We have drunk Soma, we have brought forth, we have entered into light, we have known the gods.' Its exhilarating power is, however, dwelt upon chiefly in connexion with Indra, from whom it injures in light conflict with the aerial demons. Soma thus came to be regarded as a divine drink, which bestowed immortality on the gods, being called amṛta (allied to amritas, the Greek 'immortal' draught). Hence the god Soma places his worshipper in the imperishable world of eternal light and glory, making him immortal where Yama dwells. Healing power is similarly attributed to Soma. The juice is medicine for the ailing man, and the god heals the sick, making the blind to see and the lame to walk.

In some of the latest hymns of the Rigveda, Soma begins to be somewhat obscurely identified with the moon. In the Atharvaveda and the Yajurveda this identification is explicit in several passages. It is already a commonplace in the Brāhmaṇas, which explain the waning of the moon as due to the gods and fathers consuming the ambrosia of which it consists. One of the Upaniṣads, moreover, states that the moon is king Soma, the food of the gods, and is drunk up by them. In post-Vedic literature, finally, Soma is a regular name of the moon. This somewhat remarkable coalescence of Soma with the moon must have started from the exaggerated terms in which the Rigvedic poets describe the celestial nature and brilliance of Soma. It was doubtless furthered by the imagery in which the poets of the Rigveda indulged. Thus Soma is spoken of as dwelling in the waters (with which it was mixed), and Soma in the bowls is once even compared to the moon in the waters. Soma is often called Indu, or 'drop.' This word shared the fate of Soma, also becoming a regular name of the moon in the post-Vedic period.

Soma must already have been an important feature in both the mythology and the cult of the Indo-Iranian period; for the Āvestan Haoma shows many points of agreement, in both directions, with the Soma of the Rigveda.

4. ABSTRACT DEITIES.—One result of the advance of thought, during the period of the Rigveda, from the concrete towards the abstract was the creation of a new class of deities, the abstract deities. Of the two classes which may be distinguished, the earlier and more numerous one seems to have started from epithets which were applicable to one or more older deities, but which when detached from the originals dwells chiefly as the want of a god exercising the particular activity in question began to be felt. When the type was once established, the creation of direct abstractions of this kind became possible. We have here names denoting either an agent (formed with the suffix -dr or -dar, the Lat. and Gr. -tor, -der), such as Dhātu, 'creator,' or an attribute, such as Prajapati, 'lord of creatures,' of the Rigvedic gods are nearly all of rare occurrence, appearing for the most part in the latest book of the Rigveda. Thus Dhātu, an epithet of Indra and Visvakarman, appears also as a independent god, who creates heaven and earth, sun and moon. In the post-Vedic period Dhātu has become one of the regular names of the creator and preserver of the world. The other type of the rare Vīdhā, or the Rigvedic, Dhātu, the 'supporter,' Tatr, the 'protector,' and Netr, the 'leader.' The only agent god mentioned with any frequency in the Rigveda is Tvāṣṭṛ, the fashioner or 'artist,' though no hymn is addressed to him. He is the most skilful of workmen, having among other things fashioned the bolt of Indra, and a new drinking-cup for the gods. He shapes the form of beings and presides over generation. He is a guardian of Soma, which is called the 'mend of Tvāṣṭṛ,' and Indra drinks it in his house. He is the father of Saranyā, wife of Vivasvat and mother of the primeval twins Yama and Nemi. This origin of the origin is obscure. He may in the beginning have represented the creative activity of the sun; having then, because of his name, become the centre of attraction for myths illustrative of creative skill, he finally rose to be a god whose epithet was artiste in the Vedic pantheon. Oldenberg thinks that Tvāṣṭṛ, the 'artist,' was originally a direct abstraction of artistic skill. He regards the solar deity Savitṛ, the 'stimulator,' whose name is similarly formed, as from the outset an abstraction of this type.

There are a few other abstract deities whose names were originally epithets of older gods. They are of rare and late occurrence in the Rigveda, their appellations being mostly compound in form and representing the supreme god who was being evolved at the end of the Rigvedic period. The historically most important among these is Prājapati, 'lord of creatures.' Originally an epithet of such gods as Savitṛ and Soma, the name is mentioned in a late verse of the last book of the Rigveda as that of a distinct deity in the character of a creator. Prājapati is often in the Atharvaveda and the White Yajurveda, and regularly in the Brāhmaṇas, recognized as the chief and father of the gods. In the Śūrvas he is identified with the god Visvakarman, 'the creator.' Similarly, the epithet Visvakarman, 'all-creating,' appears as the name of an independent deity, to whom two hymns of the last book of the Rigveda are addressed. In the Brāhmaṇas, Visvakarman is expressly identified with the creator Prajapati, while in post-Vedic mythology he appears, doubtless owing to the name, as the artiste of the gods (like Tvāṣṭṛ in the Rigveda). Hiranyagarbha, the 'golden germ,' once occurs in the Rigveda as the supreme god, described as the 'one lord of all that exists.' In the Yajurveda he is expressly identified with Prajapati, and in the later literature his name appears chiefly as a designation of Brahmā. In one curious instance it is possible to watch the genesis of an abstract deity of this type. The refrain of a late hymn of the Rigveda refers to the unknown creator, to whom the interrogative pronoun Ka? should we with sacrifices worship? This led to the word Ka being used, in the later Vedic literature, as an independent name of the supreme god. In the Atharvaveda Rohini, 'the long-haired (as Rohini, has become a distinct deity in the capacity of a creator, the name having originally been an epithet of the sun. The only abstract deity of this type occurring in the oldest as well as the
latest parts of the Rigveda is Brhaspati, 'lord of the spell,' of whom Brahmaaspati is a frequent occurrence. Manu, with whom the gods most prominently characterize is, however, his priesthood. As the divine brahma priest, he seems to have been the prototype of the god Brähma, chief of the later Hindu trinity. The name Brhaspati itself survived in post-Vedic mythology as the designation of a sage, teacher of the gods and regent of the planet Jupiter.

The second and smaller class of abstract deities comprises personifications of abstract nouns. There are seven or eight of these occurring in the last book of the Rigveda. Two hymns are addressed to Manu, 'wrath,' and one to Svadātha, 'faith.' Aumatu, 'favour,' (of the gods), Aditi, 'de- votion,' Śānti, 'peace,' Ātman, 'spirit,' and Nīrīti, 'decease,' occur in only a few isolated passages. These abstractions become commoner in the later Vedas. Thus Kūma, 'desire,' first and foremost, is this, the arrow, with which he pierces hearts are already referred to; he becomes in post-Vedic mythology the well-known flower-arrowed god of love. In the same Veda Kārti, 'time,' and Jāmudā, 'support,' are commoner personifications. While Prāna, 'breath,' and some other analogues abstractions are identified with Prajāpati. Śri, as a personification of beauty or fortune, does not begin to appear till the Brāhmaṇa period. A purely abstract deity, often incidentally celebrated throughout the Rigveda, is Aditi, 'liberation,' 'freedom' (literally 'un-binding': a-diti), whose main characteristic is the power of delivering from the bonds of physical suffering and moral guilt. She, however, occupies a unique position among the abstract deities owing to the peculiar way in which the invocation seems to have come about. She is the mother of the twin gods, grandsons of deities called Adityas, often styled 'sons of Aditi.' This expression at first most probably meant nothing more than 'sons of liberation,' according to the interpretation given by the Rigveda and elsewhere. The word was then personified, with the curious result that the mother is mythologically younger than some at least of her sons, who (e.g. Mitra) date from the Indo-Iranian period. The goddess Diti, mentioned only three times in the Rigveda, probably came into being as an antithesis to Aditi, with whom she is twice mentioned there and several times in the later Vedas. The Atharvaveda speaks of her sons, the Dītas, who in post-Vedic mythology are demons, enemies of the gods.

5. GODDESSES, in general, play an insignificant part in the Vedas, taking no share in the government of the world. The only one of importance is Usas (p. 604). Next comes Sarasvatī, who, however, ranks with only the least prominent of the male deities. Very few others are celebrated in even as much as one entire hymn. Such are Prithvi, Earth (p. 605); Rāti, Night, the sister of Dawn, conceived not as dark, but bright with stars; Aranyāni, goddess of the forest; and Vīc, goddess of the woods. Many more were mentioned. Such are Parnāsī and Dhiyāṇa, goddesses of plenty. Less often referred to are Rādhā and Śīvatī, spoken of as bountiful goddesses; in later Veda texts they appear as the presiding deities of full and new moon respectively. Kuṅkū also is mentioned in these texts as a personification of the new moon. Iti is a sacrificial goddess, the personification of the oblation of milk and butter. With her also mentioned Māhā or Bhadrā, another sacrificial deity. The wives of the great gods are still more insignificant, being mere names formed from those of their consorts, altogether lacking in individuality. Thus Aignā, Indrāni, Vārnavāni, are mentioned of Agni, Indra, and Varuna respectively. Kuṁvāni, as the wife of Rudra, first appears in the Sātras. The 'wives of the gods' (devīnām potāti), occasionally mentioned as a group, are given no place assigned to them, apart from the gods, in the cult of the Brāhmaṇas.

6. DUAL DIVINITIES.—A peculiar feature of Vedic religion is the invention of pairs of deities whose names are combined as dual compounds. About a dozen such pairs are celebrated in entire hymns, and about half a dozen more in detached verses of the Rigveda. By far the largest number of hymns is addressed to the couple Mitra-Varuna; though the names most frequently compounded in the dual are Heaven and Earth (dvāvāyvīthī). Most likely the latter pair, having been associated as a divine couple from the beginning, have formed, gradually, an important religious group, each of whom has become the subject of a separate group of hymns. They are also occasionally the Two Worlds (rodus) in the Rigveda.

7. GROUPS OF DEITIES.—Among the creations of Vedic mythology we also find a few more or less definite groups of deities, generally associated with some particular god. The Maruts who, as we have seen (p. 609), attend on Indra, form the most numerous group. Under the name of Rudras, they are also occasionally associated with their father Rudra. The smaller group of the Adityas, of whom Varuṇa is the chief, are constantly mentioned in company with their mother Aditi. Their number in the Rigveda is stated to be seven or, with the addition of Mārtaṇḍa, eight; while in the Brāhmaṇas and later it is regularly twelve. One passage of the Rigveda enumerates six of them: Mitra, Aryaman, Bhaga, Varuna, Daśa, Apsa; Śīra was probably regarded as the seventh. A much less important group, without individual names or definite number in the Vedas, is that of the Vaṣus, whose leader is, in the Rigveda, generally Indra, but in later Veda texts generally Agni. In the Brāhmaṇas their number is stated to be eight. There are, finally, the Vīsvedevas, who, according to the Brāhmaṇa, is the god group who in the Rigveda only appear in the invocation (dvāvāyvīthī) hymns. It is an artificial sacrificial group, intended to include the whole pantheon, and thus to ensure the omission of no deity when all were meant to be invoked. But in spite of its name, this comprehensive group was, strange to say, sometimes conceived as a narrower one, associated with others like the Vasus and Adityas.

B. LESSER DIVINITIES.

1. ELVES, GENI.—Besides the higher gods already described, a number of lesser divine powers are known to the Rigveda. The most prominent of these are the Rūhas, a dept-handed trio who by their marvellous skill acquired the rank of deities. Among their five main feats of dexterity, the greatest consisted in transforming the bowl of Tvasṛ into four shining cups. The bowl and the cups have been variously interpreted as the moon with its four phases or the year with its seasons. The Rūhas further exhibited their skill in resting the cows on their horns. The cows, by whom Heaven and Earth seem to have been meant. The myth of the Rūhas having rested for twelve years in the house of the sun is probably an allusion to the intercalation of twelve days at the winter solstice, so as to bring the intercalation of 355 days into harmony with the solar year of nearly 366 days.
Occasional mention is made in the Rigveda of an Apsaras ("moving in the waters"), a celestial woman, to whom Vaivasvata Manu, his father, gave the name Gandharva. Occasionally more Apsaras than one are spoken of. In the Atharvaveda and later, the Apsaras form a class, regularly associated with the Gandharvas; and though they are still connected with the waters and clouds, their sphere is here, as well as in the Yajurveda, extended to the earth, where they haunt the different varieties of fig-trees called Nyagrodha, Asvins, and Udumbara, in which the music of their cymbals and lutes is heard. In the Brāhmaṇas they appear as nymphs of great beauty, devoted to song, dance, and play. Several individual names of Apsaras are mentioned in the later Vedas, but the only one occurring in the Rigveda is that of Urvāsī. In an obscure hymn (x. 95) she engages in a dialogue with her earthly spouse Pururavas, whom she has forsaken. The myth of their alliance is told more fully in one of the Brāhmaṇas. Gandharva is, in the Rigveda, a single being (like the Gandarewa of the Avesta), who dwells in the aerial sphere, guards the celestial soma, and is (as in the Satapatha Brāhmaṇa) the owner of the celestial waters. In the later Vedas the Gandharvas form a class associated with the Apsaras in a stereotyped manner, and are brought into relation with marriage and with wedding ceremonies. In the post-Vedic period the Gandharvas have become celestial singers.

2. TUTELARY DEITIES.—There are a few divinities of the tutelary order, guardians watching over the welfare of house or field. One of these is Vāstupati, 'lord of the dwelling,' rarely mentioned in the Rigveda, where he is invoked to grant a favourable entry, to remove disease, and to bring about prosperity. The Śrutas prescribe that Vāstupati should be propitiated when a new house is to be occupied. Kṣetrasya pati, 'lord of the field,' is besought in the Rigveda to grant cattle and horses and to confer prosperity. The Śrutas state that he is to be worshipped when a field is ploughed. Stītā, the 'furrow,' is once invoked in the Rigveda to dispense crops and rich blessings. In a Śutra she appears as the wife of Indra. Here, too, Urvāsī, the 'arable field,' with her garland of threshing-floors, is supplicated to bestow welfare.

C. HEROES. The heroes of the Rigveda are all ancient seers or priests. (1) The most important of them is Manu or Manus (which also means 'man'), the ancestor of the human race, styled 'our father' by the poets, who also speak of the sacrificers of their own day as 'the people of Manu.' Regarded as the son of Vivasvāt, he bears the patronymic Vaivasvata from the Atharvaveda onwards. He is thus a doublet of Yama as progenitor of mankind. He is represented as the institutor of sacrifice. Soma is said to have been brought to him by the bird, and Indra is described as drinking the Soma of Manus to fortify him for the conflict with Vṛtra. In the Satapatha Brāhmaṇa, Manus plays the part of Noah, being saved in a ship from a deluge, which has swept away all other creatures, by a fish (in post-Vedic mythology an acātār of Vājī). Manus then became the ancestor of the human race through his daughter Iī, who was produced from his offerings. (2) Atharvan is frequently mentioned in the Rigveda as a sure priest, who practised devotion along with Father Manus. In the Atharvaveda he appears as a companion of the gods, being related to them and dwelling in heaven. The name is also found in the plural as that of a group of fathers. In the Atharvaveda, the Atharvans are described as destroying goblins with a magical herb. (3) Dadyatik, son of Atharvan, is a son-in-law who is a genius of great age. A myth told about him is that the Āavins gave him a horse's head, with which he proclaimed to them the mead of Tvastṛ was to be found. Indra is also connected with this myth; for he is said to have discovered the horse's head, and with the bones of Dadyatik to have slain ninety-nine Vītrvas. (4) Atri is one of the ancient seers most frequently mentioned in the Rigveda. The myth of his deliverance from the demon Vṛtra is often referred to. He is also said to have found the sun when hidden by the demon Svarbhāna and to have placed it in the sky. The Atris are a family of seers to whom the authorship of the fifth book of the Rigveda is attributed. (5) Kavya is another ancient seer and sacrificer often spoken of in the Rigveda. He is said to have been befriended by Agni, Indra, and the Maruts; and to have been specially aided by the Āavins, who restored his sight. Most of the hymns of the eighth book of the Rigveda are attributed to his desendants the Kavyas. (6) Kutsa is one of the few Vedas whose association with the sacrificer is marked. He is chiefly connected with the Indra myth. Riding on the same car as Indra and acting as his charioteer, he is even invoked with Indra in the dual form. He is especially associated with Indra in slaying the demon Śūṣṇa. When Kutsa was pressed by his foes, Indra tore off the wheel of the sun to aid him. Nevertheless Indra sometimes appears as hostile to Kutsa, delivering him into the hands of an enemy. Several hymns of the first, third, and ninth books of the Rigveda are assigned by tradition to the seer Kutsa. (7) Much less frequently mentioned in the Rigveda is the seer Kavya Usan, who is characterised as a seer of wisdom. He, too, is associated with Indra. He is said to have fashioned for Indra the bolt for slaying Vṛtra; and once joins him and Kutsa in slaying the demon Śūṣṇa. (8) Some names, moreover, appear predominantly or exclusively in the plural as representing families or groups of ancient seers, who, if in some cases historical in origin, have become invested with mythological traits. A frequently mentioned group of this kind are the Angiras, who are closely associated with Indra in the myth of the capture of the cows. They are described as seers who are the sons of the gods, and who by sacrifice obtained immortality as well as the friendship of Indra. They receive offerings of Soma, and are invoked like gods. When used in the singular, āngiras is nearly always an epithet of Āgni, who is called the first seer Angiras or the chief Angiras. The word āngiras appears to be etymologically identical with the Greek ἄγγελος, 'messenger.' This points to the Angiras originally having been regarded as messengers between heaven and earth, attendant on Āgni. But if they were mythical in origin, they came to be regarded as an actual priestly family, the composition of the ninth book of the Rigveda being attributed to them. This is also indicated by the epithet āngirasaḥ, 'the Atharvans and Angiras,' a designation of the Atharvaveda which occurs in that Veda itself as well as later. (9) Another group of ancient priests are the Bhūrgas, chiefly connected with the myth of the communication of fire to men. The Indian Prometheus, Matarīv, brought the hidden Āgni from heaven to the Bhūrgas, who established and diffused the sacrifice. Several passages of the Rigveda they are referred to as if an actual tribe of bygone days. In the later Vedic literature, Bhūrga is the eponymous hero of a tribe, and regarded as a son of Varuṇa. (10) A definite numerical group of

VEDIC RELIGION
ancient priests, but rarely referred to in the Rigveda, are the ‘Seven Seers’ (ṣapta ṛṣiyāḥ). They are referred to as self-existent. Their number may have been suggested by the seven technical priests, of whom they would then represent the prototypes. In the Satapatha Brāhmaṇa they are regarded as the seven stars in the constellation of the Great Bear, and are stated to have themselves been originally bears. This identification was doubtless brought about by the sameness of number in the two groups, added by the similarity of sound between ‘seven’ and ‘bear,’ and ṛṣi, which in the Rigveda means both ‘star’ and ‘bear.’ (11) The above groups are all spoken of as ‘fathers,’ and nearly all of them, besides a few others, are mentioned as races of ancestors to whom worship is paid. Those thus characterized in the Rigveda are the Navagras, Vairūpas, Aṅgirasas, Ātharvas, Bhūrus, Vāśītās. The last four, whether mythical in origin or not, appear in the historical aspect of families to which the composition of the Ātharvaveda and two books of the Rigveda was attributed.

D. ANIMALS.

Animals play a considerable part in the mythological and religious ideas of the Veda. (1) Among them the horse is prominent as drawing the sun chariot. In the Rigveda at least four individual steeds, probably all representing the sun, which are regarded as deities and objects of worship. The most notable of these is Dūddhikā or Dūddhikvarṇī, to whom four hymns are addressed. He is described as a swift and victorious steed, regularly invoked with Uṣas, occasionally with Agni, the Āsvins, Śūrya, and others. The divine horse TĀrkya, addressed in one of the hymns of the Rigveda, is a god-impelled mighty steed, a vanquisher of chariots, speeding to battle. In one or two later Vedic texts Tārkya is referred to as a bird; and in the epic and later literature he is identical with the swift bird Garuda, the vehicle of Śūrya. A third steed, several times mentioned, is Paiteva, spoken of as white, a dragon-slayer, a conqueror invincible in battles, worthy to be invoked like the god Bhaṣag by men. Lastly, there is Ēkaśva, the swift steed who draws the bright form of the sun, but also contends in a race with Śūrya. (2) The cow, however, is the animal which occupies the much more important position in Vedic mythology and religion. Cows, representing beams of light, draw the car of Dawn. Rain-clouds, especially in the Indra myth, are personified as cows; Pīṣṇi, the mother of the Maruts, being an individualization. The bountiful clouds are doubtless the prototypes of the many-coloured cows, mentioned in the Atharvaveda, which yield all desires in the heaven of the Blest, and which are the forerunners of the Cow of Plenty (KāmaśŚekha) of post-Vedic poetry. The animal herself is already regarded as sacred in the Rigveda; for one of the poets impresses on his hearers that she should not be killed, and she is frequently designated by the term aggha, ‘not to be slain.’ She is even addressed as a goddess; and the divinities Ilī, Aditi, and Pythvi are sometimes conceived in the form of cow. In the Atharvaveda the worship of the cow as a sacred animal is fully recognized. That the tendency to deification had already begun before the Aryans entered India is proved by the evidence of texts which shows that the sanctity of the cow is at least as old as the Indo-Iranian period. (3) In the Rigveda the goat is the animal that draws the car of Pāṣan. This is doubtless the animal that in the future became Ekapād, the ‘one-footed goat.’ In the later Vedic literature we occasionally find the goat connected or identified with Agni. (4) The ass appears in Vedic mythology only as drawing the car of the Āsvins. (5) The dog met with in the Rigveda, with two brindled hounds of Yama, chief of the dead. (6) The boar has, in the Yajurveda, a cosmogenic character, as the form assumed by the creator Prajapati when he raised the earth out of the waters. From this conception the boar incarnation of Śūrya was developed in Hindu mythology. (7) The tortoise has, in the later Vedas, acquired a semi-divine position; for in the White Yajurveda he is spoken of as an incarnation of Śūrya. In the Atharvaveda he appears under the name of Kaṣyapa, beside or as identical with Prajapati, receiving the epithet Sūryanubhū, ‘self-existent.’ In the Satapatha Brāhmaṇa, Prajapati is said, when producing all creatures, to have changed himself into a tortoise. This transformation became, in Hindu mythology, the tortoise incarnation of Śūrya. (8) A monkey named Vṛśakapi occurs in an obscure myth told in a late hymn of the Rigveda as a favourite of Indra. (9) Another late hymn contains a panegyric of frogs as bestowing cows and long life. (10) The bird frequently figures in Vedic mythology as the eagle (gāyā) that brings the Soma to Indra. Nosy animals in Vedic mythology generally appear as demons or exhibit demonic traits. (11) The serpent is here the most prominent and useful animal. The most powerful demon Yṛṣa, the foe of Indra, is thought to possess; for he is frequently designated as ahi, ‘the snake.’ The serpent, however, also shows a beneficent aspect in the divine being Ahi Budhnya, ‘the dragon of the deep,’ who is supposed to dwell in the fathomless depths of the ocean. In the later Vedas, the serpents (śurpaḥ) are mentioned, along with the Gandharvas and others, as a class of semi-divine beings that dwell on earth, in air, and in heaven; and in the Sūtras, offerings to them are prescribed. In the Sūtras, we for the first time come across the Nāgas, human beings in appearance, but serpents in reality. In the Hindu period, serpent-worship is found all over India. Since there is no trace of it in the Rigveda, while it prevails widely among the non-Aryan tribes, the conclusion seems justified that when the Aryans overpassed India, the land of serpents, they found the cult diffused among the aborigines and borrowed it from them.

E. DEIFIED INANIMATE OBJECTS.

Besides the great phenomena of nature, various features of the earth’s surface, as well as artificial objects, are treated as deities in the Vedas. This is a fetisistic worship of inanimate things chiefly regarded as useful to man.

1. Mountains are frequently addressed as divinities in the Rigveda, but only along with other natural objects, such as rivers and plants, or in association with gods. Parvatā, ‘mountain,’ is even invoked with Indra in the form of a dual compound. Besides rivers and waters, already mentioned as terrestrial goddesses, plants (gāth) are regarded as divine powers. One entire hymn of the Rigveda is devoted to their praise, chiefly with reference to their healing powers; the Atharvaveda refers to a medicinal plant as ‘a radiance’ and the Black Yajurveda prescribes an animal sacrifice to plants for the obtaining of offspring. Large trees, called ‘lords of the forest’ (vighnāpati), are also sometimes addressed as deities, mainly in association with waters and mountains.

2. Various sacrificial implements are deified. The most important is the sacrificial post. It is regarded as a form of Indra in the Rigveda, in which posts set up by priests are described as gods. The sacrificial litter (bhorā) is also de-
fied, and the ‘divine doors,’ by which the sacrificial enclosure is entered, are goddesses. The worship of the ‘sacred doors’ is embedded in three hymns of the Rigveda; spoken of here as immortal, unaging, more mighty than heaven, they are invoked to drive away demons and destruction. The word vrdh– and pedic used in pounding the soma plant are invoked in the Rigveda. In the Atharvaveda divine power of the highest order is ascribed to uchita, the ‘remnant’ of the sacrificial services, to a host of various sacrificial ladles. The agricultural implements named bana and sird, probably the ploughshare and the plough, are invoked in a few verses of the Rigveda, and, in the ritual, receive the offering of a cake.

3. Weapons, finally, are sometimes defined: armour, bow, quiver, arrows, and drum being invoked in one of the hymns of the Rigveda. The drum alone is also celebrated in an entire hymn of the Atharvaveda.

4. Idols seem not to have been known in the age of the Vedas; at all events they first begin to be referred to in the later additions to the Brähmanas and in the Sûtras. One verse of the Rigveda, however, seems to allude to some image of Indra.

5. Material objects treated as symbols of deities are occasionally mentioned in the ritual literature. Thus the wheel (yakta) represents the sun in various ceremonies; and appears to the hindu mythology as one of the weapons of the solar deity Viṣṇu. A piece of gold, sometimes in the form of a disk, also indicates the sun on certain ritual occasions. A symbol must have been used by the phallic worshippers (śāntdevād), who are mentioned with repugnance in the Rigveda. In the post-Vedic period the phallic or linga became typical of Siva’s generative power, and its worship is widely diffused in India at the present day.

5. DEMONS.

a. The demons which are often mentioned in the Vedas are of two kinds. The higher and more powerful class, the aerial foes of the gods, are generally called Asuras in the Atharvaveda and later. This word, however, rarely means ‘demon’ in the Rigveda, where it usually preserves the older sense of ‘being of mysterious power,’ and denotes a god (abhrura in the Avesta). The earlier notion of the conflict between a single god and a single demon, exemplified by Indra and Yatra in the Rigveda, gradually made way for that of the hostility of gods and demons as two opposing hosts. This is the regular view of the Brāhmaṇas. Here the Asuras, no less than the gods, are regarded as the offspring of Prajāpati; here, too, the Asuras often vanquish the gods at the outset, being finally worsted only by artifice.

In the Rigveda the terms dānu and dāsoya, properly the name of the dark aborigines overcome by the conquering Aryans, are frequently used also to designate aerial demons, adversaries of the gods. A group of demons are the Paṇis (‘nigards’), primarily the foes of Indra, who with the aid of Sarama tracks and releases the cows hidden by them.

Of individual demons, by far the most frequently mentioned is Yatra, the ‘encompasser,’ the formidable opponent of Indra. His mother being called Dānu, he is also sometimes alluded to by the metronymic term Dānaca (which later becomes the name of a class of demons). Another powerful demon is the flesh-eater of the cows, which he guards, and which are set free by Indra and his allies, notably the Agnirases. Other demon adversaries of Indra are Aśura, described as a black eagle; and the cows Indra drove out; Viṣṇurāja, son of Vṛṣaruchi, a three-headed demon slain by both Trita and Indra, who seizes his cows; and Svarbhāṇa, who eclipses the sun (his successor in Hindu mythology being Rūha); these and other minor demons are generally described as Dāsas, and slain by Indra in favour of protégés; such are Sūṣaṇa, Saṁbaras, Piprû, Nanuc, Dhumu, and Cunari, besides some half dozen others who were originally, in all likelihood, terrestrial foes.

b. The second or lower class of demons are terrestrial goblins, enemies of men, as Asuras are of gods. The Vedas mention nine kinds of demons for them: Rakṣasas. They are nearly always mentioned in connexion with some god who destroys them. The much less common term gāṇa or gāṇa-rakṣasas (primarily ‘sorcerer’) alternates with rakṣasas, and perhaps denotes a species. Terrestrial demons appear in the shape of various animals or birds, having also the power to assume human forms in order to deceive. With human shape they often combine some monstrous deformity; they are even described as blue, yellow, or green in colour; they are male and female, have families, and are mortal. Greedy for flesh and blood, they enter by dining into them, thus causing disease and madness. As they prowl about at night, and the sacrifice is the main object of their malignity, Agni is naturally the god most often opposed to them, and most frequently invoked to drive them. The Rakṣasas, a very important group of goblins, scarcely alluded to in the Rigveda but often mentioned in the later Vedas, are the Pišacac, eaters of raw flesh or of corpses. Besides some other groups of goblins of lesser importance, there were included in Vedic belief many other hostile agencies, such as those of disease, which it was one of the main tasks of magico-religious practice to combat. Only a few among the groups of terrestrial spirits were thought to be, after the manner of elves, helpful to men, as in harvest work, or in battle by terrifying the foe.

6. RELIGIOUS PRACTICE.

a. The cult of the Vedic Indian has three aspects. It endeavours, in the first place, to win the favour of the gods, who are almost without exception benevolent. It further aims at warding off the hostility of the demons, who are malevolent, here having recourse to practices which for the most part are not of a religious, but of a magical character. Lastly, it aims at appeasing and ensuring the treatment of gods and of demons; for, while ancestors receive worship as divine beings, means are taken to prevent them from unduly prolonging their uncanny presence amongst men. There are:

b. The worship of the gods has two sides, finding expression either by word or by act. Praise of their greatness and power, or prayer for welfare and forgiveness of sin is addressed to them on the one hand; sacrifice consisting of food and drink is offered on the other. Prayer and praise, which include frequent invitations to the sacrifice, are largely metrical in form, entirely so in the Rigveda. Prayer, however, is almost entirely of the ritual type, intended to accompany a ceremony, or at least to form part of a liturgy. In the creative age of the Rigveda new prayers were produced for ritual purposes; but in the age of the later Vedas, with the development of a system which foresaw almost every desire and prescribed the offering to ensure its fulfilment, prayer was reduced to nothing more than the mechanical application of ready-made formulas. It is doubtful whether even in the earliest period, much room was left, owing to the highly ritual type of the worship, for independent prayer. It is hardly in any case have gone beyond the expression of a concrete desire addressed to a particular
deity; it could certainly not have had the character of a communion of the worshipper with divine powers, for they are not necessarily accompanied by a ceremonial act. Thus the hymns of the Rigveda addressed to Usas were recited without any attendant offerings.

As the hymns of the Rigveda, in addressing prayers to a god, aim at securing his goodwill, they are, in the first place and to a large extent, pneumatics which praise the greatness and the mysterious nature, and the exploits of the deity in question. The petition for the gifts hoped for, when the favour of the god has thus been won, is then brieﬂy added. The beneﬁts desired are almost entirely of a material, not of a moral, kind. They are mainly expressed by such general terms as treasures and blessings, protection and victory; when stated in detail they consist in long life and vigorous offspring, cattle and horses, cars and gold; or the punishment of enemies, niggards, and Brähman-haters by their gods. The prayers may be summed up on the lines:

Rarely does the worshipper pray that his thoughts may be righteous, that he may refrain from doing what displeases the gods, that he may be reconciled to an offended deity, or delivered from the bonds of guilt; and his supplications lack the note of passionate appeal, deep aspiration, mental struggle, or humble submission to the divine will. As regards its eﬃcacy, prayer was held to be a source of no smaller power than the sacriﬁce in gladdening and stimulating the gods. But a hymn had to be composed with faultless art, 'as a skillful workman constructs a car'; it had to be free from impurities which impair the work, and covered with the ﬂail.' Then it invigorated the god like draughts of soma, stimulating him to new deeds; then it increased the mighty strength of Indra so that he slew the dragon. When prayer is thus believed, even in the Rigveda, to exercise the direct inﬂuence of a spell, magic is already beginning to encroach on the domain of religion. A similar tendency is observable in regard to the sacriﬁce which accompanied the prayers to the gods.

c. The general character of the Vedic sacriﬁce is essentially supplicatory, as it aims only at the obtaining of future beneﬁts to be bestowed by the gods, and is not concerned with the past. What seems to be expiatory sacriﬁces are in reality of this order also, for they are accompanied by supplications that the guilt incurred should not be punished. Such expiatory sacriﬁces are of two kinds. They are either intended to mollify the wrath of a god aroused by the transgression of his divine will, being generally offered to Varuna, the guardian of moral order and punisher of sin; or they aim at removing guilt as a kind of impalpable substance much as if it were a disease, producing this result either by the aid of a god, especially Agni, or by means of ﬁre, water, mediæval plants and spells, which are supposed to burn, wash, purify, or drive it away without the invocation of divine powers. This latter type belongs mainly to the sphere of the Atharvaveda, where magic supplants the religious prayer.

Even a sacriﬁce made in fulﬁllment of a vow, after a god has granted a boon, is in reality only a supplenary offering postposed, as when in the Atharvaveda Agni is promised an oﬀerings. Prayer was, however, by the latter rites covers his reason; or when, in the Brahmana story of Sunahśeṇa, the childless kIng vows, if a son is born to him, to sacriﬁce that son to Varuna. Thank-oﬀerings in any true sense are unknown to the Vedic оﬀerings; there they are not, not being found in the vocabulary of the language. An approach to the notion of a thank-oﬀering is only to be found in a Sūtra passage, in which certain oblations or sacriﬁces are prescribed on a man regaining his health.

The conception of the eﬀect of sacriﬁce which prevails in the Rigveda is that the offering wins the favour of the god, and indemns the offering and accompanying prayer. The Soma offering satisfies, gladdens, strengthens the god, who loves the sacriﬁcer and hates the niggard. The reward that follows is a voluntary act of the god, resulting from the benevolent attitude induced by the offering. It is not regarded as the repayment of a debt, though the sacriﬁcer feels that the god cannot well help requiting him. While conceptions of being in the presence of a mighty being, the sacriﬁc
er does not look on himself as inﬁnitely far removed from the god, who is his old friend, and whose right hand he grasps. Even in the Rigveda, however, traces are already of being in the notion that the sacriﬁce exercises compulsion not only on gods, but also over natural phenomena without requiring the co-operation of the gods. Here again is an early and primitive stage of the domain of religion. In the ritual of the Brāhmaṇas we ﬁnd that the latter has already been largely supplanted by the former.

d. The Vedic ceremonial was essentially based on the use of a sacriﬁcial ﬁre, 'the mouth of the gods,' into which the oﬀerings were cast, and by which they were conveyed to the gods. Exceptionally only, ﬁre was not the instrument of sacri
ciﬁce. Thus the oblations were cast into water, those to the dead were placed in small pits at the funeral sacriﬁce, while offerings to Rudra and demons were thrown into the air, hung on trellises, or dissolved in the water. In the ritual there was beside the sacriﬁcial ﬁre a litter of grass (barkhī), the soft seat on which the gods sat down to enjoy the offering. On this litter, according to the ritual texts, the oblations were deposited for a time, before being committed to the flames which conveyed them to heaven. Thus the gods were conceived as partaking of the sacriﬁce both on the litter and in their celestial abode. A god may be invoked, in the latter passage of the Rigveda, to bring the gods to the sacriﬁce and to take it to them in heaven (vii. 11. 5). This contradiction is doubtless to be explained by the survival of the litter in the ceremo
nial, from the time when oﬀerings were presented on it alone. The burning of the litter at the end of the rite may perhaps originally have formed the transition to offering sacriﬁces in ﬁre.

In the Vedic ceremonial, even of the earliest period, we have to distinguish between the simpler ritual of the single domestic fire and the more complicated and technical ritual conducted with the three sacriﬁces, which are independent of the former, though they may originally have arisen by its division. The single domestic sacriﬁce was maintained by every head of a family, who performed the rites connected with it himself. The three sacriﬁces were set up only by men of position and wealth, becoming a centre round which the sacriﬁcial activity of many Brāhmaṇas and priests revolved. After the regular morning and evening sacriﬁces the new and full moon ceremonies, were performed in essentially the same manner with the three sacriﬁces as with the one, the ritual of the latter, however, being simpler: the very words were nothing with the one only, while the Soma sacriﬁce could be carried on with the three only. The chief of
the three fires, called Gārhapatyā (doubtless representing the old domestic fire of the hearth), was the only one always maintained in the house, and two being divided from it for every sacrifice requiring their employment. It was used for the practical purposes of heating the vessels and preparing the offerings. The second, the Ahavaniya, situated to the east, was that in which the gods received their offerings. The third or Dakṣiṇā fire, placed in the south, the quarter specially connected with the souls of the dead and evil spirits, was used for offerings for those regions and for uncanny beings. About this fire and the pots dig around it, the ritual of the sacrificers to the manes chiefly moved.

When a fire was established for purposes of the cult, it was either produced by means of the firesticks (called aranyās, and consisting of a lower slab of soft and a drift of hard wood) or fetched from certain places, as the house of a rich owner of herds or of a great sacrificer. At the four-monthly sacrifices offered at the beginning of the seasons and at the Soma sacrifice, a new fire was rubbed and united with the old Ahavaniya, doubtless with the intention of giving a greater spirit. With regard to the material of the sacrifice, the Vedic Indian, as a general principle, offered to the gods what was his own favourite food. It comprised the chief produce of the dairy and the grain, the former in milk, in its various forms, and butter, together with the two principal kinds of grain, barley and rice (the latter, perhaps, not being used in the earliest period), cooked or baked in different ways. Among these, the products of the cow were unmistakably believed to have a more sacred and mystical import. In the cult of the dead, libations of water were characteristic. As beef and goats’ flesh, less frequently that of deer, and of the principal kinds of meat eaten, cattle, goats, and sheep were the usual victims in the animal sacrifice, the hēgoat, it would seem, being regularly offered on all lesser occasions. On the other hand, animals the flesh of which was either not eaten at all or only exceptionally eaten, such as the pig, dog, deer, as well as fish and birds, were not sacrificed to the gods. It is true that, in the rare and costly horse-sacrifice, an animal was offered the flesh of which was never a regular article of diet. This is, however, to be accounted for by the intrusion of magic into the domain of sacrifice; for the intention underlying the ceremony was to transform the victim into a magical acquisition of the horse to the royal sacrificer. This sacrifice was, indeed, akin to a peculiar tendency in the sacrificial ceremonial, to offer to a god what corresponded to his special individuality. Thus to the goddesses Night and Morning was offered the milk of a black cow having a white calf. In the animal sacrifice, a victim was often chosen which agreed with the deity not only in sex, but in colour and other qualities. The starting-point of this practice was probably the notion that the eater acquires the qualities of the animal he eats, and that his strength is increased most by eating the flesh of the animal most like himself. Thus the mighty Indra, who is constantly called a bull in the Rigveda, commonly receives the sacrifice of a bull, as also of a buffalo, to which he is often compared. The sun-god Sūrya has a white hēgoat offered to him.

The victim was killed by strangulation, and without bloodshed. With an evident desire of avoiding blood-guiltiness, it was addressed with such epithets as ‘Thou blue-robbed bull go not harm to me, death do thee; thou goest to the gods by pleasant paths.’ The ceremonial dealing with the disposal of the carcass was divided into two distinct sacrificial acts. In the first place, after an incision had been made, the caull (omentum) was extracted, being thereupon cooked and solemnly offered to the gods. This rite was concluded by the distribution of the remains as food to the other gods. The second act of the ceremonial consisted in cutting up the carcass into parts, certain sections of which were offered to the gods, while others were eaten by the priests. What remained was distributed among sacrificers, priests, and Brahmans. A magical rather than a religious notion underlies the practice of men eating the remnants of the sacrifice of which the gods have first partaken; for those regarded men who partook of the remnants of the nature of a medicine, which transfers to man the divine blessing connected with the sacrifice, or the particular power implied in the individual offering. The separate sacrifice of the caull was perhaps a relic of a time when that was the only portion of the victim which, owing to its agreeable odour, was presented as a burnt-offering to the gods. The blood of the victim was, in the Vedic ritual, not eaten, but was poured out as an offering to the Rakṣasas or lower demons, who were regarded as fond of blood, and who similarly received the offal of the grain used in making baked offerings. Analogously, the blood of the victim was regarded as having an uncanny nature, such as Rudra or the souls of the dead, were not partaken of by the sacrificer. Thus a bull offered to Rudra might not be eaten or even brought to men. In the case of the funeral cakes presented to the manes only might be snelt.

In connexion with the animal sacrifice, the interesting question as to whether the human sacrifice was known in the ritual of the Vedas suggests itself. The only certain trace of such a sacrifice is to be found in the important ceremony of building the brick fire-altar (called anīr-cauyana). Here it is prescribed that five victims—man, horse, ox, ram, he-goat—are to be sacrificed to different gods, and their five heads walled up in the lowest layer of the edifice. The object of this ceremony, which was a magical rite rather than an actual sacrifice, was to give stability to the altar. It is mentioned in the Satapatha Brāhmaṇa as the custom of a not very remote past, for which other rites had been substituted. The human sacrifice (paragam-mahāra), which the ritual books describe in detail, was probably only an innovation invented to imitate the horse-sacrifice. But of any actual human sacrifice there is no certain trace in Vedic India. Nor does the ancient literature, like that of Sunāṭhepa, nor the evidence of various Buddhist legends, is by any means conclusive.

Not only were food and drink presented to the gods to satisfy their hunger and thirst but an intoxicant, of which the sacrificer also partook, was offered to them. This was the juice of the Soma plant, which was pressed, mixed with milk or other ingredients, and presented to the gods. Soma was certainly not the popular drink of the Vedic Indian, whose favourite intoxicant was called sūra. How, then, is it to be accounted for that, in this case, he did not offer to the gods what he liked best himself? The explanation is that, having during the Indo-Iranian period been adopted in the cult instead of the earlier mead of the Indo-European age, it retained, by the force of tradition, its old-established position even in the Vedic cult.

Occasionally we find that objects which do not constitute food are sacrificed. Thus a man who desires the possession of deadly weapons sacrifices iron nails. Here again the connexion of the cult with witchcraft; the sacrifice becoming a means of obtaining something analogous to the objects offered.

1. Priests.—Vedic India was already far removed from that primitive condition of things in which every man was his own priest, and did not require
the services of persons possessing technical knowledge as intermediaries between him and the divine powers. On the contrary, it is certain that, even in the period of the Rigveda, there already existed a priest who officiated at ceremonial and magical qualities to act for others in the difficult and dangerous intercourse of man with gods and spirits. There were, indeed, already a number of sacrificially qualified Vaisyas and Vivas- nitras, in which the art of praying and sacrificing correctly was practiced as a hereditary calling, all of them employing the same cult, notably that of the ‘invoker,’ or ‘sacrificer,’ as they were called. There were no public priests; for there was no public worship of a national, tribal, or even conglomerational character. Vedic worship was of an essentially private type, sacrifice being performed on behalf of its individual instrument (yajaman) by the priests who acted for him and whose prayers belonged to him. This, coupled with the fact that idols were not used, accounts for the absence of temples in Vedica India.

Two sacrificial types have to be distinguished in the Vedic cult: the domestic priest (purohita), whose function it was to superintend the worship of his own household, and the priest (yajamana) who had to play a certain prescribed part in an individual sacrifice.

The Purohita was generally in the service of kings only, though Brahmans occasionally appeared in an analogous capacity with the house of men of high position. That the employment of a Purohita in a royal household was considered essential is indicated by a Brhmaana passage which states that the gods would not eat the food of a king who had no Purohita. The domestic priest was appointed by the king, and held his office for life, being often succeeded by his son. In the ceremony accompanying the appointment, the same verse was employed as when the bridegroom takes the hand of the bride in the wedding rite. The Purohita was, in fact, the king’s right hand man, giving the direction for all the ceremonial ceremonies and sacrifices. Even in the Rigveda the whole prosperity of the country is said to depend on the Purohita, ‘the guardian of the realm,’ and the Purohita Devapi at the sacrifice employs a spell to procure rain on behalf of his royal master, while in the Atharvaveda another Purohita uses spells to secure victory in battle.

Of the sacrificial priests there were several, with different names and technical names, the chief being the Hotr or ‘invoker,’ the Udgar or ‘chanter,’ the Adhavrya or officiating ‘sacrificer,’ and the Brahman or superintending priest; in the period of the Rigveda the Hotr was the most important. Later the Brahman became so. The Purohita was probably not one of these, though he might be employed to perform the functions of one of them; in the earlier period he sometimes appears acting as Hotr, in the later as Brahman. Thus in the Rigveda the Purohita Devapi is chosen as a Hotr, and Agni is called both a Purohita and a Hotr. The Rigveda contains a list of seven kinds of sacrificial priests, and this was probably the regular number, not only then but in the Indo- Iranian period. Seven priests still appear in various parts of the sacrificial ceremonial in later times, though, with the development of the ritual, additional cases were otherwise employed. The Avesta, which has eight sacrificial priests, probably added one to the original number. It is, in any case, a striking fact that the Znotar, the leading priest who recites the Gathas in the Iranian Homa sacrifice, corresponds, in both name and function, to the Hotr who recites the verses of the Rigveda in the Vedic Soma sacrifice. The most important of these seven Vedic priests were the Hotr and the Adhavrya. It was the duty of the former to recite the hymns which, in the chief libations of the Soma sacrifice, celebrated a particular god and invited him to drink Soma. When the hymns of the Rigveda were composed, their seers (gisi) themselves played the part of the Hotr at the sacrifice; and that the latter was, in the earlier period, regarded as the leading priest is evident from the fact that for Agni, the priest god. The Adhavrya performed the practical part of the ceremonial, tending the fire and the litter, arranging and cleaning the utensils, and the springing of the fire. The remaining five acted as assistants to one or other of the two chief priests. The Agnitha, or ‘fires- kindler,’ helped the Adhavrya in tending the sacrificial fire. The Upavaktya or ‘exhorter’ (known also as Prs, ‘director,’ and Maitrayazy, ‘priest of Mitra and Varuna’), whose duty it was to give various orders to other priests, plays the part, in the animal sacrifice, of the only assistant, and, in the Soma sacrifice, of one among the several assistants of the Hotr. The other three assistants of the ancient list belong to the Soma ritual exclusively: the Potr, or ‘purifier,’ and the Nst, or ‘chaser,’ before the Soma sacrifice in the later Vedas, while the main function of the Brahman was to recite hymns addressed to Indra, in the same way as the Hotr, whose assistant he was. In the later ritual this priest came to be called Brahman. The Brahman, with the title of Purohita, acquired the technical sense of the priest who superintended the whole sacrifice, and whose duty it was to know the three Vedas.

sg. Sacrifices. — The Vedic cult consisted of regularly recurrent or of occasional sacrifices. Our knowledge of the former is derived from the ritual literature, for there are only few and obscure traces of them in the hymns of the Rigveda, which is almost exclusively concerned with the Soma sacrifice. It is, however, probable that they were performed, at least in their main features, during the earliest Vedic period. These regular sacrifices are of three kinds, as connected with the course of the day, the month, and the year, being performed, respectively, twice a day, twice a month, and three times a year. Each of the first two kinds could be conducted, though without any difference in the ceremonial form, either with the single domestic fire or with the three sacrificial fires. On the other hand, the annual sacrifices, which were celebrated at the close of the year, the expenditure required the greater ritual of the three fires. It was a general characteristic of all periodic sacrifices that they were never addressed to one single god.

The daily rites took place morning and evening. They consisted, on the one hand, of fire-offerings to the gods, and, on the other, of gifts of food presented to all beings. The latter comprised offerings placed on the threshold and elsewhere for the deities and spirits in and around the house; a libation to the souls of the dead in the southern quarter; food scattered for dogs and birds; and meat and drink given to needy human beings.

The monthly sacrifices were generally required at the new and full moon, consisted of cooked oblations or of cakes offered to the gods. Among the numerous deities receiving them, the most prominent was Indra.

The seasonal sacrifices were offered every four months, at the beginning of spring, of the rains, and of the cool weather. Throughout these the Maruts are especially prominent. The ceremonial which inaugurates the rainy season, Karita, is offered with a view to procuring rain and consequent plenty. Then also two figures of dough covered with wool, and intended to represent a man and a swa, are sacrificed in order to
 promote the increase of flocks. In these two offerings the influence of magical notions is clearly observable. With the seasonal celebration of the rains was combined a great expiatory sacrifice with which the priests not only prepared for or consecrated sacrificial cakes and the libations of milk; in sacrificing eleven he-goats to various gods; in pressing, purifying, mixing the soma juice; in pouring it into or out of various vessels, presenting it to the gods, or drinking its share. All these operations were accompanied by the calls, recitations, chants of the priests as they carried out the details of the ritual, which were far too numerous to indicate here.

The soma sacrifice was preceded by a protracted ceremony of initiation (diksā), which was undergone by the sacrificer and his wife, and was followed by another of purification (avadāthana). Both of these ceremonies were probably known to the Rigveda. The Diksā belongs to the ancient type of magical rites which were intended as a preparation for intercourse with gods and spirits by producing an ecstatic condition. It consisted in seclusion at various forms of asceticism (tapas) ending in physical exhaustion. Fasting was a chief element in the preparation for this as well as other rites. A preliminary bath was taken, as in the wedding ceremony, in ritual life, and injurious substances which would nullify the effects of the initiation. On the other hand, no bath might be taken during the course of the soma sacrifice, for it would have been regarded as washing off the sanctity communicated by the Diksā. As in the funeral and some other rites, the hair and beard were cut off and the nails pared, because they were considered impurities.

In the ceremony called avadāthana ('campaing down' to the water), with which the soma sacrifice terminated, the black antelope skin and the sacred cord used by the sacrificer and his wife since the beginning of the Diksā were thrown into the water along with the soma shoots which had been pressed out and the sacrificial utensils which had been in contact with the soma. Finally, the sacrificer and his wife, as well as the priests, descended into the water to wash off the supernatural powers which they had acquired, and on emerging put on fresh garments. The offerings and texts which accompanied the Avadāthana ceremony were closely addressed to Varuna, the god who delivers from guilt.

h. Rites of family life.—As the Vedic wedding ceremony had in its main features probably come down from the Indo-Aryan ('praise of Agni'), it is the Agni (Agni) 1) required the ministration of sixteen priests. This rite occupied only one day; other soma sacrifices lasted for several days, up to twelve; while another class, called sattras or 'sessions,' sometimes extended to a year. These prolonged soma sessions formed an unimportant exception to the rule that every sacrifice was performed for a single individual; for here a number of Brahmans combined in such a way that each, while officiating as a priest in the usual manner, was accounted a sacrificer (yajamāna). The texts which deal with the soma sacrifice furnish sufficient details for a complete picture of its ceremonies, which in the main were doubtless the same in the period of the Rigveda. Numbers of priests and lay spectators thronged the sacrificial ground, on which burned the three fires strewed around with sacrificial grass. Between the fires was the red, an oblong shallow excavation somewhat narrowed in the middle and covered with a litter of grass for the reception of the offerings to the gods. Scattered about the sacrificial ground were the attending victims, the seats and fire-altars of the various priests, vessels containing water for various purposes, pressing implements, tubs, and bowls for soma. Among them moved about the officiating priests and their assistants, in whose midst were to be seen the sacrificer (yajmajna) and his wife, emaciated by initiatory asceticism. The priests were not only engaged in sacrificing, but also engaged in the preparation of sacrificial cakes and the libations of milk; in sacrificing eleven he-goats to various gods; in pressing, purifying, mixing the soma juice; in pouring it into or out of various vessels, presenting it to the gods, or drinking its share. All these operations were accompanied by the calls, recitations, chants of the priests as they carried out the details of the ritual, which were far too numerous to indicate here.

The soma sacrifice was preceded by a protracted ceremony of initiation (diksā), which was undergone by the sacrificer and his wife, and was followed by another of purification (avadāthana). Both of these ceremonies were probably known to the Rigveda. The Diksā belongs to the ancient type of magical rites which were intended as a preparation for intercourse with gods and spirits by producing an ecstatic condition. It consisted in seclusion at various forms of asceticism (tapas) ending in physical exhaustion. Fasting was a chief element in the preparation for this as well as other rites. A preliminary bath was taken, as in the wedding ceremony, in ritual life, and injurious substances which would nullify the effects of the initiation. On the other hand, no bath might be taken during the course of the soma sacrifice, for it would have been regarded as washing off the sanctity communicated by the Diksā. As in the funeral and some other rites, the hair and beard were cut off and the nails pared, because they were considered impurities.

In the ceremony called avadāthana ('campaing down' to the water), with which the soma sacrifice terminated, the black antelope skin and the sacred cord used by the sacrificer and his wife since the beginning of the Diksā were thrown into the water along with the soma shoots which had been pressed out and the sacrificial utensils which had been in contact with the soma. Finally, the sacrificer and his wife, as well as the priests, descended into the water to wash off the supernatural powers which they had acquired, and on emerging put on fresh garments. The offerings and texts which accompanied the Avadāthana ceremony were closely addressed to Varuna, the god who delivers from guilt.
After sunset the husband led his bride out of the house, and, as he pointed to the polo-staie and the vahana, what the young couple exhorted each other to be constant and undivided for ever. The wedding was followed by three nights of conjugal abstinence, meant doubtless to exhaust the patience and divert the attacks of hostile demons.

Similarly, in the rites performed both before and after birth for the welfare of children, the magical names were read and sanyasi's followed. Thus a powdered drug was dusted into the nostrils of a pregnant woman to ensure the sex of her offspring being male; and unripe fruits of the Udumbara tree were attached to her in order to communicate to her child the exuberant maturity which that fig attains.

On the tenth day after birth, when the period of impurity was over, the ceremony of giving the child his name was performed. In the third year the rite of tonsure, accompanied by an oblation, took place. The boy's hair was cut and arranged so as to be worn in accordance with the custom of the family. The hair which was cut off was buried. A similar ceremony was performed when the beard of the youth at the age of sixteen was shaved.

But far by the most important rite connected with boyhood was that of initiation or 'introduction' (upanayana) to a religious teacher, which took place at the respective ages of eight, eleven, and twelve in the case of boys of the first three castes. Standing at the sacred fire, the preceptor invested the boy, whose head had been shaved, with a girdle, which he wound round his waist three times from left to right, at the same time pronouncing certain formulas. He then grasped the boy's hand and, placing his own on the pupil's heart, recited a verse indicating that he had assumed power over the boy's will. On this occasion the youth also received a garment, a staff, and a sacred cord to be worn over one shoulder and under the other arm. During the whole course of his subsequent apprenticeship, the religious pupil (brahmastra) was required to practise chastity, to refrain from certain kinds of food, to tend his preceptor's fire with fuel, and to beg food in the village. But his chief duty was to study the Veda and to learn the famous Sàvriti stanza from the Rigveda, which is introduced to the study of the Vedic texts, this rite of initiation, which was regarded as a spiritual birth, the pupil had become one of the 'twice-born,' qualified to eat the remnants of sacrificial offerings. Though this ceremony is not even alluded to in the Rigveda, it must have been known at that time, for it can be traced back to a still earlier age. The evidence of the Avesta shows that among the ancient Persians a youth of fifteen was received into the community of Zoroaster with a sacred cord; and among primitive peoples similar rites have been found all over the earth to symbolize reception into the community of men as an entry into a new life. This ancient rite was in India transformed into a spiritual ceremony which gave admission to the community of those qualified for the study of sacred knowledge. The period of apprenticeship was terminated by the ceremony called smriti-patri, or 'return,' the main element of which was a bath intended to indicate symbolically that the quality of religious studentship (brahmastra) was washed off.

The father then invested his son with the clothing and insignia of the domestic ritual; it will, however, be more convenient to deal with them later as part of the ceremonial relating to death and the future life.

In Rigveda, Public life is presented as an exercise of public character because connected with the person of the king, the sacrifice was still instituted by him as an individual; and though prayers for the country and the people might be incited to, the emphasis was on the public sacrifice which was offered in the name of the tribe or the nation. In the royal ceremonial, magical practices were, as we found to be the case in the domestic ritual, more prominent than the sacrificial acts. The first of these celebrations calling for description are the consecration (ubhiśekā) of the king and the royal inauguration (rājasūya). Neither of these is mentioned in the Rigveda, and they were probably developed in the later Vedic period; but the magical elements which they contain are most likely very old. Both these celebrations included Soma rites. In the consecration ceremony the king was seated on a chair covered with a tiger skin and made of the wood of the Udumbara, the tree which to the Indian was typical of plenty. A cup, also made of Udumbara wood, was filled with a fluid compounded of butter, honey, rain-water, and other ingredients. With this fluid the king was anointed or besprinkled. In the Rājasūya a similar besprinkling took place; but it was followed by a series of further rites intended to secure success of all kinds. These included a symbolical ride on a herd of cows; the discharge of arrows at feeble relatives of the king, who were plundered; and a game of dice in which a cow was the stake, and which was won by the king.

Another ceremonial, regarded as still more dignified and efficacious, was the Vajapeya ('draught of vigour'), a kind of Soma sacrifice, which might be performed not only by kings, but even by men of royal descent or of the Brāhma n caste. Its most characteristic feature was a chariot race, evidently a magical rite intended to secure for the sacrificer the swift power embodied in the horse. It also included a rite called the 'ascent of the post' (yāpyārahoṣa). A wheel made of wheaten flour, and symbolical of the sun, was placed on the top of a sacrificial post. Mounting by means of a ladder, the sacrificer grasped the wheel as he uttered the formula, 'We have reached the sun, ye gods.' On descending to the ground he seated himself on a wooden throne and was besprinkled as in the inauguration ceremony. This part of the Vajapeya rite aimed at the attainment of exalted position.

The splendid ceremonial, however, culminated in the horse-sacrifice (ahoca-medha). It was not a thank-offering, as might at first sight be inferred from the words of the Brāhmaṇa description of each king who performed it. 'He victoriously traversed the earth and offered the horse-sacrifice.' It was in reality a supplicatory sacrifice offered, after military successes, for the fulfilment of the king's highest wishes in the future. According to the ritual texts, this sacrifice is addressed to the gods in the aggregate, but with special reference to Prajāpāti (an evidently late trait); but there are indications that it may originally have been addressed to Indra the Vajra-slayer, an obvious god to associate with a rite which is a glorification of military heroism. The horse itself represents swift vigour, a quality which the king aims at obtaining and impressing upon himself by means of this sacrifice. The ceremony was begun by bathing the horse, when a four-eyed dog (that is, one with two spots above its eyes) was killed with a club by a man of low origin. The horse, having been consecrated, was allowed to roam about free for a year, guarded by a retinue of armed youths. During the interval the sacrificial ground was the scene of various offerings and rites, according to the nature of the sacrifice, and lutes played. High and low, young and old, took a share in the pomp of the ceremonial. At
length, when the year had come to an end, the horse was sacrificed during the course of a Soma offering, during which the "Tthe priest, who risk the following the later Vedic ritual the horse is accompanied by a number of other victims; but in the Rigveda (two hymns of which are concerned with the horse-sacrifices) mention is made only of Pishon's he-goat, which announces the parting to the gods. But when the carcass was cut up, the chief consort of the king lay down beside the dead horse, while obscene conversations were carried on between the priests and the women of the royal household. Before the cauld was offered to them the priests pronounced and solved riddles among themselves, as they had already done at a previous stage of the ceremony. The whole rite concluded with a purifying bath at the end of the third day.

7. DEATH AND FUTURE LIFE.

A. BELIEFS.—a. The soul, variously called aum, 'spirit,' manas, 'mind,' ātman, 'the prāṇa, 'respiration,' was thought to be separable from the body during unconsciousness, and to continue its existence after the body had been destroyed by cremation or burial. But, though it was generally believed to be immortal, it was not considered as a mere spirit or shadow, but to retain its personal identity in a corporeal state; for the body, purified by the power of Agni and freed from the passions, is the abode of the immortals, the inhabitants of the other world. The doctrine of transmigration is not to be found in the Vedas; its beginnings are met with in the Brāhmaṇas, where the notion of repeated births and deaths in the next world appears; but it shows itself fully developed even in the oldest Upaniṣads, and must have been generally accepted by 600 B.C., since Buddha would not otherwise have received it into his system without question.

The spirit of the deceased proceeds upward through the air on the path trodden by the fathers (piṭas) to the realm of eternal light. It is natural that Agni, who burns the corpse, should have been regarded as the conductor of the soul on its journey. Arrived in heaven, where he recovers his former body in a complete and glorified form, the departed meets the fathers who revered Yama, and receives from the latter a resting-place. According to the Satapatha Brāhmaṇa, the dead, on leaving this world, make their way between two fires, which burn the former and the good deeds. This latter proceed either by the path which leads to the fathers or by that which leads to the sun. The Upaniṣads also hold that there are two paths for the good: by the one, those who possess complete knowledge of the world-soul go to Brāhmaṇa; by the other, those whose knowledge is imperfect reach the world of heaven, whence, after the fruit of good works has been exhausted, they return to earth to be born again. On the other hand, those who are ignorant of the self go to the dark world of evil spirits, or are reborn on earth. To illustrate the mystery of the future life, the Katha Upaniṣad tells the myth of Nāraka, who, on visiting the realm of death, is informed that those who have not enough merit for heaven and immortality fall again and again into the pot of the dead and, entering upon the cycle of existence for days, come back late with a body or as a stationary object; that he who controls himself reaches Viṣṇu's highest place; but that there is no hell for the unworthy.

b. Heaven.—The abode of the fathers and Yama is situated in the highest or third heaven, where is eternal light. It is also described as the highest point of the sun or the highest step of Viṣṇu. It is the abode of which Yama drinks with the gods. In the Atharvaveda it is stated to be a fig-tree (ādvaṇṭha). Heaven is believed to be the reward of the righteous, of heroes who risk the fire, and of those who by rigorous penance, and, above all, of those who bestow liberal sacrificial gifts. The Atharvaveda is full of references to the bliss in store for the latter. The deceased, on entering heaven, see again father and mother, wives and children. Sickness is left behind; bodily imperfections or frailties are unknown; and old age cannot prevail. There are neither rich nor poor, neither oppressors nor oppressed. The life of the blessed consists in serving the gods, more especially in the presence of the two kings Yama and Varuna. Here the sound of the lute and of songs is heard; streams of Soma, gātri, milk, honey, and wine flow; and there is spirit-food and satiety. Bright, many-coloured cows, which yield all desires, are at hand. The life in heaven is thus one of indolent material bliss, devoted to sensual joys. In the Upaniṣads the life in the heaven of the gods, being followed by re-birth, is a lower and transient form of bliss; only those who know the truth reach the highest stage, the condition of changeless joy and unending peace which results from absorption in the world-soul.

c. The best who dwell in the third heaven are called piṭaḥ or 'fathers.' By these are generally meant early ancestors who made the paths of heaven, and by which the immortal abodes are entered. Different races of them are distinguished (p. 608), the Āgirases being more especially associated with Yama. The fathers are also spoken of as lower, higher, and middle; as later and earlier; all being known to Agni, but a few only to their descendants. The fathers are fond of Soma, feasting with the gods and leading the same life as they do. Being immortal, they are even spoken of as gods. Great cosmical actions, like those of the gods, are sometimes attributed to them; thus they are said to have adored the sky with stars, and to have placed darkness in the night and light in the day. As the burning of the corpse was in no sense a sacrifice, the corpse-devouring Agni was distinguished from the Agni who wafts the offering to the gods; and, similarly, the path of the fathers from that of the gods. The Satapatha Brāhmaṇa goes further, discriminating between the heavenly world (añgrya loka), that is, the world of the gods, and that of the fathers (piṭra-loka).

The fathers are prayed to like the gods, especially to invite the dead, to help them therein; and to refrain from punishing their descendants for any sin humanly committed against them. They are also besought to give riches, offspring, and long life to their sons; individual ancestors being sometimes invoked by name. Coming to the sacrifice on the same car as Indra and the other gods, they drink the pressed Soma as they sit on the litter of grass to the south (the quarter of the dead). They arrive in thousands and range themselves in order on the sacrificial ground. They receive oblations, which are, however, different from those offered to the gods.

d. The chief of the fathers is Yama, to whom three hymns of the Rigveda are addressed. He is only spoken of as a king who rules the dead, but it is implied that he is a god as well. He is, as is natural, closely associated with Agni, the conductor of the dead. Yama is the son of Vivasvat and of Saranyā, Tvaṣṭar's daughter. He was a mortal, who chose death and abandoned his body. Finally, he reaches the earth and the other world, whither the ancient fathers have gone. Having been the first of mortals that died, he is called 'our father.' As a mythological creature, Yama goes back to the Indo-Iranian period, corresponding to Yima, son of Vivalvant,
in the Avesta. The most probable conclusion to be drawn from the facts of the ceremony is that Yama represents the chief of the souls of the deceased, as having been the first father of mankind and the first of those that died. This conclusion is supported by the fact that in the Avesta there is the root of an easily definable word. It is, perhaps, also borne out by the appearance of Yama and his sister Yami in the character of twins in a hymn of the Rigveda, where the very repudiation of their scandal points to the existence of a belief in the descent of mankind from primordial twins. Some scholars have, however, identified Yama with various phenomena of nature, such as Agni, the sun, or the moon. In the Rigveda Yama's foot fetter (padbīna) is referred to as parallel to the bond of Varuna, and his messengers that seek the lives of men must have indeed feelings of dread. It is not till the Atharvaveda and the later mythology that Yama becomes more closely associated with the terrors of death, and assumes the character of a regular god of death; though even in the epic his domain is not limited to hell.

The owl and the pigeon occasionally appear as Yama's emissaries; but his regular messengers are two dogs, described as four-eyed, broad-nosed, breathing fire, and keeping watch along the path to the other world or wander about among men, keeping watch on them; and they are besought to grant continued enjoyment of the light of the sun. Their functions seem to have been similar to that of the dogs of Yama in the Vedas, custom of placing them at the entrance of the house, which guards the path to the other world.

The conclusion of a watch-dog of the dead goes back to the Indo-Iranian period, as shown by the evidence of the Avesta, where a four-eyed hound is stated to keep guard at the head of the bridge which leads to the other world. If the epithet śabdās ('brindled') is identical with the Greek ἱστέγεσσες, the notion of a dog of death must go back even to the Indo-European age.

c. Hell.—As the virtuous, in the opinion of the Vedic seers, were rewarded in the future life, it is natural to suppose that they believed in some kind of abode for the wicked. The evidence of the Rigveda cannot, however, be said to go beyond speculations. It is regarded as an underground 'darkness. But there can be no doubt that the belief in a regular hell exists in the Atharvaveda, which speaks of the house below, of black and lowest darkness, the abode of goblins and sorceresses, called nārakā loka as contrasted with svarga loka, the heavenly world of Yama. The torments suffered in this infernal region are also once described. It is not, however, till the period of the Brāhmanas that the notion of future punishment appears fully developed. Thus the Satapatha Brāhmana states that every one is born again after death and, being weighed in a balance, receives reward or punishment according to his deserts. Nothing is said in the Vedas of a final judgment or of a destruction and renovation of the world.

B. THE CEREMONIAL.—a. Funeral rites.—Creation was the normal method of disposing of the dead in Vedic times. That burial was also practised to some extent is undoubted, though the ritual books have no rules regarding it, except so far as the bones of the cremated are interred. The predilection of the Vedic theologians for the god of fire was most probably the reason for incinération having already become the almost universal practice among the Aryans in India. The body and hair of the dead man were cut off and his nails trimmed; his body was anointed, decked with a garland, and dressed in a new garment, which he was intended to wear in the nether world. The corpse was then carried or driven to the burning ground and was tied to it, in order to efface the footsteps and so prevent death from making its way back to the living. The dead man was then exhorced, with verses from the Yajur Veda; the Rigveda, to go by the ancient paths, past the two dogs of Yama, to the fathers. The widow, who had mounted the pyre and lain down beside the corpse, was now carried away to render to the king of her new spouse (her husband's brother). That the ceremonial excluded the burning of the widow is undoubted; but the ritual act which was required to recall her to life shows that her ascent of the pyre was symbolical of the actual immersion of bygone times. Indeed, it must be assumed that this ancient custom, though not sanctioned by the Vedic ritual, survived through the Vedic period in the families of military chiefs. Having by their example gradually spread to other classes, it became, in later times, a universal practice throughout India. If the deceased was a warrior, his bow was taken from his hand, an indication that at one time it was burned with him; if he was a sacrificer, his combustible utensils were placed with him on the pyre. Here we have a survival of the ancient custom of laying the implements of their property for use in the next life. At the same time as the corpse was burned, a cow and a he-goat were sacrificed. These animals, however, did not represent property, but were intended as a means of deflecting the consuming power of fire to them as substitutes for the corpse; and, by a fiction, Agni was supposed not to burn the dead man, but to send him 'done' to the fathers.

The mourners, on returning from the burning ground, bathed, changed their clothes, and refrained from looking round. On entering the house of the deceased, they touched purifying or auspicious objects such as water, fire, a burning; and finally removed the sacrificial fire of the dead man by some aperture other than the door.

A death was followed by a period of impurity, varying from three days to ten, according to the degree of kinship. As the return of the soul was feared during this time, the surviving relatives took constant precautions to avoid infection. Thus only food which was bought or presented by others was eaten, and generally they were against introducing anything tainted into the system.

Generally on the third day, what remained of the bones of the cremated man was collected, placed in an urn, and temporarily buried, to the accompaniment of the Rigvedic verse, 'Approach thy Mother Earth.' During this ceremony the deceased was no longer thought of as in the realm of Yama, but was actually present. This inconsistency is not due to a primitive belief surviving beside the more recent conception of life in the heavenly world.

Last of all—according to the Brāhmanas, after the lapse of years—a burial mound was erected, the bones being exhummed for the purpose of removal to a suitable spot. During the following night music was performed, cymbals being beaten and the huts (rīvā) played, the female mourners repeatedly going round the bones with their left hands towards them. On the following morning, the bones were taken to a place, out of sight of the village, where the fire altar was first erected, the bones were cremated with roots. A hole or furrow having been made, the bones were deposited and a mound of stone and earth was erected over them. Grain was scattered on the mound as food, while milk and water were poured into and a twig of twigs into it, as drink for the deceased. When the mourners returned, various precautions were taken to pre-
VENT DEATH FROM FOLLOWING THE LIVING; THUS A STONE OR A CLAY WAS DEPOSITED AS A BOUNDARY. THE RIGVEDA, REFERS, IN ITS FUNERAL HYMN, TO THE ERECTION OF A STONE TO DIVIDE THE LIVING FROM THE DEAD.

THOUGH THE VEDIC VETERAN RETAINED MANY PRIMITIVE BELIEFS IN THE CEREMONIAL CONCERNED WITH THE FUTURE LIFE, HE HAD RECIPROCALLY FORBIDDEN THE TERRORS AND SACRIFICIAL AGONIES WHICH INSPIRE THE FUNERAL RITES OF THE SAVAGE. THE VERSICLES WHICH HE EMPLOYED IN THAT CEREMONIAL, WHILE COMPROMISED WITH MUCH PETTY RITUAL AND BREATHING MIRTH, ADDED TO HIS OWN PERSONAL CONSIDERATIONS AT THE SAME TIME REFLECT TRUE IN THE GODS, AS GUARDIANS OF THE DEAD, AND FILIAL PIETY TOWARDS ANCESTORS. IF WE FIND HERE NO traces OF DEEP FEELING AND GENUINE SORROW, THIS IS DUE TO THE FACT THAT THE IMPERSONAL FORMULAS CONTAINED IN THE RITUAL TEXT-BOOKS ARE THE ONLY AVAILABLE EVIDENCE FOR THIS PERIOD.

OUR KNOWLEDGE OF THIS CEREMONIAL IS ENTIRELY DERIVED FROM THE RITUAL WORKS OF THE VEDIC PERIOD. THERE IS NOTHING ABOUT SPIRITUALITY IN THE HINDU RELIGION THAT IS NOT ACCOMPANIED BY HYMNS TO THE MIGHTY GODS WITH WHOM THAT VEDA IS CONCERNED. NEVERTHELESS, THERE CAN BE LITTLE DOUBT THAT, IN ITS ESSENTIAL FEATURES, IT ALREADY EXISTED IN THE EARLIEST VEDIC AGE; FOR ITS GENERAL CHARACTER IS EXTREMELY PRIMITIVE: THERE IS NO TRACE OF THE SOULS OF THE DEAD ABDLING IN HEAVEN; THE GIFTS OFFERED TO THEM ARE NOT ONLY FOR THE SACRIFICIAL FIRE, BUT ARE PLACED IN THE EARTH; AND THE SPIRIT WAS ENTECTED TO THE EARTH TO BE FED AND CLOTHED. THE ONLY DETAILS WHICH PROBABLY DO NOT GO BACK TO THE TIMES OF THE RIGVEDA ARE THE OFFERINGS TO SANA AND AGNI, AS WELL AS THE PRESENCE OF BRAHMANS.

VEGETARIANISM.—IN THIS ARTICLE AN ATTEMPT IS MADE TO CONVEY THE DIFFICULTY TO THOSE PORTIONS OF THE SUBJECT WHICH ULTIMATELY HAVE A PRACTICAL BEARING, EVEN THOUGH THE WAY MAY LIE THROUGH THE INVESTIGATION OF SOME OTHER LESS IMPORTANT ETHICAL PRINCIPLES. THE OMISSION OF ALL INVESTIGATION INTO THE HISTORY OF VEGETARIANISM IS Dictated NOT ONLY BY FIDELITY TO THIS AIM, BUT ALSO CONSIDERATION THAT IN THIS PARTICULAR SUBJECT NO SOUND INFERENCES AS TO MODERN PROBLEMS CAN POSSIBLY BE DRAWN FROM ANY RECORDS OF THE PAST. IT IS, E.G., INTERESTING TO LEARN THAT THE POET OVID WROTE IN FAVOUR OF A VEGETABLE DIET AS BEING NATURAL TO PRIMITIVE MAN. THE SAME IS TRUE OF HIS WORKS, SUCH AS HIS HERALD, WHERE HIS WORDS WERE EFFECTIVE. THEY MAY HAVE BEEN, AND YET NO ONE HAS RECORDED THE EFFECT; OR THEY MAY HAVE BEEN MINTED AT FIRST BY DISSAY AT THE SIGHT OF GUTTERS DIPPING THE PRAYERS IN A BOWL BY THEMSELVES NO EVIDENCE OF VEGETARIAN PRACTICE; AND, IF THEY WERE, WE SHOULD BE ABLE TO CONNECT IT SECURELY WITH THE GRADUAL DECLINE OF ROME. IN SHORT, AT ALL TIMES THE IMPORTANT QUESTION HAS BEEN, NOT THE PRACTICE OF AN EXCEPTIOAL MINORITY, BUT THAT OF THE MASS OF THE POPULATION—JUST THE LARGE COMPLEX FACT WHICH HAS NEVER BEEN RECORDED.

THAT OMISSION LEAVES TWO PRINCIPAL ASPECTS OF THE QUESTION TO BE CONSIDERED: (i) THE PHYSIOLOGICAL ARGUMENT, WHICH IS TREATED AS OF SUBORDINATE IMPORTANCE, OWING TO THE EVIDENCE TO BE GATHERED FROM FACTS BEING STILL VERY INCOMPLETE; AND (ii) THE ETHICAL ARGUMENT, INCLUDING OUR DUTY TO THE LOWER ANIMALS, THE BEARING OF THE EXAMPLE OF CHRIST, AND THE QUESTION OF HOW THE NON-VEGETARIAN DIET IS HELPFUL TO THE HIGHER SPECIES.

(i) THE PHYSIOLOGICAL ARGUMENT.—IN SEVERAL TREATISES ON VEGETARIANISM MUNCH HAS WRITTEN ON THE PHYSIOLOGICAL EFFECTS OF A VEGETARIAN DIET, BUT VERY LITTLE OF ANY VALUE. THE TRUTH IS THAT BEFORE THE HUMAN BODY CAN BE AVOIDED AT—IN OTHER WORDS, BEFORE ANY BROAD INERENCE CAN BE DRAWN FROM EXPERIMENTS—THE QUESTION MUST BE SO FAR SIMPLIFIED THAT IT BECOMES ABSTRACT; THAT IS TO SAY, EXPERIMENTS HAVE TO BE CONDUCTED UNDER CONDITIONS WHICH DO NOT OBTAIN IN ORDINARY LIFE.
It is impossible to make sure that any two sets of experiments deal with the same data; e.g., no one could ascertain how great in any given case has been the influence of mind upon the bodily tissues. Wonderful records are given of endurance exhibited by vegetarians on a spare diet of fruit, and of prolonged effort not only of brain but of muscle. But it is quite uncertain whether the spirit of the individual in question has not affected the result; so as to make it useless as a guide in cases where such spirit is wanting. Again, the more the problem is considered, the more formidable grows the indication, for it is becoming more and more evident that a fair number of individual lives have been under observation and in all cases the health has been well maintained on a vegetarian diet, it is still open to a sceptic to insist that an examination of the next generation, or perhaps the next two or three, is required before the experiment can be deemed conclusive or scientific. If any one is convinced that the children of vegetarians are born infirm—in other words, that the human stock loses vigour if abstinence from meat becomes general—it is ridiculous to urge in answer that facts yield anything like a scientific disproof of the contention. No one would venture to say that any most important and exhaustive work has yet been made, and there is very little likelihood of any such being undertaken. Supposing—what is not easy to suppose—that some hundreds of adults allowed themselves to be placed in an experiment, there is no guarantee that similar results would be gained from people who were victims of compulsion or involuntary abstainers, or from enthusiastic votaries of a new cult, or from men and women of different antecedents and different occupations. Thus the condition of a convert to a particular diet at the age of 40 is not a sure indication of what would be the effect of a similar diet to a man of the same age, still less on another of 20, or on a child of 10 years old, or on a woman of any age.

Moreover, the question is obscured by the varieties of diet, as indeed under the title of vegetarian. Large numbers of people abstain from meat, but not from fish; others from brown meat, not from chicken; others eat meat once a week; others eat eggs, but no meat or fish, and so on. Then, there is the complex question of starch, of vegetables, of sweets, of fruit, and sugar. A sound opinion seems to be that the mischief caused by too much starch is quite as serious as that due to the uric acid found in meat. Then there is the starting of the principle that in living differences in different constitutions, anyhow for a time, and the incredible skill and delicacy required before any chemical analysis can certify food-values with any precision, and it is indisputably a matter of the most importance to know the food-values of a diet under investigation. It is further noteworthy that, in this country at any rate, we are unacquainted with the kind of knowledge which some would seem to possess of their natural food. Thus, the medical profession. For not only has there always been and is still a reluctance on the part of medical men as a profession to undertake the importance and prestige of science by preaching the sanitarian power of unassisted nature, but it appears that till quite recently the preparation for the practice of medicine has included study of the chemical questions or of food-values. Thus in a matter of great complexity, which for our enlightenment requires bold but very careful experiment and the most scrupulous observation of results, little or nothing has been done which could give promise of a scientific induction. We are thrown back on amateur and haspanded experiments, and it may be said that such innovations on convention and tradition as have been attempted have been introduced by outsiders, and rather obstructed than favoured by medical opinion. To this professional attitude parallels from other professions could be easily adduced. Hence, it is claimed for vegetarianism that the case in its favour is strongly in science and can be proved by experiment, no cautious student of the subject will yield a ready assent. The truth is that the strongest arguments in support of vegetarianism are not, strictly speaking, to doubt the truth of their conviction—but, if the number of such were ten times what it is, it would still be illogical to argue that the residue of mankind would benefit to an equal degree. The complexities of the problem are the difficulty of ascertaining how far the experiment in any case has been fairly tried, at what age, after what antecedents, and, perhaps most of all, what experiment. For, along with other uncertainties, many individuals have experienced a varying amount of discomfort in the early stages of the new regime. Of those a certain number still prefer slightly to taste this or any discomfort, abandon the attempt and give themselves out as evidences of vegetarian failure—a testimony wholly worthless in reality, but quite sufficient to deter most of us from such an innovation. Further, as various are the indications afforded by the prejudice of foreigners, especially Orientals, the crudest generalizations, based, if on anything at all, on nothing better than travellers' unverified gossip, frequently pass current as substantial evidence. Such facts, indeed, as have been accurately observed and reported can obviously give ground for nothing better than conjecture.

2. The ethical argument. The appeal to human compassion in the matter of the treatment of animals, though logically cogent, has been made with very little success even in this country, where the sentiment of kindness towards animals is strongly developed, as compared with that of other European peoples. If man could prove that flesh foods were indispensable to his existence, of course there would be little objection to the starting of the principle that in living differences in different constitutions, anyhow for a time, and the incredible skill and delicacy required before any chemical analysis can certify food-values with any precision, and it is indisputably a matter of the most importance to know the food-values of a diet under investigation. It is further noteworthy that, in this country at any rate, we are unacquainted with the kind of knowledge which some would seem to possess of their natural food. Thus, the medical profession. For not only has there always been and is still a reluctance on the part of medical men as a profession to undertake the importance and prestige of science by preaching the sanitarian power of unassisted nature, but it appears that till quite recently the preparation for the practice of medicine has included study of the chemical questions or of food-values. Thus in a matter of great complexity, which for our enlightenment requires bold but very careful experiment and the most scrupulous observation of results, little or nothing has been done which could give promise of a scientific induction. We are thrown back on amateur and haspanded experiments, and it may be said that such innovations on convention and tradition as have been attempted have been introduced by outsiders, and rather obstructed than favoured by medical opinion. To this professional attitude parallels from other professions could be easily adduced. Hence, it is claimed for vegetarianism that the case in its favour is strongly in science and can be proved by experiment, no cautious student of the subject will yield a ready assent. The truth is that the strongest arguments in support of vegetarianism are not, strictly speaking, to doubt the truth of their conviction—but, if the number of such were ten times what it is, it would still be illogical to argue that the residue of mankind would benefit to an equal degree. The complexities of the problem are the difficulty of ascertaining how far the experiment in any case has been fairly tried, at what age, after what antecedents, and, perhaps most of all, what experiment. For, along with other uncertainties, many individuals have experienced a varying amount of discomfort in the early stages of the new regime. Of those a certain number still prefer slightly to taste this or any discomfort, abandon the attempt and give themselves out as evidences of vegetarian failure—a testimony wholly worthless in reality, but quite sufficient to deter most of us from such an innovation. Further, as various are the indications afforded by the prejudice of foreigners, especially Orientals, the crudest generalizations, based, if on anything at all, on nothing better than travellers' unverified gossip, frequently pass current as substantial evidence. Such facts, indeed, as have been accurately observed and reported can obviously give ground for nothing better than conjecture.
Vegetarianism

system would long ago have roused public sentiment to a pitch of fury; and even now, assuming what is very doubtful, that the butchering is as painless as possible, there remains against man's will to be killed. The question is, not whether the broad indictment that to rob millions of them of life unnecessarily is a kind of murder.

It is difficult to say what answers to the above arguments are made. Much of the evidence is too lax on the question and custom is too strong to have allowed the matter to be fairly discussed. The truth is, an enormous majority of people are too much under the yoke of custom to be awake to the moral appeal. Many would readily admit that they cannot meet it, nor are they at pains even to excuse themselves save on the plea of convenience. Meanwhile it would be difficult to measure the mischief caused to our social life by this particular form of heedlessness. Compared with foreigners, Britons are peculiarly sensitive to the claims of the animal kingdom. Such kindness as we show is based on religion, but also on the outcome of an inherited sentiment, powerful to-day, but, it must be admitted, of somewhat recent growth. If, then, both sentiment and religion are flouted by any particular custom, and little or no protest is raised against it, it follows that our moral principles are assailed by a deadly form of insincerity, all the more deadly for being largely unsuspected. Indeed, if these considerations are sound, we, as a society, are under the ban of Christ's denunciation of the Pharisees, who were guilty in proportion as they were blind.

But there are plausible arguments for a practice so general as the slaughtering and eating of animals. Probably the most prevailing is the idea that it makes on the whole for health. The physiological aspect of the question must be dealt with separately. Here it is only necessary to observe that, granted the fact, there need be no dispute as to the principle asserted. It may be conceded that man is on so much higher a plane than animals that his welfare must take precedence of theirs in all cases where there is a direct conflict. But that there is such a conflict is exactly what the humanitarians deny. They maintain that the evidence of fruits, cereals, etc., being sufficient to support human life in full vigour is abundant; and that their teaching is not that man should suffer in order to spare animals, but that, as long as there is reason to believe that animal flesh is no better (indeed is inferior) as food for man than from the point of view of nutrition, it is not right to kill animals and eat them.

To this it is replied that, if abstinence from meat became general, intolerable evils would result, such as the means of livelihood being taken from millions of workers, and the loss of skins which are needed for clothing and which are supplied at present from animals bred or preserved for food. There would be a prospect also of large industries being destroyed and thousands of workers being thrown out of employment.

One obvious answer to these misgivings is that they are based on the assumption that a vast revolution in diet could come about suddenly. There is of course no reason to assume anything of the kind, least of all in a country where conservative prejudice on this subject is adamantane. But that is not the kind of answer that touches the core of the issue. It is, the reverse, the question of conduct in this case, as in many others, is far too uncertain to be worth arguing about. Nor would there be any need to forecast the future with the lack of ethical conviction, if once we could make it we were made clear that obedience to divine law means obedience in spite of uncertainty as to results. The training of the Apostles was directed to this end throughout, that they should walk by faith and not by sight. But to limit obedience to occasions of utility is to destroy its faithfulness. Thus, if man recognizes the claims of animals to good treatment, as it far transcends, it is far more imperative that of others because the results of the opposite line of conduct are not easy to foresee. This is the point at which religious considerations supplement ethical. If the question of the value of animals to us, we are bound to treat them kindly, even if the results were likely to be far more inconvenient than they possibly could be. Indeed, the experience of food shortage has taught us that all the difficulties supposed to be inherent in vegetarianism are faced without hesitation as soon as the situation is understood. In other words, professing followers of Christ ignore what is admitted as a divinely sanctioned claim, but recognize it as soon as ever 'provision for the flesh,' against which St. Paul (Ro 13*^4) and our Lord (Mt 6*^3) war us, seems to be in question.

A more solid objection is presented when it is urged that the Founder of our religion and the Pattern of our conduct did Himself habitually partake of animal food. How can humane-minded people take their stand on a doctrine of the general disallowance of the law which the Son of God Himself disobeys?

To face this objection fairly, it is necessary to point out that the oft-quoted parallel of Christ's silence concerning slavery is not at first sight applicable. Against slavery He did undoubtedly establish principles of charity between man and man which were certain, if followed, to overthrow the institution sooner or later. But it cannot be said that any teaching of His can be quoted which bears at all directly against the practice of slaying animals for food; and it is quite legitimate to argue that He had no such objection to the practice on humane grounds as He must have had against the practice of depriving a fellow-man of his liberty. Moreover, the question is not, 'Why did He refrain from denunciation?' but rather, 'Why did He participate in the practice?'

The explanation must take account of the main purpose which—as far as we can grasp it—the Saviour set before Himself in His work on earth. From no other point of view can the fragmentary character of Christ's ethical teaching be understood. But any adequate statement on such a theme would range far beyond the limits of this article. This much, however, may be said, that, in proportion as any interpretation of Christ's teaching and work falls short of the full doctrine of the faith as to His person, it will fail in explaining the gaps in the ethical teaching. In other words, if Jesus is regarded only as a divinely-gifted prophet, His life and teaching were not only abortive, but needlessly so. With slight precaution He could have escaped an early death and extended His teaching and the sublime example of His conduct for other fifty years. There is no way of meeting this criticism except by holding fast to the Christology of St. Paul and St. John. The task before the Lord was not to teach mankind, but to save them by His incarnation, death, resurrection, and the gift of the Holy Spirit from heaven. Now, while engaged on this task, He gave just enough time to evangelization to reveal what human life would be if men lived it in the full conviction and certainty of God's love and presence among them. The revelation was grievously misunderstood at the time and subsequently, owing to men's tendency to turn the gospel into a burden of moral law, more crushing than that of Christ as the more spiritual form of the law, that of the Ten Commandments. Therefore the teaching was in the main barren of precepts dealing with everyday conduct. The danger of literalism of interpretation was imminent, and we may con-
VEGETARIANISM

chide that, if Jesus had given us anything like a complete code of moral precepts, or even a full picture of a sinless life extended far into old age, our difficulties would have been alleviated finallly and completely from the difficult task of understanding His work of redemption to the far simpler but hopeless endeavour to live up to the level of His nature. The reason given by some of the authors of this scheme of salvation owing to utter inability to rise up to its meaning. Hence the Savior refrained from all attempt to guide His followers by rules, but gradually taught them that they must learn to know and love that their lives were to be quickened by the Holy Spirit whose indwelling was to be to them their strength and inspiration for all time. In view of this prospect, we can understand why His ethical teaching was so suggestive but so paradoxical, so figurative, and incomplete. It was designed, not to save us from the trouble of thinking, but to turn our thoughts to the Comforter whom He promised to send.

But, in considering the moral example of Christ, we have to recognize the fact that He resolutely declined to gratify the expectation of the Jews that He would be the mediator of a certain form of conduct to be imitated unintelligently. Not only the Pharisees but all mankind are ready to go through almost any unpleasantness if thereby they can escape the pain of recasting their ideas. From the beginning of His ministry, however, Christ saw Himself sternly against this temper. His first word spoken in public (Mt 4:19) was an echo of the Baptist's injunction: 'Change your minds: for the Kingdom of the Heavens is come nigh.' Clearly the Lord intended that deep principles should be learned by men, and that, as they were learned, human conduct should change. Supposing, then, the Lord made Himself no instruction, not specifically to a principle of conduct, but to a social custom, the meaning of which was widely misunderstood, that would have been an attempt, foredoomed to failure, to improve human life without human co-operation; for it is certain that moral improvement cannot be achieved if we do not know what we are doing and why we are doing it.

Therefore Christ taught principles based upon the fact of God's Fatherhood, one of them being that the human body was to be honoured. This was taught not by a formulated rule, but by the fact of the Incarnation as soon as it was accessible, that is, for hunger and thirst. Christianity, social customs, to be considered and modified in accordance with the underlying principle of reverence being due to our bodies made in the image of God. Thus the question of the kind of food that we eat arises naturally as the Incarnation is gradually being better understood.

Further, Christ's life on earth was an exhibition of divine power triumphing in and through the uttermost of created weakness. By His endurance of that weakness He manifested His personal strength, inherent and inalienable, as the Son of God. Now that strength was the strength of a Redeemer, a Transformer, an Uplifter. Christ found mankind sunk in evil prejudices and evil customs. He took upon Himself our poisoned nature, as it was, that He might cleanse and re-instate it; He did not seek to better the conditions so as to make His task easier. He took on Himself all the disabilities which resulted from human blundering, to show how, not so much in spite of them as in spite of them, He could triumph over Satan. Hence the freedom from temporary restrictions and the universality of His teaching.

It is therefore strictly relevant to the main question to ask what kind of food best helps us in our endeavour to show reverence to our bodies, while at the same time we assert our mastery over them. There is no difficulty as to the latter duty, but there is much haziness of mind in regard to the former, due to ignorance which can be dispelled only by experience of the effects of a reformed diet. Vegetarianism leaves for us the impression that they all seem naturally to result from nothing more than the relieving of the body and the mind from constant injection of poison. Once that is discovered, but not yet fully understood, is that a 'simple' diet, consisting principally of fruit, lettuce, and 'unstarchy' foods, secures cleanliness for the inside of our bodies, in contrast to the noisome defilement which in flesh-eating societies has come to be taken as a matter of course. Here there is no room for dispute. If a certain diet promotes cleanliness while another causes dirt, that is enough reason by itself for preferring the former. It is then a question of fact which can only be tested by experience. Again, vegetarianism favours moderation in diet; and if — as seems to be the case, and has indeed been certified by the restriction of diet in time of war — most people clog their energies by needlessly taxing their digestions, it remains that a diet free from poison is to be preferred. True, elaborate cooking enhances the excess, whatever be the results; but, as the poison of meat is a stimulant which is followed as usual by a reaction, and as the reaction is a certain languor which feels like hunger but has nothing to do with it in reality, there is a peculiar danger in a diet of flesh which vegetarians for the most part escape. It will be noticed that it is here assumed that excessive eating is common. We need not give all the evidence for this assumption. Perhaps the most distinct indications were given during the ration-time in 1917 and 1918 that the prevalent fashion of excess had been mainly among men who could afford superfluous food, between the ages of 40 and 60. In advancing years dialect the wisdom of a gradually diminishing diet, but when also it is quite easy to maintain by skilful cooking the craving of a palate-appetite almost at the level that it kept at 30 years of age. Our social customs, our prejudices, and our craving all make real moderation in eating difficult; and among the influences that favour excess, meat-eating followed by a nerve-reaction that is mistaken for illness, which in reality is only anaemia.

In this connexion, however, the most serious indictment against flesh-eating has still to be mentioned. Meat is a stimulant, and its heating properties act upon the system by increasing the power of the animal in man. By meat-eating, in other words, the temptation to sensuality of all kinds is strengthened.

No sooner is this affirmation made than it is traversed as follows: either (a) it is flatly denied, and instances of vegetarian or quasi-vegetarian yet sensual peoples are adduced; or (b) it is contended that, if any immunity from animalism is secured, it is at the cost of diminished bodily vigour.

(a) No arguments are more fallacious than those which rest on a false induction. The whole question is far too complex to allow of certainty. We can guide our conduct by probability only, and probability admits of degrees. If we confine our attention to ourselves — the British people—the evidence, as already remarked, gives us eminently certain results. It is nevertheless very weighty and cogent as a guide to conduct. We know something about the temperament of our own people, practically nothing about foreigners' temperament, as we know nothing of that of the Japanese. That is to say, while it is very difficult
VEGETARIANISM

to exclude other influences, such as heredity, religion, and social habits, even when we are considering ourselves alone, it is wholly impossible in the case of foreigners. In other words, evidence as to the physiological and spiritual effect of a certain diet in England is of some value for English people, but of less value for foreign with the elements of self-denial, whatever it is for people so different from us as the yellow or the black races. The evidence, then, which it is worth while considering is that which is drawn from British people; and, further, it may be drawn from people experimentally and without prejudice, from those who made the experiment, while very little weight can be attached to the affirmations of those who have not. For, while a large majority of young men, all flesh-eaters, are troubled with strong sensual desires to which a huge proportion give way, the constant assertions of those, the minority, who have made the change, to the effect that continence has forthwith become easier for them, remain uncontradicted in reality, no matter how often they are ridiculed.

Moreover, the benefit, it cannot be too often insisted on, is not only relief from certain trouble-some conditions, but a manifest purification of thought and desire. Mali mores sunt mali amores,' said St. Augustine, and no cause of life-wreckage has been more fatally operative than the attempts of this world in contradicition with the desire. If, then, converts to vegetarianism who have tried both forms of diet are the only witnesses in possession of first-hand evidence, and if their testimony is practically unanimous and wholly unassailable in confidence as to the reform of their diet being to them an immense assistance to the higher life, we are bound to conclude that, in a difficult and complex question, we have here in good sooth a solid foundation on which to build, a real light in the darkness, a veritably guiding principle. Especially is this the case when we remember that the matter is far too personal to admit of publication. A little a posteriori evidence given confidentially outweights all noisy a priori contradictions.

Nothing, however, is easier than that a principle admitted in theory should be denied in practice. If people meant what they say when they deplore the ravages of venereal disease, they would eagerly grasp at anything that held out any hope whatever of mitigating the power of the temptation, no matter what the indifference or immobility, or even by, or even if they themselves were called on to undergo real prolonged discomfort. No such excuse, however, is available. The only real obstacles to change are the most stubborn: hatred of change, positive dread of a new idea, both confirmed by deep and wide-spread misunderstanding.

(b) The objection that a non-flesh diet lowers the bodily vigour must be met with a flat contradiction, as very nearly all the evidence points to the contrary, except in abnormal cases. It is true that for a time a sudden change from a full meat diet to a régime of vegetables strictly so called may mean under-nourishment, if the foods are not carefully chosen. Or a still more disastrous blunder is made in substituting a huge amount of innutritious vegetables for beef and mutton, as a way of inducing corpulence and losing vitality. This method is not to make the change gradually and discover by experiment and counsel both the amount and quality of the nourishment required. Other benefits found in meat from a non-vegetarian diet, especially if it avoids the danger of excess of starch and is diminished with advancing years, are as follows:

1) equability of spirits and immunity from depression, especially on waking in the morning—many would admit that this evil is due to heavy feeding over night; but it is not generally known that it is chiefly due to the meat poison; (2) immunity from rheumatism, lumbago, and other requirements of sleep; (3) comparative indifference to cold; (5) cure or mitigation of sea-sickness, mountain-sickness, headache, languor, etc. It is asserted by a vegetarian, however, that whatever can be expected after an interval of time varying in different cases, from the change of diet, and that so-called failures are either abnormal cases or due to want of perseverance.

Other objections are advanced not because of their cogency but as excuses for maintaining the status quo. It is urged that a vast industry would be destroyed and many thousands of caterers deprived of their livelihood. The whole force of this argument rests on the absurd assumption that all classes of the community would make the change suddenly. What is far more relevant is the prospect of a great stimulus to the wholesome cottage industry of fruit-growing, allotments, and agriculture generally. But it should be borne in mind that, granted the cogency of the ethical arguments, Christians ought not to be in a hesitancy as to their execution. One man, in the long run anyhow, suffering is diminished by right action and never increased.

Summary.—For the sake of establishing princi- mple, it is necessary to observe that the history of vegetarianism is of little use. Nor can it be contended that the physiological effects can be stated with anything like scientific cogency. Numberless individual testimonies in its favour could be quoted against a comparatively small number adverse. But the induction is too narrow to allow of any conclusions being drawn which can be reckoned more than very probable. One, however, so much as probability is conceded, the ethical argument becomes irresistible. Two considerations alone would establish this assertion: (1) the slaughter of animals being unjustifiable unless its necessity can be proved; (2) the practical certainty that flesh foods are stimulative to the animal passions, especially of the adolescent male, unless the consumption of them is restricted to a level hardly possible of attainment. Other benefits of a frugal and light farinaceous diet concern such exceedingly important departments of life as interior cleanliness and, of course, health of body, and therewith the paying of due reverence to it; the equality of spirits, and increased capacity of sustained hard work, both bodily and mental. Where a fair trial of the reformed diet has been given, it must be conceded that in these respects the individual testimonies in its favour are very numerous and convincing. Against all this, however, are custom, prejudice, misunderstanding, ignorance, and social inconvenience, much exaggerated but sufficient to demand thought and care. These forces, though for the most part inert, will probably check any considerable advance in the direction of change for many years to come.

VIKRAMA ERA.—The era known by the name of Vikrama, or more fully Vikramādi, or, according to the Jainas, Vikramārka, is that commonly used by Hindus over all N. India, except in Bengal, where reckoning by the Sakra era (q.v.) is preferred. It is commonly called Somavat, an abbreviation of Sāvitravesa, 'year,' but that word is sometimes used in connexion with dates expressed in other eras. The Vikrama era is also current in Telingana, or the Telugu country, and in Gujurat, where it begins at the interval point in 57 B.C., but, according to Fleet, 58 B.C. is correct. The year is lunisolar, consisting of twelve lunar months, harmonized with the apparent motion of the earth around the sun, the term of intercalation and omission, which may be studied in the technical chronological works by Jacob, Sewell, and other scholars who are cited in some of the publications mentioned at the end of this article. In N. India, the Vikrama year begins in the month Chaitra or Chait (March-April), but in Gujurat it begins seven months later in Kārtika or Kārtik (Oct.-Nov.). We also hear of localities where the year began either in Aśāsā or Aṣāṣ (June-July), or in Mārgasāris, or Māgh (Jan.-Feb.). Another variation arises from the practice of sometimes reckoning the month to end with the full moon (pūrṇima), and sometimes taking it to end with the new moon (amanita). The year, in any case, never coincides exactly with a year A.D., so that any summary formula of conversion will give more than approximate results. Consequently, the subtrac-

tion of 57 from a V.E. date gives the year A.D.; e.g., 1507 V.E. is equivalent to the period from 27th March, 1800, to 15th March, 1801 A.D., according to Cunningham's tables for a year A.D. beginning with the month Chait. Another complication is caused by the use in Rājputāna of a variety of the era called A-nanda, 'without nanda,' the term nanda being taken as equivalent to 90. An A-nanda year V.E. is converted roughly into a year A.D. by adding (90-57) 33. Thus 1507 V.E. A-nanda would be approximately 1800 A.D. instead of 1800, as according to the ordinary (sa-nanda, or 'with nanda') reckoning. The bardic poet Chand, who habitually uses the A-nanda form, was unjustly accused of erroneous dating until his practice was understood.

A Hindu date may be expressed in an 'expired' year, as, when we say a man is 70 years of age, he may have completed 70 years; or it may be expressed in a 'current' year, as when we say that an article was written in 1916, meaning the unfinished year at the time of writing. The causes mentioned above, besides others, make the exact conversion of V.E. into A.D. dates a difficult business. Tables must be consulted, but they are not and always must be recalculated. The equivalent of a date requires an expert.

The name Vikrama or Vikramādiya appears not to have been applied to the era until quite a late date, in the 10th or 11th century A.D. (Gupta times and 6th cent.) the era was known as that reckoned according to the practice of the Mālava tribe (grāṇa), who inhabited Mālva, then including S. Rājputāna. Probably the era originated in the mountains of Ujjain, at Ujjain, the ancient capital, from which the Hindus reckoned longitude. At that period the years were sometimes called kṛta (lit. 'made'), apparently with reference to a Vedic 4-year cycle of which the first year was termed kṛta.

No record is known of any rājā Vikram or Vikramādiya at Ujjain or elsewhere in 58 or 57 B.C., from whose accession the epoch of the era might be reckoned, as tradition affirms that it actually was reckoned. But it is possible that such a rājā may have existed, and the assumption is that the name Vikrama as applied to the era should be that of the king who established it. It is also possible that one of the later kings bearing the common title of Vikrama or Vikramādiya may have become associated with the era by erroneous tradition. The strongest candidate for the honour of being considered the original of the rājā Vikram (Vikrama) of popular legend is Chand-ragupta II. (q.v.), Vikramādiya (c. A.D. 575-613). Hoernle suggests Yoga-dharman (c. A.D. 530), who may possibly have been the successor of both kings ruled in Mālva. The origin of the era remains unknown, nor is there any clear evidence to show how, when, or why the name was changed from 'the era according to the practice of the Mālava' or 'the ancient era in the country Vikrama.' The subject has been much debated by archaeologists without positive result.

VIKRAMA ERA— VIRGIN BIRTH

VIRGIN BIRTH.—1. Ethnic. (1) A wonder birth or a supernatural birth is one of the commonest ideas in folk-tale and myth. In not all of these, however, is there what can strictly be called virgin birth. The latter certainly does not occur where ancient myths of the birth of heroes, great men, or kings are concerned. In spite of direct evidence of true human descent, myth told how a god was their real father. Plato and Augustine were said to be sons of Apollo, the kings of Egypt sons of a god and a human mother. In these myths also the mother is already wedded, and the divine parent is father in a purely physical and mental material form, in that form taking the place of the husband. In many folk-tales and sagas where the conception of the child is supernatural, and due to contact with or to swallowing some substance, or to the breath or the soul of a man or divine being falling on the woman, or to many other causes, the woman is already married, and the birth is not, strictly speaking, a virgin birth. In this aspect these stories are purely ritual customs in which married women desirous of having children make use of certain substances, certain means, certain rites, to aid or perhaps to cause conception. 1 Epigrapha Indica, xlii. 310.

VINCENT A. SMITH.

VINAYAS.—See LAW (Buddhist).
VIRGIN BIRTH

There are, however, a number of stories, both from the lower and from the higher culture, in which a virgin bears a child because she has swallowed a pebble, a blade of grass, or some other substance.

Pohalihonne, a hero of the 8th of New Mexico, was born of a virgin who had eaten two nuts. Fe-hi, who founded the Chinese race, was the son of a virgin who ate a flower which had sprung to her garment when bathing.

Sometimes pregnancy is caused by mere contact with certain objects, by lathing, or by the sun's rays. But, while such stories regarding virgins or at least unmarried girls (and this distinction is an important one, considering the commonness of pre-nuptial amholds), are fairly sets of transposition, the lower culture, it is certainly an exaggeration to say that 'the Virgin-Mother myth is universal in Paganism.'

E. S. Hartland, in his work, *Primitiv Paternity*, maintains that these stories, the corresponding rites to cause pregnancy, and many other factors have resulted from a former universal ignorance of the physical causes of conception, still alleged to exist among Australian tribes. While his arguments are weighty, it still remains doubtful whether this ignorance ever actually was so wide-spread. The universal existence of the coward would seem to imply knowledge of fatherhood. Widowhood and monogamist or in virgin births of a child born in the often metamorphosed form of some substance swallowed by the woman, and that again is a man or hero who has taken the form of some substance, in order to penetrate the womb. Yah, the culture-hero of Iriothalian tribes, frequently transformed himself into a pebble, to which a woman fell in love, and he was then reborn. With the Arunta of Australia a spirit of a totemic ancestor enters a woman and is reborn from her. Conception, then, for the Arunta, is not supposed to result at all from intercourse, though that may prepare the way for it.2 Paleolithic peoples, at any rate, (1) it has been widely believed that sexual intercourse is a condition, rather than a cause, of sex or of conception; or (2) that conception might be regarded as the result of one cause. In any case, the stories, which tell of a supernatural birth, the stress is more often upon the nature of the substance swallowed than upon the miraculous birth.

On the other hand, the theories of the Freudian school with regard to the substitution of myths and folk-tales in dreams in which there is 'wish-fulfilment,' and in which the unconscious supplants the conscious, might here be considered. In many stories, after an explanation of such legends of supernatural and virgin birth without reference to this hypothetical ignorance of the cause of conception.4 In support of this the mythical act of conception actually occurs in a dream in some of the stories in question—e.g., the story of Buddha's mother and the white elephant and that of the mother of Mithras.5

(2) Although virgin birth has been asserted of Zoroaster, this is hardly supported by the accounts in the sacred books. A substantial tale, 'the Heavenly Glory,' created by Ahura Mazda, mingled with all the stages of birth in Zoroaster's ancestral line. The sacred books tell how his father ate a plant containing the freewill principle, Zoroaster, and how both his parents ate food containing his substance. But this leads up to his actual physical generation. So, also, when myth tells how the future saviour Soshyas would be born of a girl, this is because some of the stories of Zoroaster, preserved through long ages, will enter her womb.6

(3) The myths of Buddha's birth came into being long after his historic existence, while, in being based on transmigration, they expressly contradict his own teaching. Buddha, existing in heaven, decided to be born again on earth for the enlightenment of men. For this purpose he chooses his father, the king, to be born as a virgin birth (also commonly asserted of him) out of court. His mother dreamt that, in the shape of a white elephant, he entered her womb. Next day this dream was interpreted by several Brahmins, who told the king that he would have a son, the J. M. Robertson, *Christianity and Mythology*, London, 1910, p. 392.

7 Cf. art. *Inscation* (Buddhist), vol. vii, p. 159.

10 SBE xix. [1855] 186.

Buddha. The ordinary physical generation is implied, but to this is added the supernatural element of Buddha's pre-existence, as in the Arunta theory of birth. Later stories, however, alter the dream into an actual occurrence. It is nonsense to speak of his mother as 'Maya the virgin.'

2. The Virgin Birth of Christ.—The narrative of the Virgin Birth of Christ is found in Mt 1.23 and Lk 1.33, i.e. in the only Gospels which profess to record the event of the Birth. The alleged silence of the rest of the NT is no necessary proof of its non-acceptance—e.g., by St. John or St. Paul. It was universally accepted without contradiction in the early Church, except among the Ebionites, even some Gnostic groups approving of it. Ignatius, soon after the death of St. John, witnesses to it most emphatically, and everything that we know of the dogmatists of the early part of the second century agrees with the belief that at that period the Virginity of Mary was a part of the formulated Christian belief.1

The first denials of it came mainly from Deistical writers in the 18th cent., and later objections come generally, though not wholly, from those who reject the 'supernatural' aspect of Christ's personality. The accounts in Matthew and Luke appear to be independent of each other in form, and are both regarded as to the main fact. Matthew's narrative is written as if from Joseph's point of view, Luke's from that of Mary, and these, as the original repositories of the knowledge of the fact, have been regarded as the respective sources from whom the narratives were drawn. The story itself is apparently older than either of the accounts of it. The silence of Mark need not be viewed seriously, as it is no part of his purpose to relate the story of the Nativity, while he uses the significant phrase 'Son of God' (1).2 This applies equally to John, though his language regarding the Incarnation has been thought to presuppose the Virgin Birth—e.g., 'the Word became flesh' (14)—while his reference to believers being born 'not of blood... but of God' (c.9) may presuppose the divine element in Christ's conception as the symbol of Christian regeneration. There is nothing to show that St. John repudiated the story.

The reading in some Patristic quotations which makes the passage itself a quotation from 'John', who was believed to have been accepted as the true one by some critics, but need not be pressed.

St. Paul's silence is regarded as weighty, yet he does not repudiate it, and, while its use might have added weight to his arguments for Christ's divinity and pre-existence, he does not formally refer to it, just as he makes wean reference to any fact of Christ's earthly life, outside the Crucifixion and the Resurrection. Perhaps he wrote before it was generally known; certainly before it was known from the Gospels. Of this there is a part with that St. Paul regarded Christ's entrance into the world as 'no ordinary act,' and his references to it have always 'some significant peculiarity of expression'—e.g., Ro 1.4; 1.3; 2.5; 2.9 (God sending his Son), Ph 2.6 ('becoming (RV)[in] the likeness of men'), Gal 4.4 (ἐγένετο) instead of the more usual γενέσθαι elsewhere used by him). St. Paul's doctrines of Christ as the Second Man from heaven and of His freedom from the taint of Adam's sin almost imply belief in the Virgin Birth.

Orr also suggests a significant parallelism between the phraseology of 18:19 and that of 18:18.

The passages of Matthew and Luke are found in all the MSS and Versions, and cannot be regarded as interpolations. They do not differ in style from

2 The word 'bebogen' seems to mean 'in the womb.' 6 But they may be accepted as possibly genuine ('The Gospel according to St. Mark,' ed. A. Plummer, Cambridge, 1915, p. 1).

the rest of the Gospels, and probably always formed part of the Palestinian tradition. It has been suggested, however, that, if Lk 1:56 of the Jewish source is found in Is 7:14. No Jew, however, would ever have applied this to the birth of the Messiah, though it was in accord with Matthew’s method to use it as pointing to an event otherwise known to him. Other critics have conclusively proved that the myth of virgin birth was unknown to Jewish thought, and that its origin in pagan mythology, some going so far as to assume an Oriental myth, for the existence of which there is no evidence whatever. The other mythical sources of the story, however, must be excised, for it must be obvious that they have nothing whatever in common with the stories of Matthew and Luke: in these there is no idea of physical procreation as there is in Greek myths, and all such myths were regarded with abhorrence in Christian circles. Any comparison of Matthew and Luke with such pagan myths (notwithstanding that these show the human feeling that extraordinary personages should have an extraordinary origin) will prove that we are moving in a different atmosphere—in the one reticence, in the other lack of it and a piling up of myth. Matthew and Luke give no explanation of the mystery. They feel that here is a fitting introduction to a life such as the world had never seen before, and to the events of that life they immediately pass on. With sublime simplicity they use the two words but the angelic messenger (Mt 1:20, Lk 1:8). Divine power, the power of a spiritual God, causes the Incarnation through the Virgin Birth. The reticence is marked in comparison with the exuberant language of the Apocryphal Gospels, and, if the Virgin Birth narratives are mythical, no myth was ever expressed in such bold and restrained language. The comparison with pagan myths has been influenced by knowledge of the lack of reticence in the pagan art and theology, into which pagan elements have crept. What we find there is, however, quite foreign to the Gospels.

3. Doctrinal significance of the Virgin Birth.—Only the briefest statement is possible here. It has been held that belief in the divinity of Christ, in the Incarnation, is possible without a belief in the Virgin Birth. While this is not to be denied, the fact undoubtedly remains that those who reject the latter are generally those who in greater or less degree reject the former. It is impossible for any one to say, granting the Incarnation, that virgin birth should not have been recorded for it. An absolutely unique personality such as Christ’s demands some new beginning, just as it was consummated on earth by the Resurrection. An Incarnation inaugurating a new humanity, itself to be creative in the lives of men, implies some new kind of birth, and the Virgin Birth is not out of harmony with this new step in development. The pre-existent Logos taking human flesh is a new event in history: the Virgin Birth adequately supplies the means to this, and no other method is even suggested to the NT. Such an Incarnation is itself so wonderful that the additional event of virgin birth hardly makes any further demand on faith.

While virgin birth is not the ground of Christ’s sinlessness through the absence of human paternity—the handiwork of a predisposition to sin being presumably as transmissible by motherhood alone—yet it is apparently connected with it through ‘the power of the Holy Ghost,’ in both Matthew and Luke. The miraculous conception is in direct relation to the subsequent personality and function. —It is he that shall save his people from their sins (Mt 1:21); that which is to be born shall be called holy (Lk 1:76). The assumption of a unique birth coupled with the dynamic and ethical power of the Spirit excluded the natural disposition to sin. The sinlessness of Christ was that of a
new Personality, human and divine, and it was
fitting that such a Personality should be embodied in
One of our own; our existence was uniquely conditioned.
Whatever the link between sinlessness and virgin birth may be, 'a
sinless man is as much a miracle in the world as a virgin
birth unless unity and physicality were mutually
conditioned. Whatever the link between sinlessness and virgin birth may be, 'a
sinless man is as much a miracle in the world as a virgin
birth unless unity and physicality were mutually

VIRGIN MARY.—See MARY.

VIRTUE.—See Ethics and Morality.

VIRTUES.—See Seven Virtues.

VITALISM.—See Abiogenesis, Biogenesis.

VIVISECTION.—Etymologically the term 'vivisection' denotes the cutting of living animals
under any conditions and for any purpose. But it
has come to be associated with experiments made on
the vertebrates below man for the advancement of
medical science, whether with or without pain.
To define vivisection, therefore, as 'the infliction of real and serious suffering on a vertebrate living
animal for scientific purposes' is misleading.
1. The justification of experiments on animals.
—Experiments accomplished by pain were un-
doubtedly performed on animals before 1875 in this
country, and in other countries more generally
and perhaps less resolutely. Their ostensible object was to promote man's knowledge of physio-
ology and pathology. A committee of the Royal
Medical and Chirurgical Society, e.g., made exper-
iments before that date on a number of animals to
determine whether, for example, the injection of persons apparently drowned, in order to give
assistance to the Royal Humane Society. In the
course of these experiments animals were half-
drowned and kept in water three, four, or five
minutes.2 As a matter of fact, from the time of
Galen of Pergamos (born A.D. 131) painful exper-
iments on animals were practised, and from them
unquestionably knowledge of anatomy as well as
do physiology and pathology was gained. Thus
Harvey was enabled to establish the circulation of
the blood; Hunter his collateral circulation;
Claude Bernard discovered glycogen in the liver;
Sir Charles Bell laid bare the intricacies of the
nervous system, and the names of Pasteur and
Koch will always be associated with the most far-
reaching of all pathological discoveries—those
connected with microcosms. That pain accompanied
the experiments by which these and other steps in
medical science were reached, that prolonged pain

3. Vivisection: the Royal Society, for Prevention of Cruelty to
Animals, and the Royal Commission, p. xix.

was frequently inflicted, that medical students
were taught by experiments made before them by
their professors; that animals were subjected to
experiments on their own account—all these facts
are generally admitted. And the admission
justifies the determined attempts to put an end to
experiments on animals made in the past by the
Victoria Street Society for the Protection of Animals
from Vivisection and other anti-vivi-
section societies. It is, however, only fair to
add that during the last thirty years immediately preceding 1876 the 'torture' of animals
had been materially lessened by the discovery
and use of anaesthetics.

But, apart from the cruelty which was practised, a
principle of importance was involved, viz.
whether medical science was to depend for its
progress on the casual observations of the doctor
or was to be promoted by experiment also. In the
former case progress would be minimized owing to
want of control over the phenomena; in the latter
case the time, method, and subject-matter would be
determined by the investigator. No responsible
person can controvert the science advances
mainly by selective experiments, or that all
knowledge shows sooner or later the way to
practical utility. There is no sense in reviling
winter sowing because in April there are no crops.
Experiments on animals have enabled us to
light the causes of disease, instead of dealing with
the symptoms. If, in the process of acquiring know-
ledge by experiment, pain is inflicted in some
degree, this must be counter-balanced, in forming
our judgment, by the greater pain we thereby
learn to prevent. Unfortunately this fact has
been overlooked as a rule in the controversy about
vivisection, and so the remark of Lord Justice
Fletcher Moulton before the Royal Commission of
1906 was to the point:

'If you want to do good in a particular way, and want
to know how you can do it effortvly, give your heart a rest, and
your brain a chance.'

2. Findings of the Royal Commission.—The
year 1876 marks a turning-point in the history of
vivisection. Since that your protests against the
'torture' of animals have become, in this country
at least, an anachronism. A Royal Commission,
consisting of Viscount Cardwell, Baron Wimma-
ugh, W. H. C. Floster, Sir John B. Horslake,
T. H. Huxley, J. E. Erichsen, and R. H. Hutton,
was appointed on 22nd June 1875 to 'inquire into the
practice of subjecting live animals to experi-
ments for scientific purposes, and to consider and
report what measures, if any, it may be desirable
to take in respect of any such practice.' The
Commission issued its report on 8th Jan. 1876.
In its conclusion was that it is 'impossible altogether to prevent
the practice of making experiments upon living animals for the
attainment of knowledge applicable to the mitigation of human
suffering or the prolongation of human life; ... that by the
use of anaesthetics pain may in the great majority of cases be
greatly mitigated; that the infliction upon animals of any un-
necessary pain is justly abhorrent to the moral sense of Your
Majesty's subjects generally.'
The Commission finally recommended that the
practice of experiments on living animals should be
regulated by law and placed under the control of
the Home Secretary.
The first result of the findings of the Commission
was the passing of the Cruelty to Animals Act,
1876 (39 and 40 Vict. c. 77). By it all experiments
on animals by an unlicensed person were pro-
hibited, and ordinarily experiments were confined
to a registered place; all licences were to be
vouched for by one or more of the presidents of
six great scientific bodies and by a professor;
the use of curari as an anaesthetic was disallowed;
invertebrate animals were excused from the opera-
tion of the Act; and a series of recommendations on

1 Evidence of Lord Justice Fletcher Moulton, p. 76.
experiments were imposed, especially one which insisted that the animal must during the whole of the experiment be under the influence of some anesthetic of sufficient power to prevent the animal feeling pain; this being modified by a subsequent section which allowed one series of experiments with an anesthetic prescribed for the certificate and for given reasons. One important fact had not come to light at the passing of this Act. Bacteriology as a science was but beginning its career. Hence all the evidence given before the Royal Commission dealt with current physiology, and when the Act was passed it was soon found that it made no provision for experiments by inoculation, which are now 55 per cent of the whole. Accordingly, these had to be allowed for, and they are brought under certificate A and certificate B.

3. Legal regulation of experiments.—Under the powers conferred by the Act of 1876 on the Home Secretary, certificates marked A, B, C, E, E, or F are granted to licensed persons. Certificate A allows experiments to be made without anesthetics when anesthesia would necessarily frustrate the object of the permitted experiment. As a matter of fact, an experiment allowed under this certificate; it sanctions inoculations, feeding, and similar procedures only, which involve no cutting; and the animal has to be killed under anesthetic, if it is to be in pain, and as the result of the operation is ascertained. In view of the somewhat grotesque statements which are frequently made about the prevalence of cruelty under the existing law, it will be advantageous to state the nature of the ‘pain condition’ now prevailing. Additional safeguards against the infliction of pain have been provided, in accordance with the recommendation of the Commission of 1906, by strengthening the special condition (known as the ‘pain condition’) which is enforced on the licence in respect of all certificates which either dispense with the use of anesthetics or allow the animal to recover from the anesthetic (provisions 2 and 3 of sec. 3). The ‘pain condition’ now runs as follows:

1. If an animal, after and by reason of any of the said experiments under the said Certificate ... is found to be suffering pain which is either severe or is likely to endure, and if the pain result of the experiment has been attained, the animal shall forthwith be painlessly killed.

2. If an animal, after and by reason of any of the said experiments, is found to be suffering severe pain which is likely to endure, such animal shall forthwith be painlessly killed, whether the pain is the result of the experiment or not.

3. If any animal appears to an Inspector to be suffering considerably, and if the Inspector directs that the animal to be destroyed, shall forthwith be painlessly killed.

Certificate B allows an animal to be kept alive after the initial operation, where a more or less prolonged observation is necessary to the scientific success of the experiment. Certificate C allows experiments to be made in illustration of lectures, but under anesthetics. Certificates E and E permit experiments on dogs or cats, and certificate F on horses, asses, or mules.

The best proof that the administration of the Act has been satisfactory is afforded by the findings of the second Royal Commission on Vivisection appointed in 1906, which published its report in 1912. The report was signed by all the Commissioners; it recommended no change in the text of the Act of 1876, but suggested, without recommending a special certificate for all experiments on dogs; it recommended certain increased restrictions and safeguards, which were adopted by the Home Office. It may be added that an unsuccessful attempt to pass the Protection Bill was made in 1919 in the House of Commons.

4. Practical conclusion.—Few questions have roused more embittered feeling than that engaged by the belief that lower animals were being callously subjected to experiments by medical men and others. Men felt that the humaneness inculcated by centuries of Christian teaching was being wantonly abandoned, and the outcry was in proportion to the annoyance to man of the animals which were used for experiment. Invertebrate animals were passed over as being negligible, and it was with man’s nearest friends, the dog, the cat, and the horse, that sympathy was most likely to be expressed. As the Ancient was an adequate sympathy for the sufferings of man himself was wanting to supplement that felt for these lower animals. No sufficient recognition was made of the fact that without experiments on animals doctors would frequently have no option save to experiment on their patients, for want of the knowledge which experiments on animals could alone secure. And, as it is, much of the success attending treatment for diseases connected with the blood, with the alimentary canal and the digestion of food, and with the central nervous system, springs from knowledge gained by experiments on animals. Especially, it has made possible the treatment of diseases due to infection by microbes. As the Royal Commission of 1876 pointed out, it was hardly an exaggeration that Dr. Jenner, discovered the immunity from small-pox of those who had contracted cow-pox. But it was by experiments upon cows that the origin of the cow-pox, a disease stated to be derived from “grasse” in the horse, was ascertained.

P Pasteur’s discovery of the activity of microorganisms in fermentation was the beginning of antiseptic and aseptic treatment of wounds, by which thousands of human lives have been saved and indescribable suffering removed, and with which the name of Lord Lister will be always connected by a grateful world. The treatment of tuberculous and diphtheria and the protective treatment against tetanus and rabies are dependent on knowledge gained by experiments on animals. In the same way the nature of cholera, balanic plague, typhoid fever, epidemic meningitis, Malta fever, and other curses of mankind is now understood, and the road to their annihilation opened. When we weigh the suffering caused to hundreds of thousands of human beings by these plagues against that far less pain caused by inoculation to a comparatively small number of mice, rats, guinea-pigs, and rabbits, we realize how irrational it is to attempt for the total prohibition of vivisection. The method of regulation, not suppression, adopted in this country does justice at once to the unquestioned claims of the lower animals to kindly treatment and to the duty of man to his fellows—the duty of using his reason in the age-long task of diminishing and finally extinguishing that particular form of evil which goes by the name of disease.

Catherine Daumart, born, we are told, of a noble family of Poitou, Voltaire afterwards took his first steps in life from his mother's family, though it has been maintained that it was derived from an anagram on his signature Arouet. L. J. ("le jeune"); but the fact that in the dedication to his Célébres de l'Époque — but he officially disclosed his second name in order to cast the other into oblivion. Voltaire was thus born in a state of moderate affluence, and he was sent to the Jesuit College Louis-le-Grand, which bore the honor of regaling Voltaire's learning, possessed by schools of that order. Here he was not only distinguished intellectually but was pointed out by his tutor as the future 'coryphæus of deism in France.' On leaving college, he came into touch with the Abbé de Châteauneuf, who had been a friend of his mother, and who was his godfather; he brought him into relation with Ninon de l'Enclos. That remarkable woman, who had had the courage to reject Madame de Maintenon's offer of an invitation to the court on condition that she should become dévot, was now very old, but she maintained her freshness of spirit, and discerned in the remarkable character of the boy and left him a legacy for the purchase of books. Already he deplored in verse 'his Jansenist of a brother' and declaimed a poem, called the Epître à un Comédien (the author attributed it to Voltaire), which portrayed Moses as an impostor. Perhaps it was from Ninon that Voltaire first learned the lesson whose influence pervaded all his life, that the spirit of man is free, and that men are entitled to form their judgments for themselves. The society into which young Voltaire was launched was indeed a dissolve one. It represented a reaction against the hypocrisy and intolerance of the court of Louis XIV., and its wit was frivolous and its literary efforts trifling. The Abbé Chaulain, a versifier of some merit, exercised much influence on Voltaire and typified the outlook of the society in which he moved.

Naturally M. Arouet, the father, was shocked at the company kept by his son, and by the fact that he began to write a tragedy instead of learning law. He finally dispatched him to the Marquis de Châteauneuf, brother to the Abbé, and French ambassador in Holland; but the young man became entangled in a love affair and the ambassador sent him home. But alas! he soon forgot Voltaire, but Voltaire, to the despair of his father, was determined to live in the world in which he had got a footing, mingling with the nobles and more bent on versifying than occupying an office-stool, in spite of the fact that he had matriculated as a lawyer. A friend of his father took pity on him and brought him to a château near Fontainebleau, where he became engrossed in the study of history— a study which resulted later on in the production of La Henriade and Le Siècle de Louis XIV. Louis XIV. died in 1715, and there followed an outburst of salves on the memory of the monarch who had enjoyed such adoration. One of these was termed Les fâ lus and concluded, after describing the evils which in his short life the writer had seen, the crowded prisons, the unjust taxes, with 'And I am but twenty years old.' Though Voltaire was actually twenty-two, he was falsely accused of being the author, and in May 1717 he was sent into the Bastille, where he remained till April 1718, being allowed to return to live in the following October. This was not his first detention; he had been sent out of Paris as early as 1716, owing to verses that he had written regarding certain distinguished personalities.

Confinement in the Bastille, which was perhaps not very severe, had little effect on Voltaire's spirits, for he remained a confirmed La Ligue, corrected his tragedy Édipe, and even wrote gay verses on his misfortune. Édipe was performed in 1718 with great success, and this was the first of the dramatic works, which were to follow one another in such marvelous succession. Before this he had written only fugitive pieces, including an ode which had vainly contested for a prize given by the French Academy. Afterwards he went on with his great work, the Henriade, and also wrote the tragedy of Artémire (1720), which was much more severely criticized than was the Édipe. Everywhere the young poet was welcomed, though he appears to have again been banished for a season from Paris for his intercourse with the enemies of the regent, and more especially with Richelieu and de Gortz. With Madame de Rupelmonde he visited Holland and saw J. B. Rousseau at Brussels. Voltaire read his Épître à Uranie, and Rousseau rectified his works to him, but the two men were separated as irreconcilable enemies. Voltaire returned to France in 1723 and lived there till 1746; which was on the same lines as Artémire under new names and plot; then came the famous Henriade under the name of La Ligue. Voltaire as author of this work found the plots of the Théâtre de La Comédie and Mariannet—may be said to have made his mark in literature. The idea of being the eulogizer of King Henry IV. had inflamed his imagination since his twenty-first year, and he had begun to write in the Bastille. His idea was to dedicate the work to the king of France (Louis XV.), and the dedication was written, but there were difficulties in regard to censorship, and it did not appear. The book was issued in 1725 at Eton after an abortive effort to get it published by subscription at The Hague. An English edition (1726) was dedicated to the queen of England, consort of George II. The poem is often compared with the Enéide, and it has a place in French literature which brings it into comparison with the classics of ancient days. The subject was a great one, and, while it adheres to historic facts, there is in the work a fine sense of morality, and above all that deep love of humanity and liberty which characterizes its author's best writings. Condorcet says that the Henriade was born in the century which was made by reason among men, the greater will be its circle of admirers. Unfortunately for the truth of this dictum, life and dramatic power are also necessary to make a work such as this immortal, and these are lacking in the poem. Perhaps it was not possible for Voltaire to write a great epic; it required a depth of thought and concentration that was not his. Also the age was possibly too critical and pernicious.

In 1722 Arouet the elder died, implaceable to the last as regards his gifted son, who was now definitely known by his famous name of Voltaire. The latter was living a life of social pleasure, visiting country-houses,—those of Sully, Villars, etc. — composing verses d'occasion, arranging theatricals, and writing all the while with set and definite purpose. He loved the country, but dreaded the loss of precious time spent in country-house pleasures. Change of scene seemed necessary to him; he was ever passing from one place to another in a way that was astonishing, in those days of continuous war, that was only a matter of quick impressions, but not entirely one of self-indulgence, for Voltaire never forgot that his work claimed his first endeavours, and he never hesitated to speak his mind. He even supposed that he would have imagined that that work would have given
him an established place in society and caused his person to be respected, but, if he himself might be tempted to think so, he got a rough awakening.

Voltaire was dining, as he often dined, with the Duke of Rohan, who took it amiss that Voltaire's sentiments did not agree with his own. 'Who is that young man?' he asked; 'who contradicts me in such tones so loud?' 'My lord,' Voltaire replied, 'it is one who bears no great name but who wins respect by the manner in which he uses the small sword and challenged the name he bears.' A few seconds later the chevalier regained his composure upon the young man by causing his lackeys to administer a caning to him at the door. Sully refused to interfere, and, stung by rage, Voltaire obtained instruction in the use of the small sword and challenged the Rohan and the latter prevented him from fighting and Voltaire was thrown once more into the Bastille, where he was kept for sixteen days.

This was in April 1726, and on 2nd May he was allowed to leave for England, accompanied by an escort as far as Calais.

Voltaire's journey to England was not only a turning-point in his life, but a factor in the economic and intellectual history of France. One can imagine the spirit in which he went there, burning with indignation at the manner in which he had been treated by the laws or customs of his country. He passed into the country of Newton and Locke, the Newton and Locke of Voltaire and Bolingbroke, of Swift and Pope—a country which allowed men to speak without fear or hindrance of what they had experienced or believed. Voltaire had become known as a man of letters; now he had felt it to be his mission to become the liberator of his countrymen from bondage and false beliefs. Voltaire felt France a poet, he returned to it a sage. Newton's examination of facts strongly appealed to the young man, and his mind was specially drawn towards the Newtonian theory of attraction as well as to Locke's appeal to experience as the basis of all knowledge. Metaphysics and theology, he thought, were hindrances to the progress of human knowledge.

The Lettres philosophiques, or Lettres sur les Anglais draw attention to the many matters in which the country in which he was living was in advance of that of his birth. He was but a refugee from the Bastille, and his country was still in a condition of feudalism with an aristocracy which was exempt from almost all forms of taxation. In England, on the other hand, he saw intellectual eminence honoured and rewarded; even administrative posts were granted to distinguished men of letters, whilst the liberty of the press was absolute. He cannot have been surprised that these things were publicly burned by decree of the French Parliament.

The tragedy of Brutus was the firstfruits of Voltaire's visit to England, expressing as it did the aspirations of an oppressed people. The next twenty years of Voltaire's life, between his leaving England and going to Berlin, were a prolific period. The dates of his most famous tragedies are as follows: Brutus, 1730; Zaire, 1732; Mort de César, 1735; Alzire, 1736; Mahomet, 1741; Merope, 1743; Sénonvins, 1747; Tancredé, 1760. The Mort de César was a brave venture, for not only did it deal with ground well trodden by a greater dramatist than Voltaire himself, but it was a play without love scenes or women, and in three acts only, and thereby a complete innovation. Its republicanism, too, was sufficient to cause its publication to be prohibited in those days of tyranny. Its author came into further contact with the authorities over an attack he made on the excommunication of a celebrated actress, who was not only beautiful but honest in her turn. But, though Voltaire was ever ready to take up real causes of oppression, he was far too susceptible to any vulgar calumny, and his time and talents were used in petty quarrels for the worth of a publisher's name and position. His struggle was by his writings to

1 John Morley, Voltaire, p. 56.

own sovereign, Louis xv., would have none of him, and Frederick, now king of Prussia (1749), took advantage of Voltaire's fear of how his writings might affect his reputation and that of the king, to secure his presence by an offer of protection. A constant correspondence took place between the two, as well as a soi-disant diplomatic visit on Voltaire's part to the king's house in 1746. Voltaire's historical writings occupied him greatly at this period of his life. He is not remembered as properly speaking, a historian, but his histori- cal works are worth reading in the times in which he himself lived, and hence their interest for us to this day. They are full of intelligence and good sense, with moralizations which are to the point and are yet combined with an irony which is characteristic of the author. His Siécle de Louis XIV. is specially interesting, inasmuch as he was able to make use of his own private information and of memoirs hitherto unpublished, like those of Saint-Simon. He gives a very full account of the government, commerce, and industry of the time. In fact, he had in view not only to write a history of the period with which he dealt, but also to reveal the state of the mind in that wonderful epoch of history. He worked with great diligence, passing the whole day at his desk, and despite frequent ill-health, never seemed to tire.

Madame de Pompadour was Voltaire's first friend at court, and through her he was asked to celebrate the marriage of the dauphin in a court piece called the Princesse de Nointe. In view of this work, which he regarded very lightly, he was made in 1745 historiographer of France—a position once jointly held by Racine and Boileau—and given thereby a certain protection as well as a salary of 5,000 livres. But above all he desired to obtain admission to the Academy, and before this was possible he wrote to Latour, head of his former school, professing his devotion not only to religion but also to the Academy. He achieved his end in 1746. But he did not long hold a place in royal favour, for libels poured upon him, worse even than before. Crébillon was given the pre-eminence as an author by Madame de Pompadour and others, and everything was done that could be done to humble and discourage him. In 1749 Madame du Châtelet, the friend of sixteen years, died. Her companionship had meant much to Voltaire, and his life with her had been marked by an unceasing and unshaken dignity. Frederick of Prussia, who had for long corresponded with Voltaire and had formerly urged his migration to Prussia, came to the throne in 1740, and renewed his blandishments. The result was that in July 1750 Voltaire arrived at Potsdam. He was received with the greatest respect by his remarkable host and endowed with a pension; but the step was one which he had every cause to regret. By his action he even gave offence in his own country and to Louis xv., his king, little appreciated as he had been by him before. He thought he would find liberty and peace in his new abode, but he found on the intellectual side obscur- antism only. The Academy of Sciences, founded by Sophie-Charlotte under the direction of Leibniz, had fallen on evil days. The king was mainly concerned about drill and orthodoxy theology, and Berlin was far behind Paris in civilization, being in many ways but a mediæval town. The association of these two, the greatest figures in Europe, was to the misery of the philosophes, who were so far from being able to communicate with each other. But actually the combination was disastrous. Frederick was Voltairean, it is true, but his interests were centred in the establishment of the Prussian ascendency and the transformation of the face of Europe. Voltaire's task was a no

1 Letter to Madame Denis, Berlin, 2nd Sept. 1755.
2 Confer. p. 206.
peaceful life, but he meant to devote himself to political work, to obtaining a change in the constitution of the republics and to help bring them more into line with that of England. He wished above all to procure economy of public money, to put an end to persecution and intolerance, and he considered it was against reason to tolerate these ends in view. He was ambitious, desired to produce and to teach. He might indeed be compared to a great European instructor—one whose works were written, to which were not too favourably disposed to receive the instruction offered. He was not an idealist perhaps, but he had the good of his fellow-countrymen at heart, and there was no better place from which to preach the gospel of the deliverance of mankind from the thraldom of the oppressor than the republics of Geneva and Abbeville.

His literary work went on apace. The first play to appear was L'Orphelin de la Chine, composed when he was in Alsace and performed in 1755. His peace was, however, disturbed by the piratical publication of La Pucelle, which forced him to finish and issue it himself. By its means there was plenty of reason given to the enemy to blaspheme, although it may be possible to argue that it aims at the destruction of hypocrisy and superstition. It is impossible, however, if so, not to notice the form and the gross manner of bringing about that result had been adopted and that more respect had been shown for a famous woman and patriot. He also wrote at this time the poem entitled La Loi de Dieu and the Desoix de Lisbonne. The first was burned by the parliament at Paris because of its attack on intolerance and the fear of where such opinion would lead. He endeavored to express in an antagonism to the orthodox view of the origin of evil, and was condemned in consequence. In 1759 he published Candide, undoubtedly one of the best of all his works of the romantic and philosophic type. It is an ironical satire on the optimism of Leibniz, and is extremely amusing as well as full of a common-sense type of wisdom, so that it can be read in the present day with as much pleasure as when it was first published. At the end of it there is the famous injunction to himself and his readers to 'cultivate one's own garden.' Voltaire also made a free translation of Ecclesiastes and part of the Song of Solomon, and, as instruction and entertainment, works appeared. This was published under his own supervision, and to this edition there was added the Essai sur l'Esprit, générale et sur les mœurs et l'Esprit des nations, a work undertaken in order to influence Madame du Châtelet in favour of the study of history. This work involved an immense amount of research and labour that must have been irksome to a man of quick wit like Voltaire, who was neither an earnest student nor a metaphysician. But his historical writing was never dull. He grouped his facts and interpreted these in a wide way, giving them life and significance. His reflections may not be very profound, but they are full of common sense and just. He obtained the best material available and put it to the best use in his power. On the whole he was scrupulous and critical in respect of the value of his evidence. Satire and wit were always at his command.

In 1755 Voltaire sold Les Délices and settled at Ferney, where he occupied the position of a country gentleman, and there he remained until his celebrated days in the court of European statesmen. Voltaire was still at Berlin, and with their object, the free and open statement of the facts of science and philosophy, he was in the most intense sympathy. Hence from Ferney he wrote a number of articles for the newspapers. This work took up much of his time, and when it once became known, it was speedily prescribed. The writers were known as the philosophes and encyclopédistes, and among them the chief was the celebrated Abbé de Chastenet de Pompone.1 The latter was as usual ready to make reply to the ignorant attacks made on the writers who numbered among them those most distinguished in the literary world; and a series of pamphlets was the result. One of these is known by the name of L'Encyclopaedia, a comedy in which a culminating journalist is introduced.

At the age of sixty-six Voltaire wrote Tancred, dedicated to Madame de Pompadour. This work was admired by Gibbon and translated by Goethe, and it has always been considered one of the author's best dramas. But he was not only concerned with literature, for the human side of him was ever conspicuous.

His admiration for the great Cornelle was profound, and his notes on some of Cornelle's works are among the mightiest criticisms where he thought criticism due, none recognised more fully the greatness of this man of whom France was so proudly. His grand-niece was, he said, in distress, and at once Voltaire said that it was 'the duty of a soldier to succour the injured spirit.' Consequently he wrote to her and provided for her education, and with wonderful tact and good feeling he assured her that she owed her support to the dependents of her illustrious uncle. Another case, much more remarkable, is that of Calas. This old man, a Protestant, had been brought on the wheel because his son was found dead and he was accused of poisoning him, although there was not the slightest evidence of the fact. The accusation rested on the traditions of the Indians that a son masked as a martyr. The father died, but Voltaire took enormous trouble to have the sentence annulled and to prevent the other members of the family from being convicted. But after the years had passed, he was successful. During the three years which were taken up with this matter Voltaire stated that 'not a smile passed over my face but that I reproached myself for it as though I had committed a crime.' No wonder that when he came to Paris in triumph before his death he was acclaimed as the saviour of Calas. Stevenson's case was somewhat similar, but he had time to save himself and take refuge with the protector of the oppressed and persecuted, and he was consequently secure.

But it must not be assumed that it was only these of another faith than that in which he had been brought up whom Voltaire succoured. He was ready to help any one oppressed in whatever way, and whatever his profession. The case of the Jews in Portugal was not old intolerance but the destruction—the 'friends of letters and enemies of reason,' as Condorcet calls them—enlisted his sympathy, and one of them, persecuted by the Inquisitionists, had attempted suicide; but Voltaire went to the Pope and said that if he was not without his use when Voltaire's own enemies blasphemed. But free-thought was speedily apace, and persecution did little, if anything, to stem the tide. Jean Jacques Rousseau was writing, and his writings were being circulated abroad. Political feeling was strong against a privileged and effete aristocracy. And yet the most astonishing events occurred, like the case of a young soldier named La Barre, about seventeen years old, who was accused of defacing a crucifix placed on the bridge of Abbeville. The lad was executed with horrible barbarity, and this aroused a blaze of indignation in Voltaire's bosom, although he had some cause to fear for himself, seeing that the Dictionnaire philosophique was in a manner involved (it was burned with La Barre's body).

No wonder that he exclaimed when he was tired of hearing that twelve men were able to establish Christianity! I should like to prove that one is capable of destroying it. We cannot forget Voltaire's efforts on behalf of our own Admiral Dying, who retired from the Encyclopédie in 1765, and who was still at Munich, and with their object, the free and open statement of the facts of science and philosophy,

VOLTAIRE

shot in 1757. 'In this country,' says Voltaire of England—'a good sword is well-adapted to his use now and then to encourage the others.'

This side of Voltaire's character—his righteous indignation with injustice and indefatigable efforts after restitution when injustice had been inflicted—is the side which attracts us most. He, perhaps, the greatest personality in Europe (for Frederick

was his only rival till the star of Goethe rose), endowed with a power of sarcasm and of invective of a kind, had the power to act, and it is entirely to his honour that in those difficult times he did act without fear and without delay. His humour was the bitter humour of the

man who felt that things were too desperately bad to be taken entirely seriously, but this sardonic merriment did not prevent his practical action. His correspondence, which forms in some ways the most interesting part of his voluminous writings, is full of expressions of his inmost feelings regarding the events that were occurring daily around him. The iron burned deep into his soul, and he was given the power to foresee what was wholly realized only later on and then was dealt with by the terrors of revolutionaries.

There is another side to Voltaire's character which is more difficult to fathom. When he built his Temple of Minerva and built it in a small church with the inscription on it 'Deo erexit Voltaire,' and his correspondence shows him to be apparently anxious to prove himself to be all things to all men. He was likewise always ready to shelter himself through anonymity, and even to ascribe his works to another, though the other was dead and unable to defend himself. No doubt the times were bad and men's lives had to be preserved; but, whatever the customs of the day, this action was far from heroic. Then there is the famous communion made on 1st April 1769, followed by a public protestation of respect for the Church. His impish delight in forcing the priest to administer the communion to him, though forbidden by his bishop, and his 'forgiveness' of the bishop, is not an edifying spectacle, any more than the fact that Voltaire had himself made temporal father of the order of Capuchins for the district of Gex—an act done probably to annoy the bishop of Annecy. Even his sympathizers were scandalized by these actions, and in regard to them and many others no one can make a categorical statement. Voltaire was a deist, but that he regarded orthodox Christianity in any other way than as a scoffer is unthinkable, and this is the role he played throughout. He scoffed at the ordinary optimistic point of view, whether it was the one of the philosopher or that of the ordinary believer. He was always ready to criticize and show the errors incident in any positive creed or system of philosophy, but he never reached a constructive system either of spiritual belief or of social theory. Indeed he did not appear to have constructive power any more than great originality, but his interest in theological matters is apparent from his constant references to them. His religion, though it partook of negation, was not of the wholly negative character of that of some of his contemporaries, nor did it partake of the nature of the beliefs of Rousseau. Voltaire denied what he believed to be false, and that included practically all that he had received as religious tradition from the past. It left a sort of possibility for the future which Rousseau's followers have since seized. Voltaire was performed amidst tears of enthusiasm; the author's bust was crowned in the theatre, and it was difficult for him to pass through the surging masses of people, and to sit during Voltaire's last days. And the 'Henriade, Mahomet, and La Prucelle!' they cried. The Academy, after all its coldness to him

2. Cayeux, 1741, letter to M. Kaahle.
in early days, lavishied honoris upon him. Franklin was in Paris, and Voltaire insisted on speaking to him in his own tongue and blessing his grandson in the simple words 'God and liberty.' And the great man was not idle. He was revising his Essai sur les mœurs, and he had a scheme for a new academy to be issued by the Academy, and he even himself undertook the first letter in it. But all this was too much for a man of 84. Sleep went from him, he took more opium than was good for him, and he was no more fit for duty in May 1778.

The Abbé Gaultier confessed him some time before his death, and it was declared by him that he died in the Catholic religion in which he was born. 'I am about to appear before God, the Creator of the universe,' he wrote. 'If you have anything to say to me, it will be my duty and privilege to receive you.' When he was in the act of death, the curé of Saint-Sulpice tried to get him to give a more detailed statement of his beliefs, and, as he was frustrated in this, made difficulties about his burial. Finally, however, Voltaire was buried at the Monastery of Scellières in Champagne, where his nephew was abbé, in time to avoid the interdict of the bishop. There was also objection made to the usual service for one of the members of the Academy; the king of Prussia, however, hearing of this, interceded, and his majesty himself wrote his eulogy. In 1791 the body was removed to the Panthéon, but later it was disturbed and taken away, like so many others.

Voltaire's personal appearance is perhaps better known than that of any literary man of his time. He was extremely thin, almost like a skeleton in old age, with bright piercing eyes and a 'mocking smile,' and he wore a wig. He had a great attraction for women and a certain devotion to them, but this was for the most part of a platonic kind, and in any case he did not, like so many of his contemporaries, allow himself to be carried off by his feet by it. His life was never indecent, judged by the standards of his time, whatever his expressions may seem to us to be. His powers of work were prodigious, and, though not physically strong, he often worked for eighteen or twenty hours on end. He was interested in medicine and has the credit of recommending inoculation for smallpox when it was hardly thought of. His conclusion as to health matters is given in a letter to M. Bagieu, a neighbour of his, on December 26, 1745: 'I have come to the conclusion that every man must be his own doctor... above all he must know how to suffer, grow old, and die.' Sometimes he is seen bargaining and quarrelling about sums of no importance, and then indifferently munificent on another occasion. From such contradictoriness of nature he may be painted black or white, as the sympathies or prejudices of the observer dictate. To do with his own and later generations he was the most sinister figure of his age, and his writings (excepting some of his historical works) the most harmful in the 18th century. Others regard him as the deliverer of the oppressed and the champion of liberty. He wrote with the utmost ease and lucidity. He was a prince among journalists, and his output was enormous, as the 50 volumes of his writings testify.

What he wrote was writen as from himself and not as the views of those who had written before, though he had a wonderful power of absorbing the work of others. Goethe, after enumerating all the great, admirable works of the 18th century, designates him only 'two-depth and finish ('Tiefe und Vollendung'). He was no philosopher, but a child of the 'Illumination'; i.e., he belonged to the school of those who saw facts so clearly that there seemed no possibility of error in them. It was the time of cataloguing and arranging, the heyday of encyclopedic knowledge. Yet all Voltaire's work was impressed with his own individuality. He seemed to have the power of seeing the truth that others were blind to. He was always considering, and, when he came upon a false belief, he ran at it against it without hesitation. He could not be called a sceptic, for he had his own beliefs clearly defined and certain; his was no dogmatizing spirit, and, when he held that there is a God exists; but it also tells me that I cannot know what He is.' There were occasions on which he lied, but the lies were begotten of the circumstances of life which he was ready to justify. His vanity was apparent to all, but that again was the conscious vanity of the man who felt himself to be above his fellows. He was money-loving, but he loved money because it redeemed him from a position of subservience and gave him the power he required. He had another side which proved ready to be generous and hospitable in the extreme, so that he cannot be truly called avaricious or miserly. He was by nature a politician, and, as an entrance to the politics of his country was denied to him, he showed what could be done on a small scale in his own domains and passionately upheld the interests of his country. He did not live to see that his teaching bore fruit in a manner none could foretell, though many must have anticipated it when they saw how vain the efforts after orderly reform had proved. Such men as Voltaire were never to have a chance of being used, for the amelioration of the conditions of their country. Such as he, who had an intense love of humanity, and on whom the misery of the common people under their unjust taxation rested like a constant cloud, were set aside. His reception in Paris as a human benefactor might have enlightened the rulers of the time.

Voltaire loved the stage from his boyhood onwards, and among his works there are 50 or 60 Théâtre pieces of various merit. The interest in his tragedies is often said to be too purely intellectual; i.e., love plays little part in them. This is characteristic of the writer on whom in manhood affection never seemed to take any passionate hold.

His poetry is fluent, and the usual criticism is that its fluency is greater than its substance, and that its great charm is its theme (and the theme is one that specially appealed to Voltaire), is not the really great poem that he intended it to be. He wrote many comedies, but no one could say that real humour, such as we find in Sterne, was present in Voltaire's writings. Of wit he had an ever-ready store, and his subjects knew too well of his powers in caricature. But Voltaire had not the terrible bitterness of Swift. His romances and tales appeal to the largest section of readers, if we except his historical works. They are delightful to read to this day. Candide gives us an admirable specimen of his style. L'École des femmes and César attack the orthodox view of Biblical events, though not the larger ideas of Providence. The most numerous of his writings, however, if we except his Correspondances, are his historical works, of which the best known are Charles XII., Louis XIV., Louis XV., and the Histoire de l'Empire de Russie sous Pierre le Grand. The first is celebrated for the attractive way in which it is written, the ease of its style, and clearness of its narrative. With his Essai sur les mœurs he breaks with the old forms, so unsatisfying, as he explains, to an intelligent age, and Madame de Montespan, in a letter of 1727, tells him she gives us a sense of proportion which was absent from the writings of those who had made sacred

VOLUNTARISM

In the Stewartian case, the same judicial authority was bestowed, and the spiritual authority of an establishment cannot exist in law, except so far as the Legislature has allowed or sanctioned that authority—a principle which was corrodorated by Lord Wood: "The Church, as an establishment, is the creation of statute."

The decisions as to all of them (in the Auchtterm, Lechendy, St. Anthony's, Calais, and Calais, and the others) were uniformly founded on the one general law, laid down with cumulative deliberation and emphasis, that the Kirk derives "all its powers," and has its whole authority, "from the common consent and the laws of the realm . . . and that the jurisdiction of the church Courts is derived from and defined by the State."

It is only just, however, to note that the subordinate standard of the Church, the Westminster Confession of Faith, speaks with two voices on the relation of the Church and State. In one passage it enunciates the principle that "God alone is lord of the conscience, and hath left it free"; in another, the principle of spiritual independence is not less clearly enunciated: "the Lord Jesus, as king and head of his church, hath appointed a government in the hand of church officers, distinct from the civil magistrate;" but in other passages this document is as frankly Erastian as, if not more so than, the decisions of these judges and the reasons by which they are supported.

"The civil magistrate . . . hath authority, and it is his duty, to take order, and cause the church officers to execute the power committed to them, in order that the truth of God be kept pure and entire, that all blasphemies and heresies may be suppressed, all corruptions and abuses in the church prevented, and all the ordinances of God duly settled, administered and observed. For the better execution of this office, he is to be present at, and to provide that whatever is transacted in them be according to the mind of God."

(3) Hildebrandism.—According to this theory, the Church's authority is not only in things spiritual but in things civil as well. This theory takes its name from Hildebrand, the family name of Pope Gregory VII, and finds its most memorable illustration in the excommunication of Henry iv, and his pilgrimage to Canossa. For three days he stood in the courtyard of the castle, in midwinter, clothed only in the hair shirt of a penitent, till he was absolved and restored by the pope. Excommunication, by the civil law of the empire, involved deposition; no excommunicated person could sit on the throne. Indirectly, therefore, if not directly, the enthroning and the dethroning of monarchs was part of the authority to which the Vatican laid claim.

The claim of the Free Church of Scotland in 1843 has been described as Voluntaristic, or Hildebrandian, but a full elucidation of this is groundless. The core of the claim of the Free Church of Scotland and of those secessions by which it was proceeded was the right to regulate their spiritual concern, communion, worship, discipline, without interference from the State—a claim that differs in two essentials from that of Rome.

(5) The finality of the authority of the State in temporal matters, including Church property, was not questioned. The decisions of the Legislature and Law Courts might be unjust and oppressive, involving hardship even to persecution, but the right of the State to pass these laws and to enforce them was not disputed or resisted.

(b) The Free Church, unlike the Church of Rome, claimed no authority over the conscience of the individual.

(3) Co-ordinate jurisdiction.—Establishment in England and Scotland has been described by many under this conception. The Church, it is argued, existed before the State, and is independent of it. She framed her own creed and constitution and adopted them; she organized her own courts and defined their sphere and jurisdiction. The spiritual law of the realm and the civil law were in accordance with the teaching of revealed religion, or accepting them as such on the authority of the Church, inscribed the Creed in its statutes,

ratified the Church’s claim to jurisdiction in her own sphere, and voted support from the nation’s exchequer (1819), but Church and State would restrict themselves respectively to their own spheres, they need never come into conflict.

Co-ordinate jurisdiction is the ideal outlined and advocated by Thomas Chalmers in his Lectures on the Use and Abuse of Literary and Ecclesiastical Establishments (1827) and later in his Lectures on the Establishment and Extension of National Churches (1836), but the disestablishment of his ideal had not been realized. The cause of establishment had been vindicated in argument, in his opinion, but his grief was that the cause had suffered defeat at the hands of those who believed in it, but nullified their convictions by submitting to the jurisdiction of the State in the sphere of the Church.

(4) Nominal establishment with real and effective endowment.—This theory is that the function of the State is only to furnish monetary support, and it is not for the State to intervene or to judge whether the creed and constitution on which the Church had been established had been departed from or not, an ideal which seems to be the objective of the articles declarative of the constitution of the Church of Scotland and the proposals for voluntary establishment. This, however, he thought, but, as these articles and the question they involve are still sub judice, they will not be further referred to in this article.

(5) Voluntaryism.—The voluntary takes high ground and argues from first principles. The Church is the Bride of Christ, and the phrase is more than a figure. There is so much of reality in it that, if the Church enter into a wedded relation with any earthly institution, the loyalty and obedience which she owes to her King and Head are thereby imperilled.

The Church’s sphere is faith and conduct; but these are questions of conscience, and conscience must not be forced. Liberty of conscience is one of the first principles of religion. The only weapons of the Church are moral and spiritual. The weapon of the State is force. The entry of the State into the sphere of conscience is thereby de facto delbarred.

Liberty of conscience implies universal religious toleration. Religious toleration connotes religious equality. Religious equality and voluntary, is traversed by Church establishment. Not only is loyalty to Christ imperilled by alliance with the State, but history has proved that such alliances are impossible without situations arising often in which the Church must choose between the will and command of the State and the will and command of Christ.

Conscience is forced by establishment, for State support directly or indirectly comes from all classes and creeds, and people are compelled to support what they may or may not get benefit from; and in many cases for the propagation of doctrines which they do not believe.

Tolerance is traversed, for the principle of intolerance is the same whether it be expressed in the form of active persecution or in that of passive disability. Equality and justice are traversed wherever one Church or one creed is favoured, privileged, provided for more than others.

Voluntaryism is thus reached by the path of development, where a voluntary takes his stand on great a priori principles of justice, liberty, equality, and, in particular, spiritual independence, of which he holds that voluntaryism is the logical and indispensable conclusion. It is reached primarily by the path of induction. It is supported by masses of evidence accumulated from the history of the Church in every age. The Church was never so vital, so convincing, so fruitful as in the first three centuries before it was allied with the State.

The spiritual activities of the Church in modern times in every field of service (Home Mission, Foreign Mission, Church Extension, liberality)—not to speak of the inward graces of the spirit—have been confessedly greater and more fruitful in voluntary churches than in those allied with the State.

Not less convincing are the testimonies of those who, previously to the disestablishment of the Church of which they were members, not only believed in the principle but believed also that the existence of religion in their country was bound up with the voluntary or the Church was of no spiritual value. For their experience of disestablishment moved rapidly to the opposite pole of opinion. Lyman Beecher wrote:

'It was as dark a day as ever I saw. The injury done to the cause of Christ, as we then supposed, was irreparable. For several days I suffered what no tongue can tell. And yet it was the best thing that ever happened to the State of Connecticut. It cut the Churches from State-support: it threw them wholly on their own resources, and God.'

Colonel Sanderson, formerly M.P. for North Armagh, whose every sympathy was strongly biased against disestablishment, politically as well as religiously, declared that he voted against the disestablishment of the Church of Ireland, but would not undo that vote if he could: 'He believed the Irish Church at the present moment was stronger and more spiritual than it ever was before.'

2. Voluntaryism and Scripture.—The argument against State support is often rested upon Scripture, but the argument is not final. The passages most frequently quoted and relied upon are:

1 Co 9:14: 'Even so doth the Lord ordain that they which preach the gospel should live of the gospel'; 1 Th 5:10: 'My kingdom is not of this world: if my kingdom were of this world, then would my servants fight, that I should not be delivered to the Jews'; 2 Co 10:4: 'For the weapons of our warfare are not carnal, but spiritual (or) mighty through God to the pulling down of strong holds'; Gal 6:1: 'Let him that is taught in the word communicate unto him that teacheth in all good things.'

Now it must be premised that the weight of the Scripture argument depends upon the interpretation and application of the passages. So convinced a voluntary as the late Principal Cairns acknowledged this frankly in a lecture delivered in the Synod Hall in 1883:

'The voluntary principle is, in one sense, held by all Christians. They all admit the duty and privilege of giving for voluntary purposes, according to their religious principles, and argue that voluntary, is traversed by Church establishment. Not only is loyalty to Christ imperilled by alliance with the State, but history has proved that such alliances are impossible without situations arising often in which the Church must choose between the will and command of the State and the will and command of Christ.'

Confessively, then, the weight of the Scripture argument rests upon the interpretation of these passages. Scripture authority would be final only if one interpretation were possible. But that is not maintained.

1 Co 9:14, the great proof text of voluntarism, may be correctly rendered: 'even so doth the Lord give instructions or directions that they who preach the gospel should live of the gospel.' The instructions referred to, doubtless, were those given on the occasion of the voluntary is traversed by Church establishment, but seventy, but most of those were local and temporary in their nature: some of them assumed the power of law: others included a voluntary poverty and dependence on Providence ('no purse, no scrip') compatible only with a temporary and unusual Providence, not the condition general or even widespread by our Lord when He said: 'But now, he that hath a purse, let him take it, and likewise his scrip: and he that hath no sword, 1 Disestablishment in Connecticut, quoted in J. Barr, Scotch Church Questions, 1837.

2 Glasgow Herald, 23rd June 1862, quoted in Barr, p. 140.

3 Synod Hall Lectures, Edinburgh, 1882.

4 The Italics are the present writer's.
VOLUNTARYISM

let him sell his garment, and buy one.' (2 Cor. iii.) Many of the apostles, as well as Paul, were voluntaryists, and the fact that he still considered this instruction valid for the Church in Corinth does not prove its validity for all time. To say that it was an instruction debares the Church from any help from other persons is surely an irreversible step.

In A.D. 313 and 2 Const. 104 enumerate the same principle that the Church as such will not resort to the weapons of force, but that the individual believer will accept help from a civil power as such is not a self-evident corollary from it. The principle of toleration to liberty of the individual Christian. To say that the Church as such is thereby forbidden to accept a contribution from the State is a non sequitur.

Isolated passages from the OT or the NT for or against disestablishment and disendowment are so differently interpreted and applied by different writers, and these interpretations are so coloured and biased by the writer's position, that definite conclusions cannot be rested upon them.

3. Voluntaryism in history.—The first quarter of the 16th cent. was signalized by three remarkable edicts:—(1) an edict of Galerius signed also by Licinius and Constantine, a venia indulgentia, by which the last great persecution was brought to an end; (2) the edict of Milan (A.D. 313), a declaration of universal religious toleration; (3) proclamation by Constantine 'to the Peoples of the East (A.D. 324), in which toleration is based on the principle of justice.

Thus the issue of the edicts of Constantine was voluntaryism, but the practical issue of his action and influence was State-Churchism. His personal benefactions were very large, and the gifts of an imperial character can hardly be disentangled from those of the State. The whole weight and wealth of the Byzantine Empire under Constantine and his sons in the middle of the 4th cent. were put in the scales on the side of Christianity, and it was essentially established and endorsed as the religion and the worship of the empire.

Space limits us to two or three great names in the voluntary succession.

(1) Ananias Higlieri.—"A. Constantine! to how much ill gave birth, Not thy conversion, but that plentiful doer, Which the first weighty Father gain'd from thee."—

(2) John Milton.—"It concerns every man's conscience to what religion he consents. The civil magistrate is entrusted with civil rights only, not with conscience.... That which each man gives to the minister, he gives either as to God or as to his own teacher. If he gives it to God, he is justified in devoting to religion uses any part either of civil revenue which is the people's and not the State's, except from other taxes, or of any movable property, but God by special command as He did by Moses, or the owner himself by voluntary intention and the persuasion of his giving it to the minister. It is well for him as to his teacher, and eat justice or equity compels him to pay for that which religion leaves freely to his choice whether he will learn or no, whether of this teacher or another and especially to pay for what he never learned or approves not, whereby, besides the wound of his conscience, he becomes less able to recompense his true teacher... most of all are they to be reviled and shamed who cry out with the distinet voice of notorious hirelings that if ye settle not our maintenance by law, farewell the Gospel, than which nothing can be uttered more false nor ignominious, and I may say more blasphemaous against our Saviour who hath promised without this condition both the Holy Spirit and His presence with the Church to the world's end."—

No clearer or weightier exposition of the principle of voluntaryism and the sense of justice to which it appeals lies anywhere before given.

(3) John Locke.—Locke's First letter on Toleration is a powerful exposition of the motto from which it begins: 'Absolute liberty, just and true liberty, equal and impartial liberty is the thing that we stand in need of;' an exposition that would still, I think, be of great service in carrying its logical issue from the magistrate to the Government by which the magistrate is appointed.

(4) A. R. Vinten.—"How will it be possible to persuade the state that it has no right to superintend services for which it pays... whoever pays is master over the service paid for,'?—

(5) Henry Alford.—'Coming, as it does, from one of the most scholarly and most spiritually-minded men in the Church of England, the thoroughgoing voluntaryism of Alford is remarkable.

'The next term is, the severance of the Church from the State. Whether years, or decades of years be taken for the accomplishment of this, this fact is plain and plain however opposed; accomplished it will certainly be... God's arm is thrusting it on, and man's power cannot keep it back.'

Voluntaryism as a principle was not professed by the founder of the Secession and Relief Churches in Scotland or by the Free Church of Scotland at the Disruption. In Scottish Church history it is a practical corollary rather than an a priori principle. The claim of spiritual independence, and the growing certainty that it could not be realized in a State Establishment; the conviction that State support for one branch of the Church was unjust and forced the conscience of those who did not belong to it or believe in it; the conviction, also, on the part of many that State alliance and support were contrary to the teaching of Scripture, led the former United Presbyterian Church almost unanimously to a large majority of the former Free Church of Scotland, to adopt voluntaryism as the polity of the Church. The leaders in that movement were the Principals of four colleges—John Cairns, Robert Rainy, Thomas M. Lindsay, and George C. Hutton of Paisley.

The Church of Ireland was disestablished in 1869, the Welsh Church in 1909, the bill becoming operative in 1911, the Church in France in 1803. No Church is established in Canada, Australia, New Zealand, or South Africa; there is none in the United States. The only English-speaking nations in which establishment still exists are England and Scotland.

4. Questions.—(1) Is voluntaryism compatible with the conservation of endowment? James Barr, in his recently published Scottish Church Questions, the most effective and comprehensive contribution to the subject yet produced, holds that it is not.

'The whole body of the Church is the Church of Scotland, or at least a large majority of the Church of Scotland,' he writes. 'It is the Church of the community of the covenanting fathers; it is the Church of the commonwealth, the Church of the State; and it is the Church of all Scotland.'—

'The Church of Scotland is not the Church of England; it is not the Church of the united Presbyterians and Seceders; it is the Church of the Church of Scotland, and no other.'

Some, however, have claimed for themselves the designation of 'pure voluntaries' who deprecated the alienation of the endowments. Speaking in the Assembly of the Free Church of Scotland in 1852, W. Robertson Smith said:

'I will stand here as a Free Churchman, but perfectly free to say as I do now, that while I am a loyal Free Churchman, recognizing the value of the act of 1853, I also stand here as a voluntary—a pure voluntary';

but Robertson Smith made it clear that he did not take exception to accepting relief from the State.

Objection to endowment rests on three grounds:—(a) it is anti-Scripntural—to which it is replied that that is a matter of interpretation and of circumstances; (b) it is contrary to sound political economy that a State should give monetary help without determining and enforcing the conditions on which it is administered—to which it is replied that, if the State is satisfied with the wisdom and conscience of those to whom the money is given in trust, its duty to itself and to its citizens has been fulfilled; (c) it is incompatible with the principle of spiritual independence; it is not possible that a Church should be endowed, and spiritually free. A distinction, however, may be drawn, and

VONDEL

has been drawn, between an endowment and a donation.

'1 It is perhaps conceivable that the State should make a donation to the Church without imposing conditions, but that it should make permanent provision for the ministers of religion

and impose no conditions is not for a moment to be thought of.' 1

Furthermore, when it is remembered that many believe that morally as well as legally the endowments to the Church, that the State has never really owned them, but only administered them, that the alienation and secularization of these endowments would be morally unjust and religiously harmful; when further it is remembered that centuries of undisturbed possession establish a prescriptive right in law as well as in equity, it seems clear that one may claim to be a voluntary and yet hold also that the endowments of the Church should not be secularized.

(2) Voluntaryism appeals so often to conscience that one is constrained to ask, Is it possible to be a State-Churchman and yet to be sincerely conscientious? Does voluntaryism claim a monopoly of conscience? Was Elzevirner Erskine not true to his conscience when in 1735 he wrote:

'Whenever it shall appear that the established J udicators are in any measure contriving the cause of Christ, purging and cleansing His house according to His will and the solemn covenant lying upon the members of the Church; I am bound by the law of God, and the members throughout Scotland, I hope not only to return to communion but to enter the gates of Zion with praise.' 2

Thomas Chalmers was loyal to his convictions and conscience when, in his opening address to the first Free Church Assembly, he declared, 'We are not voluntaries,' and when in 1827 and 1838 he bent the weight of his massive intellect and pure heart to the vindication of Church Establishment as being right and expedient. The voluntary is conscientious according to his light; so also is the State-Churchman. To say otherwise would be a 'railing accusation' on one side or the other.

But, if both are equally convinced and equally conscientious, it follows that the conscience of a sincere State-Churchman is forced and wronged by disestablishment in the same measure as the conscience of a sincere voluntary is forced and offended by an existing establishment. The argument leads to a moral dilemma. Neither side could press its conviction if the conscience of another were thereby offended.

Solicitur ambulando. The question is one for men as citizens of the State more than as members of the Church; some convinced voluntaries have held it to be their duty to be troubled by the Church of a man. In a democratic Government like our own the will of the State is the will of the majority of its people. If that majority believe that the best and wisest way in which national religion can be expressed is by a national Church, their right to disestablish and to disendow cannot be questioned.

The voluntary ideal is a Free Church in a Free State. The trend of public opinion everywhere is towards the fulfillment of its realization is inevitable. The principle has been recognized and embodied in Queen Victoria's Proclamation to the native religions when she assumed empire in India.

'2 Firmly relying ourselves on the truth of Christianity, and acknowledging with gratitude the solemn of religion, we declare, as the world and desire to impose our convictions on any of our subjects. We declare to be of all and.popularity that none be in any wise favoured, none neglected or disdained by their religious faith or conscientious convictions; that all shall alike enjoy the equal and impartial protection of the law; and we do strictly charge and enjoin all those who may be in

1 Andrew Henderson, Synod Hall Lectures, Edinburgh, 1853, p. 63.

authority under us that they abstain from all interference with the religious beliefs of any of our subjects on pain of our highest displeasure.'

The justice of that Proclamation to many minds is self-evident; but what is just in India is just for all the world, and the day will come when justice shall be done.

By what path will it come? It may come by way of the State or by way of the Church. State-churchmen and voluntaryists were in agreement in terms. Voluntaryism for the individual is real only when it is spontaneous. Compulsory voluntaryism may force the conscience of the State-Churchman as really as State-Church forces the conscience of the voluntary. Let voluntaryism get its majority and power, and, on the ground of abstract justice, it is entirely justified in enforcing its convictions on the nation. The true voluntaryist, however, hesitates to do it. He will rather suffer wrong than inflict it on the conscience of another.

Voluntaryism may come by way of the Church. Conviction in favour of the disestablishment of Church not only in Free Churches but in those allied with States. The proposed union of the two great Presbyterian Churches in Scotland and the tentative approach of England and her Church of England and Nonconformists are full of hope and promise. The voluntary conviction in each of these unions would leave the whole lump, and voluntaryism would come by a great free-will supremely sacrificing. The Churches would demense themselves of every State-confessed privilege, prerogative, preferment, and prestige and take their place on the platform of toleration and equality with all the Churches of the land.

WILLIAM ROSS.

VONDEL.—I. Early life and writings.—Joost van den Vondel (1587-1679), the greatest of Dutch poets and one of the greatest religious poets of the Counter-Reformation, belonged to the South Netherlands, his parents being natives of Antwerp, pious 'Doopgezinde,' or Baptists, who were driven by religious persecution to settle at Cologne, where the poet was born in 1587. The lovely opening stanzas of his Olyftack aan Gustaef Adolf, written when that town was threatened by the Swedish army, recall his earliest experiences. While he was still a child, his parents migrated, first to Utrecht and later to Amsterdam, where his father soon acquired a considerable business in the hosiery trade. Vondel's younger brother was thus enabled to obtain a good classical and musical education. The poet entered his father's business and was a self-educated man. As an exile from the south, he became early a member
of the Chamber of Rhetoric, 't Wit Lavendel (White Lavender), to which most of the Brabanders in Amsterdam belonged; and his earliest plays and poems were of the same type as the Ridders en van der Hooge and of the Bible plays which, under the influence of the Renaissance and the Reformation, had taken the place of the medieval moralities. The poems show also, like some of Milton's first verse, an admiration of an admixture of theological lore; and the poems of the French Protestant poet Du Bartas. His wife took over the management of the hosier business, and Vondel set himself to the task of repairing the decline of his poetic career; and whatever form his poetry may take, its master-quality is always lyrical—ardour and sweetness, fertility and subtlety of thought, a music of verse which is at once the full and resonant counterpart of the changing moods of his exalted mind. He wrote few or no love poems. Only once or twice in his long life does the current of his private feelings of joy and sorrow rise to the surface in a lyric of joy or sorrow. His personal interests were merged in his passion for great causes, patriotic and religious.

The first conflict which evoked the full strength of Vondel's religious feeling and poetic genius was the critical struggle between the Remonstrant Arminians, supported by the magistrates and cultured circles, and the Calvinist Contra-Remonstrants with the common people behind them, which ended with the Synod of Dort and the execution of Oldenbarnevetel. Vondel's soul was moved to its depths, and about 1618 he attacked Prince Maurice and the preachers under the thin veil of a classical tragedy on the subject of Palamedes. He had to go into hiding and was fined for his boldness. Vondel found a more effective outlet for his feelings in a series of satires, ballads, and poems, which were printed throughout his life. The best of these, the fiery Geese Vesper of Steckhout, Under zijn hart, and the Rompdepot van Hansbro, where the mutual amenities of the Calvinist clergy are portrayed under the figure of a roost full of gobbled, screeching, fighting cocks, are popular songs handled by a poet of genius. The Decretum Horribile is an impassioned denunciation in Alexandrines of the doctrine which consigned infants to eternal perdition. Roosam en Harpoen, in the same verse, are more quiet and argumentative expostulations against endless theological hatred and strife. The Uitvoer van Apollo en Speelstrijd van Apollo en Pan, written when his Lucifer was driven from the stage, read like folk-songs into which a great poet has blown a music as winged and sweet as the Hymn of Pan by Shelley. None of Vondel's poems have presence, nor do they seem to be satirical as the satire.

It would be out of place to quote any full account of the secular poems which flowed from Vondel's pen hereafter till the end of his long life. A large number of them are political and erotic, and none of them exudes, descriptive and lyrical in character, written to celebrate the sea-power of Holland, the birth of a prince to the House of Orange, the victories of Frederick Henry by land or by sea, or the building of a new Stadhuis at Amsterdam, the visits of royal persons, the marriages and deaths of his friends. He was the laureate of Amsterdam for the rest of his life. But he was never the same city was the heart of the Netherlands, and the Netherlands almost the heart of Europe, responsible to every movement from Sweden to Spain, from England and France to Turkey, and looking out over the seas to the East and West Indies. He summoned himself to the task of writing the history of his religious development and some of the chief poems in which his devout and ardent feeling found expression, dramatic, didactic, and lyrical.

2. Attractions of Roman Catholicism.—The steps which led Vondel into the Church of Rome have nowhere been clearly indicated by himself, but they are not difficult to trace. As a Doopsgezind he had been brought up to reject the doctrine of predestination as formulated by the Calvinists. That movement had its ultimate source in the desire to find in the Reformation not so much a new creed as a new method of religious and spiritual communion with God; and for Vondel himself it is clear that Christianity was primarily a movement of the heart, a passionate love of God, a faith in God, a love to his heart. To him Calvin's doctrine seemed an outrage on that faith and love. The bitter fanaticism of the Contra-Remonstrant preachers appeared equally hostile to the spirit of Christian love. Moreover, as a poet and lover of the culture of the Renaissance, he ranged himself with the poets, dramatists, and men of learning, like Grotius, the object of his warmest admiration, who found their chief friends and patrons in the magistrates and middle class who were also the supporters of the Arminian movement. In short his religious and artistic sympathies alike drew him to the side of the Remonstrants. But he had no sympathy with the somewhat Epicurean and sceptical spirit of some of the humanists, as Hofft, who took the same side. Religion was for him the first of interests. Further, within his own Baptist communion were differences that disturbed him and doctrines enunciated to which he could not subscribe. In the Antidatum tegen het Vergift der Geestdrifters (1626) he ranges himself against the supporters of the doctrine of the security of the Christian and the source of inspiration and instruction equal or superior to the written Word. He does not go further in this poem. He does not ask whether the interpretation of Scripture may be left to the individual enlightened by the Spirit. But events showed that this was the question on which his mind was busy, that he was in search of an authority able to allay such storms of conflicting dogmas as had swung over the Netherlands and brought to the seafold one of the savours of his country. The trend of Vondel's mind was diametrically opposed to that of Milton, who was a republican in politics, and became always the custodian of the personal and any organized Church, any authoritative interpreter of Scripture, any mediator between the Scriptures and the individual conscience and reason. An uncompromising adherent of author-}

2 See art. MULTOON, VOL. VIII. P. 6445.
but elaborates more fully the legend that Alexander the Great spared Jerusalem at the intercession of the high-priest. Like Milton also, Vondel was planning in these years a heroic poem, and the subject he selected was the conversion and victories of Constantine. He had reached the battle at Milailen when his wife died, and the poem was never completed nor any part of it published. He turned to tragedy, and prepared for the new Amsterdam theatre a classical tragedy on the legend of a Hound. Gijsbrecht van Aemstel, supplying the details of his plot from the description of the destruction of Troy in the second and third books of the Iliad. The best things in the play are the beautiful choruses on married love and on the Massacre of the Innocents; but the sympathetic treatment of Roman Catholic rites and beliefs throughout the play warned his countrymen of the coming change which was consummated in the autumn of 1641. With the Gijsbrecht, too, Vondel began a long series of dramas on Biblical subjects or saints' legends, but including two patriotic plays — Der Batavische Gebroeders and the general De Leeuwendaelers. Vondel did what Milton in the same years would probably have done had he not turned from poetry to political and religious controversy. But, on his hand, what Milton would not have found in England — a theatre to perform his religious plays.

The relations of the Protestant Reformation and the drama were complex, and differed in different countries. In general, both the Reformation was antagonistic to the stage generally, on much the same grounds as the early Church, and especially to the realistic presentation of the great mysteries of the Christian faith in the miracle and mystery-plays. But, on the other hand, the moralities lent themselves to polemical ends, Protestant as well as Roman Catholic; and the educational interest of the theatre and its need as an instrument in drama composed in Latin — e.g., the Jephthes and Baptizes of Buchanan and the flourishing drama, Terentian and Senecan, on Scriptural subjects, of Germany, Switzerland, and the Low Countries. From both of these sources were descended the novelesque Biblical plays of the Chambers of Rhetoric, the kind of play with which Vondel had begun. But the Eglishire, the most famous of the Amsterdam plays, and its successor — the Academy, founded by Coster, a minor dramatist, preferred secular plays, native farces, romantic plays of the English type, but without their poetry, and classical plays. The new Theatre which finally took the place of Coster's Academy was opened with Vondel's Gijsbrecht, and it was here that all his subsequent plays were presented with elaborate and gorgeous staging and scenery. These plays differ from his earliest experiments simply in their more classical form, as that was understood, their closer resemblance to the Latin plays of Gratie.

3. Vondel and Milton. — Vondel's genius was not dramatic, and his ardent piety still further limited his dramatic treatment of its themes. He was incapable of letting his artetic genius so far get the upper hand of his diviner purpose as to create a great figure like Milton's Satan. His favourite hero is the pious and submissive saint whose first virtue is unquestioning obedience to the will of God and whose main virtue is sometimes even painful, as in De Gebroeders, a play on the subject of the expiatory murder of Saul's sons, in which David's piety is shown by his becoming accessory to a crime at the bidding of a pious and political high-priest. Vondel's temper is more attractively expressed in plays whose hero is some young saint of pure and ardent piety, like Joseph in the two plays with which he followed up his translation of Grotius's drama on the subject of Joseph's temptation, Joseph in Daathan and Joseph in Egypten, or again in the beautiful character of Jephtha's daughter in Jephtha. The most famous of all his plays the Lucifer, will not bear comparison dramatically with the great opening books of Paradise Lost. Vondel gives as the motive for the rebellion of Lucifer the announcement by his father, the Sun, that he is to take the Sun himself and thereby raise humanity to a higher level than the angels, following the tradition that the Incarnation was independent of the Fall. With his eye upon the Rebellion in England, to which he was passionately hostile, he presented the revolt more in the form of a mutiny among the angels, in which Lucifer allows himself to be pushed to the front, concealing his deeper ambitions under a veil of zeal for the rights and liberties of his order — a Cromwell, in short, as a royalist sentinent interpreted Cromwell's policy and career. For Milton also disobedience to the absolute and unquestioning will of the Creator is a crime, but there was in Milton the temper that rebels, and he was on Cromwell's side, and the apologist of regicide. His feelings and imaginations are not only to the history of his dogma, but the great and human figure of Satan as he himself presented to us in the opening books, Vondel's strength did not show itself in dramatic creation, nor, any more than Milton's, in philosophical or mystical interpretation of the Incarnation and the fall; but in descriptive and lyrical poetry — the opening picture of Eden, the final conflict of angels in the air, a great naval battle as between ангелы van Tromp and diabolic Blakes, and the choral odes — e.g., that on God which closes the first act:

*Wie is het die zo hoogg geseten,
Zoo diep in 't grondeloos licht.*

All Vondel's plays show the same weakness in the portrayal of heroic and dramatic characters, the same descriptive and lyrical qualities. Such a pious and complete acceptance of the Christian view of life as Vondel's leaves little room for tragedy such as that of the Greeks or Shakespeare; for it eliminates those conceptions of fate and chance and the enigma of human life which such tragedy is an expression.

4. Teaching the plays. — The teaching of the plays is in general simply Christian and Biblical; only latently is it specifically Roman Catholic, as in Jephtha, where Vondel makes Jephtha's sin his stubborn reliance on his own conscience rather than on the authority of the priest whom he consults. Vondel's more purely Roman Catholic sentiments found expression in lyrico-ididactic poems such as the Broeken der Heilige Maagden (1642), saints' letters modelled on the Heroes of Ovid; the Altergo-geheimenissen (1645), an impassioned didactic on the sacrament of the Mass, the Scriptural and ecclesiastical authority for the Roman Catholic Church, and the mystery of the worship of the Host, and the rites with which that worship is invested: De Heerlijkheid der Kerke (1663) on the glory of the Church; and the Bespiegeling van God en Godtendien (1663) on the attributes of God.

More interesting than these to the reader of to-day, especially the non-Catholic reader, are those poems for which Vondel, as a Protestant, was intended for a didactic purpose, his personal feelings in strains which reveal what a fullness of happiness the devotional richness of the Roman Catholic Church brought to him as to the English poet Crashaw. *De Koninklijke Hulp,* a brooding river of song:
in praise of David's Psalms, the Opdrukacht acn De Heilighe Monstro, prefixed to the Brieven mentioned above, a white flame of adoration, are good examples. The perhaps most touching of all are the shorter, simpler lyrics evoked by the death of his wife, his little son Constantijn's 'zalig kijnje,' his daughter, and his grand-daughter. The Uitwond van myn Dochterken, written in 1633, is an unrehearsed portrait of sorrow, simple but perfect in form. The corresponding Uitwond van Maria van den Vondel (1688) is a hymn of resignation to God's will that hardly breathes regret.

When this earthly life hath ended
A life of God and angels tended,
His gift to those that earn His love,
Wint from that Unity is severed
Must here to weary exile go
On earth no resting-place discover,
In heaven her fatherland and house.

Her dying breath went out to God
Whither all hearts must turn to last,
The goal, the rest, the perfect portion;
And in that prayer all sorrow passed
The resignation which such poems breathe was displayed by Vondel in the heroic close of his life when the aged poet sacrificed his whole fortune to redeem the debts of a worthless son and spent ten years of his life in the service of his native city as a journalist. The public power of the Dutch State rewarded him with a pension of 60 florins a month for Pegasus. He died in 1679 at the age of ninety-two.

5. Place as a religious poet.—The personal note of the individual's life is seen historically the most important; for the significance of many poets like Crashaw and Vondel, emphasized by the supreme place which the latter holds among the poets of a country which had been in the vanguard of the Reformation in the Netherlands, reveals the importance of the Counter-Reformation, where it was that the Protestant movement had miscarried, had ended, not as its leaders anticipated, in a victory of Christ's Church over Antichrist, but in a definite rendering of the seamless garment, a division leaving truth and untruth, good and evil, on either side. In its eager quest of a purer and more Scriptural creed and simpler worship, its impatient desire to root out the tares of 'humanity'—traditions and ceremonies, Protestantism had outrun the human heart, had ignored the depth and power of the instincts of those beliefs and rites were the life-blood of the true priesthood of Christ, the Church speaking with authority; the significance of the sacraments, above all of the Eucharist—the 'This is my body,' 'This is my blood'; the devo- tion to the person of Christ and its overflow in the cult of the Virgin and saints—there were in Protestant countries and churches of all denominations hearts to which these things had only to be presented to make immediate and irresistible appeal. Some of the most interesting movements in Protestantism since the 17th cent. have repre- sented the effort of individuals to recover these sources of devotion without sacrificing Protestant loyalty to SCRIPTURES, and the history of truth; and there have been corresponding movements in the Roman Catholic Church to secure a higher level of Scriptural and historical truth without any sacrifice of traditional devotion. Vondel was not a poet of the calibre of Dante or Milton; there is nothing striking and original in the content of his thought; but a poetry so resonant and harmonious, uttering with perfect impassioned rhythm and force the exultations and exultations of a great Christian soul—a Roman Catholic poet in a Protestant country—can never be without significance for the student of religious thought and feeling in Western Europe since the Reformation.

For the student of the drama too there is an interest, corresponding to that of the religious drama of Calderon, in this last survival in a Protestant country of the drama of the Middle Ages.

Catholicism, says a recent writer, 'like the Greek but unlike the English, had not cut itself off from its religious origins, and so remained a far more truly national institution than the English drama ever became after the Reformation.'

Vondel's drama is throughout religious and patriotic. If it is not completely national, it is because this is the spirit which it expresses and not that of the great body of the Dutch people and because it does not do full justice, as Shakespeare's did, to the secular interests of the nation as these had taken shape and colour under the quickening influence of the Renaissance.

LITERATURE.—The most complete bibliography, up to date, is in H. W. Unger, Catalogue of Writings, etc., by J. van den Vondel, Amsterdam, 1887; Bibliographie van de Vaderlands Werken, do. 1888. See also G. Kalff, Geschiedenis der Nederlandsche Letterkunde, Groningen, 1896-1914, iv. 333-346. The best ed. of Vondel's works is that of J. van Lennepe, in 28 vols., Leyden, 1818-44; Geeraardt Brandt, Leben van Vondel, Amsterdam, 1882, ed. Emile Verweij, 1886, is the classical biography. A complete list of Vondel's dramas, not including translations, in order of production is: Het Pascha (1613), Ptolemades (1625), Hieronymus van Amstel (1626), De Wijngaerde (1639), De Gebroeders (1639), Joseph in Dothan (1640), Joseph in Egypt (1641), Eerstere Vondelsche Pieter en Petrus (1641), Maria Stuart (1642), De Lovenambt (1643), Lucifer (1644), Stal- mena (1657), Jeptha (1659), Koning David in ballingschap (1660), Koning David in gezelschap van Hetzelsheing (1661), De Batavische Gebroeders (1663), Poeta (1663), Adam in ballingschap (1664), Daal en Zevenheuvelen (1667), Nicolaas van den Boegrand (1667) is a short didactic epic suggested in part by G. B. Marinus's La Strage dei Innocenti. For the religious drama of the Reformation see art. DRAMA (Introductory), s.v. C. H. Herford, Literary Relations of England and Germany in the 16th Century, London, 1906; W. Joseph, Die Gesch. des neuern Drama, Halle, 1895-1909, vol. ii. bk. i. and elsewhere. Note also G. Edmundson, Milton and Vondel, London, 1885; H. J. C. Grierson, The English Drama of the Seventeenth Century (in 'Periods of European Literature' ser.), Edinburgh, 1900, p. 33; and Kalff, op. cit.; Vondel's Lucifer, tr. L. C. Van Noppen, New York, 1885.

H. J. C. GRIESEON.

VOODOO.—Voodoo is devil-worship and fetishism brought from the Gold Coast of Africa by negro captives to the United States and West Indies. Its chief sacrifice is a girl child, referred to by the initiates as 'the goat without horns.' When a child is not available, a white kid takes its place. Excepting at the great semi-annual festival when the 'goat' is drugged, killed, and eaten, black dogs, cocks, and hens are cruelly sacrificed by being dashed so that their bowels fall out. There is a regular farce performed, and rob the devotees. These sometimes have the name pepetaloi and mamoisi, more frequently poppy and narcum, used as a prelex to their given names. The head of the circle or association of priests and priestesses has the title of 'king'; e.g., King Alexander was long the head of the cult in the south-western states. The entrance into the priesthood is won by many and difficult tests. The aspirant (man or woman) must endure hunger, thirst, extreme heat and cold; must go sleepless, unless commanded to have the dream-tormented sleep induced by drugs; must eat out of and drink the ooze of the drugs. While performing these rites, he must keep a calm mind and strong will, and memorize the power of various poisons, from rattle-snake venom, stramonium, and water-hemlock to putrid liver and carbolic acid. Also he must acquaint himself with the properties of healing herbs, such as red clover for cancer, dock for liver trouble, benset for fever, etc. Must learn to make thick-rum, rich-tasting pastes of love, fingers-of-death, and other fetishes, and lay up in his memory the incantations which he must mumble as he works and the number of times he must repeat them, for numbers are very important.

1 John Eglington, Anglo-French Etudes, 1917, p. 59.
in his magic. He must, above all else, concentrate his will, so that, by the time he is considered a finished product by his school, he is a hypnotist of power. When he has satisfied his teachers as to his requirements, he is set to lead a season's dances, these being fire-, snake-, and moon-dances. The fire-dance is the most important, and is called the 'great dance' (megadromos) of the devil; but in Homer and Hesiod we first meet with the technical ἀνάθεμα, and inscriptions of about the same age have ἑθύμα, ἑθῦμα, ἑθυμα, and ἑτυμα. Shortly after this the term used for the votive offering becomes generalized: ἀνάθεμα and, as its passive, ἀναθήματα, being used to distinguish such things from gifts to human beings (เทพย, ἀναθέμα). These terms remained until the 4th cent. and later they lose their force. These changes probably correspond to psychological changes, the offering being considered at first as a gift to the god, then as a gift from the giver, and finally the religious feeling being swallowed up in self-glorification. The shifting centre of gravity changes the character of the gift, and at last robs it of its value.

2. Occasional Uses. The offerings might be given on any occasion, customary or special, public and private; but, whether state or person was the giver, the principle remained the same. Our classification is perhaps preferable to the former one. (a) Customary. — There are many records of customary offerings at the recurrent festivals. Such are the dedication of a ναῦσα to Athene every four years at Great Panathenaea, and a ναῦς to Herm at Olympia every four years, and a ναύς to Apollo at Amyclae; Alcamen's Παρθένον seems to describe a similar gift to Artemis Orthia at Sparta. We know that many other ancient images were clothed, and it is not unreasonable to suppose that these customs did not stand alone. The periodical washing and dressing of images is common in the East, and its ancient character is obvious. Hecuba indeed gives a fine role to Athene, but the records of the public and customary dedications do not go beyond the 6th century. A βήσις sent to an oracle carried with it votive offerings as well as sacrificial animals. Hyperides describes one of them dressed and decorated. The statue of Dion at Dodona, and an oracle from the same place demanded sacrilege with the gift of a bronze table for the gift that the Athenian people had sent. Other festivals demand the ceremonial gift of a βήσις; we find them year after year at Branchide, where fourteen cities dedicate one in year, and at Delos. So the Athenian colonies sometimes sent gifts to the great festivals of Athens. It is reasonable to assume that the practice was customary at public festivals.

The private worshipper who took part in a festival was certainly expected to offer something. There are occasional allusions to this; but it may be safely inferred from the preservation of thousands of little, uniform, of the same shape and size, and of anthropomorphic figures of certain types. These are found in most ancient shrines in regular series from the earliest strata; and, whatever they meant, we may assume them to have been sold by the priest to visitors for the purpose of dedication. The worshipper may very likely have taken the

opportunity then to present some special petition; so that it is impossible to be certain of the occasion for many one.

But there are a large number of objects, common in the Archaic period and later, that can best be explained as memorials of the act of worship. Such are the well-known statuettes of Artemis at Athens, bearing a calf over his shoulders, just as the modern Greek does still on Good Friday. There are several similar figures known; and large numbers of little clay figures carry some offering, often a present of perfume, or plant-stalk, dove, or other bird, fruit, flower, or garland, which have been found in Athens, Calaures, Corcyra, Crete, Cyprus, Dodoma, Ephesus, Naukratis, Sparta, Thebes, Thebes. Others, again, are grouped in a ring-dance, and there are single figures who bear pipes or harp or play upon some musical instrument, who carry in the hand a bowl or jug or lustral spray or a jar of water on the head, who clap the hands or uplift them in the attitude of worship. A peculiar variety are the figures of Artemis found in Corcyra; the goddess stands facing, and a votary is seen in the act of dancing before her. In late times they are called ACT IV, with or without priestesses. The most remarkable of these are those discovered in Crete and Ephesus. In a shrine at Chios were found figures which apparently represented a female in ceremonial dress, holding and girt with snakes: similar figures, less elaborate, at Palaikastro and Gournes; at Ephesus, perhaps priestesses, and probably the eunuch priest. Relief-carving reached its perfection in the 5th cent. and then and later, the sacrifice, the libation, and the feast are commemorated in reliefs. The worshipper may dedicate the clothes actually worn in doing the rite; even nude male figures have been found made in porcelain.

(b) Occasional.—Here fall the great majority. State or person may return thanks thus for victory in war or deliverance from peril; and the person often marks by an offering the date of some event such as marriage and retirement from active life. Any supposed wrath of a deity may be met with a propitiatory offering, and the sin of the human being thus expiated.

Motives.—The motive may be thanksgiving, prayer, or propitiation, chiefly the two former. Help or deliverance from peril and success in some undertaking are the commonest occasions of the act of worship. The motive of the offering was sometimes given in anticipation; to keep the god in mind of the prayer; if we may draw a deduction from the customs of modern Greece, this would be common in cases of sickness. The crew of Odysseus, intending to steal the oxen of the sun, vow to build him a temple if they return to Ithaca; and Croesus appeared with rich gifts the oracles of Apollo and Amphitaurus, which had guessed his riddle and were angry with him for his unbelief. For unbelief a worshipper at Ephesus was ordered to offer a silver pig, and other indications exist that small offerings were made for a breach of etiquette. Fixed fines or confessions differ from these in being compulsory. For bloodguilt propitiation was not uncommon. Temples are recorded as being built for this cause; and after the murder of Pausanias the Delphic oracle commanded that his statue be dedicated in the Brazen House, whence he was dragged forth to die. The nine archons at Athens swore to dedicate a statue of Apollo at Delphi if they should break the laws. One inscription mentions the motive of dedication 'fear of the wrath of the twin Tindarids.'

4. Classification.—Certain numbers of the worshipper's gifts are of direct use in the god's service. Such are temples or shrines and the articles used in them. Temples dedicated on a special occasion are recorded in legend and in history. Delphi erected a temple to Apollo in Argos, in memory of an omen which encouraged him in seizing the kingdom; Hercules and Theseus do the like. The temple of Apollo at Bassae commemorates the deliverance of the city from pestilence, and that of Hera in Sparta deliverance from flood. The murder of a tyrant was expiated by the temple of Artemis at Tegea. A colonnade is built in some religious precinct with the spoils of war, as that of the Athenians at Delphi; so with certain of the Treasuries at Delphi. Parts of a temple might be specified, as the pillars of that in Ephesus dedicated by Croesus; this became very common in later times, when it often means no more than that some official paid for repairs or even arranged for them. Altars are a common dedication, especially late, some being presented in the form of a tripi—articles for the idol have already been mentioned. Many articles of intrinsic value, such as ornaments or coins, may have been given as valuables; but these are generally appropriate to the occasion, as we shall see.

Another class consists of what may properly be called ἄνεμοι, οἱ ἄγαλματα τῷ θεῷ. The ἀγκρόβια, or choice pieces, are given from spoils of war—as the throne of Xerxes, the manger of Mardonios, statues from the temples of a conquered foe. So also any rariety—the stone swallowed by Cronus, the sceptre of Hephaistos, Dedalus's wings, mummish bones.

But in the great majority of things dedicated, even if they have material value, the ideal value predominates: they are in fact appropriate to the occasion. We may classify these: (a) image of the deity, (b) the act or process blessed by the deity, (c) the winnings, (d) the tool or means.

(a) Image of the deity.—In all the great shrines large numbers of clay figures are found that must represent the deity. Many of them have been found in Boiotia, in the shrine of Apollo Pion, and many other places, were probably meant for the god; and also the κέμοι of Athens and Delos. Some in each class are dedicated as a tithe or firstfruits; and the armed bronze Athena dedicated by a baker-woman shows that there need be no connexion of the type and the occasion.

Perhaps the figure of the nursing mother may be a goddess in her beneficent aspect; but these seem more likely to represent the devotee. Later, the god's beneficent activity is represented in a series of reliefs, which show Asklepios and his attendants curing the sick. With less confidence, the same may be held for a few other classes of reliefs. These begin late in the 5th century.

(b) Act or process blessed by the god.—The earlier examples are simpler in conception. We would include here the warrior armed, a type that goes back to the 7th cent. at least, sailors rowing their galley, the victor in his car with Victory driving, the jockey on his coursier, the athlete with his proper attributes or in proper pose, the hunter with his game, the dairy-farmer milking his cow, perhaps the peasant in flat and cloak. Here also we would place the common statuettes of the nursing mother and the various scenes of childbirth, which are becoming more common with the progress of excavation. These must sometimes represent the devotee, and it is reasonable to assume that they always do, in the absence of direct proof that they represent the deity. A more authoritative representation is a bronze stoneware from the Athenian acropolis, inscribed so as to leave no doubt as to its meaning: ην δεινα (=δεινα) με τάθελων ἁλθέντες. This may give the key to interpret figurines of rams, bulls, and horses, which are found everywhere. A complete scene of animal life is not uncommon: brood-mare suckling a foal, stag attacked by hounds, or the hound alone, hawk gripping hare.

There are vast numbers of other animals, which more probably belong to the next class. In many cases the figure may be a simple reminder of a tale to which the key is lost, like the figure of an ass that prevented a surprise by his bray,4 or that of a frog which directed a traveller to a spring. An early series of painted tablets found at Corinth depicts every stage of the staple industry of the place, pottery-making, together with hunting and farming and vine-dressing; later, athletic contests were often commemorated by a relief.10 We may perhaps add the rather rare instance of a workman dedicating his first or chief piece of work, or a model of it. The most definite instance of the 'masterpiece' is Lycurgus' pot, inscribed, Λυκρίνος ἀνέθηκε τῇ Ἀθηναίᾳ τῷ πρῶτῳ ἡρετῷ. Mandrocles, who could not place his bridge over the Hellespont in the temple of Hera, placed a picture of it instead.11 A summary memorial of healing was often a model of the part affected. These have now been discovered in very ancient deposits of Crote and Ephesus; hitherto they have been very common from the 4th cent. B.C. to our own day, and hardly known before.12

Ephesus was also a real human tooth, bound with gold wire (for hanging). Things outworn may be regarded as similar memorials of the act blessed. There is little room for this. The earliest is an epigram of Simonides,2 but there is enough to show that the thing might be. Later, its sentiment won favour for it, and it became common. So the lion man dedicates his crutch or the sick man his bandage; children dedicate their toys at puberty; and clothes worn in time of peril are dedicated by the survivors.3

(c) The winnings.—The oldest and most important group of these are the spoils of war, which are found everywhere, dedicated to practically all gods, from the earliest times to far into the Christian era. The trophy itself is a war-dedication; and the warrior made his gift to the god whom he believed to have helped him, i.e. usually to the patron of his own city or tribe. It is rather mean to dedicate a small model of spoils, but it seems to have been done. In Olympia, Delos, Lusi, and Crete have been found useless or miniature models of shields, helmets, longcoats, cuirasses, and knives, besides others, such as axes, which may be memorials of war.3 So with the athletic prize: from Hesiod's tripod in the 8th cent. to the prize tripods at Athens and the Triopia, athlete, vassal, or crown of Zeus. As the bronze sickle at Sparta,3 there is plenty of evidence of the custom. Models in gold of corn-sheaves, sulphur, olives, or vine doubtless display thanks for a good harvest; and perhaps some of the numerous animal models, which include almost every domestic kind and most game, are due to the hunter's gratitude.6

(d) The tool or means.—Sometimes the soldier dedicated the arms or weapons used in battle; sometimes the athlete dedicated his chariot or his quoit or leaping-weight. Later, we have models of sickles, wine-presses, and the like recorded in literature. There is not much evidence of this, but there is enough to show that the thing was done.7 It should be noted that wherever the worshipper's figure appears, he is depicted as engaged in some significant act. His portrait, as such, is never dedicated by himself. The human being never appears except when something of the ideal is implied. There are some apparent exceptions; but in Greece they are only apparent, and, if not apparent, they are not Greek. Later, beginning in the 4th cent., all this changed; and the honorific statue came in just when the votive offering became a means of self-glorification. The old spirit harshly survived except in cases of dedications for relief from sickness and peril.

VOWS.

VOWS (Buddhist).—1. Vows at ordination.—The primitive and most fundamental form of taking vows in Buddhism consisted in expressing one’s confession of faith on the occasion of ordination (upasanmpadā). The words uttered at ordination before the master of the ceremony were the regular formula (bhavan-uññāna) of taking refuge in the Buddha, in the Dharma, and in the Sangha, repeated three times as a rule. This profession of faith was associated with other professions—of personal purity, of determination to practise all the precepts and rules of conduct ordained by the Buddha—for the newly ordained was, after the regular parly, instructed in the rules of discipline, and therein was implied the vow to observe those rules. As the profession of his faith, the ceremony differed among the schools of Buddhism, and various doctrines developed as to the efficacy of the ceremony, its influence upon the life of the ordained, its relationship to the other branches of Buddhist training, etc. The more important aspect in the development of the practice and doctrine was the Mahāyāna conception of vow-taking, i.e., its significance in the ethics of the bodhisattva.

2. The vow of a bodhisattva.—As is seen in the art. PRAYER (Buddhist), prayer in Buddhism amounted to taking the vow to perfect oneself on the way to Buddhahood and thereby to save others. It takes, as a rule, the form of vows (parajñāna or prajñādhi) taken by a bodhisattva (or any other Buddhist) before a master Buddha, who gives assurance (śraddhavyāma) that the vow-taker shall finally attain full Buddhahood: the task of the vow-taker is then to dedicate all his good qualities and meritorious deeds for the realization of his high purpose. The specific methods and points in the acts of dedication (parajñāna) are copied from the special vows attributed to the Buddhahs and bodhisattvas of the past, recorded in various texts. As a specimen we cite here a passage from the "Lotus" (Lotusavatāra-puṇḍarikā) where Buddha Sākyamuni tells his all-saving power:

"There shall never be any being, Who, having heard the truth of Buddha, shall not attain Buddhadhāma.
For the vow taken by all the Buddhās is this:—
"Let me lead them to Bodhi, by accomplishing (my works).
Throughout future days Buddha will expound Many billions of the truths of truth.
They shall reveal this unique road (āra-pāna) And preach thereby the truth for the Tathāgata-schipā.
The 'unique road' is explained as working out in life the stability of truth, the continuity of existence. Being is one throughout all existences, and therefore the ardent intention expressed in a bodhisattva’s vow and his work of salvation can induce other beings to the same goal of life, while the assurance given by his predecessor not only encourages him in the work of salvation but has a mysterious, or metaphysical, efficacy to help him in the progress of bodhi.

3. The composition of the vow-takers.—The vows are destined to be fulfilled not only by means of earnest intention and ardent work on the part

1 See SBE xii. [1881] 155, etc.; J.A.S. 1875, pp. 1-16.
3 See D. T. Suzuki, Outlines of Mahāyāna Buddhism, p. 399, for a typical bodhisattva vow taken from a Chinese version of the Swarajaprabha.

4 Of the vow-taker but also in virtue of the assuring help rendered him by the master Buddha and of the mutual exchange of vows. This is due to the metaphysical continuity of existences and to the consequent reciprocation among the vow-takers, i.e. bodhisattvas, of the works of dedication done in fulfilment of their vows. The realm of existence is likened, in a metaphor often used, to a net in which every knot is studded with a brilliant diamond and all those diamonds mutually reflect their lustre and figures. Every one in the realm does perpetually affect, more or less, all others by his or her ideas and deeds, good or bad, noble or mean. The intention and resolution (chattotpada) are the preliminary to the vow, and it is by the act of dedication that the individual work; but these three phases are one in their essential nature, not only on the part of an individual vow-taker but in the communion of all the vow-takers of the past, present, and future, because these phases and the individuals are but manifestations of the bodhi-chitta, one and the same throughout all the realms of existence.

4. Further examples.—The Buddhist ideal was to emulate the bodhisattvas of the past, and we have many records of vows taken by historical or imaginary personages. These were an expression of emulation as well as a source of inspiration, because in the Indian Buddhist view, a bodhisattva is a potential bodhisattva, and it is within the reach of a common mortal to emulate a bodhisattva and to pledge himself to similar tasks. We may cite here the vows taken, in the presence of the Buddha Sākyamuni and his great disciples, by Queen Srimālā, of Benares, the alleged daughter of King Prasenajit, of Kosāla. The vows consist of ten preliminaries and three great vows, wherein she says:

"I shall never cherish any thought of breaking the precepts which I have now accepted. From to-day up to the attainment of Buddhahood I shall never cherish any idea of pride toward the elders ... I shall never arouse any angry thought toward any fellow-being ... I shall never say any evil in others' bodily excellence or beauty ... I shall never arouse arrogant thought concerning all things, whether subjective or objective ... I shall never accumulate any wealth for my own sake, but shall distribute it out all that I shall receive for helping poor and suffering people.

2 See art. PRAYER (Buddhist).
3 For illustration of this point see The Garland of the Bodhisattva’s Precious Work, in a Chinese tr., perhaps a Mahāyāna development of the Jātaka-nātika; see B. Sanjō, Catalogue of the Chinese Translation of the Buddhist Teiijōs, Oxford, 1892, p. 1092; or art. PRAYER (Buddhist), vol. x. p. 169.
4 In the Indo-China Charitā, or Samantabhadra-charitā-prajñānāma-gaha; see K. Watanahe, Die Bhaisrajā, Leipzig, 1912, text and translation.
I shall praise the four embracing methods (saṃgraha) not for the sake of upholding and maintaining them, but for the sake of abandoning and saving, and thus being free from attachment, never being weary (of my work), and being without any entanglement in the mind, shall embrace the loving-kindness of the Buddhas. Whenever I shall meet any unfortunate people, orphans, deserted, impoverished, suffering from various miseries and tribulations, I shall never leave them unhelped nor stop until they will be saved and freed from sufferings, through righteousness. 1

We have here an instance of the vow intended for maintaining the Buddha’s body. 

In contrast to the peaceful intention of the queen’s vow, we have another type of the vow to persevere in service and missionary activities. These are told in the “Lotus” how the Buddha Sākyamuni, before entering the Great Decease, prepared his disciples, both human and superhuman, for the hard tasks to be achieved and the difficulties to be encountered by them after the Master’s death. Then the bodhisattvas pledge themselves in the presence of the Buddha to remain faithful to his admonition and warning, even after he passes away, and to fight opponents and persecutors, even in remote countries. The ardent and passionate tone of this vow sometimes aroused the fighting spirit in combative Buddhists and gave them a consoling assurance of the righteousness of their cause.2 A part from the question of the period and circumstances of the composition of the book, we have here a counterpart to the missionary charge and an extension of the story of Punna, the first missionary to the barbarous Sākyas.

5. The ‘prime vow’ of a Buddha as a redeeming power.—Just as the vow taken by a bodhisattva served as an inspiration and incentive to Buddhist morality, the vow accomplished by a Buddha furnished the occasion for adoration and devotion to the achiever of the wonderful vow. A bodhisattva is a being on the way to bodhi, while a Buddha is one who has reached the end of the way, where he has established a paradise to receive those who believe in his power. His vow is fulfilled, as shown in the glories of his paradise, and is called the ‘prime vow’ (pārve-prajñādhāna), while its actual effectuation manifests itself in the increase of power, more or less vicarious, of the Buddha. We see here a special stream of Buddhist faith developed out of the metaphysical conception of the power of vow-taking—a stream which was further divided into various branches according to the respective nature of the vows taken by several Buddhas.

Of the vows attributed to Buddhas who on that occasion became objects of specific worship we take two most important cases—that of the Buddha Bhaisajya-guru (the Medicine-Master), the lord of the western paradise Sūkhāvati; and that of the Buddha Amitābha (the Infinite Light), the lord of the western paradise Sukhāvatī, the Land of Bliss. Apart from the questions pertaining to the mythical origin of these Buddhas and their parinirvānas, we note here an interesting contrast between their respective vows and between the streams of religious faith based on their worship. Both are the product of the eastern paradise8 pudes, himself, among other things, to save the sick and other sufferers and to give them immediate comfort, while the lord of the Land of Bliss promises to take to his paradise all those who cherish a pious faith in his saving power. Thus the Medicine-Master was a supernatural medicine-man, and his worship became a religion of healing, while the Buddha of Infinite Light was almost a vicarious saviour, and the faith in his redemptive power developed into a pietism, a Christianity within Buddhism, so to speak.

Let us see the vows taken by Bhaisajya-guru. The story that, while he was still a bodhisattva, he pledged himself to the following twelve vows:

(1) Let me, on attaining Buddhahood, realize all the supernatural glory of the Buddha’s body and all the realities of existence, and induce all beings to the same glories.
(2) Let me, on attaining Buddhahood, create all the luminous realms and thus illumine all those who are drowned in darkness.
(3) (5) amount to vowing that all beings be induced to Buddhist perfection.
(6) Let me release all the crippled, mutilated, blind, deaf, lesers, sick of every description, from their sufferings and have them supplied with wholesome limbs or body.
(7) (8) amount to vowing that all beings be induced to Buddhist perfection.
(9) Let me release all those who, being starved, commit offences for getting food, by giving them, first, delicate food and then giving them a saturation in the taste of true bliss.
(10) Let me save all those who, being destitute of clothes, would be attacked by cold or heat, insects and worms, by giving them all kinds of fine clothes, decorations, perfumes.

Here we see a Buddhist counterpart of the Vedic Sārya or Sūrya, and it is no wonder that Bhaisajyaguru was worshipped for the sake of immediate helpfulness.

In the myth of the western paradise the Buddha Amitābha was once a monk Dhammarāja, who vowed to furnish a paradise for the pious souls and accomplished the task by a long and severe self-denial.4 By supplying the whole world with light as the sole means of calling forth his saving power. The vow is taken before the Buddha Lokevārājya as the testimony, and consists of three parts. The first part is chiefly in praise of the Master Buddha and is an expression of the vow-taker’s determination to imitate and emulate him.5 The second part consists of the forty-six specific terms of Dhammarāja’s intention and purpose in furnishing a paradise in the west and inducing all beings, without distinction of good and bad, of wise and fool, to share the glorious and blissful life in the paradise. 6 The last part is the consecration of the second and takes the form of a paeanic committal to carry out the plan, and even of a compelling call to the universe to respond to his ardent intentions and to give an assurance of the final attainment.

Here we see the Buddhist conception and practice of taking a solemn vow developed to a faith in the saving and redeeming power of the vow.

Finally let us add a remark on a modification, or degeneration, of the vow to curse or magic formula of the case with the Tantric form of Buddhism. Here we see a circle of prajñādhāna, starting from entreatment and petition and resulting in the use of the vow and prayer

Numerous instances of vows and oaths taken by the princes of the Chinese states in the early historical period may be found in the famous narrative of Tso (Tso Chuen). A good example of these early covenants is in 'the vow of Duke Hsiang' (562 B.C.).

All we who covenant together agree not to hoard the produce of good crops, but to set aside all advantages that we possess, not to protect traders, not to shelter criminals. We shall call to aid one another in all calamities, to have compassion on one another in seasons of misfortune and disorder, to cherish the same likings and dislikings, to support and encourage the royal House. Should any prince break these engagements, may he who watches over men's sincerity and I he who watches over covenants, (the Spirits of the famous hills and of the famous streams, the kings and dukes our predecessors, the whole host of Spirits, and all who are sacrificed to, the ancestors of our 15 (167) States with their 7 urns—may all these intelligent Spirits destroy him, so that he shall lose his people, his appointment pass from him, his family perish, and his State be utterly overthrown.'

Some of the old commentators and moralists began at a very early period to complain that the frequency of forward government and formal vows was detrimental to sound morals, because, when solemn engagements were lightly made, they were apt to be lightly violated. Cases were known, in Chou-dynasty China, of covenants being broken 'before the blood was dry.' It was held that in the golden age of the 'holy kings' vows and covenants were unknown (ku ch'ê yu ming yeh), and that the simple spoken word required no vow or oath to make it binding. It was pointed out that the making of many solemn protestations fostered distrust between state and state and also between rulers and ruled. In the 'Classic of Poetry' (Shih Ching) we read of a king who added to the disorders of his kingdom by entering into frequent covenants with the vassal princes: for he showed thereby that he had no confidence in them and lived in fear of rebellion. Commentators also observe that no formal covenants were known before the Yin dynasty (1766-1122 B.C.) and that this was precisely the time when the State began to be disturbed by rebellious movements. Oaths and vows were introduced only when loyalty and sincerity had worn thin and men's hearts were perplexed with doubts.

It will have been noticed that these State covenants were really the ancient Chinese equivalents of modern treaties; and the vows or oaths that accompanied such engagements practically corresponded to the modern seals and signatures of plenipotentiaries. The violation of these covenants was therefore nothing more or less than what we should call the wilful breaking of a treaty.

2. Vows of friendship.—Chinese social life has for ages been characterized by five 'relationships,' each of which implies certain rights, privileges, and duties. These are the relationships between 'sovereign and minister' (this will probably be reinterpreted to mean 'citizen and State' if the Republican Chinese government proves permanent), 'husband and wife,' 'father and son,' 'elder brother and younger brother,' 'friend and friend.' Friendship thus often assumes the importance of a family relationship and is recognized by similar rules, customs, and traditions. When two or more Chinese decide to become 'friends' in what may be called the institutional sense of the term, they become bound to one another by solemn vows which are sometimes accompanied by a ceremonial smearing of blood. This is supposed to create a bond identical for all practical purposes with that of blood-kinship. The following example of a vow

1 See art. Ordai (Chinese).
2 See Le Tcheou-Mi, Cr. f. Biot, Paris, 1951, ii. 247. P'tan and tia are used technically for the two bloods which are sometimes accompanyed by a ceremonial smearing of blood.
3 See art. Ordai (Chinese).
4 See Le Tcheou-Mi, Cr. f. Biot, Paris, 1951, ii. 247. P'tan and tia are used technically for the two bloods which are sometimes accompanyed by a ceremonial smearing of blood.
5 See Biot, i. 249.
6 Ib. iii. 350-362.
of friendship is taken from the official annals of the Sung dynasty.

If the Government intend well to hold together like serpents and dragons interextrically coiled. When one of us attains riches and honour he must feel it a propriety with the prosperity with others. May he who breaks this vow receive divine chastisement.1

After uttering these words, the parties would prick their arms and let the blood flow into a goblet. Of this obol each brother, those becoming the 'brother-brother' of the other. If 'sworn brothers' wish to terminate the relationship, they must do so in a formal manner. 'This is sometimes known as 'swearing the incense-stick' (pu hsiang-fou-tzu).2

A few foreigners have become the 'brothers' of Chinese officials and others, though probably in these cases the ceremony is abbreviated and simplified. H. A. Giles describes how, in 1868, he became the 'younger brother' of the influential court eunuch, An Tê-hai.3 A similar relationship has also been entered into between various Chinese emperors and some of their chosen subjects; e.g., Shêng T'an (10th cent. A.D.) and Hsiang T'sung (11th cent. A.D.) of the Liao dynasty both became 'bound brothers' (ch'ieh wei hsiang-tzu) of certain trusted friends in modern times the Chinese Government (especially under the Manchu Dynasty) has shown itself extremely hostile to this custom, and indeed made it a punishable offence.

Soon after the accession of the Manchus it was decreed that for the purpose of preserving certain traditional associations, each other as 'sworn brothers' (ch'ieh wei hsiang-tzu) was an offence punishable by a heavy fine or banishment, and the friendship of brothers, once decreed against 'sworn brothers' who took part in the ceremonies of blood-smearing and the ritual burning of paper slips on which vows were written. A slightly less rigorous law was enacted in the seventeenth year of K'ang-hsi (1695), but membership of sworn brotherhoods was still an offence punishable by flogging and, in aggravated cases, by death. The death-penalty was reduced to 'a hundred blows' if there was no blood-drinking or smearing and no burning of vows. In 1701 a further law enacted that persons guilty of joining sworn brotherhoods were liable to three years' banishment to the frontier; but in 1762 a new law made a clear distinction between harmless brotherhoods and those which were regarded as criminal. The blood-smearing and drinking of the traditional consignment of the written vows to the keeping of the gods by means of fire, constituted the decisive evidence of guilt in its most serious form.

Formal vows of friendship between women are not unknown. They salute each other as 'dry sisters' (koan ch'ieh). One method of entering into this relationship is for each of the two women to hold the end of a straw over the necks well all and to call upon a deity known as the 'Peach-Flower Maiden' to witness the compact.

3. Vows of secret brotherhoods and societies. The 'sworn brotherhoods' have been treated by the Chinese Government are not far to seek. Secret fraternities, all the members of which are bound by inviolable vows to be loyal to one another as against the whole world, are very apt to become a danger to almost any form of government, especially if that government is controlled by an alien dynasty that has supplanted a native one. In ancient times, nevertheless, it was considered a right and proper thing that men should take vows of cooperation and mutual aid. The Ch'ou Li declares that 'by entering into mutual engagements accompanied by oaths, the highwaymen are kept to extend brotherly love to one another and to put away apathy.'1 A commentator on this rather esoteric enigmatic statement is worth quoting: 'There are different ways,' he says, 'in which people show their apanth and laziness. They do not hurry to give help to those who are in danger or suffering hardship, thus they are lazy and slothful.' Hence he cites the expression 'before a good thing, a new one has completed the old.'2

that people should be stimulated by means of solemn vows to aid one another, to purse one's own prosperity, to extend a friendly hand to those who need it, to help one another in the hour of necessity or peril, and to be faithful to one's word as long as life lasts, setting aside all considerations that might cause delay or give an excuse for inactivity.3

This remarkable description of the social value of vows seems strangely modern; it might almost serve as a statement of the ethical basis of the Boy Scout Oath. Chinese history furnishes innumerable instances of vows of this kind entered into and most faithfully carried out by bands of associates or members of social groups. Where the ethical ideal is strong, it is the fact that the obligation to succour the distressed is not usually regarded as of general application, but concerns only fellow-members of the oath-bound fraternity. Yet this depends, of course, on the specific purposes for which the fraternity has been constituted; and sometimes they far transcend the individual or collective interests of the members, even if they do not go so far as to include all mankind within their purview.

The most famous and memorable Chinese example of a vow entered into for purposes that went far beyond the private interests of those concerned was 'the oath of the Three Heroes' of the Liao dynasty. Three heroes: Liu Lei, Kuan Yu and Chang Pei (2nd and 3rd centuries A.D.) bound themselves to fight for the preservation of the reigning dynasty against the attacks of the Yellow-Turban rebels.4 We are told how the three heroes, who were to be killed by their master, (Ching Pei's peach-garden) consisted in the sacrifice of a black ox and a white horse and in the taking of a vow to the following effect: 'We swear to rescue one another as brothers, to unite our abilities and our hearts, to bring succour to the miserable, to raise up the fallen. We will serve our country and give protection to our people. Though we were born on different dates we wish to die together on the same day. Our hearts are open to the inspection of the divine decrees of Heaven and Earth. If any one of us should prove false to his duty and forgetful of his obligations, may God and man unite to destroy him.'

This celebrated 'Vow of the Peach-garden' has been imitated countless times, especially by members of societies formed for purposes of mutual protection. Such societies, indeed, are still formed from time to time; several new ones sprang into existence among the tens of thousands of Chinese labourers who worked behind the fighting lines in France during the Great War.5

It is interesting to note that the Peach-garden Vow was often referred to as belonging to the 'Triad Society,' and that in these cases were 'exhorted to emulate the faithfulness to each other and loyalty to their country that the three heroes who took it.'6 The vows of the Triad Society were thirty-six in number.7 It is characteristic of China that the first of them is a vow of filial piety. After repeating this, each candidate was required to take a lighted incense-stick and dip it in a bowl of water. As the light is extinguished, he says, 'If I prove false to my vows, may my life go out like the fire of this stick of incense.' The master of ceremonies ('incense-master') then takes up a porcelain basin and dashes it on the ground, saying, 'May each be the fate of all traitors.' He proceeds to take up the paper on which the vows are written, and sets fire to it. By this means it is supposed that the vows pass from the material into the spiritual world and are received by the divine powers, who will register them in the archives of heaven and inflict punishment on traitors. The next part of the ceremony consists in cutting off the head of a cock, as an indication of the grim fate that will befall any one who betrays the cause. The incense-master then drops some of the dead cock's feathers into which the incense-sticks were extinguished; and each of the candidates pricks one of his fingers and lets the blood drop into the same vessel; the feathers (and sometimes) into another vessel containing a little wine. The ashes of the burnt papers on which the vows were written are put into the bowl containing the mingled blood of 1 Cf. art. BROTHEHOOD (Artificial), § 3 ff.

4 For details see Fr., Cl. art. Secrec (Chinese).

6 Ibid, pp. 61 ff., 113 ff.
the candidates, and the bowl is then handed round and slipped by each in turn. This concludes the ceremony of the initiation, after which the new members of the society are hailed by the old ones as ‘brothers.’

Sisterhoods are less common than brotherhoods, but by no means unknown. Detailed information regarding these is lacking, but mention must be made of one group, the Golden Orchid Society (Chin-Lan Hist), which is described by H. A. Giles as ‘a secret association of unmarried girls who bind themselves not to marry, but to remain virgins, and women to which they are unable to avoid) but to leave them and return to their old homes or go elsewhere.” It has been said that members of this society would commit suicide rather than break their vow.

4. Religious vows.—(a) Buddhism.—In China as in other Buddhist lands there are vows for both monks and laymen, those of the former being naturally much stricter and more comprehensive than those to which laymen subscribe. Sometimes, however, lay Buddhists of both sexes voluntarily bind themselves by one or more of the obligations which follow, each according to his own conscience. There is a society of lay vegetarians which is said to have been founded in the Tang dynasty by the fifth and sixth ‘patriarchs’ of the Ch’an school of Buddhism. Members of this society observe strict vegetarianism (‘fasters’), a term which is also applied to those who take vows of temporary vegetarianism during their pilgrimage to a sacred mountain. The fact that practically the whole of Chinese Buddhism belongs to the Great Vehicle (Mahāyāna) explains the existence of religious vows of which little or no trace can be found in primitive Buddhism. The great means of all such vows are those which were supposed to have been taken by the bodhisattvas. These vows are numerous—in the Ku-liang-shou-sitra they are forty-eight in number—but they are practically all summed up in the formula, ‘So long as there remains a single being who has not attained Buddhahood, I vow that I will not become Buddha.’ The ‘vows’ of the bodhisattvas (pranādhāma) may be described as expressions of will which, through the intensity of the will and the lessenss of emotion that inspires them, are instrumental in bringing about a realization of the desired conditions.

The Mahāyāna, as J. J. M. de Groot has shown, attaches to the power of the vow a fundamental principle of Buddhist psychology. This fact is apt to be ignored by those who dwell upon the ‘vain repetitions’ said to be characteristic of Buddhism in practice, and who do not understand that the repetitions are believed to reinforce the creative power of thought to which the spoken words give expression.

We have already seen that forty-eight bodhisattva vows are preserved in a famous sûtra; but according to another classification only four are essential. These four great vows are Sat karma (sīth-yûna) are as follows: (1) the vow to save the world, i.e., not to rest until all beings in the universe have been brought to salvation; (2) the vow to destroy in oneself all evil and the passions that produce evil; (3) the vow to study and practice the dharma, i.e., the law of Buddhism, with a view to the attainment of wisdom and virtue; (4) the vow to attain the perfection of Buddhahood. These vows are related to the San Kuei—the ‘Three Refuges’ (the Buddha, the Law, and the Church)—common to both vehicles. The second and third (the destruction of evil and the cultivation of virtue) have reference to the Buddha and the Law, and to self-development (sàli ii); the first (the helping of mankind, and the salvation of the world) has reference to the Church or community, which, in the Mahāyāna, includes all beings in the universe (li-t’â). The full accomplishment of the three first vows will lead automatically to the accomplishment of the fourth—the attainment of universal Buddhahood.

There are several other classifications of bodhisattva vows, but we need not give a detailed analysis. It will be sufficient to refer to the ten vows set forth in the sûtra known as the Ta-Pei-Hsin Ta-lo-mi Ching (the Dharni ‘Sûtra of the all-Pitiful Heart’). In this sûtra Kwan-yin (Avalokiteśvara) is represented as the true text, and they are not considered in the second, third, and fourth, (2) to become acquainted with the true faith; (2) to attain the spiritual vision (dharma); (3) to lead others to salvation; (4) to be charitable; (5) to embark on the ship of prajñā, ‘wisdom’; (6) to cross the ocean of bitterness (life and death); (7) to be steadfast; (8) to attain nirvāna; (9) to join the company of saints; (10) to become one with the Dharmakaya (the mystical body of the eternal and universal Buddha).

The vows taken by Buddhist monks on their reception into the order, or on subsequent occasions, may be conveniently studied in the Brahmajíla-sûtra, called in China the Fan-wang-ching. The 33th and 36th sections of this popular sûtra deal with the vows which should be taken and constantly retaken by ‘every son of Buddha’ (ko Fo tzu). They bind him to regard his parents and religious teachers with respect and devotion, to associate only with virtuous companions, to study the scriptures and perform good works, and to obey the commandments of Buddha in all things. He must be ready to sacrifice life itself rather than allow himself to act or think in such a way as to hinder the propitious conditions of these souls. Similar vows should be taken by those who seek to attain mystical illumination by practising the rules of dhyanā.

In the Te-Ch’ian—translated by the monk T’ai-Ch’in—the guidance of such aspirants, it is said that the novice should begin by cultivating an attitude of love towards all beings, and should then make a ‘great vow’ (fa hung shih-yuan) to devote himself earnestly to the spiritual welfare of others and not to seek salvation or enlightenment for himself alone (wa sei chi shen tu at-shih chêng-fu).

It will be seen from the foregoing that the Buddhist vow is practically a self-dedication to an ideal of conduct of which the central feature (in the Mahāyāna) is the service of others. But, apart from what may be described as the ‘official’

1. The terms tāk-li and li-ta constitute a concise statement, from the Mahâyânist standpoint, of the essential difference between the Small and the Great Vehicles. Tâk-li (to benefit oneself) is regarded as the ideal of the Small Vehicle, and li-ta (the helping of others) is regarded as the ideal of the Great Vehicle. The combination of the two (erh li t’iu man) is aimed at by Mahâyânists.

3. The Mahâyânists, as they understand the statement, is that the novice should begin by cultivating an attitude of love towards all beings, and should then make a 'great vow' (fa hung shih-yuan) to devote himself earnestly to the spiritual welfare of others and not to seek salvation or enlightenment for himself alone (wa sei chi shen tu at-shih chêng-fu).
vows, there are others which have sole reference to the spiritual needs or personal aspirations of the individual who utters them.

On the other hand, the remarkable and comprehensive is the vow which is said to have been taken by a monk of the Sung dynasty named Ju Chien, who dwelt as a hermit on the sacred mountain of Chih-shan. It was to the following effect: (1) that he would never allow his eyes to look upon forbidden sights; (2) that he would never allow his ears to hear forbidden sounds; (3) that he would never allow his mouth to utter forbidden words; (4) that he would never allow his mind to be occupied by forbidden thoughts.

Of the numerous vows made for particular objects or in view of particular circumstances it is unnecessary to give a detailed account. Sometimes a Buddhist will make a vow to recite a certain number of sūtras or portions of sūtras, in which case beads are often used to count off each completed recital. Sometimes he will register a vow to go on a pilgrimage, or to supply oil for keeping a lamp burning in some shrine for a term of years, or to burn a certain number of sticks of incense before the image of a bodhissatva. Some men, actuated by a desire to print and circulate copies of a favourite sūtra.

One such person, e.g., vowed that he would cause 1000 copies of the Diamond Sūtra to be printed and given away for the good of sickness. Yung-cheng (1725-35) vowed that he would feed a stated number of monks in respect of his otherwise worthless weather.

Sometimes the vow is accompanied by some act of austerity or even self-mutilation, though the latter is contrary to Buddhist law.

A monk of the 13th cen, named Tien-Shih, who belonged to the famous monastery of Kuo-ch'ing at the foot of the Tien-t'ai mountain in Cheh-chiang, made a vow to devote all his life to the propagation of the doctrine of the T'ien-t'ai school, and in proof of his sincerity burned one of his own fingers before an image of the bodhissatva Puxian. A similar act, showing regrettable fanaticism but great fortitude and powers of endurance, was performed by a monk who died less than a century later. Having made a vow of absolute dedication to religion, he burned off two of his fingers. Throughout the rest of his life he was known as P'ei-chou-t'o, ‘the eight-fingered ascetic.’ He rose to be abbot of one of the most prosperous monasteries now existing in China (the Tien-t'ung Si, near Ningpo) and to head of the newly-founded Association of Chinese Buddhists.

Various opprobrious epithets are bestowed on members of the monkhood who have broken their vows (especially the vows of chastity and vegetarianism) or have been expelled from their monasteries for misbehaviour. Among these are such terms as ‘slanderer of the Three Holy Ones,’ ‘shameless one,’ ‘objectionable on the holy path,’ ‘bald-headed huntsman,’ ‘cassock-wearing robber.’

All the Buddhist or quasi-Buddhist sects which have played so prominent a part in the political as well as the religious life of China in recent times have their characteristic religious vows. But in many cases these societies have very little to do with the true religion, and have used various formulas in order to inspire their members with a due sense of the binding nature of their vows. This is so in the case of the Tao-Li Society, one of the most flourishing organizations of the kind in N. China. It professes to be associated with the cult of the bodhissatva Kwan-yin, but its activities are of a social and ethical rather than a religious nature, and in any case its religious basis is almost as much Taoist as Buddhist. It is said to have sprung from the dreaded White Lotus Society, and though it has apparently long ceased to meddle in politics, it is believed to have the authorities up to the time of the Boxer movement, if not later. It flourishes in the leased territory of Wei-hai-wei, but has never given any trouble to the British authorities there. Its members take vows to abstain from strong drink, opium, and tobacco. When a member is known to have broken his vow, he is expelled from the society and is said to be pu yii, a phrase meaning ‘not present’—a common Chinese euphemism. The expression, implying that the deceased member is ‘dead’ to the society. There is a play on the word text, which also forms part of the society’s name.

VOWS (Christian).—1. New Testament.—(a) The word.—The discussion starts naturally with a consideration of the data afforded by the earliest Christian books, the writings of NT, but these are scanty and to some extent irrelevant. The word ‘vow’ (eογυ) occurs twice (Ac 18:21), but in both cases the atmosphere is Jewish rather than Christian. In the first instance Paul (or Aquila) has his hair cut at Cenchreæ, ‘for he had a vow.’ Whether the making or the redemption of the vow is meant is not clear; if the latter, it was probably in connexion with some escape from danger. The second case is similarly connected with the hair-offering. To avert the reappearance of anti-Judaism, Paul, at the request of the Jerusalem elders, associates himself with four men about to be ‘purified’ on the termination of a vow, and bears the expense of their hair-cutting and probably of their sacrifices—a custom not uncommon among rich Jews on behalf of their poorer brethren. On the Nazirate vow (Nu 6), of which these incidents, and the account given by Hegesippus of James the Just, are illustrative, and the significance of the hair as the seat of the devotees’ life, see art. NAZIRITES, VOWS (Hebrew), and W. R. Smith, The Religion of the Semites, London, 1884, p. 483.

Two other NT passages may be glanced at. One is the vow made by forty Jews to fast until they had killed Paul (Ac 23:12), but this is at least as much an oath as a vow. The other is the ‘Korban’ passage (Mc 7:13 = Mt 15:9) in the teaching of Jesus, a reference to cases in which the Pharisees had attempted to justify defiling their hands with their sacrificial offerings. The case of Ananias (Ac 5) has no pertinence, though Roman theologians find a precedent for vows in the community of goods supposed to have existed in the early Jerusalem Church.
what was expected from virgins we may refer to Jerome's treatise on the subject and his letters to Donatianus (xxii) and Demetrius (xxx.). The thirty years interval between these epistles may account for the milder and less fanatical tone of the second.

The subsequent history of vows of celibacy belongs unison to the story of monasticism (q.v.). Poverty, chastity, and obedience are the triple cord of the monastic life. They had been required from its early days, and the great Benedict of Nursia, while making obedience still more absolute, added what was known as the 'vow of steadfastness.'

'Herefore the door of the monastery opened only inwards. Formerly, if the monk forsook his cell and married he was liable to penance, but his marriage was not annulled. Now such marriages were declared, ipse jure, void, and the offender was compelled to return. The vow, written out, was laid upon the altar, those who could not write signing it with their mark.'

The Trappist (Reformed Cistercian) 'vow' of silence seems rather an injunction and comes under the vow of obedience.

3. Patristic evidence. — A few examples of general reference to vows in the Fathers may be given. Eusebius says that it was customary for vows to be taken at the tombs of martyrs, and Hilary says that they are effective and helped by the Holy Spirit only when taken in a church with due ceremonial. In his day the usual personal vows were those of abstinence, chastity, and fasting.

The opinion of Augustine is interesting:

'If in Scripture a vow is usually termed evξη, being called a prayer, we must understand particularly that kind of prayer which we offer when making a vow, i.e. with evξη. But everything we offer to God is vowed, and above all the offering of the holy altar, in which is implied the greatest of all our vows that by which we vow to be in Christ, as members of His body.'

Commenting on Ps 76, he encourages the taking of vows as an inspiration to otherwise unaided strength. Among the customary vows in his time were those between man and wife either to be faithful to each other or to abstain from intercourse with each other, and those on the part of the rich either to show hospitality to all 'religious' persons or to give their goods to the poor and embrace the 'religious' life.

Ambrose contributes something. In de Off. Ministr. III. xii. he lays down the general proposition that witnesses to the kingdom of heaven are bound to marry, and, if we have made an unjust oath, we may not keep it. He illustrates his contention from the familiar cases of Herod and Jephthah. In his funeral oration over his brother Satyrus he says:

'We now recognize that thy departure hence was obtained by thy vows to the holy martyr Lawrence.'

There are other references to vows to martyrs, but they seem to be of the nature of prayers for martyr intercession. In the Satyrus oration, § 30, he says:

'Not that I was ignorant of his condition, but a certain kind of prayers and vows had so clouded the sense of common frailty, that I knew not how to think anything concerning him except entire prosperity.'

Ambrose is also responsible for the clear distinction between præcepta and consilia, on which see below.

4. The medieval doctrine; consilia evangelica. — In the theology of the medieval and modern Roman Church the subject of vows occupies a large place. It is connected with the concept of works of supererogation. The doctrine of good works

1 Ad Polyc. 5.

5 Euseb. Ev. xliii. 20, ad Paulinum, § 8.
6 Euch. Psalm. lxx. 2, de Fide, 55.
7 See art. MARRIAGE.
 rests in the first place on the Augustinian doctrine of grace together with the idea of the universal working of God. Strictly speaking, a meritorious work is inconceivable, but, on the other hand, free universal grace must be mere grace and through it to make satisfaction for his sin—a notion compounded of Jewish legislation and Stoic moralism and found as early as Tertullian. The Stoics did not distinguish between the perfect and imperfect, and the Jews emphasized special and unusual virtues—e.g., To 12. Certain NT passages (Mt 25:21, Lk 19:21-22) were regarded as similarly indicating a graded valuation of works. In time the doctrine of concilia evangeli (e.g., 'evangelical counsels') was developed. The term is used in contrast with praecusta ('commands'), and the distinction, though traceable in Hermas, Tertullian, and Cyprian, is first expressly formulated by Ambrose. We find it in Augustine, though two tendencies are visible. For, while the external and literal observance of the counsels (e.g., poverty, virginity) is considered as a higher standard of mortality procuring greater merit, he sees the danger of measuring the ultra-moral by this standard, since all conduct is judged in the light of inward moral intention.

The doctrine of the heyday of monasticism, the first consideration outweighed the second, but in Thomas Aquinas the other tendency again appears. Commandments are given 'about those things which are necessary to attain the end of eternal felicity,' but the counsels 'about those things by which one may obtain this end better and sooner.' In general the counsels deal with poverty, chastity, and obedience, but there was an enumeration of twelve culled from the Sermon on the Mount, including, e.g., the injunctions 'Love your enemies' and 'Resist not evil.' Aquinas puts it that perfection consists essentialiter in the command of love, but instrumentaliter depends on the counsels. Generally speaking, the disregard or non-observance of the counsels is not sinful, though their observance entails greater perfection and greater reward. They are 'auxiliary norms toward the discernment of those obligatory commands which govern a Christian in his particular circumstances.'

5. Roman Catholic doctrine.—Roman theology classifies vows as personal (applied mainly to oneself) and real (applied to external objects and circumstances); also as perpetual or for a definite time; also as solemn (publicly pronounced before the Church). Between the monastic vows or the subdiaconic implicit vow of celibacy or simple. The doctrine of works of supererogation drew vows of all kinds, even simple and private vows, within ecclesiastical jurisdiction. Dispensations can usually be granted by the bishop, but in live cases by the pope alone. Vows that prejudice the rights of a third person and vows made by minors without parental consent are inadmissible.

6. Protestant and evangelical views.—Half a century before Luther, Johann Puffer von Goch in the de Libertate Christiana and Dialogus maintained that God has given but one law and set before all Christian people one kind of perfection. Luther declared for the all-embracing nature of the baptismal vow and combated Aquinas's idea that the higher degrees of love are not commanded. He condemned all breaches of the law alike and would not allow 'inferior' perfection, though this sin forgives on condition of faith with daily repentance. Monastic vows he declared not only inadmissible and idolatrous, and the Augsburg Confession and the Schmalkald Articles follow his lead. They also oppose the Roman doctrine of evangelical counsels as setting up works of supererogation, admitting private revenue, and casting doubts on the civil commonwealth.

With regard to special vows (promises made to God from motives of gratitude or devotion or as a means of preserving spiritual life) he was intolerant, though not putting any stress on them. Calvin, however, while giving pride of place to the baptismal vow and championing Christian freedom against the Roman doctrine, was more convinced of the utility of particular vows by which a Christian might in some signal way express his gratitude, or strengthen his will-power. In this connexion it is worth recording the testimony of the Westminster Confession of Faith, vii. 14, where it is said that religious oaths and vows, solemn fasting, and thanksgivings upon special occasions are an addendum to the 'ordinary religious worship of God.' Ch. xxii. 'Of Legalistic Oaths and Vows,' includes the following paragraphs:

1. A vow is of the like nature with a promise oath, and ought to be made with the like religious care, and to be performed with the like pertinence.

2. It is not to be made to any creature, but to God alone; and that it is made, it is to be made in sincerity, out of faith, and conscience of duty, in way of thankfulness for mercy received, or for the obtaining of what we want; whereby we more strongly committeth ourselves to necessary vows, or to other things, so far and so long as they may fitly conduces thereto.

3. No matter what kind or degree of vow, or what, be it of God, or what would hinder any duty thereby commanded, or which is not in his power, and for the performance whereof he hath no possible ability from God. For it is the will of God, which regards, popish monastical vows of perpetual single life, professed poverty, and regular obedience, are so far from being degrees of higher perfection, that they are superstitious and sinful things, in which no Christian may entangle himself.

4. The 'promises observed are as follows.' Ps 192 i., Ps 61:5-18., Ps 79:1, Jer 44:27, Ez 20:12-30., Ps 89:12, Gn 28:20-22., Ls 11:1, Ps 61:12, Ps 132:14-16., Ps 133:14, (vii.) Act 20:34-35, Nm 28:2-10., Mt 10:16, 1 Co 7:2, Eph 4:1, 1 Co 7:3.

Modern Biblical criticism had not yet been born. Similarly in the 'Larger Catechism' vowing unto God is included among the 'duties required in the Second Commandment,' and sinful vows among the 'sins forbidden in the Third Commandment.'

7. Conclusion.—There are certain ethical duties which the community, whether ecclesiastical, civil, or social, imposes upon the individual, and which he accepts (marriage vows at least in part may be reckoned in here), and there are others of a more particular kind which the individual imposes on himself either to death or life. He may develop his activity in order to express his gratitude to God for some special mercy. It is quite legitimate to argue that these are implicit in the general vow taken at baptism or on conscious entrance into the Christian circle. It is also evident that all action is conditioned by circumstance, and circumstance may vary so that what seems to-day a clear and positive duty may to-morrow occupy quite a subordinate place. It is possible for a formally expressed vow to become a burden on the conscience, and it then exposes the soul to extra peril. In any case special and formal vows are best left to extraordinary circumstances, and normally it is well simply to lay before God a prayer for the grace of perseverance and constancy. A closing word may be said about the 'counsels.' Alongside the 'commandments,' whether of God or of the Lord, there are not only the 'commandments' of the law, which hardly concern us here (1 Co 16:17), but also his 'judgments,' (1 Co 7:4, 2 Co 8:9), counsels whose acceptance presupposes a divine charisma (1 Co 7:7). Making all allowance for time and place, the apostle's counsels still have pertinence, and 1 Co 7, like Mt 19:12, furnishes a basis for distinguishing between an 'advisory

1 Ch. 106., 2 Qu. 113.
norn' and the absolute force of a command. This, however, is not to admit the whole Roman doctrine of consilia evangeliica.

LITERATURE.—In addition to the references cited in the above section, Elizabeth Ringwood, Orations and dedications to the gods, 1846, viii. iii. 37, iv. 2, v. vii. 9; Thomas Aquinas, Summa, ii. q. 88, a. 1, q. 1; In Ios, see still more; in Opusc. 18 (cl. 252) E. Simon and Frederiksen (Copenhagen) and Rothe and Hase (Protestant). A. J. GRIEVE.

VOWS (Greek and Roman).—I. Greek.—We understand by a vow a conditional promise made by the worshipper to the divine power. The condition is the rendering of aid; and the vow, thus strictly regarded, is the proposal of a bargain that the recipient of the favour required shall make suitable recompense. Viewed in relation to prayer (q.v.), the vow is intended to add cogency to the request and to help towards its fulfilment. The fulfilment of a contingent vow is often pledged by the security of an oath, as when the nine archons at Athens on entering office swore at the altar in the market-place that they would respect a golden statue, if they adhered to the laws during their term. 2

But, of course, a promise may be ratified by an oath which lacks the essential conditions of a vow, as when Odysseus undertook to bring Penelope home with the help of Minos, to yield his life to any one who might choose to take it. 3 Further, to the Greek conception a vow could not be merely negative; a definite offering must be promised as a return for the favour to be gained. 4 If therefore the Nazirite vow taken by St. Paul (Ac 18) involved merely an act of abstinence or consecration promised by way of thanksgiving for escape from danger, it would not be a vow, in the full sense of the word, as explained above. It frequently happens that, although we have reason to suppose that a vow has been made, evidence is lacking of the conditions imposed. Thus in the version of Iphigenia's sacrifice referred to by Euripides and Cicero 5 we are simply told that Agamemnon vowed to Artemis the fairest thing born in his kingdom within a particular year. Among the very numerous examples of 'votive' offerings recorded in literature and inscriptions there are comparatively few where it can be determined with certainty whether the consecration was made by way of thanksgiving or in fulfilment of a vow, as the condition which the incumbent gave to have been taken from sources where the evidence is unambiguous. It should be added that several inscriptions which have been preserved and were attached to votive offerings bear as a label the statement that the dedication is in consequence of a vow. 6

(a) Public vows.—It may be stated generally that vows were made in times of fear and danger. Women especially, Plato 7 tells us, and men too when they are sick or in trouble, if alarmed by dreams or apparitions, are apt to consecrate the occasion by vows of thanksgiving and promising the building of temples. Times of war, especially when the existence of the State was imperilled by hostile attack, often gave occasion for vows to be made in public on behalf of all.

Rector had his mother Heracli promise to sacrifice to Athens of twelve heifers, if she would pity upon the city of Troy and its inhabitants. 8 In historical times the most famous of such public acts of intercession was the vow of the Athenians made before the battle of Marathon offering to sacrifice to Artemis a Virgin of the Heavens, and to the winner who might be killed in the impending fight. But so many copies of the curse were found that it is believed the victims; and consequently it was resolved to compromise the liability and to sacrifice 500 every year. The custom was still in force in the second Punic War. 9 This famous vow is parodied in Aristophanes, 10 where the sacrifice of 1000 gods is offered to Artemis so soon as the price of anchors is paid. Before Salamis a vow was taken by the Greeks to destroy the Medes with burning and to consecrate their gods. 11 The oath is said to have been taken by the Persians to found a festival Eleuthera to be celebrated perpetually 12 is considered by apocryphal writers. The myth of the murder of Hippolytus, which impelled Cyrus to place Orestes and fourteen Lydian youths on a pyre for sacrifice, recognizes the prevalence of human sacrifice among Oriental nations; and there are similar acts of sacrifice described in the Iliad. 13

Before entering upon a campaign, it was customary to offer to the gods a share in the spoils as a reward for their assistance. 14 Similar obligations were undertaken in the crises of civil war or when national interests were seriously endangered.

Olympus offered, if he succeeded in his attempt to become master of Corinth, to give to Zeus, and evaded the extremity of the hardship imposed upon them by exacting a ten per cent tribute of their goods for 15 years. 15 On the other hand, Muses the Lydian, after he had freed his countrymen from the tyranny of Meles, ordered them to fulfill his vow by sending over a race of horses to the gods. 16 In the hope of freeing themselves from the horrible tribute of human heads, which they had exacted from the Athenians are said to have promised Apollo that they would every year dispatch a sacred embassy to Delos. 17

(b) Private vows.—We may now pass to vows made by individuals in order to save lives dear to them on occasions of peril.

Pelusin vowed, if, Achilles came back safe from Troy, he would dedicate a lock of his own hair, together with 18, 19, to the river-god Spercheios. 11 Similarly Berenice vowed to cut off her hair to the gods on the occasion of her husband, Polycenus Euprepes, starting on an expedition to ravage the Assyrian border. 20 So long as the owner is exposed to a special peril, the hair remains uncut; but, when he has been delivered through the crisis or has reached a certain age unharmed, 21 a lock is rendered in thanksgiving to the protecting power. Hector, about to meet Ajax in single combat, promises that in the event of his success he will dedicate the spoils in the temple of Apollo. 22 Telemeus urges his monk Penelope to vow the sacrifice of hecatombs to the gods, if Zeus should grant retribution for the wrongs they have suffered. 23

The successful completion of a sea-voyage was frequently celebrated by offerings to the gods. 24 Eurykleus, on behalf of the companions of Odysseus, when they prepared to land at the shore of the sun-set islands and found a splendid temple in his honour, if he would grant them a safe return to Ithaca. 25 Digenes, in peril on the Carpathian sea, vows to dedicate a temple to the sea-gods if he may safely land. 26 An epigram of Callimachus parodies these vows by describing the dedication to the Saxon gods of a salt-cellar which by providing its owner with frugal meals had enabled him to escape from the storms of death.

In the same way the infant Achilles, a lover and who has safely completed his journey dedicates his felt hat to Artemis in the due accomplishment of his vows. 27 We have a copious record of dedications by those who successfully competed in the ordeal of the Great Games. 28 Many of these must have been made in consequence of previous vows such as that of Xenophon of Corinth, who, as a competitor for the Olympic crown in 464 B.C., vowed that, if successful, he would consecrate 100 tripodes for the service of the temple of Aphrodite in that city. 19

Many examples of vows are connected with the ordinary incidents of family life. A mother makes and pays vows for the safety of her child. The cure of
dedication consequent upon the parent's vow is frequently in the form of a portrait-statue of the child, which is offered to Æsculapius or Apollo on condition of the cure of sickness. Or it may be the patient himself who makes the vow, as is indicated in parody by the tricky vow of a devotee of Bacchus to abstain from strong drink for 'a hundred suns' in the event of recovery from fever. The Greek Anthology furnishes several examples of vows made to Ilithyia or Æsculapius if they will grant a safe release from the pains and dangers of child-bearing, and in such cases were articles of dress or jewelry. Sometimes the condition of the vow is the granting of a good harvest; more often it is relief from the stress of poverty. There is even on record the promise of a sacrifice, if the god will make a curse effective upon an enemy.

(c) Penalty for infraction.—The infraction of a vow was visited with a suitable penalty; and this might be directed against the community of which the transgressor was a member, as we have seen that, according to one form of the story, the Greeks were punished with adverse winds at Aulis for the default of Agamemnon. It cannot be denied, however, that the favour of the gods was so confidently anticipated that offerings were made to them in advance; Polydorus, who dedicated statues to Aphrodite and Ares before starting from Athens on the expedition against Thebes, was not an encouraging example. But no doubt confidence was more frequent in the daily requirements of domestic need.

2. Roman. Whereas with the Greeks vows tended more and more to become a matter of individual concern, as being employed chiefly in the critical moments of domestic life, and the records of vows offered publicly on behalf of the whole community are comparatively scanty, at Rome the conditions were entirely different. It is true that we have sufficient evidence that here also individuals menaced with danger applied for the assistance of the gods with promises of offerings or sacrifice. The illustrations to be found in Vergil should not be set down to the influence of his Greek models.

Nevertheless, the characteristic formalism of the Roman religion is chiefly apparent in the administration of the public vows. A regular contract is drawn up between the State and the deity concerned, and its conditions are publicly annou nced (manifestation) and the form of words necessary in accordance with sacred law is prescribed by the priest (concipere vota); a solemn engagement (suavicere vota) is entered into by the official who represents the State; in his public capacity he becomes liable to carry out the vow (votum solvere, reddere); and, if he fails, the breach in the sacred compact is a sin against the State. The representative is thus, during the period between the undertaking of the vow and its fulfillment, in the position of an accused person awaiting his trial (pro re iusta); and, so soon as the condition was fulfilled, he was cast in the terms of his bond (voti damnatus).

Sometimes an estimate was made of the cost involved, and the sum required was entered in the public records. The cost of the celebration of ludi magni on a solemn occasion during the Second Punic War was assessed at the figure of 333,333½ sesterces—a number evidently chosen for its magical properties in the pages of Livy.

One of the usual occasions for the making of vows was at the opening of a war. Thus Aulus Gabrio, at the commencement of the war against Antiochus, vowed to make the sacrifice of a single serra not be dedicated to two deities.

An outbreak of pestilence was another occasion on which extraordinary vows were usually made. On the occasion of such a visitation, if it was feasible for the vow to be fulfilled on the cessation of the plague, we find the dedication of a temple to Apollo, the oblation of gifts and sacrifices to Apollo, Æsculapius, and to the gods in general; and the institution of feasts or public holidays (feriae) and ceremonial processions (suppli cations). These and similar rewards suitable to the particular occasion or to the functions of the god whose favour is to be enlisted meet us continually in the pages of Livy.

Thus the Athenian Apollo was offered a rite of the boot for assistance rendered in the capture of Veii. The most remarkable example of votive dedications was the consecration of a veil sacram, i.e. the sacrifice of all living animals to be born within the limits of a particular spring. There is only one instance on record in historical times, that is to say, as we know it, in the pages of the Second Punic War in 217 B.C.

The vow was actually performed twenty-one years later. Sometimes the condition imposed upon the divine agent was the continuance of the commonwealth in its then present condition for a period of five and ten years. The specified condition of the ipse limit forms a link between the extraordinary vows and those which were repeated regularly after the lapse of a certain period. Thus, every year on 1st January the consuls, suitably attended, climbed the Capitol hill, made a solemn sacrifice of white oxen in fulfilment of the vow made the previous year, and entered into a new obligation for the year to come in order to secure the safety of the State. From the year 30 B.C. onwards a special vow was made for the safety of the princeps and his house; and at a later date the same was held to be performed annually on 3rd January. Similarly, when sacrifices were made at the opening of a new building, a vow was made of a new offering to become due after the expiration of the quinquennial period. In imperial times a custom grew up of making vows for periods of five, ten, fifteen, and twenty years. This may have been

partly due to their substitution for the old lastrum, and partly to the periods of five and ten years for which Augustus assumed the imperial power, starting from the year 27 B.C. The absence of such a punishment was unnaturally gave rise to a multiplication of the vows offered on extraordinary occasions by courtiers anxious to testify their devotion to the reigning Caesar and his household. To the number of these were added the return of Tiberius from a campaign,² for the safety of the dying Claudius,³ and for the safe delivery of Poppea.

We have seen that the choice of the god whose aid is invoked—e.g., Aesculapius or Bellona—is determined by the occasion of the desired intervention. In the fierce struggle of a decisive battle, as a final effort to leave no possible means of victory untried, it was sometimes determined to appeal to the enemies' gods and to offer them an inducement to transfer their protection. The classical instance is the offer of the dictator A. Postumius at the battle of the Tusi, and of his son at the battle of Tarsus, to dedicate a temple to Castor, the patron deity of Tarsus. A special application of this practice was the solemn rite of evoctio,⁴ according to which, before the final assault was made, the soldiers gathered on a hillside and were summoned to abandon it and to accept a new resting-place at Rome. In this way Juno was invited to leave her home at Veii and follow the fortunes of the conquerors. An interesting account of the whole matter is given by Macrobius,⁵ who remarks that the Romans endeavoured carefully to conceal the name of their protecting god, in order that others might not employ them against them, the device which they used against Corinth and Carthage as well as against Veii and other Italian towns. He records the formula which were employed at the siege of Carthage and points out that the evoctio of the gods must be carefully distinguished from the simultaneous decreto of the hostile garrisons and citizens who were handed over to the dominion of the deities of the under world Dispariter, Velovis, Manes, and Tellus. To these powers a sacrifice of three black sheep was offered at the same time. The decreto of the enemy appears here as the consequence of the evoctio; but the term was specifically employed when during the progress of a battle the Roman commander made a vow to the infernal powers that he was prepared to sacrifice either his own life or that of a Roman citizen serving under him on condition that in return for this sacrifice the annihilation of the enemy's forces was assured. The peculiarity which distinguished the decreto from the offering of vows in general was that the forfeit was rendered in advance to the divine promiser in the assurance that the required service would be forthcoming. Our knowledge of the custom rests almost entirely upon Livy's account of the self-sacrifice of P. Decius Mus in the battle with the Latins in the neighborhood of Vescovio in 293 B.C. and of his son at Sentinum in 295 B.C. during the course of the war against the Etruscans and their allies.⁶ Even if these events are not to be regarded as historically true,⁷ the particulars of the ritual and formularies adopted are sufficient to prove the antiquity of the

(frag. 453). ⁶ Liv. xiv. 21. ⁷ T. Mommsen, History of Rome, Eng. tr., London, 1877, ii. 368. ⁸ Liv. xiv. 20. ¹ T. Mommsen, History of Rome, Eng. tr., London, 1877, i. 369. ² Dio Cass. liii. 9. ³ The sources of the decree of a thing of the battle of Ausculum (Cic. de Fin. ii. 61) in 279 B.C. is certainly apocryphal (Pavlly-Wisseswa, iv. 2293). ⁴ If the person whose life was pledged fell in battle forthwith, the sacrifice was considered acceptable and the result assured. ² If the Roman general who made the vow did not meet with his death, he became impious, and was excluded from participation in public and private sacra; but, if the vow was made for the self-immolation of a legionary soldier and the sacrifice of himself omitted or rejected, he could obtain expiation by the burying in the ground of a signum at least seven feet high and the offering of a peculiar sacrifice, and the place where expiation was become locus religiosus. The development of devotio in later times as an act of self-sacrifice for the emperor does not concern the present subject.

VOWS (Hebrew).—By a vow a person brings himself under a sacred obligation to God (or to some particular god) to do something or to refrain from something. The thing he vows to do is something which goes beyond the limits of his religion, and the thing he vows to refrain from is something permissible in normal circumstances—e.g., the enjoyment of food, the fruit of the grape, sexual intercourse. The motive of the vow is usually desire to secure divine help, and its form is usually expressed conditionally; if God does something for the man, the man will do something for God, something with which He is believed to be well pleased.

In the OT a vow is unconditionally valid only when it is made by a person whose will is not subject to the challenge of another—i.e. by the head of a house (the father or husband), a widow, or a divorced woman (Nu 30). A wife (Nu 30: 8) or an unmarried daughter (30:10) could of course make a vow; but the husband in the one case, and the father in the other, had the right of veto. If, however, this right of the husband was not immediately exercised, the vow of the wife was held to be valid: it could not properly be cancelled by a subsequent disavowal on the man's part; if he did so sollicer it, the guilt of non-fulfilment was attributed to him, not to the woman. The 'strange' woman of Pr 7, who is married, is represented as making vows and inviting a paramour to the sacrificial feast (7:15) while the annihilation or the fulfilment of the vow (1 S 11:1, Ps 66:3-11). There are no exact regulations in the OT governing the vows of an unmarried son.

Vows must have been practised from innumerable antiquity; they are as old as the feeling for God and the experience of distress. They are attested for every period from the patriarchal to NT times (Ac 21:21-22; 23:11), and they seem to have played a more prominent part in religious practice as time wore on. Early historians record vows, but there is no early legislation on the subject. This first appears in a simple form in Deut. (7th cent. B.C.); but in the later (post-Exilic) Hebrew literature the subject comprises legislation—a fact which indicates extensive indulgence in the practice. This is confirmed by numerous references in later books—Prophets and Psalms (Is 19:1; Jon 1:22, Job 22:27; Ps 50:8, 50:15) (60:15).

Illustrations of vows from the period of the judges and the early monarchy are as follows: (I) Jephthah vows that, if Jehovah give him victory for the Ammonite army, he will offer to Him the first living thing coming out of his house to meet him (Ac 11:12); (II) Hannah, ¹ Liv. x. 88. 12. ² Ib. viii. 10. 13. ³ Ib. vii. 10. 12. ⁴ τον τον ἱδρυμένον · (Dio Cass. iii. 29).
that, if Jahweh give her a son, she will dedicate him to the life-long service of Jahweh, and no razor shall come upon his head (Ps 132:1). Absalom, while in the camp at Hebron (2 S 16). To these may be added—though not in the same sense historical—Jacob's vow to his wife at Bethel a sanctuary and to pay God tithe. If he furnished him with food and clothing and brought him safely back to the land he was to make an offering of thanksgiving. The offering of almsgiving may be taken the curse which Saul invoked, in the course of a battle, over his enemies (De 28:58). Absalom, according to the later law, abstained while the vow was upon him, from wine, from contact with the dead, and from cutting the hair (Nu 6:1-9); the Redhebists not only abstained from wine, but refused to practise agriculture or to live in houses (Jer 35:6). The almsgiving, however, which accompanies such vows is to be interpreted not as arbitrary privation, but as a tabo 'incident to the state of consecration, the same taboos, in fact, which are imposed, without a vow, on everyone who is engaged in worship or priestly service in the sanctuary, or even who is present in the holy place. Turi's refusal to enter his house or deal with his wife (2 S 11:11) is explained by his being a warrior on campaign, and war is a sacred activity.

Most of the vows from the early period reveal the person considering them with an eye to some national interests bulked in the mind of the individual, whose chief duty and privilege was to promote the religious, military, or political welfare of his people, and show the interests of the national God, which were bound up with those of His people. Jephthah and Saul, e.g., desire victory over the enemy of their nation and the nation's God; David is represented as passionately concerned with the suitable worship and the holy house of that God. Even in that early period, however, the individual had a life and interests of his own; Jacob and Absalom long for a safe return, and Hannah for a son. The various vicissitudes of the State, the individual came into ever-increasing prominence as a religious unit, vows affecting purely individual interests became increasingly common, and even the vicissitudes of their lives were to be observed in so many occasions for them. The Psalms preserve some of the songs sung by grateful worshippers at the payment of their vows, i.e. when they brought their 'sacrifices of thanksgiving' (e.g., Ps 22:36-38; 66:13-18; 116). In particular, the various stanzas of Ps 107, with its repeated appeal to the worshippers to give thanks to Jahweh (vv. 1-5, 12, 22, 31), give us a glimpse of the sort of occasions on which anxious hearts felt grateful to the Lord, and paid them praise. The Psalms, in each stanza deliverance from some distress is contemplated—from the perils of a journey across the wilderness or on the sea, from sickness, prison, etc. Ps 116:11 preserves for us the interesting custom (cf. Mt 26:27) of raising in the hand the 'cup of salvation' when invoking the divine name in connexion with the payment of vows. The Psalms abound in expressions of overflowing gratitude which are manifestly the sincere utterance of much happy experience of divine deliverance, and profound joy in the privilege of performing the vows (which would frequently take the form of sacrifices) made in the hour of distress.

The readiness to vow, however, had its dangers. Instinct and legislation alike (Lv 22:7-12) prescribed that nothing short of the best was good enough for Yahweh—male without blemish, if the offering was an animal; but vows made in haste were often repented at leisure, and offerings of inferior worth (e.g., a blind, lame, or sick animal) were made—a practice which evokes the fierce indignation of the priests. There was an obligation to make a vow (Dt 23:21); but, once made, there was a solemn obligation to keep it in the form in which it was made (Dt 23:20-22; Nu 3:9). It must cost the offeror something, whether in money, effort, or privation; and deliberately to evade or reduce the cost to which one has voluntarily and without compulsion committed oneself is to be guilty of a breach of faith, which in the later period was considered an inadvertence. The inconsiderate levity with which vows were made and the specious religious pretexts on the basis of which men withdrew from moral obligations (cf. Mt 23:14-19). The OT's clear indication that what Jephthah was confronted, but to him it was hardly a problem at all; his belief, on the one hand, in the sacredness and irrevocableness of the vow and, on the other, in the right to adjust at least on unique occasions—of human sacrifice contributed to make his decision inevitable, with however sore a heart he reached it.

The thing vowed was very frequently an animal, but it might also be money, a house, land, or a person. When an animal was offered, the sacrifice was accompanied by an obligation, as in the case of the other sacrifices (Nu 15:29). Money given to sacred prostitutes could not be accepted at the sanctuary in payment of a vow (Dt 23:14)—it was 'tainted' money. As the thing vowed must be something extra to normal demands, nothing could be vowed—such as firstlings in which Jahweh already held a claim (Lv 27:28). If an animal technically unclean and therefore unfit for sacrifice had been vowed, it was sold at a price put upon it by the priest, and the money was given to the priests. If an owner wished to retain it, he could do so by paying the estimated price with an addition of 20 per cent (Lv 27:28-29). The same procedure was followed in the case of a house that had been vowed (27:14), and, with certain modifications, in the case of land (27:28-29). The value of the land was determined by the distance of the next year of jubilee; for the complete period the basis of valuation was 50 shekels for an acreage seceded with a homer of barley, the value being reduced (apparently at the rate of a shekel a year) as the year of jubilee approached. If the land belonged by inheritance to the man who vowed it, he could secure the reversion of it in that year to himself by paying 20 per cent in addition to the price as ascertained on the above basis; if he failed to do this, it went over to the priests. If, however, the land had not been originally his own but purchased, it reverted in the year of jubilee to the original owner.

In the older period human beings could be dedicated to the god by a vow in one of several ways—baptism (116); services at a sanctuary (1 S 11), or by the nazirite life (Jdg 13). Since, however, in the post-Exilic period human sacrifice had passed away and the service of the sanctuary was more specifically, in the case of the Levites (Nu 35:26), only the nazirite vow—and
that in a modified form (temporary, not now life-long)—remained (6th).—But, though the custom of vowing human beings was no longer possible, this is described in the Vedas and the Āraṇīs as the substitution for the person a sum of money determined by the age and sex of the person, 50 shekels being payable for a man and 30 for a woman between the ages of twenty and sixty; the powers were presumably at their highest, and smaller sums for those under twenty and over sixty (Ls 274). These estimates doubtless often represented a substantial demand on the financial resources of the worshipper; the priests would have many motives of both a higher and a lower kind for insisting that he must not escape an offering which had cost him little or nothing (cf. the noble words of David in 2 S 124). They stood to gain heavily by the practice of vows, as what was vowed to God was as good as made over to them (Ls 274). But the OT shows here its customary regard for the poor by providing that in their case these demands should be reduced—i.e., they are only to pay according to their ability, as estimated by the priest (Ls 274).

Persons devoted by the fan could not be redeemed; they must perish. This, like all the other archetypal abstractions in view of the destruction of Canaanite idolators: it could have been an inspiration unexplainable, only in sarcasm (Jos 6:17); for the later age it would suggest little more than the obligation of uncompromising hostility to idolaty.

An examination of the vows recorded and of the laws regulating vows throws some light on the character both of the worshipper and of his God. The vow was born in a sense of need or an experience of distress (Ps 60). The things that men desired were deliverance, prosperity, health, children, victory; and the God to whom the vows were offered was believed to be pleased with sacrifice (even—in the early period—with human sacrifice). The circle of ideas with which vows were associated is priestly rather than prophetic, and there is an externalism and a quasi-commercial conception of the relation between God and man which is alien to the higher prophetic spirit. But, though vows in the later period were sometimes lightly made and dexterously evaded, the manifest emotion with which many a singer in the Psalter records his gratitude to God as he pays his vows shows that they often have represented a warm and genuine religious experience. They are an implicit confession of the speaker's recognized insufficiency, and their fulfilment is the expression of his gratitude for the experienced help of Jahweh (cf. Jer 5:11). It is no accident therefore, that these vows speak practically no rôle at all in the NT, where the demand is for a consecration not occasional but continuous, and for a consecration not of gift but of person.

JOHN E. MCFADYEN.

VOWS (Hindu).—Vows are a highly important element in the Hindu religion. Thus, according to a Sanskrit lawbook, a Brāhman ascetic must keep that in his vows (vārta) of abstention from injuring living beings, of truthfulness, of abstention from theft, of continence, and of liberality, besides five minor vows, such as abstention from anger, thrift, etc. (Baudhāyana, ii. 18, 1, 3). Brāhmānical students were subject to restrictive rules of the same kind during their residence with a teacher, and they had to keep five vows (vārta) when learning particular portions of the Vedas, such as the Sāvittīvārta, in connexion with the study of the sacred prayer called Sāvittī. The five great vows (vārta) of the Āraṇīs, 'I renounce all killing of living beings, lying, stealing, sexual pleasures, attachments whether great or small,' are evidently formed upon the Brāhmanical model. Nor are the five commandments (pāñcaka) of the Buddhist canonich books and the Mānusyaramaṇa (Ls 558) the only five Brāhman vows, especially as they are supplemented like the latter by five other vows which are binding on the Buddhist monk only. On his ordination, the Buddhist monk had to raise his joined hands and to declare: 'I take refuge in the Buddha, in the Law, in the Congregation.' Many different Brāhmanical vows (vārta) are of three classes in the sense of self-imposed devout or ceremonial obervances, but are not universal in India. Some have been derived from the Purāṇas, and have passed from them into the medieval and modern Sanskrit Digests of Religious Usages, such as Hemadrī's Čaturvarṇineśṭa-ānāmī (written c. 1500 A.D., printed in the Bibliotheca Indica), which devotes more than 2300 pages to the subject of vārta, most of them to be performed and repeated on certain stated days of the year. Thus the sāmpadottāravārta (i. 362), to be performed on the second (dālīyāt) of the bright half of every month for a whole year, beginning with the month of Kārttiṅa, consists of eating nothing but flowers or blossoms (papu); during all the days, at 9 o'clock in the morning, the bhiksu must eat the flowers of the plant of the ārāta at the close of the vārta with flowers made of gold and with a cow. As a recompense for performing this vārta a man obtains heavenly enjoyments and a blissful death. For seven succeeding years, the monk will be reborn and will be imbued with a knowledge of the Vedas and of the Vedāṅgas, and will live in happiness for a long time, surrounded by his sons and grandsons. In the case of the 'bull-vow' (sūgabhāvavārta), which is undertaken on the eighth of the bright half, one bestows a bull clad in a white robe and decked with ornaments, the spiritual rewarシ consisting in a long residence in the heaven of Īśā, followed by re-birth in the station of a king. One performing the 'river-vow' (nādiravārta) should, within certain intervals, worship seven different sacred streams, each for one day, offering milk in water, giving waterpots filled with milk to the Brāhmans, subsisting on nothing but milk himself, bathing far from the village, and taking food at night only. At the end of the year he should give a pāla of silver to the Brāhmans. By so doing he will enjoy a long and prosperous life, and will in a future birth be free from disease, eminent, virtuous, and rich, enjoying the position of a king, or of a distinguished Brāhmaṇ (i. 623). By the observance of these comparatively simple rites, we find others with a more complicated ceremonial; but the ingredients of fasting, gifts to Brāhmans, offerings to deities, etc., recur in nearly all these endless vārta, which give a nice round of religious observances, entailing spiritual blessings and natural comforts for the whole of the Hindu year. The Vratārṣī, which is considered the leading Sanskrit treatise on vārta in W. India at the present day, contains a description of no fewer than 205 vārta. The performance of vārta is nowadays specially common among women, and this may be an ancient custom. The formulae that in the Brāhmaṇa drama Uvāśi, the queen, when desirous of effecting a reconciliation with her husband, sends for the king, inviting him to undertake a certain vārta in common with her; and that the Sanskrit lawbooks exhort wves to perform their vārta together with their husbands.

Speaking of modern vārta, T. C. Bose observes: 'When the king is sent to the Pātaśāla (school), the girls of the school begin her course of vārta.' The first vārta is the river Pājā, instituted after the example of the goddess Durgā, who performed this ceremonial that she might obtain a good husband, Siva being considered a model husband. On the last day of
the Bengali year, two little earthen images of the goddess Durga are made by the girl and worshipped by her. The next two vratas are those of Hari or Kṛṣṇa, and of the ten images. Then comes the Sejāṭi vrata, in performing which the girl repeats a volley of abuses against her satī, or rival wife in the distant future, in order to avert the dreaded evils of polygamy. Of vratas to be practised by a married woman, the Śūtrivārāta is made specially prominent by Bose. This vrata derives its name from the sinless legend of the faithful Sātvitri, who through her devotion revived her deceased husband. It is annually celebrated in the Bengali month of Jyaśātika both by women whose husbands are alive and by widows who are desirous of averting the evils of widowhood in a future birth. In the former case the husband is worshipped by his wife with sandal and flowers, and she cooks a good dinner for him. The prayers are read by the priest, who gets his usual fee and all the offerings. This vrata should be performed regularly for fourteen years, at the end of which the expense is tenfold more, in clothes.

In the performance of vows, of which there are innumerable, the law distinguishes in two classes—those made primarily for the salvation of the soul, and those conditioned for the welfare of others. Of this latter class Brahmarshni and friends, and, thank the previous vratas. The Śūtrivārāta has also been described by Ward, who mentions, besides the ṣadvatī and the prāśāṭi, the vratas of different wives of Brahmarshni, one on each day, during the month of Vaisākha; and the Paścimāvārāta, a vrata on a large scale extending over a period of six years, and including many partial or total fasts, and various gifts to Brahmarshni on the part of the woman who is to perform this vrata, and various acts of worship on the part of the husband, the priest, and others. Ward calls the vrata a very lucrative source of profit to the Brahmarshni. He defines them as unconditioned vows to perform religious ceremonies, distinguishing them from conditional vows consisting of a promise to present offerings on condition that the god bestow such or such a benefit. Vows of this kind, e.g., when a man promises to sacrifice a goat, or to present two loads of sweetmeats, or cloth, ornaments, money, a house, etc., if the god grant his request to have sickness removed, or to become the servant of some European, or for rich clothes, a wife, and son. Bose observes that vows made in times of sickness are fulfilled.

VOWS (Jewish).—As the OT amply indicates, vows were a familiar feature in the religious life of Israel in former days (see art. Vows [Hebrew]). In the Apocrypha the references to the subject are few.

1. Let nothing hinder thee,' says Ben Sira, 'to pay thy vow in due season, and wait not until death to be justified (i.e., to pay thy debt). Before thou makest a vow, prepare thyself, and be not as a man that tempteth the Lord.'

2. *Pillar of history* has some interesting observations on vows.

3. The word of the man, he says, should be his oath, firm and unchangeable, founded steadfastly on truth. Therefore vows and oaths should be superfluous. If a man swear at all, he must swear not by the Divine Name, but by the sacred name of his parents or by some of the great objects of nature, which are ancient and, in accordance with the will of their Creator, never grow old. Once made, a vow should be sincerely performed if it were made 'with sober reason and deliberation.' (Pillar of history) Philo would thus sooner see the door to an annulment of vows made rashly and without due consideration of what they involved. Some Gezer, however, makes vows 'out of wicked hatred of their species, swearing, for example, that they will make no more vow, until they have not admitted this or that man to sit at the same table with them, or to come under the same roof, if he adds impressively: 'Sometimes, even after the death of their enemies, they keep up their enmity. I would recommend such men to seek to propitiate the mercy of God that so they may find means to avert the enmity of the vowing, and they proceed to explain the Mosaic laws concerning vows in his characteristic allegorical fashion.

All through the life of the religious teachers failed to kill the practice of the breaking of the vows. The Talmudic Rabbis were forced, accordingly, to legislate for the popular inclination to it in their turn, and, since that inclination survived long after the Talmudic age, the coddlers had to adapt the Talmudic enactments to the needs of their day, and even to amplify them. Two whole tractates of the Talmud—Nedarim ('The Laws on Vows') and Nazir ('The Laws on the Nazirite')—are devoted to this subject. The laws on vows are embodied in Joseph Qaro's Shulḥan Arukh (16th cent.), the latest of the great codes, and a separate section, consisting of 33 chapters containing many paragraphs, is devoted to them. To give even a brass tacks outline of this extensive and intricate legislation is obviously impossible here. Its magnitude and complexity are themselves an indication of the large place which vows occupy in the Jewish faith, and of the importance attached to the subject by the Rabbinical mind. The contents of the first chapter of the treatise on vows in the Shulḥan Arukh (14th cent.) (see also the Tosefta) are: 'Which Vows are Praiseworthy and which Should Be Forbidden.' For, besides preserving the inviolability of the vow, the great anxiety of the Talmudic doctors and of their successors was the prevention of useless vows which failed to minister either to religion or to morality. Among such vows were those made hurriedly or frivolously. There were also vows imposing upon the persons taking them a needless austerity and self-mortification.

Thus, when a beautiful youth under a vow of Naziritehood presents himself to Simon the Just (3rd cent. A.D.), the sage asks him reprovingly, 'How couldst thou have consented to destroy thy fair locks?'

The chapter in Qaro's work to which reference has just been made opens with the following monition, borrowed from the prescriptions of the codes, from the Talmud:

*Be not haliubted to make vows; for he that makes a vow is called wicked. Be not afraid to call God to witness. But, if you do not make for holy ends, it is a positive duty to fulfil them. Even vows for charitable purposes are not desirable; if one have the money, let him give it away without a vow, and if not, he should not defer his vow until he have it (which obviously means that, in either case, a vow is undesirable). It is 'permissible' to make a vow in time of trouble. He that saith 'I will study this or that chapter of the Torash, and, fearing lest he may be slothful, binds himself to study it by a vow, his vow is permissible, as that of one who, fearing for his strength of purpose, fortifies by a vow his determination to fulfil a certain precept of the Law.' He that takes a vow in order to strengthen his good resolves, and to improve his way of life, is a man of energy, and worthy of praise. For example, if he be a glutton, and abstains from vows by vow from meat for one year or two, or if he be a drunken man and makes his wine—wine for a time or for life, or, if proud of his comeliness, he becomes a Nazirite (as a penance)—all such acts are a service of God, and to them the Talmudic Sages refer when they say that 'Vows are a protecting hedge to reconciliation.' And the concluding utterance is instructive: 'But, in spite of the contrary, a service of God should not make many vows of self-denial; rather let him abstain without a vow.'

The same is typical of the Jewish spirit, which looks askance at vows, often made to be broken, and at asceticism, which makes for inefficiency in the great work of life. For, according to the

1. Cf. the interesting parallels, or comparisons, in Mahan Mahan Nedarim, iii, 3, 3.

3. Yoreh De'ah, 206.

5. Cf. ib. 32a.

Jewish idea, the true servant of God, nay, the true man, is he who takes his full share of the activities of the world, and serves its legitimate and in some measure pleasures. Voluntary renunciation springing from an ennobling sense of freedom, not servitude to a despotic asceticism, is the Jewish ideal. The one is the mark of the strong; the other is the self-condemnation of the weak; for the rest, the following enactments may be cited:

All vows, to be valid, must be uttered aloud. 1 Boys of twelve and girls of eleven, provided they understood the meaning of the words of making vows; 2 on the other hand, in accordance with the Pentateuchal precepts, a father may annul the vows of his daughter, but a woman cannot annul that of her husband, if they involve hardship to the daughter or the wife. 3 A man, moreover, may rescind some undertaking upon himself by vow he cannot so restrict others. 4 Moreover, vows the fulfillment of which is made impossible by forces major are, upon facts, null. 5

The formal enactment of vows can be effected only by an expert Rabbi or by three laymen specially indicated for the duty by reputation and experience. 6 7

It has been seen that, like the Biblical teachers, the Rabbis were opposed to vows on principle. Simon the Just only once approved of the taking of a vow—when the youth, in the story already cited, was allowed by him to become 8 Nazarite as a penance for having fallen in love with his own beauty. 'Would that there were many such Nazarites in Israel!' he exclaimed. But his objection, generally speaking, held, and it was usually a mere temporal precept, like Hilkhot Temurah, and the first Canailel. 9 He that made a vow built an idolatrous altar, and he that fulfilled a vow offered sacrifice on it. 10 Jephthah is cited as the type of a vow whose fulfillment was a worship of Baal. 11 The Nazarite is commanded in the Pentateuch (Nu 6th) to bring a sin-offering. 'In what has he sinned?' the Talmud asks. 'In having abstained from wine,' is the answer. 11 On the other hand, it appears that he must be scrupulously fulfilled; Heaven itself testifies against the man who breaks his word. 12 Further, the Supreme is pictured as thus exhorting Israel, 'Take heed that ye break not your vows, for he that does so will come to break his oaths, and that would be to deny Me, and so to commit mortal sin.' 12 'He shall not break his word' (Nu 30th)—the Scriptural utterance is the basis and starting-point of much of the Talmudic legislation concerning vows, and so sensitive was the Rabbinical mind to the sacredness of the vow, and to the danger of its being infringed by the common folk, that one Rabbi (Shifra, 4th Saon, or Succa 750th)—forbade even the study of tractate Nedarim.

Despite these facts the Rabbis have been accused of too readily 'opening the door' to use their own phrase, to sympathy with the misfortunes, sufferings, and annulment of vows. The prescriptions in Middoth Nedarim, ix., have been specially cited in support of this charge. But it is only necessary to read these enactments intelligently and fairly in order to vindicate their underlying motive. Far from being animated by a loose regard for morality, they have an ethical intent, that of saving persons who have made virtually impracticable vows from the guilt of breaking them, and of protecting the hardship and injustice which their fulfillment will entail upon others. Men would make vows in a fit of ill-humour, or in a morose and anti-social temper, from which it was only kind to them, and just to the members of their family or to their neighbours, to release them. 3 But even such under

13 takings were not lightly cancelled. They had to be annulled formally by recognized and competent authority. In the other, by the court, and under the order of the court could, under no circumstances, be set aside by any authority whatsoever. 1 A further charge of a different character has been brought, doubts with reason, against certain Jewish practice in regard to vows, against the Gospel the Pharisees are condemned for making vows under circumstances which involved a positive violation of the express commands of the Mosaic Law (Mt 15th, 7th). That, in the Middle Ages, divergent practices, varying with the authorities immediately concerned, prevailed with regard to granting absolution from vows is unquestionable. Some Rabbis were more lenient in the matter than others. But this difference of practice was due to the varying importance attached to the two opposing considerations which have already been mentioned. One Rabbi would lay the greater stress upon the desirability of preventing the violation of vows, and so be inclined to grant dispensation from them; another would think more especially of the sanctity of the vow itself, however lightly made, and however trivial its character, and so refuse dispensation. A familiar instance is that of a man who vowed to give up gambling. The temptation to break such a vow was particularly strong. Should this be considered an injustice?

Or should the man be held to his vow notwithstanding? So great was the dread of breaking the plighted word that we find a Jew of the 16th cent. swearing that he would never swear. 2

Here reference may be appropriately made to the formula for the annulment of vows which ushers in the service in orthodox synagogues on the Eve of the Day of Atonement. Deriving its name Kol Nida ("All Vows") from its initial words, it runs as follows: 3

1 All vows, bonds, oaths, etc., wherewith we have vowed... and bound ourselves, from this Day of Atonement unto the next... in, to repent in them. They shall be annulled, made void and of some effect... Our vows shall not be vows; our bonds shall not be bonds; and our oaths shall not be oaths.

And, since the congregation may have sinned by violating its vows in the past, the declaration is immediately renewed by the verse

'And all the congregation of the children of Israel shall be forgiven, ...for in respect of all the people it was done unwittingly.'

This declaration has provided anti-Jewish writers with much welcome ammunition. Here, they have contended, is a proof that the word of a Jew cannot be trusted, seeing that he absolves himself from his vows and promises beforehand, in his very synagogue, and on the most solemn day in the year. The accusation is the fruit either of ignorance or malvolence or of both combined. The best answer to it is supplied by the unequivocal doctrine of the Rabbinical teachers in all ages, who warned their people that their very 'Yea' and 'Nay' must be true, 4 and that it is even more sinful to deceive a Gentile than a Jew. 5

The history of the declaration completes the defence. Owing its origin, at some unknown period not later than the early Gaonic age, to the dread of violating vows, it was nevertheless viewed with stern disapproval by the greatest of the rabbis.

VOWS (Teutonic)—Vows were solemn promises which were made before some deity or superior power, and by which the person making the vow undertook within a given time or in the future to perform a particular act, to obtain a purpose, to bestow a gift, or to devote himself to some person or thing—as, e.g., in a sworn brotherhood. Such vows were rather common among the Teutons both in the North and in Germany, and they were considered absolutely sacred and inviolable. A person not redeeming his vow or his promise was considered an out-caste, and no regard was paid to him. Among the ancient Teutons all oaths and solemn promises were given with great attention and seriousness. They were generally closed with much hilarity and drinking, and then all kinds of promises were made for the future while the goblets were drunk, each of them devoted to some special divinity or to the memory of some great name. The Braga-goblet was the most imposing of all. Of such an occasion we have a description in the Heimskringla

1 First Odin's goblet was emptied for victory and power to his king; thereafter, Njord's and Freya's goblets for peace and a good success. Then it was the custom of many to empty the Braga-goblet; and then the guests emptied a goblet to the memory of departed friends, called the remembrance-goblet. 2 They were considered absolutely sacred and inviolable. A person not redeeming his vow or his promise was considered an outcaste, and no regard was paid to him. Among the ancient Teutons all oaths and solemn promises were given with great attention and seriousness. They were generally closed with much hilarity and drinking, and then all kinds of promises were made for the future while the goblets were drunk, each of them devoted to some special divinity or to the memory of some great name. The Braga-goblet was the most imposing of all. Of such an occasion we have a description in the Heimskringla.
ditions of the vow given. 1 Those promises were, no doubt, offered to make certain undertakings more sure—e.g., to win or offend such a woman, whom the maker of the vow wanted to secure for himself or for somebody else, to avenge a crime or an injury, to obtain an honour or any such thing which required honest personal effort—and they were often most in the interest of the higher services so as to render the act itself morally binding.

Sworn brotherhoods were mostly entered into by young men who had been brought up together or who had formed close friendships because of peculiar experiences. The ceremony was as follows.

The sod of a selected piece of ground was loosened and cut in three oblong slices, which were raised and held up by the head of the covenanters, as so to form an arch under which they let drop of their blood from self-inflicted wounds freely now in the fresh and open air, vowing to be faithful to one another in life and death. Such men would afterwards be irrepressible and never failed one another. The one would always avenge the injury done to the other, which meant in case of death that he had to take the life of the slayer, even if a promise of a relative or a highly exalted person. In later times of ancient Teuton history sworn brotherhoods were the most sacred of all covenants, no one ever thinking of breaking a vow thus made or even considering such a thing possible. 2

It is apparent that vows as sacred obligations entered into public life in various manners, and also that mutual behaviour thereby became more pregnant and dependable. Even to this day it is very common in countries of the North to demand, or at least to request, that certain promises be made sure by the oath, neither before the court nor in the way prescribed for judicial proceedings, but as a vow made to a friend or to the second party of the contract; for, where such a vow has been taken, one feels that the promise is not so much hold.

WAGES.—See Economics, Employment.

WAHABIS.—Named after "Abd al-Wahhab," this Muhammadan community has its headquarters in the part of Arabia called Nejd, but is also represented in Mesopotamia, India, and Africa.

i. Tenets.—The aim of the founders of the community appears to have been ostensively to restore Islam to its original purity, as taught by Muhammad and practised by his converts. Hence, when their system was examined by Sunni experts in Cairo, it was found not to differ from the orthodox. Their precepts ordering all other Muslims as idolaters lay in the practice of visiting the tombs of saints and appealing to them in emergencies, which the Wahhabis identified with the practice of the pre-Islamic pagans that was later banished completely in the Qur'an. Hence they destroyed such tombs, when they got the opportunity, not even sparing that of Muhammad in Medina. One of their enemies summarizes

1 Snorri Sturlason, Konungasaga, Christiania, 1860.
2 Heimskringla, l. 100 (King Olaf Tryggvesson's Saga, ch. 39).

The points wherein they differ from the orthodox under ten heads.

(1) They regard the Deity as having bodily form, with face, hands, etc.

(2) Reasoning has no place in religious questions, which must be settled solely by tradition.

(3) The source of true and of common 'Concensus' is rejected.

(4) The source called 'Analogy' is rejected.

(5) The opinions of the compilers of codes have no authority, and those who follow them are unbelievers.

(6) All Muslims who do not join their community are unbelievers.

(7) Neither the Prophet nor any saint may be employed as intercessor with God.

(8) Visits to the tombs of saints, etc., are forbidden.

(9) Oaths by any oath are forbidden, as also is the practice of sacrificing at the tombs of saints and prophets.

It is doubtful whether no. (5) is correct, as the Wahhabis are said to be followers of the line of Ahmad Ibn Hanbal (+ A.H. 241), the adherents of whom were notorious in "Abbasid days for their interference with pilgrimages to the tombs of 1 Ch. Hardwar Saga, 14; 2 Mosek Thors Saga, 12; 3 Porphyrion, 55.

2 Strahlenm, Svenska Folkets Historia, ii. 511-515. Cf. also art. Druzehood (Arabia).
saints; in A.H. 323 the khilafah Râdi issued a rescript against them. European travellers lay stress on their tabu of tobacco and all drugs that bring on the passions; and their objection to the use of silk in any part of the attire, and of ornaments of gold, silver, or gems. Practices of which their history gives evidence are the massacre of the women and all as well as the men of their Muslim enemies, and the mild treatment of the tolerated communities; these were characteristic of the early Khârijî, whose revolts were brought about by deviations from the rigidity of Islam. If Islam has been assimilated, that is, they suppose the Qur'ân to have been mutilated by the third khilafah, they retain therein the notion which brought about the earliest Khârijî movements. Their iconoclasm bears some resemblance to the practice of the Khârijî called Qarnâtîn, with whom they are not otherwise connected.  

2. History.—The history of the Wahhâbîs appears to have been written exclusively by European travellers; there is therefore some uncertainty about the origins of the system. As early as 1764 it attracted the notice of Carsten Niebuhr, who brought the first mention of it to Europe. There are many statements about the birthplace and the tribe of that Muhammad Ibn 'Abd al-Wahhâb from whose patronymic the sect derives its name. Born in Central Arabia about 1730, he is said to have travelled as a student and merchant, and to have attached himself to one Muhammad b. Sa'âd, chief of Dirâ'Iyyah (about 4620 E. long, 25 N. lat.), who married his daughter and became his first disciple. To what extent these persons contemplated from the first the establishment of an independent state cannot now be ascertained; Palgrave, whose account of this matter is more than generally acceptable, states that Ibn 'Abd al-Wahhâb allured Ibn Sa'âd with a definite promise of the sort. It is clear that the two made their resolve to restore Islam to its original purity a ground for attacking their neighbours, at first, it is said, with a force of seven men mounted on camels; but a little initial success carries such adventurers a long way where, as in Central Arabia at the time, there is no organized government. Muhammad b. Sa'âd had before his death extended his authority over 'Arîd, Qasim, Haša, Dovâsir, and Sulayyîl, and become master of all the provinces situated between the Hijâz and the Fâhâl. The two were reckoned as one of the strongest tribes of Meccah, a fact which, as we shall see, was of the highest importance. Under the successor of Muhammad b. Sa'âd, his son 'Abd al-'Azîz, the Wahhâbîs came into collision with the outposts of the Ottoman Government, and attacked and plundered Imam 'Hasîn, where they massacred the inhabitants. This was in 1801, and in the following year the Wahhâbî chief, who had for some time been struggling with the then sharîf of Meccâh, Ghalîb, was able to wrest from him the important town of Tâfîf. Owing to the supineness of the Ottoman Government and the incompetence of the pashas who attempted to oppose the Wahhâbîs, the latter progressed with great rapidity; in 1803 Sa'âd, son of 'Abd al-'Azîz, took Meccâh, where, however, Ghalîb, having adopted Wahhâbî tenets, was allowed to resume his government; and in 1804 Meccâh was also taken by Muhammad b. Sa'âd, who by a blunder of Muhammad, was robbed of all its ornaments and treasures. By this time Sa'âd was chief of the community, his father 'Abd al-'Azîz having been assassinated in 1803. Râdi was made by Wahhâbîs in the direction of the Yemen, which, however, was not permanently occupied.  

Though the new rulers of the Hijâz did not actually abolish the pilgrimage, fear of them kept away the pilgrim caravans from Persia, Syria, and Egypt.  

Muhammad Ali, the pasha of Egypt, had been conferred by the Porte in 1804, with an express injunction to reconquer the sanctuaries, took no serious step in that direction till 1809, not even in prohibiting the export of food from Egypt to Arabia, though that measure alone would have rendered the position of the Wahhâbîs in those cities difficult. After two years of preparation the pasha of Egypt sent his son Tuzun, a man famous for his personal courage, at the head of an expedition, which seized Yanbo in Oct. 1811. In the following year he succeeded in reconquering Medînah; and in Jan. 1813 Meccâh and Ta'if also were recovered. In this year Muhammad Ali himself took the command in Arabia, and fought with varying results against Sa'âd till the death of the latter in the following year; he was succeeded by his son 'Abdallah, with whom peace was made by Muhammad Ali in 1815, after each party had won some considerable victories. Muhammad Ali returned to Egypt; but the terms of peace could not be carried out, and in the following year the pasha's army was sent out to reduce what remained of Wahhâbî power; in 1818 he took Dirâ'Iyyah, the Wahhâbî capital, and obtained possession of 'Abdallâh's person; the latter was taken to Cairo, and sent thence to Constantinople, where he was executed. 

A Turkish governor was left in the Najd by Ibrahim Pasha when he returned to Egypt; a son of 'Abdallah, named Turki, who had escaped when the capital was taken, succeeded in re-assembling the Wahhâbî forces and expelling the governor. A new capital, Riyad, was chosen by Turki for the renascent community; he then sent the pasha of Meccâh, with a large force to meet him, to the camp near Qatif. He was driven by the Wahhâbîs to return, and Turki proceeded to Meccâh, which he regained in 1821; he then carried the war into the Yemen, and obtained possession of the former capital of Meccâh, Medînah, in 1824. In 1829 the Wahhâbîs were driven to the South, and there remained till 1838, when Muhammad 'Ali, the Egyptian pasha, proceeded to Arabia with a powerful force, and after a series of battles, recaptured Meccâh and Medînah, and put down the Wahhâbîs forever.

where he installed one of the Ibn Sa'ud family as ruler, remembering that the founder of his own dynasty had been a creature of Ibn Sa'ud. Since the day he declared himself from Ibn Rashid's control, and in the intrigues which preceded the Great War of 1914-18 the latter favoured Germany, whereas the former favoured Britain.

3. Wahhabism in India.—Wahhabism was introduced into India by one Sayyid Aḥmad, who was born in 1780-87 in Rai Barli, and started a revivalist movement among the Muslims of India, which he believed at Patna, before he made the pilgrimage to Mecca which was the occasion of his conversion to the Wahhabī system. Returning to India in 1824, he gained a following in Peshawar, and in 1826 started military operations against the Sikhs, in which he had considerable success; national disensions, however, broke out among his followers, and in 1831 he met his death at the hands of the Sikhs. The movement was continued by him in the dominion over a large extent of territory along the left bank of the Indus, which, however, they lost in 1847, when the Wahhabī troops surrendered to a British continued in a harbour a number of Wahhabīs, who are said to have taken part in the Indian Mutiny. For about twenty years after the mutiny had been quelled attempts were made by Wahhabī preachers to stir up risings against the British in different parts of the Penin-
sula and to found Wahhabī states.

The Indian Wahhabism is said to differ from that of Arabia in its identification of one or other of the founders of the system with the Mahdi of the Sunnis, whereas in Arabia this term was not used.

4. Literature.—It does not appear that the founders of the system in Arabia did more than issue letters and manifestos; and at this day there is no printing-press in Riyadh or (probably) in Hijaz. Such literature as the system has produced is mainly Indian, and in Persian or Urdu; but there is some anti-Wahhabī literature in Arabic, emanating from Mesopotamia—e.g., al-Fājr al-Sa'dīq fl-radd 'ala munkfi-twassul wa-l-karnāt wal-kāwarīq by Jamīl Efendi Sidqi Zahāwī (Cairo, a.H. 1329).

Life and conduct.—The Wahhabis appear from the commencement of the system till our time to have maintained the institutions of orthodox Islam with far greater rigidity than other Muhammadans. Like other Muslim leaders, the first generations of Wahhabis propagated their views mainly with the sword; with the introduction of Arabia into the Pax Britannica more peaceful methods are coming into vogue, and the following description is from a recent visitor to Riyadh gives an idea of both the practices and the aims of the Arabian Wahhabah at the present day:

"In this city men live for the next world. Hundreds are studying in the Mosques to go out as teachers among the Bedouin tribes. It is the center of a system of religious education that takes in every village of Central Arabia, and imparts the rudiments of an education to reach the larger part of the male population of the various towns. Great efforts are being made now to educate the Bedouin. Men prey five times a day in Riyadh. In the winter the roll is called at early morning prayers and the one who is absent does the service in the late evening. Absences are beaten with twenty strokes on the following day. In the summer duties in the date gardens and elsewhere are considered a proper place for praying at home. After a few years ago a man absented himself some days from all prayers and was publicly executed for so doing. It is safe to say that there is one city on earth where men are more interested in the next world than they are in this. Late dinners are unknown. The evening begins early in the afternoon, and that there may be time for religious readings and instructions before going to bed. There is the regular program in the house of the great chief himself."  

Literature.—J. L. Burckhardt, Travels in Arabia, 2 vols., London, 1855; French tr., Paris, 1858; ii. 423-470 (this tr. con-

1. WAKASHAN.—See MANITU, ORENDA, MANA, PLAINS INDIANS.

WAKASHAN.—The Wakashan linguistic family consists of two main branches: the Kwakiutl, extending from the Tsimshian country southward to the northern end of Vancouver Island, and the Nuuks of the west coast of Vancouver Island and the extreme northwestern corner of the State of Washington. The northernmost Kwakiutl, usually known as Heiltsuk, were divided into clans governed by mother-right, but the Kwakiutl division, while not true gentes, inclined to be patriarchal, although crests descended to a man's daughter's son rather than to his own son, thus showing a confused or mixed system of descent. The Nuuks tribes were divided into a number of totems of varying rank, and often by exogamy. If a man married outside of his sept, his children belonged to that which stood higher socially, but, if he married inside, the descent was patrilineal.

1. Kwakiutl.—I. Supernatural beings.—The principal Kwakiutl deity was the sun, called Ata ('the one above'), Kanskiy ('our brother'), Kansūla ('our elder brother'), Amiecek ('the one to whom we subscribe'), and Amicke ('our chief'), and Kautsoump ('our father'). The last of these names is said not to have been used until after the advent of Europeans, but this is not quite certain. He was frequently addressed in prayer in such words as 'O chief, take pity upon us'; and in bad weather the steersman of a canoe would say to him 'Take care of us, chief.' His son Kanikilak ('with outspread wings') largely takes the place of the northern transformer, Raven. He descended from heaven and wandered over the face of the whole earth, giving man his arts, customs, and institutions. He also was addressed in prayer. Raven, however, appears as well, and the stories told of him resemble those related by the Haida, Tlingit, and Tsimsian (qq.v.). Besides being partially displaced by the sun, his son, he is also and functions as a trickster with Mink, who was often even more prominent. A host of lesser spirits were believed in, but they were not especially different from those found elsewhere in America, except the spirits concerned with the great winter ceremonials. Twins were believed to be transformed salmon and were supposed to have power over the winds and weather. When a salmon was killed, its soul was believed to return to the salmon country.

2. The dead.—After death a man's soul, which was thought to have its seat in the head, became a ghost, or īləmok, the sight of which was deadly. Those īləmok either lived in a place under ground called Bebbenakana ('the greatest depth'), or roamed through the woods. They might not enter a house, but hovered round the villages, causing bad weather. The name Bebbenakana is said not to have been used before the advent of the Whites, but the idea for which it stands was certain aboriginal. Ultimately the īləmok was reborn in the first child of a relative. Probably Bebbenakana was not the only region of the dead, for one story speaks of a man whose soul went to live with the sun before it was reborn.

3. Shamanism.—The common name for a shaman among the Kwakiutl was náwalak, but, when times the history somewhat later than the original); W. G. Patgivre, Personal Narratives of a Year's Journey through Central and Eastern Arabia, 2 vols., London, 1888; E. Rehaktek, 'Hist. of the Wahhabī in Arabia and in India,' TRAFÉE XIV., 474-497. For a full account of the Arab-Deserta, 2 vols., Cambridge, 1887; Edvard Nolde, Reise nach Irak und Mesopotamien, Brunswick, 1855; Al-Manar, xii (Cairo, 1897) 391-400.

D. S. MARGOLIOUTH.
curing diseases, he was called heliikya or pakako. Disease was supposed to be caused either by some form of evil which affected the patient as a stick or piece of skin, bone, or quartz, or by the absence of the soul from the body. In the former case the shaman moistened the place where the disease had its hold, with incantations and went throughout the usual incantations to the accompaniment of his rattle, and finally nailed out the disease and showed it to the bystanders. Sometimes he used water, and laid the disease from the hollow of his hand into the air. When the soul had left the patient's body—a fact which the shaman discovered by feeling the patient's head and the root of his nose—the shaman caught it and replaced it in the head, its proper seat. Sometimes it was seen in his hand in the shape of a bird or mannikin. The shaman was also able to cause disease by throwing something into his victim's body. The secrets of the shaman proper or medicine-man were derived from Hailaklyawe, the ancestor of the gens of that name. One of the secret societies, however, the Mamaka, conferred power to catch the invisible disembodied soul as supposed to be constantly flying through the air in the form of a worm—and throw it back upon one's enemies.

4. Witchcraft.—True witchcraft was of two kinds. In one the person was made sick by having a portion or element of his body taken from him. The second, called cha, was more complicated: A portion of a person's body, or clothing that had received portions of it, was obtained and was burned before the fire, along with fragments of a corpse; then they were ground up together, sealed in a piece of skin or cloth, and placed in the hollow of a human bone. This in turn was placed inside a human skull and the whole deposited in a small box, which was afterwards hung in the ground. This box was barely covered with earth. Almost on the top of this fire was built so as to warn the whole, and, while it burned, the wizard beat his head against a tree, naming and denounced his enemy. This was done secretly and at night or in the early morning, and was repeated at frequent intervals until the enemy died. Such a spell might be removed, however, by finding and unearthing the box—carefully, lest a sudden jar prove fatal to the sick man—and then unwrapping the contents, covering them with feathers, and throwing them into the sea. It might also be removed by some one going over the bewitching ceremonies again, the second ceremony serving to undo the first.

5. Eclipses.—When an eclipse of the sun or moon took place, it was supposed that those bodies were being swallowed, and to liberate them the Kwakiutl burned blankets, boxes, and food. They also made noises to frighten away the enemy and sang 'Haukiki!' ('Throw it up!').

The Nutka are treated in art. VANCOUVER ISLAND INDIANS.

III. MAKAH.—The Makah Indians around Cape Flattery in the State of Washington are merely a colony of Nutka, who had crossed the strait, but their beliefs show certain points of divergence.

1. Supernatural beings and cosmology.—Like the other Nutka, they worshipped a supreme being, whose name was spoken only to those who had been initiated into the sacred rites and ceremonies. One name for this being was Chakatta Hatarstli, or Hatarstli Chabatta ('the great chief who resides above'). He was said to be clothed in animal skins, and to live on the Kwakiutl burned blankets, boxes, and food. They also made noises to frighten away the enemy and sang 'Haukiki!' ('Throw it up!').

Waldenses.—The Waldenses are a Protestant Church, bearing among its own people the name of Vanda, derived from the geographical situation of its origin and headquarters among the southern valleys of the Cottian Alps, which run the tributaries of the Pellice and the Po, and which are approached from Turin across the plain of Piedmont. Thus situated as a community of the mountain-dwellers far removed from the town life of Italy, and with interior valleys still more remote into which to retreat in times of
danger, this Church was able to develop and maintain its own individuality and to withstand the attacks of opponents in a way that has almost superhuman qualities. We may realize the reason for such an appearance in the physical geography of the area in which it grew up in order to understand the strange characteristics and account for its sturdy independence and heroic aspect. In fact, the Walsdenses, being a fanciful impossibility to form the fabric of its story. But a sufficient substratum of solid fact remains to account for the importance that has been attached to so small a group of people who have persisted down through the ages, and Milton immortalized their suffering in a great sonnet. Over and above these facts critical questions concerning their origin have attracted the attention of scholars and aroused the energies of controversiasts, with the consequence that a literature has grown up about the Walsdenses to such an extent that only the name is quite out of proportion to the small number of simple folk to whom it has been attached.

1. Origin.—The question of the origin of the Waldenses has been a matter of controversy from a number of different considerations. While Roman Catholic writers have settled the matter by regarding these people as simply the followers of Peter Waldo of Lyons, they themselves repudiate this view and push back their beginnings to the age of primitive Christianity. Thus they deny that they first appeared as a sect of heretics breaking off from the historic Church, and claim to have preserved the purity of the faith through the ages, while all the rest of the Church was degenerating and accumulating the corruptions against which they protested from the first.

1. Claim to apostolic origin.—This claim is first met with in a Dominician monk at Passign in the year 1316, who states that the Walsdenses declare that they are the most ancient of all the sects, some even saying that this sect 'durauit a tempore patrum.' It was but a step from this position to add that the Waldesian Church was founded by the St. Paul when on his way to Spain. A little later a woman under examination for heresy is said to have made a similar statement. It is not met with in a letter written in 1530 and addressed to Ecelanapudus. But it was adopted by Robert d'Olivetan and published in the preface to his translation of the Bible in 1553, and from that time onwards it was universally adopted by the Protestants, who thus came to honour the Waldenses as the one Christian Church that had preserved the primitive faith of NT times. Its adoption by Beza, its appearance in the Confession of 1541, the assertion of it by Leger in the preface of his history, the encouragement it obtained from Samuel Morland, the British envoy in Savoy, all helped to confirm its popular acceptance. It was even claimed to be the primary source of Calvinism, an ingenuous way of accounting for its otherwise suspicious resemblance to that type of Reformation theology. But now it has been pointed out that no trace of this notion can be found in any of the early Waldensian writings. The inquisitor Moneta of Cremona, dis-

2. The time of Sylvester.—A second theory of the ancient origin of the Waldensian Church is that it arose at Rome in the time of the episcopate of Sylvester, when that bishop, after baptizing Constantine, put the Church under the power of the emperor; whereupon a colleague of the bishop protested, broke off communion with Rome, and retreated into the Vadois valleys. Thus the Waldesian movement is represented as being a reaction against the corruption of the Church in the 4th century. This theory has been combined with the claims to apostolic origin, with the suggestion that the secluded Church, already some centuries old, now received an accession of refugees who found a welcome home in its primitive simplicity. It is given by the inquisitor Moneta, as held by 'the Poor Men of Lyons.' But the want of evidence during the intermediate period, which is fatal to the claim to an apostolic origin, is also applicable to this theory, though the intermediate centuries are not quite so many. Moreover in that period, Sylvester and his predecessors had the Church preserved the primitive simplicity advocated by the Waldenses uninterrupted until the age of Sylvester, as the upholders of this theory have maintained. Thus its basal assumption is discredited by history.

3. The time of Claude of Turin.—Claude, bishop of Turin in the 8th cent., under Charlemagne and Louis the Pious, revived the Augustinian doctrine of predestination, but ignored the High Church side of Augustine's teaching, according to which the Church was the appointed medium of communication between God and man, resisting the papal claims, and denying that St. Peter had received power to bind and loose. He had crosses as well as images removed from his churches, in all these matters anticipating the Reformation. Accordingly Leger, Muzon, and other Waldenses, understanding that such churches of the Vadois valleys had to be included in Claude's diocese, maintained that, if their separation from the Roman Catholic Church could not be traced back to primitive times, it might very well be attributed to the influence of this French bishop, who has been described as a Calvinist before the Reformation. That Claude may have had some
The supposed connexion between the Waldenses and the Albegenses was championed in England by a certain Mr. Valdensian, of whom the most notable was G. S. Faber, An Enquiry into the History and the Theology of the ancient Valdensians and Albigeenses (1820). The same year the Church was also almost completely demolished by S. R. Maitland in Facts and Documents Illustrative of the History, Doctrines, and Lives of the Waldenses and Albigenses (1888). Lastly, Charles Schmidt of Strasbourg made an attempt to settle the question of the garrison, saying, or as Coema says, its coup de grace. See further, A. A. Albigenses.

5. Various later influences. — It must well be observed that various influences tended to limit the Vaudois from continuous close Roman influence. Their isolated geographical situation would minimize intercommunication, and at the same time their life as mountaineers would foster a spirit of independence and its simplicity keep them from the materializing influence of a smutinous ritual. Then the Gothic and Lombard invasions would reduce ecclesiastical and political domination. For a while these people came under the wave of Arian dominance. We cannot regard the Waldensian faith as akin to a product of Arianism, and the local separation produced by the heresy would seem to render a holy refuge. Arnold of Brescia, a disciple of Abelard, executed at Rome in 1155, was a strenuous opponent of the temporal claims of the papacy. He contended that sacrifices and absolutions by the Church were not living an apostolic life were invalid. Lucius III's bull of excommunication (1184) shows that he left followers behind him whose influence may well have limbs to another Northern historic tradition. The new wave of Vaudois was merged in that of the definitely anti-papal Waldenses. But Leger, in setting his name at the head of the list of barbs, was confusing it with that of Peter of Toulon. Arnold. Then, on both sides of the Alps, those parts of France and Italy respectively which were nearest to the Waldesian valleys witnessed during the Middle Ages repeated protests against the abuse of images and materialistic forms of worship. With greater probability Peter of Bures (1194–23) is claimed by Combé, Gay, and others as one of the precursors and originating influences of the Waldensians.

Unfortunately our knowledge of Peter's tenets is almost confined to the statements of Peter the Venerable, abbot of Cluny. It would appear that he ascribed the highest authority to the Gospels, especially the teachings of Jesus. Consequently in the Eucharist, finding a second and lower authority in the Epistles. It is not clear how far his spiritual teaching was understood and adapted. The Waldensian baptism and repudiated the efficacy of infant baptism, rejected the doctrine of transubstantiation and the Mass—perhaps even going so far as to place up to the observation of Christ as a rite of the Church—repudiated the custom of prayers for the dead, denied the efficacy of the holy oil, and finally combated an iconoclastic crusade against the use of crosses. Dölger's association of the Petoranusians with the Cathari has been shown to lack foundation. Peter was the Venerable assigning what he regarded as the superstitions of the Church, especially the 'Roman Idiocy.' Beginning in the obscure village of Bures high up among the Alps, his influence spread through Narbonne, Guissény, and Gasceny, and was for a time centred at Toulouse, where he enjoyed great and growing popularity. Nevertheless, at the instigation of the monks of St. Gilles, he was seized by a mob and publicly burnt, without any legal trial, and also without any interference from the authorities. Peter of Bures was followed as a reformer by Henry of Cluny, who was condemned at the Council of Pisa (1122) but escaped, and was again imprisoned in 1150 at Toulouse, where he died. His most exact connexion with the famous abbey of Cluny is a mistake; so is the claim that he was an Italian; he seems to have been brought up by his father at Lausanne. Henry followed Peter in protesting against corruptions in the Church, especially the degradation of the clergy, whom he persuaded to marry their own. Unfortunately, to his successor, our knowledge of this reformer is chiefly dependent on indirect evidence. The explanation to which the result of his energetic activity was that the altars were abandoned and the sacraments of the Church despised. Further the details are absolutely not established. We have the report of the historian.
specific doctrinal teaching and cannot say that he shared Peter of Brossa's fight against Protestantism. Apparently his process was on moral rather than on theological grounds. Meanwhile there was a spirit of revolt in the air and a growing desire for a return to apostolic observance that was counteracted by the pope. On the other hand, the Council of Tours (1169) eommunicated both the findings of the Lateran and the Hebraic and the Hussites have been claimed as precursors of the Waldenses; but they were simply workmen's guilds in Lombardy, many of whose members joined the new religious movements, but who were not themselves formative influences in them.

6. Waldo and the Poor Men of Lyons.—The Christian name Peter commonly attached to the reformer suggests a desire to lay claim to the apostolic mother church, of whom he was a true spiritual descendant. His name is given in French as Waldes, in Latin as Waldeenius, Waldeenus, Galdenius, in Italian as Waldo. Again we have to turn to the prejudiced account of enemies for most of our information about this reformer. It is from an anonymous writer at Laon, however, that we obtain the story of his conversion.

He had been enriched by the practice of usury when in 1173, after being deeply impressed by the legend of St. Aelius, describing how the saint had given all his property to the poor and gone on a pilgrimage to the Holy Land, he was directed by a theologian to the words of Christ in Mt 6-10. Thereupon, making over his landholdings to his wife, and distributing the rest of his wealth to the poor, he and all of his family threw himself to the study of the Gospels, the Psalms, and other parts of the Sacred Scripture as well as some old books, which he got two friendly priests to translate for him into the Romance dialect. After taking a formal vow of poverty and going through the streets begging his way and preaching his message of self-abnegation, he gathered about him a group of followers, who in turn went about with the same message and became known as the Poor Men of Lyons. They travelled in strict observance of Christ's directions to the Seventy (Lk 10-14), giving two and two, without staff or scrip, their feet only in wooden sabots, preceding and followed by exhorting people to return to the purity and simplicity of the primitive Christians. Forbidden to preach by the archbishop, they replied with the apostolic defence in Ac 5-7, and later (1170) appealed to the Third Lateran Council, under Alexander III., for recognition, only to have their request scornfully denied—although the pope himself had received Waldo kindly and is said to have been secretly ordained by him to the priesthood. They continued in their preaching, they were put under the ban at the Council of Verona (1184), presided over by Pope Lucius III. They had no wish to break off from the apostolic Church, and they were never opposing its doctrine, ritual, or government. They claimed to be loyal sons of the Church, called to lead their erring brethren back to the ways of their ancestors, and this entirely as a practical reformation of life and conduct. Nevertheless their refusal either to recant or to be silent and their condemnation by the ecclesiastical authorities forced them into a position tantamount to open rebellion. Then this condemnation, followed by an edict of Barbarossa, drove the Poor Men of Lyons out of the city and scattered them abroad, only however to spread the seed of their message the more effectually through Southern Europe. Thus they found their way into Provence, Dauphiné, the valleys of Piedmont, Lombardy, Lorraine, Pannonia, Picardy, Germany, Spain, and even as far as England. Since Waldo and his followers had not been condemned for any doctrinal heresy, but only for a breach of discipline in preaching without ecclesiastical authority, strictly speaking they should have been prosecuted as schismatics rather than heretics. Nevertheless they were the determined opposition with which they were met implied that their free handling of Scripture gave offence to the theologians, and in point of fact, like the followers of Peter of rectangles, they were denounced as heretics. They had their own ministers (called ministri), chosen annually for the administration of the communion, which was only once a year. When Waldo renounced the head of the sect (associates) till his death, selected and ordained the ministers, and admitted the new members, though he did not claim to be a bishop. The conditions of membership, called "conversion," were renunciation of private property and an ascetic life, separation of husbands from wives, and three days' fast in the week. It is said that they repudiated indulgences, purgatory, and masses for the dead, and denied the authority of the Roman pontiffs; but, nevertheless, were tolerated by unworthy priests. If so, they certainly would be deemed heretics. But the question of the full contents of their preaching is obscure. A literal application of the teachings of Christ contained in the Gospels was its chief theme, as it had been that of their founder, and, they being for the most part simple folk, without any theological training, it would be pedantic to try to fix any definite theology upon them. We do not know much about the later days of Waldo; he died in Bologna in the year 1217.

7. The fusion. — An inquiry into the origin of the Waldensian Church shows that it grew out of a fusion of the work of Waldo and the Poor Men of Lyons with the movements originated by Arnold of Brescia, Peter of Bruys, and Henry of chartres. It can be traced in the teaching of these four leaders, and it rounded into a definite form and ripened into a distinctly organized Church with its own specific teaching in parts where their fourfold influence had been felt, and this not till the latest and most vigorous of these movements, that of Waldo, came into contact with the earlier types. Thus, while the old Waldensian claim to primitive and even apostolic antiquity is abandoned, it cannot be maintained that Waldo found a Church of evangelical teaching in the Vaudois valleys ready to welcome him and learnt more from it than he imparted to it, neither is it right to say that the Waldenses are simply the followers of Waldo of Lyons. It does not appear that he simply founded the community de novo, or that its evangelical and Protestant character is entirely due to his influence. The ideas were, in the air, the spirit was alive and awaked, when Waldo and his Poor Men came with apostolic fervour to embrace them and blend them with their own version of the teaching of Jesus. There were antecedents of the Waldensians before Waldo, existing as scattered religious. But it was his movement that gathered in the harvest of their lives and brought about the formation of a Waldensian Church.

II. MEDIEVAL PERIOD. — Disputations in 1175-76 between the barons Olivier and Sicard and their bishop Montpeyroux having alarmed the neighbouring clergy, two or three years later the pope, Alexander III., sent the cardinal of St. Chrysogone, Henry of Citeaux, and Reginald, bishop of Bath, then on his way to the Lateran Council, accompanied by the monk Walter Mapes and the priest Raymond of Daventry, to Toulouse. Two barons came there with safe conducts, Bernard of Raymond and Raymond of Bainsme, to be examined by John of Besse, bishop of Poitiers, and then to Narbonne to be examined by Bernard of Pontcarré, under the presidency of the English priest Raymond of Daventry. It is this Raymond who first uses the name 'Waldenses' (Vulgate)—as far as it can be traced, the first use of any form of condemnation, which must be dated 1179 at latest, because, as already said, Raymond was then on his way to the Lateran Council as an attendant of the bishop of Bath. The next year Bernard of Pontcarré wrote a book entitled Adversus Waldenses.
et Arians.\(^1\) It seems that these discussions arose out of the union of the Petronianists andHenri- cians with the Poor Men of Lyons in Provence. About 1232 Waldo's followers united with the Anarhystis in Lombardy. Thus the Waldenses of France and Italy were united, and their union was cemented by persecution. A sentence of excommunication by the Council of Verona cleared the remaining followers of Waldo out of Lyons and drove them to Provence, Dauphine, the valleys of Piedmont, Lombardy, and some even to Verona, while others became in 1232. In Pope Gregory IX. sent a bull to the archbishop of Turin allowing fifteen of the heretics being burnt, King Ferdinand himself casting wood on the fire. In course of time these Spanish Waldenses were exterminated. In this century Waldensian churches in Germany sent candidates for the ministry to study at a Waldensian college in Milan. Martyrs to their faith suffered death in Germany during the two following centuries. Bohemia, where Waldo died, became an important field of Waldensian activity. Forty years after the founder's death the inquisitor of Passau named 42 places as nests of the heresy. The king of Bohemia, started persecution, which became most severe in 1335 under Pope Benedict XII. The rise of the Hussite movement led to a fusion of some of the two groups of reformers under the name of Taeborites, the most famous of whom was the barbe Frederic Reiser, who spent 27 years in the valleys among the Waldenses in Bohemia and Austria and was burnt at Strassburg in 1438. Austria had been reached as early as the 13th century. In 1545 the inquisitor of Krems denounced 36 localities as infected with the heresy and secured the burning of 130 martyrs, the most illustrious of whom was the bishop Neunmeister, who was burnt at Vienna; he is said to have declared that there were more than 80,000 Waldenses in the duky of Austria. The end of this century witnessed a terrible persecution in Styria. Meanwhile the movement was spreading in Italy under an organized itinerant mission, the missionary activities as pedlars and preaching over many districts. They prospered especially at Milan, where they had a college under John of Rome, who was appointed to the headship for life, in spite of Waldo's disapproval, which resulted in a division into two groups, the French group and the Italian and German group. The Lombards appointed their own chief (pastor propositus), and he, as well as their ministers (ministers), held office for life, while Waldo and the French Waldenses on his authority elected annual leaders to administer the Lord's Supper and serve as pastors. A more and more vital division between the two parties arose out of the teaching of the Italian W aldenses that the sacraments could not be efficacious if administered by priests of unworthy character, while the French believed in the power of the Church. The Waldenses insisted most strongly on close adherence to NT teaching and practice generally and on rejection of everything in the Church which lacked scriptural authority, and they were thoroughly anti-Romanists. In May 1217 six members of the two parties met at Bergamo to draw up terms of agreement, but failed (1) on the question of the validity of sacraments administered by unworthy ministers, denied by the Italians, allowed by the French. Nevertheless fraternal intercourse came to be established in course of time between these two branches of Waldenses. In the 15th cent. there was a very influential number of the Waldenses in central Italy. The Inquisition records reveal the existence of groups throughout the whole of this region. In Calabria, where Waldenses were Planted, some cabarets had been sent for to cultivate a great estate, proved themselves most effective missionaries, winning over most of the population of the district. They had retained exceptional privileges of religious liberty, and flourished for 250 years, after which they were almost exterminated by a wholesale persecution.

While the French Waldenses seem to have developed the episcopal form of government with the three orders—bishops, priests, and deacons—in spite of Waldo's greater simplicity of ministerial functions, the Italians worked out more of a presbyterian type of church, each church having a pastor whom was associated in government a consistency of laymen, and a synod met once a year composed of an equal number of ministers and laity members.

The valleys on the Italian side of the Cottian Alps now became the centre and chief home of these Waldenses, so that in course of time their very name (in French 'Vaudois') was regarded as geographical, and it was asserted that Waldo took his surname from that of the inhabitants of this district after joining their religious movement, whereas later researches have shown that the Waldenses are derived from that of the founder of the society of the Poor Men of Lyons. In the 15th cent. these valleys came under the rule of the duke of Savoy, who took the title of "Duke of Savoy," and immediately took the name of Savoy, which in the 14th century was the title of the French kindred family of the House of Savoy. The name was changed to Savoy. The violence drove numbers to emigrate. The inquisitor Acquapendente visited the valley of Laserna in 1435, and, disapproving of the religious views and practices of its inhabitants, roused their overlords to compel submission to his orders, with the result that a few years later there was a rebellion which led in 1454 to the interference of Duke Charles of Savoy, who was able to bring about a peaceful arrangement between the two parties. The first serious attack with armed forces took place under Philip II., who became regent of the duky of Savoy in 1400, and duke in 1403. It was in 1494, during his regency, that Philip launched an expedition against the Waldenses of the Laserna valley, only to meet with so disastrous a defeat that he gave up attempts to suppress them, guaranteeing them liberty for 40 years. It is not easy to be clear as to the theological views of the Waldenses during this period. The notion that, when the Reformation broke out, the Protestants were surprised to find such a vigorous and industrious branch of the Waldenses as inhabited the Alpine valleys, who had pre

WALDENSES

served them from primitive times, proves to be a delusion. When we do meet with a Waldensian statement of belief, this is subsequent to the Reformation and characteristic of Swiss and German theologians and churchmen of that movement. The earlier Protestantism was partly negative, in the rejection of Roman Catholic teachings and practices which could not be justified by Scripture. As it was polemical, a return to the simplicity and spirituality of worship believed to have been characteristic of the primitive Church. Waldo and his immediate followers relied mainly on the Gospels. The ordinance of poverty thought to be required by the teachings of Christ was not universally adopted, nor did it long continue in operation. On the other hand, the Pauline theology, so emphatically and elaborately taught both by Luther and by Calvin, does not appear to have been brought forward by these earlier Protestants. There was no tendency among them to elaborate a system of theology. The books were drawn from the part of the peasantry, and the college at Milan in which they were trained had begun with the most elementary instruction in reading and writing. The great requisites of simplicity to read the Gospels and familiarity with their contents. Here we have the religious teaching of the mediaeval Waldenses.

III. Reformation Period.—1. First contact with the Protestants.—When the Reformation broke out the only organized opponents of the papacy on the Continent were the Waldenses and the later Hussites, who were called the Bohemian Brethren, but whom the Protestants as well as Reformers and Catholic alike considered as Roman Catholic heretics. In 1514, these Bohemians sent two of their ministers on a visit to Martin Luther with a message of congratulation and encouragement, and ten years later they sent a confession of faith, entitled Apologia seu doctrina eorum qui vulgo appellantur Waldenses, with a eulogistic preface. Subsequently communications were maintained by the missions of successive deputations. In 1540 the Bohemian Brethren sent a deputation to confer with Calvin in Strassburg. Driven out of their own country in 1548, they took refuge in Poland, where they united with the Protestant churches which they found there. Calvin wrote to the churches of Poland, ‘I hope for every kind of good from your union with the Waldenses (ave les Vandois).’ Meanwhile the churches of the Alpine valleys took steps to come into contact with the Reformers. In 1545 and 1556 the synod of Laus (Pragela), in which 140 barbes took part, having received confusing reports, sent the barones Martin Gomin and Guido de Calabris both to Switzerland and to Germany to make inquiries and bring back some of the Protestant writings. Their report and the literature which they circulated among the churches helped to draw them into contact with the Reformers. Four years later the synod which met at Marindol decided to consult the principal Swiss Reformers on several points of doctrine and discipline, for which purpose they sent two barbes, George Morel and Peter Masson, who visited and conferred with Farel and Haller, and at Basle received a friendly response to their questions from (Economandus), who then sent them on to Strassburg, where they were well received by Farel, who gave them an equally full and explicit reply. Morel published the Waldensian questions and the Reformer’s answers under the title Questiones, Paris, 1556. In the same year the two delegates returned by way of France, when Masson was put to death at Strassburg but Morel escaped, bringing back their report to the Waldensian churches. This was discussed at a synod in Piedmont, held apparently in 1531. The discussion resulted in the election of five bishops, and the formation of two parties, known respectively as ‘Conservators’ and ‘Innovators,’ the former inclined to their position by reason of their accepting the new Protestant teaching. This indisputable fact argues clear evidence that the pre-Reformation Waldenses were not simply hidden Protestantists, cherish the doctrine subsequently

held by the Swiss and German Reformers. On the other hand, the Hussites among whom they principally lived in Moravia, in Hungary, and the descendants of the Lollards still in hiding from persecution in England, they were ready to intermarry with the new opponents though the perfect test of their separateness from all others keeps. Separatist, spiritual, simplicity of worship, and the popular use of the Scriptures in the vernacular as the authoritative standard of faith and discipline, the Waldensian character is far more pronounced. They found welcome support from the powerful new Protestantism that was making great its way to the east, where the church of Bohemia, under the spiritual guidance of Farel and Calvin, was already in a great ferment. The question of meeting with these Reformers was settled, and by the mutual understanding above described, the Swiss and German Protestants, as they were termed, returned with new confidence to the Church of Bohemia. The Waldenses themselves were invited to attend the general synod of 1532 at Strassburg, at which they were represented by the baron Charles de Pragela, who was a prominent leader of the Reformers, and who, with the consent of the synod, was appointed as their bishop in Switzerland. He was received with great respect and love, and his appointment was confirmed by the leading Reformers. The Waldenses were thus welcomed as equals by the Swiss and German Reformers, and their presence at the synod was a great step forward in the advancement of the Reformation in Switzerland. The Waldenses were received with great respect and love, and their appointment was confirmed by the leading Reformers. The Waldenses were thus welcomed as equals by the Swiss and German Reformers, and their presence at the synod was a great step forward in the advancement of the Reformation in Switzerland.

2. Association with the Swiss Reformation.—The difference of opinion among the Waldenses of the valleys and their division into two parties on the question of accepting the Protestant views which their delegates reported to them led to the desire for fuller knowledge and conference with leading Reformers. With this end in view a general synod was convoked in 1532 under the chrestians of Swiss and Angers, in which the Reformers Farel, Saunier, and Olivetan met a large assembly containing laymen as well as barbes. Three recommendations, which rose out of the previous consultations with Ecclampatius and Farel, were then read: viz. (1) the adoption of public worship by the Waldensian churches instead of secret meetings, (2) an absolute condemnation of the custom of the Waldenses of attempting to bring about a Catholic service, (3) an acceptance of the Reformers’ views on predestination, good works, oaths, the denial of obligatory confession, Sunday fasts, marriage of the clergy, and the two sacraments. Farel’s enthusiastic eloquence carried the great majority of the assembly with him in a vote for adopting these propositions, though some of the barbes protested against the term ‘predestination,’ (1) as unnecessary, (2) as casting a reflection on those who had hitherto led the churches happily. Olivetan remained for three years travelling among the valleys and setting up schools. Meanwhile—the next year after the synod of Chamforo—two barbes who had been confessing with their brethren in Bohemia returned with a long letter conjuring the Waldenses of the valleys to weigh well the question of adhesion to the proposals of the foreign teachers. Accord- ingly a synod was at once called at Praili to reconsider the question; but it adhered to the previous decision, with only a handful of dissentents. The chief differences which now arose between the Reformers and the Swiss Protestants was that they were skeptical of the adoption of Calvinism. The Swiss Protestants had been based on the question of the degree in which everything must be determined by the authority of Scripture. Both parties held, as against the Catholic position, that this was the one supreme authority and that, while the Swiss theologians would allow of nothing which was not expressly taught in the Bible, the Waldenses had held that only those tenets and practices of Catholicism which were expressly contrary to Scripture need be condemned. But now the closer adhesion to the Swiss Reformed Church tended to assimilation of views and practices and subsequently to the adoption of Calvinism.

3. Olivetan’s Visit.—One of the most important and lasting outcomes of the friendly intercourse between the Waldenses and the Swiss Reformers was the production of the first Protestant French translation of the Bible. Waldo had translated some portions into the Romance vernacular earlier dialects, but most of his publications had been destroyed by the Roman Catholic authorities. The conference at Chamforo, Farel and Saunier urged the Waldenses to adopt a new translation, the Waldensian having been authorized on the whole Bible in the French language. This work the barbes persuaded Olivetan to undertake (Octob. 1536), and he completed it in 1537. Considered better in the VT portion than the NT, Olivetan revised it on the basis of the later French versions, or rather revisions.

4. The new order.—In course of time the Waldenses on the French side of the Alps, who for the most part consisted of Conclusives, were fused into French Protestantism. Then persecu-
tion in Bohemia and also in Southern Italy nearly exterminated the churches of this communion in these valleys. In the Italian valleys of the Cottian Alps, the Vaudois country, as its only important habitat, though this very persecution scattered many of its victims among the Swiss and other Protestant states. It took some 20 or 30 years to supply adequately trained ministers and organize the worship, discipline, and teaching of the Waldensian Church in the valleys on the lines agreed upon in the conference held at the cast of Oyon. The very lapse of time was one cause of delay. The Swiss theologians could preach only in French, the Italian ministers, educated in the college at Milan, only in Italian. Neither knew the Romance dialect which was used in the villages of the valleys. Instead of taking the course usually adopted by missionaries and themselves learning the provincial dialect, the French- and Italian-speaking teachers induced the peasants to learn the languages of these teachers, so that they could be used in the church services. Until this curious change had been effectively completed, the movement could not make much progress. Meanwhile Piedmont carried us for the power of France. This was in 1536—under Francis I. and the French domination lasted till 1569. The first governor appointed by the French king was the well-known first Fieschi, a resolute Protestant, who proved friendly to the Waldenses, and, on being sent into Germany, left his secret secretary Farel, a brother of the Reformer, in charge of the valley of Lausanne. This man set to work vigorously furthering the Reformation and abolishing the Mass which the Catholics were still celebrating at Angrogna—an act of violence which provoked representations from the part of René of Montenois, the governor of Turin, who sent soldiers into the valley, sacked its villages, and imprisoned the barons. The governor, returning to the province in 1539, released them, and Francis then left the Waldenses of Piedmont in peace for seven years, while he was persecuting those on the French side of the Alps, Henry II., succeeding to the throne of France in 1547, was also severe on the northern Waldenses; but Caracciolo, his governor of Turin, who was friendly to them, and persecution did not break out in this district till 1550, when the inquisitor Giacomelli sent for the synode of Angrogna and imprisoned him at Turin. War put a stop to further persecution. A number of fully trained ministers came from Switzerland to take charge of the congregations in the valleys, together with some Swiss pastors who travelled about inducting them and regulating the new order of worship in the French language, also a coprincipal who distributed the service books among the villages. Many ' temples ' were built, and by 1556 the new form of worship was being conducted in all the parishes. Thereupon two commissioners were dispatched from Turin with directions to stop these services. The villagers disobeyed the edict, and an arrest of the pastors was ordered. But proceedings were stopped owing to the influence of Swiss and German authorities with the French Government. Thus another respite was secured, during which the Waldensian Church was being fully organized and equipped with capable leaders. This is a significant fact, in view of the terrible times that were to follow. The discipline and leadership now established by the churches enabled the Waldenses to make one of the most magnificent stands for religious liberty ever recorded in the annals of history.

1. PERSECUTION OF GREAT PERSECUTIONS (1540–1600).—Although the Waldenses had been liable to persecution as heretics from the first and had suffered from some severe outbreaks previous to the Reformation, there is no evidence, either in the Italian or in the French annals, that could be adduced as indicative of the absence of rigorous lines of demarcation. But now their open co-operation with the Swiss and German Protestants showed no ambiguity as to their quarrel with Rome, and consequently stern measures of repression were taken against them. The political arrangement formally adopted in Germany as a refuge from civil war and practically operative in the other countries of the Low Countries was a steady attempt to suppress that of its prince or other ruling authority. In democratic and republican Switzerland this worked smoothly, since it meant the dominance of the faith of the majority. But it was otherwise with a country such as France under an autocratic ruler, and accordingly in 1534 there was a wholesale destruction of the Waldensian churches of Provence. Piedmont was subject to the rule of the duke of Savoy, and therefore it depended on the will of that prince, or sometimes rather on that of his overlord, whether the practices of the Waldensian Church in that province should be interfered with. Measures were taken to suppress them. Another feature of the consequent contest is the fact that it was by no means one-sided. Those sturdy mountaineers were not meek martyrs led into a pit, as lambs into the enemy's camp, and the first outbreak of persecution directed against them was an act of reprisal for the suppression of the Massat Angroga. Then the Waldenses became in a literal sense a Church militant, taking to the field in arms and fighting valiantly for their liberty of worship, with hardy heroism and at times with brilliant success. The outstanding personality of this period is Scipione Lentolo, born at Naples, but said to have come from a Roman patrician family, who became a priest, a doctor of theology, and preacher at Venice and Ferrars, at the latter of which places he was converted to Protestantism. Accused of heresy for his preaching at Lucca, he was imprisoned and sent to Rome. Escaping first to Sicily and then to Geneva, he there came in contact with Calvin, who appointed him pastor of St. Jean in the Waldensian country. Not confining his activity to this parish, he visited other valleys, and even went down to the plain of Piedmont on an evangelizing tour. When persecution broke out, he went into the French service. In 1553 a decree was issued, encouraging the people everywhere to stand true to their faith. Lentolo is the author of the earliest history of the Waldenses and the chief authority for that of the persecution of his own times. This history was virtually unknown till in 1897 Comba called attention to a copy of it in the Berne Library; eight years later it was reprinted and published, and thus a flood of light was thrown on the persecution with which the author was so closely connected. Expelled from the valleys in 1566, he ministered in the Engadine and carried on literary work till his death in 1589.

The principal persecution with which Lentolo was brought into contact led to the war of della Trinità. Phillibert, the duke of Savoy at this time, though personally averse to the molestation of his mountain subjects, was compelled by the papal nuncio, backed up by France and Spain, to issue an edict requiring them to attend the Mass and forbidding their holding Waldensian services. On their refusal Lentolo was expelled under the command of della Trinità to enforce it. This commander, arriving in November 1560, met with such strenuous opposition that he consented to allow a certain number of barbes to go and present their plea for religious liberty, while he went into winter quarters at La Tour. The
WALDENSES

Deportation was treacherously treated at Turin, in order to compel them to abjure their faith. Accordingly, on their return in the spring, the inhabitants of the Val d’Aosta rose in arms and resolved every attack of della Trinità at Lussera, at Angrogna, at Prali, with the result that Philibert was glad to come to terms with the heretics, leaving them to retain their Protestant services (5th June 1561). At the same time a persecution to the extent of extermination was carried out by Spanish troops at the instigation of the Grand Inquisitor, Michele Ghisleri (later Pope Pius V), in Calabria, where, in spite of wholesale slaughters in the 13th cent., some representatives of the early Waldenses had persisted in maintaining the faith of their fathers, and had now welcomed the new Protestant movement. Two thousand were put to death and 1600 imprisoned. In Piedmont, after this, attempts were made successively by missions of Jesuits and by Capuchin friars, sometimes with the aid of soldiers, to bring the mountain villagers back into the fold of the Church; there followed several local persecutions, exactions of fines for supposed offences, and violent seizures of churches and even a sanguinary war in the year 1584, in which the rebels, and the most important Waldensian leader of this time was Peter Gilles, an inspiring preacher and vigorous political writer, who died in 1644.

Deportation under Louis XIV.—The determined loyalty of the Waldenses to their faith, combined with their amazing military prowess and the reluctance of the duke of Savoy to change his mountain subjects—a policy only undertaken excepting under pressure from France—had secured them treaties of peace with liberty of worship. For a quarter of a century they were very little molested. In 1650 Charles Emmanuel II, the young duke of Savoy (only 16 years old), came to the throne. Behind him was the real power, his mother the duchess, daughter of Henry IV. and Mary de Medici, grandmother of the notorious Catherine de Medici, the author of the Massacre of St. Bartholomew. Thereupon a Council of the Propagation of the Faith, consisting of the chief councillors of State and Church dignitaries, was established in Turin. Five years later there was issued the Decrees of Gustavo, ordering all Waldensian families in the plain back into the mountains and the sale of their lands within 20 days, unless they would renounce their Protestantism, swear the Oath of Allegiance, and submit to all the other regulations of the Catholic religion. The resulting exodus was complete; the few/victors were allowed to remove the inhabitants into the mountains. Janavel and a banditti, called banditti by the Piedmontese, took up the cause of the persecuted villagers and repeatedly attacked the duke’s soldiers. On 6th August the duke issued an edict condemning all the Waldenses to death as rebels. The war continued till the end of the year, by which time Janavel had 2000 followers, who occupied a number of advantageous positions. Meanwhile the persecuted people sent messengers to Switzerland and Holland begging for help, and their great leader Leger made good use of his enforced absence from home in travelling about to urge the pious. The duke got little satisfaction from the war. At Angrogna, after his soldiers had ravaging the neighbouring villages, he lost 600 men and the two captains Sanfront and della Trinita. This had been a dishonourable expedition, because at the very time he was pledged to a truce while conducting negotiations with some Waldensian deputies, aided by an English embassy of 2500 men, and at the time of these negotiations with some emissaries from Switzerland were followed by a month of private discussion, till at length, on 14th Feb., 1664, the ducal government issued the Patente di Turin. This covenant granted an amnesty to all the Waldenses except their victorious leader Janavel, who was ordered out of the country, and liberty of worship in their own way without molestation, except at St. Jean Leger’s parish, where the Protestant worship was prohibited. It is much to the credit of Janavel that this hero of the war consented to his own exile without protest for the sake of a peaceful settlement of his people. Twenty years of liberty now followed.

3. The exile.—In the year after the revocation of the Edict of Nantes (i.e. 1656) Louis XIV. sent a demand to his cousin Victor Amadeus II., the duke of Savoy, that he would treat his Protestant subjects as the French king was treating the Huguenots. He found some ground for this interference with a foreign government in the fact that fugitives from their territories, who were escaping persecution were taking refuge in the Waldensian valleys. The result was that the duke ordered the Waldenses to discontinue their religious meetings on pain of death and the confiscation of their
property; their churches were to be razed to the ground; their pastors and schoolmasters to leave within fifteen days under pain of death and confiscation, and to remain on a pension; and all their children to be educated as Roman Catholics. The Waldenses, assembling at Angrogna, dispatched two envoys to Turin to plead for their rights; they were refused an audience. On hearing of the terrible plight of their co-religionists, the Swiss Protestants held a conference at Baden, which decided to send envoys to Turin and to the Waldenses. Accordingly the brothers De Muralt, selected for this mission, went to that city and obtained an audience with the duke on 13th March. The result was a proposal of Victor that his Protestant subjects should be allowed to emigrate to Switzerland. It was with the utmost difficulty that the De Muraltis persuaded the mountaineers to accept this suggestion of voluntary exile (in an assembly at Serre, 4th April). On 9th April the duke signed a decree permitting the emigration. In spite of this fact, some of the Waldenses who had agreed to accept it were arrested and imprisoned. Not having belonged to the confederation of the Swiss, the people prepared to resist the authorities to the last. Then, with the aid of soldiers sent by Louis XIV. as well as his own men, Victor sent expeditions up the mountain valleys, and besieged Cenis. By the end of the year 1700 had been killed and 12,000 carried off as prisoners, many of them to perish in the dungeons of Piedmont. 'The valleys are deserted,' wrote Catamit, the leader of the invading troops, at the completion of his work. Among those who escaped to Switzerland was Henri Arnaud, who was to be the leader of the return from exile and whose narrative is our principal authority for this period. Victor declared all the property of the Waldenses confiscated, and he reckoned the heretics to be exterminated. But there were 200 fugitives lurking in the mountain caves, who afterwards descended at times to the terror of the immigrants from the plain who had taken possession of their homes. The duke sent messengers bidding them escape to Switzerland, but after sending these to consult Janavel and Arnaud they declared that they would resist till death. Victor had no mind to keep up the war with these brave mountaineers, and he agreed to let them go to Switzerland with their belongings, only making them swear to relatives to accompany them, and on their arrival there to permit all the imprisoned Waldenses, for whose liberation they had been holding out, when offered an earlier opportunity of escape, to follow them. The persistent guerilla warfare of this handful had secured the release of all the surviving Waldenses. Early in 1697 the prisons were opened, and the prisoners, now reduced to 3000, set off on their terrible journey across the Alps for Geneva, by the Mont Cenis route, a journey which occupied on an average twelve days, during which many perished in the snow. But, in spite of the protest of the Swiss against the flagrant breach of treaty, children under twelve years of age were detained to be educated as Roman Catholics. The fugitives came in dribbles, and the last detachment did not arrive till the end of August. Their reception at Geneva was very hospitable, and by degrees they were settled in various Swiss towns and generously supported by Holland, England, and Germany. But the Waldenses were anxious to return to their valleys, and the duke of Savoy was so much annoyed at one or two futile attempts that he induced the Swiss authorities to have them removed farther away, and arrangements were made by which they were compelled by a fine, and in the residence all claim on a pension.
pastors urging them to encourage recruiting in his service and even appealed to the Camisards and other French Protestants, whom he had been led to believe were still joining his army.

When the war was over, those French Protestants who had responded to his invitation were again expelled, and in 1707 he even sent back the Swiss who had remained only to be driven out eight years earlier. In 1708 Victor took possession of the valley of Pragel, whereupon its Protestant inhabitants were delighted to have the duc's permission for a visitation of Waldensian pastors; but he soon changed his policy and murdered these people to observe the Roman Catholic festivals. His policy all along was opportunistic, with a strong leaning to the Roman Catholic side when he was free from the necessity of conciliating his Pro-

testant subjects. There was no depending on his word. When the people of Pragel protested against his later treatment of them, the leading Waldenses in the valley were arrested and imprisioned; in 1716 the Protestant schools were closed; in 1720 the Reformed worship was absolutely forbidden in the valley. From time to time there was imprisonment of recalcitrants till the climate of opinion in 1790 was such as to give rise to the intercession of Frederic William I. of Prussia, all the Waldenses in the valley were ordered to abjure their faith or leave the country. They replied that they had done so and had freed of the year 800 exiles had gone over into Switzerland.

2. The 18th century.—During the remainder of the century, until Piedmont felt the effect of the French Revolution, the Waldenses had no eventful experiences. Though guaranteed rights of religious liberty, they suffered from time to time from exactions and restrictions by the Government, which showed that they were only allowed to exist on sufferance; and, when they complained against local acts of injustice, their complaints were little considered. Thus in 1753 a decree was issued forbidding them to leave their valleys; in 1748 a bishop was appointed there to work for their conversion to Rome, and the Opera dei predetti which exists in the present day was then founded, in order to assist Roman Catholics to buy lands from the Waldenses; in 1756 they were forbidden to hold meetings outside the temples; kidnapping of children was a common and growing practice. Government reports entitled Compendio degli editti concernenti Waldesi, containing a host of vexations, enthrivals, and restrictions which emanated from the senate. Meanwhile, in common with Protestantism throughout the rest of Europe, the religion of the Waldenses now suffered from decline of spiritual vigour. The Arian movement in England affected some of the pastors, and after that the Continental 'rationalism.' During this period they received pecuniary help from Holland and from England under encouragement from George II. and George III.

3. Period of the Revolution.—The Revolution brought an interval of complete religious liberty to the Waldenses owing to the French Republic being established in Piedmont in 1798. On 19th December all civil government authority over the Church was abolished; on 31st December liberty and equality were proclaimed for all kinds of religion, and early in the new year absolute liberty of the press and the abolition of the Inquisition was also declared. Though inevitably mixed up with the war of the Revolution when the absence of Napoleon in Egypt enabled the Russians and Austrians to invade Piedmont. After at first siding with the French, to whom they owed their liberty, the Protestant mount-

aineers, driven into a corner, gave the allies a pledge of neutrality. In spite of this agreement, the Austrians took the opportunity to involve the Waldenses in trouble on charges of plotting and collusion with the French and on other accusations. These vexatious proceedings the Swiss put an end to by describing the action of the Austrians as 'a crusade' against them. During the three and a half years when Lombardy and Piedmont were governed as a republic there was no grievance of the Waldenses, their pastors' loss of pecuniary aid from England owing to their association with the French. But, on receiving a petition from 'the Table'—their central governing body—for assistance, the execu-

tive commission issued a decree reducing the Roman Catholic parishes from 28 to 13 and granting the revenues of the suppressed parishes to the Waldensian pastors, and by this means half their salaries were secured. Thus the Church now obtained support from State funds. The valleys had taken over the administration of national property. But, after the establishment of the French Empire, Napoleon issued a decree sequestrating the state property and so deprived half of the contributions which they had received from France during four years (25th March 1805). The following May, however, when the emperor was defeated at Turin, they were again freed, and when he treated his members very graciously and invited them to present to him a statement of their wishes. Accordingly an open-air meeting was held at St. Jean, where the pastor drew up a petition on three points: (1) the grievance of the sequestration of the State funds out of which the pastors' salaries had been made up after the loss of aid from abroad; (2) a request for the application of the Organic law of the Reformed Churches of France to the valleys; (3) a plan or organization for grouping the parishes in five consistories.

In reply Napoleon agreed to restore the sequestrated funds and to allow three consistories in the valleys. The stirring flattering with which the emperor was approached in this matter, and the painful anxiety shown about the recovery of money grants, do not reflect much credit on the representatives of the heroic Church of Leger and Arnaud and its stand for religious liberty. A further mark of Government favour is seen in the grant of land for the erection of the temple at St. Jean, which the Waldenses had been seeking for so long with great éclat on 1st Nov. 1806.

4. 19th cent. vicissitudes.—During the first half of the 19th century, the Waldensian Church passed through great vicissitudes of fortune. For 34 years, from the fall of Napoleon in 1814 till the Revolution of 1848, it was oppressed under the rule of the king of Sardinia, who actively espoused the papal cause. On Victor Emmanuel I. coming to the throne, the Waldenses of Piedmont sent to Turin a deputation, which had an audience with the king, but obtained no response at the time. Meanwhile the Jesuits had been put in charge of the education. The State funds which Napoleon had allowed the pastors to resume were again withdrawn; the only mitigation of the hardship against which the Table protested was a partial remission of dues from the valleys. Charles Felix (1821-31) was much more severe. When the Table asked for an audience at his accession, he insolently answered that all they needed was to become Catholics. Moreover the Waldenses were guaranteed that they were allowed to hold a synod. When the Waldenses reopened their college at La Torre, they were peremptorily ordered to close it again. Charles Albert (1831-48) was also severely re-

2. May, p. 171.
presive with the Waldenses till near the end of his reign, when the appointed bishop of Pignerol in 1833, announced that all the old laws against them should be enforced. When the English ambassador intervened on their behalf, the king ordered them not to appeal to Rome, and forbade the coming of alien visitors among them. All along they were excluded from the universities, the learned professions, and commissions in the army. But at length, after more forceful advocacy of 1848, the current of European opinion was running so strongly in favour of religious liberty that Charles Albert abandoned his harsh treatment of the Waldenses. On 5th January of that year he granted an audience to the Table, which gratefully acknowledged the legislative reforms and removal of hard enactments he was granting to all his subjects, but which at the same time appealed for relief from the laws especially adverse to their Church. They were well received, and on 17th February the king issued an edict of emancipation, granting the Waldenses the full civil and religious rites enjoyed by other subjects, including access to the public schools and universities, and allowing them to give their Protestant religious teaching in their own schools. The good news was welcomed with joy and relief by the inhabitants and bonfires. A Waldensian congregation was now formed at Turin, and it became a home for refugee Protestants from all parts of Italy. In 1854 there was a division owing to the objection of these refugees to come under the government of the Table and its old rigorous rules. The use of the French language in the services was another ground of complaint. The division spread to other congregations, in which both parties regarded the uncontents as liberalizers and progressives, and also as protestant Italian patriots in their desire for the use of the Italian language just when a new spirit of a united Italian patriotism was sweeping the country. The result was a split, and the formation of the 'Free Church' (Chiesa Libera) of which Luigi Desanctis, a learned and eloquent priest and theologian of the Inquisition at Malta, who had become a convert to Protestantism, was leader. After serving as pastor of this church for ten years he left it, owing to its adoption of J. N. Darby's views—the Plymouth Brethren idea—rejoined the Waldenses, and became their professor of theology at Florence and the editor of their journal, Eco della Verità, till his death in 1860. The chief leader of the Free Church, after Desanctis had left it, was Alessandro Gavazzi, an ex-Barnabite father from Naples, who subsequently became an eloquent hero of Italian emancipation, accompanying Garibaldi as his chaplain and also enthusiastically supporting Victor Emmanuel as 'the only saviour of Italy as Jesus Christ is the only Saviour of sinners. In 1870 a general assembly of the Free Church was held at Milan, when a simple Biblical confession of faith was drawn up, and the next year another assembly at Florence adopted rules of a constitution recognizing the pastoral office—as against the Plymouth Brethren idea—arranging for annual assemblies, and appointing an evangelization committee. It now took the title 'Unione della chiesa libera in Italia.' Some of the congregations, still adhering to the Brethren idea, arranged for annual meetings, and formed themselves into a community, which they ventured to designate simply 'Chiesa Christiana.' On 1st May 1884, with the exception of the Reformed Congregations in Italy, a Waldensian annual evangelical conference with a view to Church unification. Owing to the Baptists and the Methodists not altogether agreeing with the position taken up by the Waldenses and the Free church, these last two bodies took their own course for coming together on condition that the Free Church adopted the confession and Church order of the Waldenses.

5. Present condition,—The following facts concerning the decrees regarding the Waldenses and the Church have been supplied by the Moderator, Signor Ernesto Giampicco. This Church holds its old position in the Alpine valleys, and though it has spread throughout the Peninsula and the Islands. There are now more than 200 towns and villages outside the original valleys where congregations, large or small, have been formed. The full membership of the whole Church amounts to about 25,000; but there is a much larger number of adherents. For their training the ministers spend three years in the theological college at Florence (which is soon to be transferred to Rome) and at least one more year in a foreign university. They are ordained at the annual Synod in Torre Pellice. The Waldensian Church is in the Alliance of Reformed Churches of France and Switzerland, the latter being more liberal in its tendencies than the former, which now contains four high schools for boys and girls—the only Protestant high schools recognized by the Government—also hospitals, orphanages, and other benevolent institutions. In the same year the whole Church is absolutely independent of the State, and it enjoys complete liberty in all branches of its activity. The worship is in the main the same as in the kindred Evangelical Churches of France and Switzerland, the liturgies being almost identical; but there is a tendency to introduce congregational responses in the morning service. Neither the narrower type of Calvinism nor advanced liberalism is to be found in the present teaching of the Church, which is what is commonly known as 'Evangelical.' This Church is still progressing, though slowly. It always has been and still is hampered with financial difficulties, although it receives assistance from abroad and the contributions of its members are increasing.

WALTER F. ADENEY.

WANG YANG-MING. — Wang Yang-ming (A.D. 1472-1529), known also as Wang Shou-jen, Wang-shen, Wang Wei-an, and Wang Wen-ch'eng, was a Chinese philosopher and statesman and scholar of note during the Ming dynasty, specifically during the reigns of Hung Chih, Cheng Te, and Chia Ching. Like many other Orientals who had posthumous honours conferred upon them, Wang has had hero-stories associated with his career. In early youth he began to exhibit unusual ability as a student. At twelve he is
reported to have made inquiry of his teacher con-
cerning the most important thing in life. When
the latter said, 'Study to become a Chishih' (an
academic degree of about the same rank as the
Ph.D.), Wang replied, 'Study to become a sage;
that is the first and greatest occupation.' An-
twenty-one he was decorated with the degree of
Chujen; at twenty-eight he was made Chishih;
and a little later he received the highest academic
honour the Government could bestow, the degree of
Hanyi.

Having unjustly incurred the hostility of the
eunuch Liu Ts'ing when he was thirty-five, he was
sent as a disgraced official into the Government
dispatch service in the province of Kwei-chow. His
biographer describes Lung-ch'ang, where he was
stationed, as a resort of venomous snakes and
poisonous worms, inhabited by babbling barbarians
with whom he could not converse. It was a critical
situation: in suspense over his own fate, realizing
that at any moment a decree from the capital
might order his death, he found his followersone by one falling ill. Nothing daunted, he cut wood, chopped water, and boiled soft-
boiled rice for them, cheering them with songs
and stories of home. In view of his own precarious
position, he had a sarcophagus made for himself.
In it he laid his thoughts, ideas and subject matters
of his meditation was the conduct of a sage under
similar circumstances. One night at midnight
the great enlightenment came, and suddenly he
realized what the sage meant by 'investigating
things for the sake of extending knowledge to the
utmost.' Overjoyed, he unconsciously called out,
and, arising from his couch, paced the floor. 'I
was wrong,' he said, 'in looking for fundamental
principles in things and affairs. Making human
nature sufficient to solve all the problems of existence.'
From that time on he was a faithful defender of
idealism in opposition to the realism of the philo-
sopher Chu, whose commentators, then as now,
were esteemed the final authority.1

At the age of thirty-nine Wang was restored to
honour and promoted to the magistracy in Luling-
hein in Sian. As time passed he held numerous
positions of trust and honour in the Government.
He was President of the Court of Ceremonies,
Military Governor of Kiangsi, first assistant to the
President of the Censorate, President of the Board of
Works, and President of the Board of Revenue.
Wang, Kwangsi, Kiangsu, Hsuan, and Huphel, and was made Earl of Hsienhien with the title of 'Master of the Ban-
queting Office and Pillar of the Government.'

His greatest military campaign was undoubtedly
conducted while he was Military Governor of
Kiangsi, against the rebellious Prince Ch'in Hao
(Prince Ning), who, it was feared, might utilize
the down-river current and invade the capital.
Wang first sent up several memorials advising the
emperor of the rebellion; then by a series of
subterfuges he misled the rebellious prince, finally
engaging him in battle near Poyang Lake at Huang-Hsi and Patzunao, and capturing him prisoner of war. His success aroused the jealousy
of several officials, to which we may ascribe the
fact that his philosophic point of view was attacked
and branded as heterodox.

It was not, however, as strategist and statesman
that Wang made his largest contribution to human
welfare, but rather as a great moral reformationer, who
made a unique and lasting impression on society.
In his appreciation of moral values and his emphasis on fullness of
life and moral integrity as of far more
worth than fame or gain. He found himself intellectu-
ally fettered by a conventional interpretation of
classical or Chinese moral teachings, firmly fixed
and as rigidly observed as the most hollowed

1 See art. PHILOSOPHY (Chinese), § 4.

religious traditions of any other Oriental civiliza-
tion. He was determined to break down this barrier.

The latter said, 'Study to become a Chishih' (an
academic degree of about the same rank as the
Ph.D.), Wang replied, 'Study to become a sage;
that is the first and greatest occupation.' An-
twenty-one he was decorated with the degree of
Chujen; at twenty-eight he was made Chishih;
and a little later he received the highest academic
honour the Government could bestow, the degree of
Hanyi.

WAR

Human warfare is generally the climax and the symbol of the strife which pervades the realm of nature; it is itself an institution which has been involved in the struggle for existence. It has also had to adapt itself to a changing environment. The institution is rooted in a deep instinct and an invertebrate habit of the race; but it has also come into conflict with powerful forces, emanating from the intellectual, the moral, and the religious realms. It is now admitted to a chang-

ing environment. The present article will trace the

interpretation made upon war by morality and religion, examine the spiritual issues to which it gives rise, and discuss the desirability and the possibility of the establishment of a non-warred conflict among the nations.

I. NAME AND DEFINITION.

The term 'war' is popularly applied to any conflict between nations, communities, or other large social groups in which violence is used for the settlement of a quarrel. Cicero defines it as 'gens discordiante per vicis' in distinction from the method of argumentation (dis-

ceptatio).

In ethical discussion it has been defined as 'conflictus multorum contra multos extranes'; it is not a state of general antagonism, but a conflict in which matters are forced to an issue; it is the affair of many or of masses, and the name may not lightly be used to dignify sedition. In legal definitions the term has been limited to conflicts in which the belligerents are states, or at least combinations which can reasonably claim a higher status than bands of rioters or brigands.

War is a contest carried on by public force between states, or between states and communities having with regard to the context the rights of states.

The aspects of war on which the genius of language fixed in its coinage of words may still to some extent be recognized.

(a) Approach and assault.—Hラルラ、from root pel, akin to Welsh pel, to assault, implies the idea of going at, or 'going for.' エラル, from the same root, or a cognate term, has the meaning of to strike, to assault, or to inflict blows and the clash of arms.

(b) A contact between two adversaries.—Bellum is commonly explained from the alternative form διόδια as the quarel which begins, or 'two things that are equal.' quod duas partibus de victoria contendentibus diminuitur.

(c) An intense effort.—Krrieg, O.H.G. Krge, Krle, Krize, his stress on the excited and strenuous exertion, and later on the gain which resulted. O.H.G. Wie, with derivatives, seems to have had the same primary and secondary meanings.

(d) Conflict and tumult.—The word 'war,' late A.S. werc, O.H.G. Wara, l. s., wara, Fr. guerre, if connected (as commonly) with wer, sererien, may have sprung from the observation that 'every battle of the warrior is contused noise' (Is 32:4), or that war upsets the general order of things.

The root may, however, be wer, preserved in Werh, sehren, weir, beware, guard (of sewer), when the term would be an illustration of the habitualagogical tendency to attribute to all wars the character of self-defence.

(e) Organisation.—Hb. ספ, from root ספ, 'to set in order,' draws attention to the ordered action of the battle array.

(f) The fateful plight.—A.S. orlege, O.H.G. Orlog, Dan. orlog, may reflect the fatalistic mood which is fostered in war, or the common experience that nowhere else is man so surely in the hands of God and so little certain that he can himself in

control the issue. This interpretation has been supported by the O. Frisian group with the Norse, the Moiri, or Parce of the North.

II. THE PREVALENCE OF WAR.—War has been one of the most constant and distinctive features of human history, and it may even be thought to be a sinister peculiarity of the human species that hordes should pursue hordes of the same kind with a persistent purpose of rapine and destruction.

The pre-historic age, which extended for tens of thousands of years down to about 5000 B.C., enjoys a fairly pacific reputation. If it was usually rain-

ning, as Kästel puts it, the age was at least free from the thunderstorm and the devastating floods of war. 2 Man being the animal intime, furnished by nature with no more formidable weapons than fists and teeth, he was too much preoccupied by his designs on the beasts, and by theirs against himself, to meddle much with his own species except when rival claims emerged over a hunting-

ground, or at a later stage over pastures and wells (Gn 15:2, 9).

Pastoral man, 'It is observed,' hardly needs tools, or weapons either, for it is to the common interest of pastoral to range apart, and on the steppe there is room enough for all. It is the same with the nomads of central Asia, who continued to be so as late as the Bronze Age was established. 3

Historic times have their landmarks in the rise, the conquest, or the fall of great empires. In the period of Oriental antiquity martial races moulded the history of China and India. Further west, and in the central current of history, arose the powers of Egypt and Mesopotamia, which during thousands of years engaged in an ever-

renewed struggle for supremacy, while in the intervals Mesopotamia was the scene of a fierce and prolonged conflict, waged with alternating success, between the rival peoples of Babylon and Assyria. From these centres of empire there also proceeded frequent campaigns against sedentary or migratory peoples which raised a threatening front in Western Asia, or which tempted war-

like kings by prospects of sovereignty and spoils.

In the end Assyria was overthrown by Babylonia, Babylonia by the Persians, and a Persian empire entered on its course with a similar programme of conquest and tribrate that brought it into collision with Greece.

In the age of classical antiquity, when the scene shifted to the Mediterranean, and the Greeks and Romans assumed the chief rôle, war continued, notwithstanding the growing culture, to be re-

sional, with the most honourable and almost the most urgent of human pursuits. Men had now iron weapons in their hands, and when they arrived on the central European stage to show how effectively they could be used.

The Greeks made their advent as barbarian conquerors from the north, who served themselves heirs to an older civilization that had developed its powers and accumulated its treasures in the Levant. There-

after they went on fighting with little intermission —against the Trojans, as they said, for Helen of the glorious tresses and for honour, but doubtless also with an eye to dominion and the wealth of Anatolia, against the Persians in maintenance of their racial independence, against one another from cupidity of spoil, or jealousy, while given in their exhaustion they could claim for Greek arms a considerable share in the conquests of Alexander the Great, and in the creation of his grandson's empire. Meanwhile, the medieval empire, in the time the Romans, dug from the same pit, and similarly equipped, gradually made themselves masters of Italy, settled the long-drawn and hard-

1 J. Grünberg, Die Geschichte, Historical monographs, Leipzig, 1882.
2 Die Erde und das Leben, Leipzig, 1892, ii. 672.
fought issue between the Semites and the Aryans through their victory over Carthage in the Punic Wars; and by the beginning of our era, notwithstanding the standing traditions of civil broils, they had subjugated and embraced within their empire a great part of the known territories of the three continents. Under the Roman emperors it seemed for two or three centuries as if the curse of war had wrought its own cure, and the world had been saved by the sword, the hopes which was short-lived, and the Pax Romana proved to be only a hollow that heralded more furious storms.

The period of antiquity came to a catastrophic end, and the Middle Ages were ushered in by the Teutonic migrations, which reduced the Roman empire to ruins, and gave new masters, with a fresh deposit of population, to its richest and fairest provinces. The outcome was that for the next ten centuries Europe was afflicted by wars of every known kind—between imperial dynasties like the Carolingian and peoples which repudiated their sway; between the new-born nations as in the Hundred Years' War of England and France; between rival claimants to a throne, as in the English Wars of the Roses; between the central authority as represented by a king and feudal and semi-feudal provinces; between particular interests: between the governing classes and oppressed populations which sought redress or revenge in social war. Religion supplied additional motives and occasions. In the early Middle Ages the armies of Islam penetrated into the heart of Europe, and at a later date Christendom retaliated in prolonged and sanguinary Crusades for the recovery of the Holy Sepulchre. The modern age, dating from the beginning of the 16th cent., has perhaps had more intervals of repose, but it has found evil compensation in the magnitude of the struggles and the destructiveness of the operations. Instinct and tradition disposed the European rulers to seek an extension of their dominions whenever opportunity arose, while the discovery of the new world offered to the possessors of sea-power the prospect of unlimited agrandizement and wealth. The possibilities of effective warfare were also enormously increased, in the centuries that followed the invention of gunpowder, by the enlistment of science in the improvement of the instruments of destruction. During the last four hundred years the outstanding fact in the political history of Europe was that one great power after another—Austria, Spain, France, Germany—sought to become the master of the Continent. Nationalisms which felt themselves threatened formed combinations which should be strong enough to frustrate, and which also deemed it prudent to anticipate, the development of ambitions and aggressive schemes. The programme of Britain was to rule the seas, and to avert a European hegemony. The result was that almost every generation witnessed a European war of the first magnitude—among them the Thirty Years' War, the War of the Spanish Succession, the War of the Austrian Succession, the Napolonic Wars, and finally the World War 1914-18, which has cost Europe the lives of 10,000,000 picked men, devastated wide areas of Europe by famine and disease, swallowed up one-third of the accumulated wealth, and shaken to its foundations the moral order no less than the material order. The peace of the modern world has also been disturbed by the ferment due to the assertion of the ideals of democracy and nationality in opposition to the alterations of order. The cause of the war has its military monuments in the English Civil War of the 17th cent., and in campaigns of the French Revolution, but for the most part it has pursued its triumphant progress without the necessity of sanguinary, or at least of prolonged, lighting. The spirit of nationality, which developed in the 19th cent. with extraordinary fervour, promoted war in several ways. On the one hand, it claimed independent sovereignty for populations which could establish a claim to nationhood on physical or historical grounds, and thus came into collision with existing imperial structures, giving rise to wars of war in which such states which liberated the Greeks and the Balkan peoples from the rule of the Turks, and the convulsions which have dissolved the heterogeneous Austrian empire. On the other hand, the national spirit fosters the ideal of the consolidation of separated kinsfolk in a single state, and this aspiration directed the third-century policy of Prussia which achieved the desired unification of the German people through the Austro-Prussian campaign of 1866 and the Franco-German War of 1870. Imperial ambitions also proved to be a natural sequel to the fulfilment of national aspirations. Within the great realms trouble has arisen, apart from any racial antithesis, in connexion with the respective rights of a central authority and of the subordinate members: in the 18th cent. the American colonies, in assertion of their colonial rights and interests; in later days, the claimants, fought the American War of Independence; in the 19th cent. the Southern States of the Union affirmed the inalienable rights of particular states in opposition to the prerequisites of an in­destructible Federation, and the matter was brought to an arbitration in the American Civil War. Finally, the modern world has had grave warning that, if the religious war is obsolete, religious enthusiasm has been replaced by a more violent fanaticism rooted in political and social ideals, as was evidenced in some of the phases of the French Revolution and most recently in the spirit and the efforts of Soviet Russia.

III. THE CAUSES OF WAR.—War is traceable to elemental desires and passions of human nature. According to Hobbes, his threefold root is the desire of gain, the fear of injury, and the love of glory.

(2) The desire of gain, in the narrower sense intended by Hobbes, has doubtless supplied the principal impulse to warfare aggression. Territory, with the attendant booty of various kinds, has been the usual stake in war, coveted alike by peoples and by dynasties. At the same time utility in the matter of territory has often been associated with other motives involving lesser degrees of culpability, and even tending on the realm of the virtues. Account has justly to be taken of the frequent play of fairly reputable reasons for war such as famine or scarcity, resulting from drought or the increase of population, the defence and development of trading interests as vital to the subsistence of a commercial nation, the migratory impulse, the spirit of adventure and the conquering desire of a mission to develop waste or neglected regions of the globe, and to conquer and take charge of people for their own good.

(2) The fear of injury, as well as the resentment due to actual injury, has unfailingly prompted to defensive war when resistance was possible, and
often when it might well be deemed hopeless. The interests with which nations have usually been prepared to defend at all costs are, in addition to their territory, their jurisdiction and their honour. It has also been commonly accepted that a palatable and growing threat to these interests justifies a nation in seizing a propitious opportunity for an anticipatory or preventive war.

(3) The desire of glory has in the main been a dominant motive of the great conquerors and of the great destroyers of human life and the destruction of peoples. Apart from such ambition, indignation at a national insult has proved to be capable of evoking the utmost effort and self-sacrifice.

(4) The desire of power is an additional motive which cannot be entirely resolved into cupidity. It is true that power may be sought as the means of appropriating territory and increasing the wealth of a people, but nations as well as individuals find satisfaction in the exercise of power as an end in itself. This desire manifests itself positively in the attempt of a nation or class to acquire dominion over others. The love of power for its own sake has been an important factor in the movements which established the great empires of history, and it has been not less conspicuous in struggles for the supremacy among allied states—as Illustrated by the story of Athens and Sparta, and in the modern contest of the German principalities which issued in the hegemony of Prussia. It has also supplied much of its energy to civil strife, and on occasion has kindled the flames of civil war. The desire of power comes into collision with the spirit of liberty. The demand for liberation is the natural response to the policy of domination, being rooted in the same appreciation of power; and, as the assertion and extension of the power of one nation or class presupposes the abridgment of the power of another, a system of imperial rule or of autocratic government involves the permanent possibility of wars directed to the achievement of national independence or of political revolution.

(5) The passions of hatred and religion have also furnished a relatively independent motive. A nation can take up an attitude that is on a still lower plane than brutal selfishness; it can become inspired by a hatred of the diabolic kind which quite transcends even the counsels of self-interest for the satisfaction of inflicting deadly injury on a loathed enemy. The spirit of hatred has sometimes been engendered by centuries of conflict or oppression, sometimes it has had its spring in deep-seated differences of racial character and culture.

(6) Finally, a religious zeal which can no more be resolved into self-interest than hatred has been the cause, and not merely the pretext, of many wars. Zeal for the glory of God at least co-operated with lust of booty to inspire the onslaughts of Islam, and it blended with the spirit of adventure in the Christian Crusades.

IV. THE REACTION AGAINST WAR.—The most general explanation of war is that men and nations have a legitimate desire for the goods of wealth, honour, and power, and that they are tempted to grasp them by force instead of earning wealth by labour, and honour and power by service. Human nature, however, embodies other principles to which this peculiar method of acquisition, with its inevitable cruel accompaniments, has constituted a challenge, and which have reacted against it in varying degrees of criticism and opposition. The complex constitution of man exhibits in him a longing for a vigorous sense of justice and a lively capacity of sympathy; and at least one of the belligerents must usually have been conscious of a gross viola-

tion of his sense of justice, while the butcherry and the devastation, the slaughters of the field and the sack of a city, when reviewed in cold blood, must often have excited the commiseration even of the conquerors. The general conscience, accordingly, from an early date, has expressed a certain ethical regulation of the occasions and of the practices of war. The great religions strongly supported the ethical plea. At the animitic stage, it is true, religion was practically indifferent to moral questions, but once the West had captured the mind of Asia and Europe were agreed in representing it as normally a part of religion to do justly and to love mercy even in the waging of war. Philosophy, with its distinctive appeal to rational considerations, has also contributed to foster and diffuse critical and reforming opinion through its disciplines of Moral Philosophy and Jurisprudence. The theoretical work was followed up in the 19th cent. by international conventions and conferences which established a fairly authorita-
tive code of International Law.

The moral strain against war has culminated from time to time in the assertion that war is essentially immoral, and in the repudiation of any traffic with it, in any case whatever, as an unworthy compromise. It will be convenient to deal first with those periods most distinctly repre-
sented by a considerable show of moral authority, before proceeding to trace the influence of religion and morality in the discrimination of just and unjust wars and in the humanization of the conduct of war.

V. THE LAWFULNESS OF WAR.—There have doubtless been men in all ages who have objected to war, and refused to have any hand in fighting. They could not harden themselves to the torture either by sheer cowardice, or by counsels of prudence natural to a difficult or desperate situation, or again by the conviction that the shedding of human blood was a criminal outrage, and in any case a futile way of attempting to oppose and prevent wrong-doing. At the risk of their principle being mistaken for cowardice, voices have been raised on the heights of moral idealism in absolute condemnation of war and all its works.

i. THE RELIGIOUS JUDGMENT.—i. The older religions.—While the Vedas are sufficiently warlike, and Brahmanism gives a concretion to the military caste, the miff spirit of Hindu religion tended to view war under the repugnant aspect of murder.

"Alas! we are engaged in committing a heinous sin, saying that we are the architects for killing our brethren out of greed of the pleasures of sovereignty. If the sons of Dushiaras, weapon in hand, should kill me in battle, me weaponsless and not defending (myself), that would be better for me.^"  

The influence of Buddhism was cast on the same side.

"If you desire to honour Buddha," said a Brahman who successfully mediated between two belligerents, "follow the example of his patience and long-suffering. 'Conquer your foe by force, you increase his enmity; conquer by love, and you will reap no after-sorrow.'"  

The teaching of the OT prophets contains a decided pacific strain. They condemned wars of aggression as magnified schemes of murder and plunder, and they were disposed to think defensive wars useless or unnecessary—useless, since a wicked nation would not escape punishment; unnecessary, since a righteous or repentant nation might safely dispense with armaments, and look for protection to the omnipotent Ruler of history (Is 33, 15, 17).

It may, however, be questioned whether the prophetic attitude arose more than that non-judgmentalism of the duty of Israel in the special circumstances of the situation and time (Jer 2528, 32). The great prophets lived at a period when it was a manifest inference from the providential order of the world
that a pacific and submissive policy was the duty of their little border-state, and they might well have been contented with a garrison for a nation to which had been providentially entrusted a larger and more promising political mission than was open to Israel under the conditions of the 8th and 7th centuries before the Christian era.

2. The bearings of the Christian ethic.—The teaching of our Lord and of His apostles includes precepts which on a first impression appear to rule out all traffic with war as inconsistent with the moral ideal. Not only is there a law of love, which condemns the passions that incite to aggression, but there is a law of meekness, expressed in non-resistance, which sufferers the aggressor to work his evil will.

‘Ye have heard that it was said, An eye for an eye, and a tooth for a tooth: but I say unto you, Resist not him that is evil: but whosoever smiteth thee on the one cheek, offer the other also. And if any man would go to law with thee, and take away thy coat, let him have thy cloak also’ (Mt 5:38-40). ‘Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which spitefully use you and persecute you’ (Mt 5:43-44).

‘Avenge not yourselves, beloved, but give place unto wrath: for it is written, Vengeance belongeth unto me, I will recompense’ (Rom 12:19).

The precepts were enforced by the example of Jesus, who ‘left an example that ye should follow his steps,’ and who, ‘when he was reviled, reviled not again; when he suffered, he threatened not: but committed himself to him that judgeth righteously’ (1 Pet 2:23).

As to the bearing of this teaching on the lawfulness of war there have been two schools of Christian opinion.

(a) The literalist interpretation.—The view was widely prevalent in the early Church that war is an organized iniquity with which the Church and the followers of Christ have nothing to do. This sentiment was expressed, though with varying degrees of lucidity and emphasis, by Justin Martyr, Tatian, Irenaeus, Tertullian, Origen, Athanasius, Lactantius, and Theodoret. The allusions to the subject are often casual, and the pacifist testimony sometimes does no more than affirm the undeniable position that the Church differed from the kingly race of this world in that it cherished no schemes of conquest, equipped no military forces, and did not dream of propagating the faith, or even of resisting persecution, by armed rebellion. But the position was also definitely taken up that war and the military institution of the state is the work of darkness, and some were quite emphatic that a professed Christian should not be mixed up with the foul and devilish thing.

‘It is not a law,’ says Lactantius, ‘for a just man to engage in warfare, since his warfare is justice itself.’

The prohibition of military service was partly due to war, in proportion that the soldier was required to compromise his faith by participation in the pagan rites associated with Roman warfare, and to jeopardize his character by association with brutal and licentious comrades, but objection was also taken to the principle to the military profession, and was supported by arguments such as these— that the military oath was inconsistent with the pledge of loyalty to Christ, that Christ had warned His disciples against taking the sword (Mt 26:52), that, if the lesser strife of litigation be forbidden, much more is the greater (1 Co 6), that, if it be unlawful to fight on our own behalf, it is also unlawful to fight the rights of others, and especially that in war men fight to kill, and that intentional killing is murder.

The last considera-

5. De his qui arma profident in pace, placit ab iubentis see a commissione' of the Pope, in Licin. Sacrorum Conciliarum Collect, Paris, 1819 ff., ch. 471.
6. Firmicus Maternus, De errore profanarum Religionum, Migne, PL, xii. 1048.

so impressed the general ecclesiastical mind that certain canons of the period excluded a soldier from the clergy; that a nation had been made for the blood that had been shed.

The literalist view, which had its exponents throughout the Middle Ages and at the Reformation, was made a cardinal tenet of ‘the people called in Scotland Quakers.’

‘Whoever can reconcile this, Resist not evil,’ says B. Barclay, ‘with, Resist evil by force: again, Give also thy cheek, with, strike against another, Lo, whosoever smiteth thee on the cheek, make a prey of them, pursue them with fire and sword; or, pray for those that persecute you, and the Lord will judge for thee, and make thee his hand, for it is written, Vengeance belongeth unto me. I will recompense, shall smite, and shall be smitten. Forgive, love, and pray for them which spitefully use you and persecute you: and ye shall be called the children of God’ (Rom 12:19-21).

The doctrine has recently been popularized by Tolstoi, who developed it in the thoroughgoing fashion which would also sweep away the whole of the machinery by which civilized states repress and punish crime. The justification offered for war, he says, is that it seeks to repair or avert injury, while the command of Christ is that we offer no resistance to injury. The practice of war is no less inconsistent with the injunction to love our enemies. It may be objected that Jesus does not prohibit war in set terms. But ‘a father who exHORTS his child, let him not be thought dishonest, nor let every person, and to give all that he has to others, would not forbid his son to kill people on the highway.’

(b) The reasoned judgment of the Church.—The mind of the primitive Church, so far as reflected in the NT, does not join in the unqualified condemnation of war. The Church of the apostolic age found solace in apocalyptic dreams which presupposed the general redemption of humanity would follow upon appalling conflicts between the powers of heaven and hell, of which the Christian saints, who would be collected in a camp, would at least be sympathetic spectators (Rev 20). In any case the Epistle to the Hebrews pronounces a glowing panegyric on warrior saints of the Old Dispensation (Hebrews 11), while the book of Acts welcomes Cornelius the centurion to the Christian society (10:28). During the succeeding four centuries, as has been exhaustively shown by Moffatt in the article cited, the Church as a whole declined to be committed to the extreme position. From Tertullian himself we learn that there were numerous Christians in the Roman army by their own choice, and that the Church did not condemn them. Clement of Alexandria taught that the position of a soldier was governed by the Pauline principle that ‘he should serve in that calling wherein he was called.’

Diocletian found so many Christians in the army that he deemed it a danger to the State, and Constantine was impressed by their importance as a military asset no less than as a political influence. When Christianity became the religion of the empire, the general tendency, exemplified by Eusebius, was to support the civil power by the benediction of military service. The excommunication of its members appears to have visited ecclesiastical censure on those who abandoned the army even in time of peace from conscientious scruples. Some even thought that the sword might be drawn in a holy war for the extirpation of idolatry. Ambrose enlivened the warlike courage which prefers death to bondage and disgrace, and claimed the OT
warriors as spiritual ancestors. He even added the observation that he who does not defend a friend from injury is as much at fault as he who commits the injury. Augustine was forced to face the question by the havoc of the Teutonic invasions and the sword of the empire, and his not too vividly fully explored the subject and laid down the lines on which in the main the thought of the Churches has subsequently moved.

That war is sometimes lawful on Christian principles is manifest from Augustine on these and similar grounds: (a) that it has been and may be waged by appointment of God; (b) that the object is a divine one, and rapacious attacks by one nation upon another falls under the same category as the crimes of murder and burglary, and should presumably be similarly dealt with; (c) that John the Baptist did not require the soldiers to abandon the service, but only exhorted them to do violence to no man and commit no wrong.

Sermon on the Mount are most fully discussed in the Epistle to Corinthians, which was called forth by the pagan objection that the precepts of non-resistance were inconsistent with public policy, and would prove ruinous to the State. The precept to turn the other cheek to the sufferer, Augustine says, cannot be taken literally. What it requires is an inward disposition of patient good-will towards the aggressor, and it does not prescribe any uniform manifestation of the disposition in act, as appears from the fact that Jesus Himself at least protected against violence (Acts 4:27; cf. Ac. 289). We ought always to cherish the spirit of clemency, and be willing to render good for evil. Such things have to be done in which we have to pay regard not to our own kindly inclinations but to the real interests of others, and their interests may require that they should be defended and protected in some situations. He mentions the following cases of common and natural wrongs: (a) a certain beastly aspersor. 'Qui lecentia iniquitatis equiter, fideliter vigilat et armat, huic infidelibus ac licentiam, quae possidet nutritur injustis, et malam voluntates vestris hostis inferior roboratur.' At the same time war is merely a means to an end, and it is wise and glorious to achieve peace by peaceful means than by war.

Thomas Aquinas replies as follows to objections formed against the teaching of Jesus.

(a) 'Jesus said that he who takes the sword shall perish by the sword.' But 'to take means 'to use without warrant,' and this only suspected, unauthorised, or dangerous persons from drawing the sword. (b) 'War is inconsistent with the command that we 'resist not evil.' (Mat. 5:38) and 'avenge not ourselves, but commit vengeance to God.' (Rom. 12:19). War is the cultivation of a placable spirit, and cannot require us to do mischief by all means.' But 'the people-makers are clearly, war-makers are accursed.' But war may be the best or the only means of attaining the end of peace.

Luther held that the gospel presupposes natural rights and duties, and vigorously defended the Christian soldier. Calvin argued that war was a branch of the work of retributive justice which has been entrusted by God to the civil magistrate, and that it has the same literal justification as the police measures which protect the citizens against the criminal population.

Whether it be a king who does it on a big scale, or a seconder who does it on a small scale, he is equally regarded and punished as a robber. It is no breach of the command, 'Thou shalt not kill,' the slaying of the authors of the unjust war is an execution, the judge is God, and the fighting men who defend the right are merely God's instruments. If it be objected that the NT does not expressly permit Christians to fight, it is to be observed that the NT does not undertake to legislate about civil polity, and that it presupposes the OT, in which the greatest men of God, like Moses and David, were mighty men of valor in the service of God. 

The topic received prominence, in the leading Protestant Confessions, which found it desirable to allay any misgivings that might be felt by princes as to the political implications of evangelical religion. The modern Protestant literature of Christendom is in general agreement with the Roman Catholic moralists.

The ultra-pacifist interpretation of Christian duty, which insists that lawfully rests on a superficial view of the ethical system of Christianity. It ignores an observation which is now a commonplace of the science of Comparative Religion, viz. that, in every society, from the savage to the civilized, which attempt to lay down hard-and-fast precepts prescribing the action to be taken or avoided in particular situations, the ethical scheme of Christianity constitutes usually a stock of principles, accompanied by some illustrations of how they are to be applied in practice. Had Christianity been a nomistic religion, it would have distinctly enacted that 'war is always sin,' or would have enumerated as corollaries of its lawfulness being a religion of the spirit, it bequeathed to the Christian Church, and to all others that claim the Christian name, the task of forming a Christian judgment upon a diversity of concrete questions and situations as they may arise. Again, the original Christian ethic, so far as elucidated in detail, was chiefly illustrated from the individual sphere. While the OT is mainly concerned with the nation, the NT is mainly concerned with God and the soul; and the consequence is that little was done to illustrate the application of Christian principles to the political department of thought and action, which for the most part lay outside the purview of the primitive Church.

There are, now, besides non-resistance, two other principles, deeply embedded in the teaching of the Church, which demand a more concrete illustration before a judgment is formed as to the lawfulness of war in the abstract or the sufficiency of a particular occasion of war. The doctrine of retributive justice, to begin with, teaches wickedness ought to be and will be punished—filled at least as large a space as the doctrine of non-resistance in the circle of Christ's thought. He pronounced upon Jerusalem's impiety, and its destruction, to be attributable to blindness and disobedience (Mt. 23:38), and He drew the picture of a last judgment in which the wicked and impotent would be punished according to their works (Mt. 25:46). The idea of penal retribution, moreover, is the central and inspiring thought of the apocalyptic sections of the NT, represented by eschatological discourses of Jesus (Mt. 24), the Pauline Apocalypse (2 Th 2), and the book of Revelation. And, if it be a fact of the universe that wickedness ought to be restrained and punished, if God Himself, while ready to forgive on condition of repentance and submission, and ever willing to promote man's rights towards recognition, fights against the obdurate rebels of His dominion with all the resources of His providential order, not to speak of the menaces of apocalyptic prediction, it may well be thought incredible that Christianity has made it criminal for a nation to be a fellow-worker with God in restraining the powers of wickedness and in seeing justice done upon the earth. The ultra-pacifist school thinks it to impose upon the nations a code of morality and a plan of procedure which, if absolutely binding, would entail grave censure on God Himself and give ground for an indictment of the methods a God's government of the world. Further, in forming a Christian judgment as to the lawfulness of war, respect must be chiefly paid to the master-principle of the Christian ethic, which is so manifestly in man's nature that it is evident that, if Christian charity were universal, there would be no more war, and also that, if war took place, a belligerent animated by Christian love at its highest reach would do nothing to violate the principles of righteousness clearly shown in history. But the essential feature of love is that it seeks the welfare of its objects, not necessarily that it seeks it by the measures suggested by easy good nature.
—as is sufficiently familiar in the discipline of the faithful, provides this penitentiar
ty and the gaul. The law of love, now, has three main applications for a nation—in reference to the race as a whole, in reference to a particular enemy, and in reference to its population; and in the face of unjust aggression the law of love may actually urge a demand for forcible res
stance on a threefold ground. The interests of the race may require it: a nation is no beneficiary of mankind if it does nothing to support, and even contributes to undermine, the general arrangement that the world is a realm of moral order. That the nation which checks and chastises another in a criminal enterprise is in a real sense its bene
factor is supported by the contention of Plato in the Gorgias that it is a greater evil to commit injustice with impunity than to be punished for it, inasmuch as the wicked who go scot-free are deprived of the valuable remedial discipline of merited chastisement. Again, the Christian law of love lays special stress on what may be called duties of guardianship, which were exemplified in the attitude of Jews towards the house of Israel, towards Jerusalem, towards little children, and towards those who were called `his own.' And in considering the duty of a state in regard to war, it has to be remembered that, from one point of view it is a collective personality which has to think and act as one, in another point of view it consists of those who rule and of those whose interests are committed to the trust of the rulers. It is therefore absurd to maintain that it can be a postulate of Christian morality that the rulers of a nation are under obligation, not merely to sac
rifice themselves, but to take the responsibility of sacrificing others who instinctively look to them for protection, and of abandoning old men, women, and children to privations, sufferings, and moral perils. The Christian spirit was surely better interpreted in the medieval code of chivalry. The literalist view also overlooks a serious diffi
culty as to the possibility of rendering an act of national self-sacrifice of unquestionable sacrificial value. The suggestion is that, even as Christ suffered Himself to be led as a lamb to the slaughter, so a Christian people might dutifully, and with similar profit, suffer a national crucifixion; but it is forgotten that for a sacrifice there is necessarily suffering as well as a will to suffer, and no nation that is or has been has remotely pos
sessed the spotless perfection, not to speak of the willing mind, which would qualify it for a literal imitation of Christ in this regard, or give promise that if attempted it would produce effects in any degree comparable with the effects of the sacrifice once offered on Calvary.

Christian thinkers have, then, to take their orders from the whole Christ and not a fragmentary Christ—from the Christ who is the expression of the complete moral purpose of God, the revela

tion of justice and love as well as meekness. And from this standpoint it may be maintained with a good conscience that Christianity makes room for warfare in co-operation with God in a world which teems with violence and injustice, breaks His laws, and challenges His righteous authority. But, while the principles of meekness and charity have no title to be the sole determinant of the international relations of a Christian state, they ought to make their influence effectively felt as maxims of co

ordination and dispersion. They ought to have such recognition that every concession short of the impossible should be made to avert war, hatred and revenge should be ruled out from deliberation, and the general danger of short-sighted of counsellors, magnanimity should pre
vail in the day of victory, and after the struggle everything should be attempted to obliterate the evil memories and to promote sincere and lasting reconciliation.

The question as to whether a Christian may lawfully bear arms is governed by the decision as to whether a nation may lawfully engage in war. Clearly it can be wrong to give personal assist
ance towards the execution of a necessary and righteous task. The debt which a man owes to the State is even greater than that which he owes to his parents, and the desirous of parents in sickness or old age is not more discreditable than the refusal by a citizen of such service as it is in his power to render to his fatherland in its time of distress or peril. It is less easy to define his duty in the case of a war which he thinks unjust, and in which he is compelled to fight; and all that can be said is that, except in a case of manifestly flagrant injustice, the average person has reason to think that the chosen rulers of a civilized state with possessing more knowledge and wisdom than himself, and at least as great a sense of responsi
bility. Those who refuse to fight from a genuine conviction that it is unlawful to shed blood are wisely treated with consideration in the modern world, inasmuch as conscience, even when unin
structed, is an asset which a nation cannot dis

regard and flout without grave injury to its higher life.

Recent events have revived interest in the rela

tion of ministers of religion to military service. The claim to immunity was very generally made for lessees priesthoods, and allowed by the secular power. The question did not arise in the circum
stances of the Christian Church in the early centuries. The pope and bishops of the medieval Church were often involved in war, and could even foment it in support of their worldly interests, but the official teaching was that it was unlawful for all clerics who belonged to the ordin
e

es maiorres to take a direct part in the shedding of blood. The conviction of Thomas Aquinas is to this effect:

1 Cum bellis exercitata dominum maxime divinorum contemplationes avertantis, et ad humani sæculi cléricos ille tractans, minus cléricos a spiritualibus personis bellarre licet, nisi in necessitatis articulo.

2 Military service, as it is added, is inconsistent with the clerical office on two grounds—it is inconsist
ent with the cultivation of a spiritual temper and the discharge of pastoral duties, and in particular those who are ordained to minister at the altar should rather make themselves better martyrs than think it seems to spill the blood of others. The Lutheran Church has followed this tradition, and the Anglican Church re-affirmed its adherence to it during the recent war by forbidi
ning the clergy to offer themselves for combattant service. The Reformed Churches, narrowly so called, while agreeing that in ordinary circum
stances ministers have an all-important spiritual function to perform in war and should abide in their calling, have taken a broader view of what is covered by the accepted condition (in articulo necessitatis, and have occasionally left it to ministers, such as lately done by the Moderator of Scotland, to judge for themselves as to whether the necessity was such as to require them to offer their services as fighting men to the State. On the question as to whether it may be observed that it is difficult to maintain the view that the clergy as representatives of Jesus Christ ought to refrain
from all violence and the shedding of blood, and at the same time to resist the further contention that the same prohibition extends to persons of every class who profess and call themselves Christians. Further, while it is generally admitted that the clergy and ministry ought to encourage the soldiery to fight in a just cause, the ordinary judgment of mankind a person who thinks it wrong or degrading to do a thing himself ought not to find aid and act otherwise in doing it. The argument based on 2 Ti 2:3 can be used further to support the view that the clergy should not be distracted from their spiritual work by the cares of married life or by the discharge of the duties of any civic office. It may be added that the traditional attitude of the Church seems to have been largely determined by the interest felt in magnifying the distinction of priesthood and laity, and by the reflex influence of the medieval sacramental doctrine.

ii. The Philosophical Vindication. — The verdict of ethical philosophy, ancient and modern, has been that under certain conditions war is justifiable, and non-resistance is unworthy and even immoral. The Greek view was summarily expressed by the inclusion of courage among the four cardinal virtues. Justice, according to Cicero, involves for the individual the duty of preventing injury and of exacting punishment and reparation. The modern schools have their varying conceptions of the ground of obligation and of the nature and basis of natural rights, but there has been practical unanimity as to the moral justification of self-defense when one nation is assailed by the ambition and capacity of another. From the intuitive point of view there is an eternal and immutable moral law attended by conscience, which includes the requirement that nations shall render to all their due, and, in the absence of machinery for making the law effective, it is held to be the duty of the particular nation to do that which its power to enforce and safeguard this obligation. From the utilitarian standpoint repressive and punitive action is held to be called for in view of the disastrous effects which unrestrained injuries would produce for particular nations and the general life of the race. The doctrine of non-resistance, Herbert Spencer argued, is a social, as it involves the non-assertion, not only of one’s own rights, but of those of others, while it holds out no prospect of leading to the desirable end of international peace. 2

The view of the jurists, while reflecting the varieties of ethical theory, are at one in giving an affirmative answer to the question, ‘an IJsiaun unanquam justam sit.’ Grotius argues that recourse to war is permitted and approved by the law of nature, by the consent of the many and of the wise, and by the law of nations, as well as by the divine law which was promulgated and attested in the Scriptures. The law of nature has two branches—the course dictated by natural instincts, and the principles approved by reason. This law intimates its permission of war through the universal instinct of self-preservation, accompanied as it is by natural discourse of purpose in the provision of means of defense to all creatures, and also by the voice of reason which makes it clear that the well-being of society is incompatible with the unchecked reign of violence. 3

By the law of nature, says E. de Vattel, the nations are under an obligation to procure justice and also have the right to be treated with justice; and it would be in vain that nature gave us the right of not suffering injustice, and required others to be just towards us, if we could not legitimately use compulsion when they refuse to acquit them of this duty. Some recent treatises find it sufficient for their purpose that the practice of war is a human custom, and they prefer to leave to philosophy the treatment of the question of the ultimate justification.

VI. The Distinction of Just and Unjust Wars. — The primitive view was that fighting was as natural and proper as any other means of acquiring wealth and servants, and that the only matter needing careful consideration was the prospect and the cost of success in a particular venture. From a comparatively early period, however, the moral consciousness drew a distinction between just and unjust wars, and procured for the distinction such recognition that almost every belligerent has been anxiously engaged to make out that he had the sanctions of morality and religion on his side.

The general view represented in the OT was that wars of aggression, such as were waged by the insatiable and arrogant Asiatic empires, were wicked and criminal, and that wars waged for the defense or liberation of a people, like those organized by the Judges and the good kings, were in accordance with justice and the will of God. The criminality of the heathen wars of conquest was not held to be inconsistent with the observation that they were sometimes used for the merited chastisement of other peoples; the guilt was the aggressor’s, God’s were the wisdom and the power that made the wrath of man to praise Him, and that in the end over-ruled the evil for good. The prohibition of the war of conquest was, however, subject to exceptions—even from the point of view of the prophetistic idealism. It was an axiom of the historical writers, even of those of the prophetical school, that the conquest of Canaan by their tribes had been abundantly justified partly on the ground of an ancient promise and of the provisional occupation by the patriarchs, partly because the conquest and even the extermination of the Canaanites had been richly deserved by their impiety, their corruption, and their cruelties (Jg 1, 1 S 15; cf. Jos 10). For the expedition of Cyrus against Babylon a similar moral and religious sanction was asserted (Is 45). The contribution of Islam was to elevate into a rule the command given in the OT in the war against the Canaanites, and to glorify as just and necessary the war of conquest which is waged for the conversion of the punishment of unbelief. ‘They who believe fight for the religion of God.’ ‘Give to those who misbelieve glad tidings of grievous war.’ 4 The Qur’an is full of exhortations to fight against unbelievers and hypocrites, 5 with promises of Paradise to those who should fall in the holy warfare.

2. The standard of the classical moralists. — The argument in the OT was in the LXX is to the effect that the rulers should organize their realms with a view to virtue and peaceful prosperity as the chief 6

3 Lede: De quod spea, 1758, Washington, 1910, ii. 5.
4 SBE vi. 27 ff., 31 ff., 37 ff., ix. 53, etc.
end, and that military provisions should be relegated to a quite secondary place. At the same time he accepted the view that Greeks and barbarians were called to fight in the way of acquiring property; and he also justified the war of conquest against outside nations on the ground that there are peoples which are destined by nature to servitude, and which are properly coerced if they do not obey properly their destiny. The discussion of the subject by Cicero is important as a summary of the ethical reflections of classical antiquity which was also to serve as a useful legacy to the later guides of the Christian Church.

He concludes the common view that the use of peace was to prepare for war: peace is to be kept in view at the end, and war regarded as a means which is sometimes unnecessarily necessary to secure a satisfactory peace. It is the irrational and brutal way of ending disputes. Unjust wars are those which are prompted by covetousness of the possessions of others. Just wars are of different types, according as they are required for the safety of the State, when measures are taken to ward off injury, and to secure reparations and punishment, or are prompted by the honourable motive of succouring those who have been subjected to a claim of ignorance on the ground of the law or of treaty-obligations. To fulfil the requirements of justice it was further necessary that the demand be made justly, and no eventual declaration of war, should be made in due religious formality.

These principles, it may be added, made it possible to offer a tolerable moral apologia for the proceedings of the Roman empire: when a war could not be plausibly represented as defensive, it could at least be conceived as partaking to some extent of the character of a war of acquisition of honour on behalf of allies, of a war of chivalry on behalf of an oppressed and wronged population. 3. The judgment of the Church. — The need of an official Christian criterion emerged with the union of Church and Empire, and guidance was given by Augustine with considerable obligation to Cicero.

He had no difficulty in deciding that there are unjust and just wars—the unjust represented by the contemporary barbarian onslaughts on the Empire, the just by the efforts of the Empire to defend itself and the cause of civilization. "Inter autem bella fraterna, et inde in custodia procedente, ac populos sibi oppressos, atque inter regna regnique capitis capitatae, quid quid aliud quam接地 latrorum consultum est?" Such wars have their spring in the worst of passions—"sociendi cupiditas, sonebris crudelitas, impetorum et implacabilium animus, feritas rebellandi, libibo dominandi, et si quia situlia."

Justice must be waged to procur war, to punishment, to secure reparations for injury, or (as in OT) by express commandment of God. So terrible, however, are the calamities of war, that in honour of the dead, it should only be entered on under stress of the direst necessity. He also by the hand of God is exalted by those undertakings by a prince and carried on by a regular soldier. The victory is put in that victory in war is not necessarily to be ascribed to the dearest of a peace.

Thomas Aquinas laid down three criteria of a just war: it must be waged by a prince invested with legitimate authority, against an enemy who has deserved punishment, and with the intention that good shall be promoted and evil removed. 4. Following on the Decrees of Gratian the subject was elaborately treated by Suarez, Ayala, Gentilis, and other Canonists. They were agreed in vindicating defensive and punitive warfare, but developed some differences of opinion in regard to the ethics of conquest, the powers of the pope in sanctioning wars and annexations, and the lawfulness of war against infidels and heretics. 1. Protestantism generally reproduced the Augustinian criterion, just as the protestantism of the representatives of the Lutheran and Anglican schools were peculiarly emphatic in branding rebellion as one of the most criminal types of unjust war. According to Luther, rebellion was thought to be submissively and patiently endured, insomuch as every nation richly deserves chastisement, and on the other hand tyrants will be adequately punished in the future state of retribution. 2. With still greater solemnity, even ferocity of language, is the iniquity of rebellion established in the Anglican Homily against Disobedience and Wilful Rebellion. The reasons given include the following in addition to the two mentioned above:

Rebellion had its prototype in the apostasy of Lucifer; monarchy is of divine right, being a copy of the divine rule; rebels will be punished with eternal damnation; history abundantly proves that it is as foolish and futile as it is wicked; subjects are not fitted for the goodness or badness of a prince; rebellion is not a single sin, but 'the puddle and sink of all sins against God and man.

The unjust war, according to Calvin, is one inspired by cupidity, and the just war is one in which a prince, as vice-regent of God, undertakes to coerce another nation which has embarked on a murderous and marauding enterprise. 3. He urged the usual argument against rebellion, but with a significant addition:

"When misgovernment becomes intolerable," he says, "delivery may be expected from God, whose way it is either to raise up avengers from among his servants, or to use for his purpose agents who may be pursuing different purposes of their own.

On this principle it could be contended by the Puritans that rebellion against Charles I. became lawful when God raised up a deliverer in the person of Oliver Cromwell. The Scotch Church emphasized another qualifying doctrine, that obedience to kings ceases to be a duty when they make demands inconsistent with the laws of God, and in the National Covenant the subscribers accordingly bound themselves to maintain their sacred cause with 'their best counsel, bodies, means, and whole power against all sorts of persons whatsoever.'

The modern literature of Christian ethics has in the main reproduced the ideas of Augustine, Luther, and Calvin. One of the most interesting discussions is contributed by Rothe, who justifies the most aggressive war in the defence of treaties, which have made it a chronic disturber of the peace, and also defends the war of conquest, at least in extraordinary times, as legitimate in order to the replacement of a lower by a higher civilization, or for the correction and improvement of a nation which has become effete and degenerate.

4. Jurisprudence and philosophy. — The classic treatises on international law deal elaborately with justificatory causes and unjust occasions of war. To Hugo Grotius more than any other it was due that political realism was called to account in the name of justice and humanity, though in some respects he applied the ethical principles with a measure of timidity.

Grotius recognizes three forms of just war—in the maintenance of a nation's own interests, in interposition on behalf of others, and in duty towards God. A nation is entitled and even bound to maintain its own interests by the defence of the life, honour, and property of the citizens; the duty of repair for injuries and insistence on the fulfilment of obligations, and the promotion of the laws of the country, may be lawfully undertaken by a nation on behalf, not only of its own subjects, but also of its allies, its friends, and of fellow-nations as well. The impious creed which opines two

5 R. ii, 3-4.
fundamental articles that there is a Deity, and that He cares for human affairs, is a doctrine so dangerous to the world as we are now told, or in our day thinking to God that He should be forcibly repressed in the name of human society. 1 War may not be entered on through blind fear of another nation, or a supposed utility, but that is not supported by absolute necessity. It is monstrous, linguistic that war is justifiable against a neighbor on the extermination (bellum interius). He refused to concede the moral right of one state to attack another on the mere ground of its iniquities (bellum punitum). 2 Hegel affirms the paramount duty of a great nation to preserve and develop its individuality, and holds that this may give a title to a great nation, as the best representative of the world-spirit for the time being, to embark upon wars of conquest. As against such an elect people, a war of extermination against the civilized nations is criminal, that oppressed nationalities have a sacred right of rebellion, and that there is a moral privilege, if not a duty, of chivalrous interposition on behalf of the wronged. Or, if the worst was done, the prisoners were increasingly disposed to disdain the office of directors of conscience to the nations in the matter.

1 "It is not possible," says Hall, "to frame general rules which shall be of any practical value, and the attempts in this direction which jurists are in the habit of making result in mere abstract statements of principles or perhaps of trivialities, which is unnecessary to reproduce." 12 What is the value of this chapter of the history of thought? It must be admitted that a review of the whole school of Jortiff to to an irrelevance, as to the judicial capacity of the human mind, if not even to foster moral scepticism. The general result was that, while it agreed both by the minds of wise that the specification should regulate the occasions of war, there was serious difference of opinion as to the prohibitions actually involved in the moral law, the parties who had 1 22, 7-14. 3 41 20, 497. 4 61 22, 11.

Le Droit des gens, t. 4.

to judge of its application to particular situations were so biased by their interests and passions as to be incapable of equitable judgment, and the enforcement of ethical demands practically depended upon whether the statesmanship of a nation was for or against the advantage of a state or states to lend its support to a righteous cause. The lesson to be drawn is that, if the demands of morality are to be properly punished and the criminal pursued, the task must be proceeded with under different conditions, and the problem must be formulated in a different way. If the chaotic situation of the world were replaced by a society of nations, the problem of justice and unjust wars would be simplified, inasmuch as the typical form of unlawful war would be an act of rebellion against the general body in which a particular state broke the law that prohibits aggressive military action, and defied the authority supporting the law. Under these conditions the great question for ethical reflection would be, not what wars were just or the reverse, but whether a like a heritage. Particular nations were entitled to assert or to have safeguarded. This subject is no doubt a difficult one; and it is probable that much would have to be done to arrive at a universal and comprehensive view of equity rather than in accordance with the provisions of a cast-iron statutory code. There would, however, be a good guarantee for just judgment in the fact that the elaboration of the code of rights would be undertaken by representatives of the general mind of the race, for whom the criterion would be the greatest good of the whole, and that in the application and enforcement of the recognized law the parties directly interested would play a subordinate part.

VII. HUMANIZATION OF THE CONDUCT OF WAR.—The ancient tradition was 'Vae Victis!' The peaceful era was the era of Viator, peace and rain and infallibility. The invaded country was ruthlessly devastated, the captured city was commonly sacked and destroyed, neither age nor sex could count on immunity, and a whole population might be put to the sword. If the practice was commonly less thorough than the theory, this was probably due not so much to clemency as to the reflexion that a ruined and depopulated country could pay no tribute, and that the services or the ransom of slaves gave more permanent satisfaction than the slaughter of captives. Such was the general spirit of warfare at the advent of certain of the great religions. It is these facts that vindicated the title of ethical by embodying provisions which represented a real advance on the primitive ferocity of mankind.

1. The curb of the religions. — The Laws of Mann, while showing no scruples about aggressive and acquiescent war, make a strong plea for humane fighting.

2. What the King has not (yet) gained, let him seek (to gain) by his arm. 1 . 1 Let him plan his undertakings (pensively meditating) like a heron; like a lion, let him put forth his strength; but when he sees that the rights and the rules are such, let him double in retreat. 2 At the same time he is to conduct war mercifully and even chivalrously. When he fights with his foes in battle, he must not strike with the sword concomitant (in wood), nor with (such as are) barred, poisoned, or the points of which are blazing with fire. 3 Let him not strike one who (in flight) has climbed on an eminence, nor a eunuch, nor one who jolts the limbs of his hands (in supplication), nor one who (sees) with flying hair, nor one who is naked, nor one who is alone, nor one who looks on without taking part in the fight, nor one who is fighting with another (force). Nor one whose wounds are broken, nor one afflicted (with sorrow), nor one who has been grieved (in fortune), nor one who is the father of (those who have turned to flight, but in all these cases let him remember the duty (of honorable warriors). 4

The effects of the persecution of the religion of Israel left its mark on the regulations for the conduct of war. Israel was familiar with the ferocity of Oriental warfare, to which a religious consecration

1 SBE xxv. (1866) 325. 2 Ib. p. 235. 3 Ib. p. 231.
was sometimes given by the application of the doctrine of the herem, or ban (Nu 21:23, Jos 6:21c, etc.). It could imitate its neighbours in the ruthless devastation of territory (2 K 25:18), the massacre of captives (Ps 110a:5), the mutilation of captives (Jg 19), and the murder of pregnant women (2 K 15:27). It would appear, however, that Israel had a general reputation for clemency during the monarchy (1 K 4:6) and that its treatment meted out to their enemies was not to be compared to the Assyrian devilries.1 The subject of atrocities bulks largely in the prophetic invective. 

Amos thundered against the nations for the cruelty and perversity that marked their methods of warfare, and judgment is denounced against Damascus because it has threaded Gilgeam with threshing-instruments of iron; against Edom because it has sold Israelites into captivity; against Tyre because it has violated a treaty; against Edom because of its pitiless vendetta against Israel; against Ammon because it ripped up the woman with child that it might enlarge its border; against Moab because it burned the bones of the King of Edom with lime (chs. 1-5).

The Deuteronomistic legislation did something in this field to sustain its general character for humanity. It provides that the inhabitants of a city which capitulate are to be treated with clemency, and that, if it be carried by assault, the non-fighting population is only to forfeit its liberty (20:17-21). It was also forbidden to cut down trees of a vineyard during the sabbatical year 'since the tree of the field is man's life' (20:15).

Among the great religions Islam alone upheld the ruthless traditions of Oriental warfare. As it was, it was a tool capable of being used to an extent that the worst excesses of war were given the character of a righteous judgment on the infidel, and the forfeits demanded of the vanquished by the law of that savage were passed on to the faithful as their natural rights.

'O thou prophet, fight thou strenuously against the misbelievers and hypocrites, and be stern towards them, for their repulsive habit, and, in all probability, they will repent.' The reward of those who make war against God and His Apostle and strike wer violence in the earth, is only that they shall be slaughtered or crucified, or their hands cut off and their feet on alternate sides, or that they shall be banished from the land.2

It should be added that some Muslim and other peoples have their share of human kindness, and that they have also found it necessary to compromise with their exterminating doctrine as a condition of being allowed to retain political power and even to occupy the planet.

2. The Graeco-Roman period and its spirit.—During the classical period the traditional usages of war had somewhat softened. Although vengeance was pitilessly wreaked on an enemy who had inspired deadly fear or hatred, and although the principle still held that a victorious soldiery was entitled to the compensations of pillage and outrage, there was a milder strain in the Aryan constitution, which re-asserted itself in cold blood. While the Greeks did not evolve a code of international law, there was a minimum of common morality which a common religion enjoined on all Greeks alike. The chief elements of the code were the rights of the alien (strēs), the sacred immunity of the herald, pious treatment of the slain (whom corpses might not be desecrated and should not be left unburied), and merciful treatment of prisoners. Unconditional surrender, if voluntary, carried with it a right to mercy; conditional surrender, if confirmed by an oath, was to be respected; and a captive had a title to be liberated (though it was doubtful if the caption was compelled to accept it) on payment of a fixed ransom which was believed to be sanctioned by divine authority.3

3. The medieval period.—In the fighting of the early Middle Ages there was some lapse into primitive ferocity due to the fact that the conflict was between civilization and barbarism, and the stakes were the material foundations of existence. Writing in the early thirteenth century, the Romanist, Augustine, recalls that the tradition even of heathen Rome recommended clemency and magnanimity, and urges that war be conducted in accordance with the merciful precepts of the ancient laws and the outline of a cosmos re-emerged. Christianity was already generally professed, and it contributed, in conjunction with the nobler elements of the European character, to the formation of a chivalrous ideal, which in some part particularly mitigated the hideousness of war. The Church, as the moral guide of the nations, took the matter into consideration, and in its canon law framed rules which were legislated by the secular powers.

4. The modern advance.—In modern times regulations for the conduct of war have been humanized to an extent that has been a welcome offset to the multiplication and intensification of the horrors due to modern inventions. The forces making for this improvement were the Christian heaven working in European society and the developing moral reflection of the civilized world, and those happily met in the personality and equities of thought of such men as Grotius, theologian, moralist, and lawyer, and became widely operative through the influence of the treatise De jure Belli ac Pacis.

After expounding the general theory and practice of the conduct of war, as opposed to the inhumanity on the part of humanity a list of amendments and mitigations (temporamina) in regard to the treatment of the persons and the property of the enemy. The general principle insisted on is that the right to slay, enslave, confiscate, etc., is not absolute, but is limited by consideration of what is necessary to break an enemy's resistance or to obtain reparation for injury inflicted.

During the 18th and 19th centuries there was a marked development of the cosmopolitan and humanitarian spirit, accompanied by much ethical reflection in the departments of International Law, Moral Philosophy, and Christian Ethics. The common-sense development of the influence of the sentiment, voiced by Benjamin Franklin, saw no reason why the law of nations, which had already discarded something of the old savagery, should not go on improving; and Franklin proposed that, when nations were so far, in proportion as they were open to cultivators of the earth, fishermen, and traders in unarmed ships, artists, and mechanics working in open towns, also that rapine and privateering should be abolished and rapine and privateering should be abolished and that hospitals

1. R. S. Kennedy, Art. 'War' in SDB. 2 Qur'ân, iv. 9. 3 Ib. v. 39. 4 See O. F. y. 415, 415c. 5 Brit. c. xii—xxxiv: 'Circus jussi interficiendi, vationem, res capitae, captor,' etc.
should be respected. In the treatises on International Law, which was sedulously cultivated during the period, the humane trend was strongly accentuated and the doctrine of the Roman Catholic Church, which the Church brought its canon law up to date, Protestant theology was prolific in systems of Christian Ethics, which at least made it clear that the spirit of Christianity required to be a reform of the usages of war. Definite and valuable practical results were achieved by the Geneva Convention of 1864 which dealt with the treatment of the wounded, to sick, and prisoners. The Hague Tribunal covered practically the whole ground, except that it was only permitted to glance at the topics of arbitration and disarmament. The chief provisions illustrating the ethical progress were as follows.

(A) Methods and weapons of war.—(a) In reaffirming the principle that the right to injure the enemy is not unlimited, the Hague tribunal prohibited poisoning, treacherous wounding and killing, declarations that no quarter will be given, and the use of incendiary bombs. It prohibited attacks on and bombardment of defenceless towns, and unnecessary destruction of edifices devoted to religion, art, science, and education, as well as the prohibition thereof of cities. (B) It laid down that prisoners are entitled to be provided for and relieved of the necessities of life. (C) The treatment of the wounded was put on a much better footing. It was provided that ambulances and military hospitals are to be respected; that persons employed to care for the sick and wounded are to be protected and returned to their posts, that wounded and sick soldiers are to be cared for and treatment of prisoners should be uniform.

(B) Treatment of the enemy's country when occupied and of property therein.—The rights of private property were asserted—both as against pillage by individuals and as against confiscation by the enemy state. Wanton destruction of property was forbidden. Any requisitions in kind or in services were only to be demanded from communes or inhabitants for the necessities of the armies of occupation. The inhabitants could not be compelled to take part in military operations against their own country. The two main subjects dealt with are commerce with the enemy during hostilities, and the law of reprisals.

During the recent war there were doubtless grievous violations of these humane regulations—notably in the use of poisonous gases, the wanton destruction of property, and the occasional refusal of quarter—but that the modern world had reached a higher level of morality than antiquity was still in evidence in the fact that, in the most gigantic and cruel of all the historic struggles and orders, the war was to a large extent maintained in occupied territories, prisoners were not as of old callously butchered or reserved for the slave mart or the gladiatorial spectacle, and the sick and wounded found themselves under the shelter of the Cross and tended by the ministrations of the Good Samaritan.

VIII. THE DESIRABILITY OF ENDING WAR.—The general judgment of mankind upon war is that it is a scourge of the nations which, along with famine and pestilence, makes up the dread trinity of human woes. This estimate rests on considerations which have certainly not lost in force in modern times.

(1) War is organized destruction of the harvest of civilization and of those who produce it. It impoverishes a country in two ways—by diverting labor from productive to unproductive tasks, and by annihilating wealth which had previously been accumulated by peaceful industry. It also sets at naught the civilized doctrine of the sanctity of human life, and replaces the beneficent efforts of science to save and husband life by measures which directly or indirectly sweep away whole masses of population. The ever-increasing efficiency of the instruments and methods of destruction has still more decidedly given to modern warfare an aspect of folly and clothed it with a suicidal character. The conquerors, hardly less than the vanquished, have emerged from the World War bleeding, dazed, exhausted, and doomed to shoulder almost intolerable burdens.

(2) The tragedy of the waste of life is accentuated by the circumstance that the victims are the élite of the nations. War, as Eschylus says, is a gold-merchant, with whom his customers do most unprofitable business.

(3) In fighting man reverts to the sub-human plane. The badge of humanity is the possession of reason, which at least suggests that man ought to try to avoid disputes by rational methods.

(4) War makes an appalling addition to the miseries of the human lot. A world-wide crime is suffered, being supplied with Missull into his list of the horrors of ancient war:

1. Rapt virgins, pueri; divelli liberis a parentum corpore; matres familiarium pati que viribus collibus, fatis signare domus, legem, etiam erudienda arma, cadaveribus, cruore, atque nactus omnia compiler. With more detail and colour but hardly more impressiveness, a great preacher depicts the horrors of the battle-field, the agonies of the occupied country, the ravages of want and sickness, the desolated lives, and the broken hearts. It is a service rendered by realistic fiction that it has shown how deeply purchased even by the fighting man is 'the one crowded hour of glorious life' which itself under modern conditions may be like nothing so much as the death of a poisoned rat in a hole.

(5) War, when looked at as a whole, is a gigantic moral evil. The aggression which sets in motion and sustains the strife has its dynamic in lusts and passions that defy and reverse the recognized magnitudes of morality. Even a just war sets the heart of a nation aflame with hatred, malice, and revenge. War turns the moral world upside down and sanctions a temporary suspension of respect for life and property and truth. It is therefore probably inevitable that it should be waged with some grim accomplishment of unlicensed outrage and of unhallowed vice. Experience also shows that the moral chaos of war makes its influence felt later on in a certain hardening of a people's heart, and a perversion of their moral sentiments, and also in a ground-swell of unrest, licentiousness, and crime which continues to surge after the actual tempest has died down.

To this indictment there has been opposed a eulogy of war, which has some basis in facts, but fails to establish that the blessings traced to the expenditure of war efforts are not of a far more dangerous kind. The truth is that the loss, and much less that it is desirable to perpetuate war

WAR

as the condition of life, benefits accruing in the future.

(i) The progress of human civilization, it is said, has been due to war. If the first men came to the frontiers of the world and steeled by war, and won through war their power and title to the world, the wholeness of life is on one side, it makes it on another, and war is its instrument.1 Few would indeed so far venture to criticize the course of history as to deplore the presence of war, e.g., Rome nad Islam. In the name of the greater part of North America, as well as of Australasia and New Zealand. Such events have a certain ethical justification, since self-preservation is a duty. But if not a duty of nations, while under former conditions a people was practically thrown back on war as the one form of enterprise by which to supply its vital wants and in which to find scope for great native powers. At the same time it may not be forgotten that the after-world over the most valuable ends are able to collect. Hence the culture of the Greeks and the religion of the Jews, both of which peoples went down in the military struggle, and it is unreasonable to expect that in the future great races will find it possible to come in the original leadership and service of the peace which has promoted the higher developmental interests claiming their opportunities by the exercise of brute force.

But it is a maxim of state and avert degeneracy. 'No Body can be healthful,' says Bacon, 'without Exercise, neither Natural Body, nor Politique.' And hence, to a Kingdom or the nation, he warns, 'Warre is the true Exercise.'2 One might reply that is gets something out of natural life that has a mind to be as good and useful as the earth and developing industry and commerce, and that in any case there are more healthful forms of exercise than those of the body, brain, and mouth. But it is a tenable view that Bacon was to give discrete utterance to the maxim of statecraft that exercise and is the best recipe for national domestic dissensions, but to this assertion the reply is that sedition is more dismally and humanely treated by measures of political and social reform than by the extermination of the degenerate in peace, and because of peace, has been often asserted, and no doubt it is sometimes happened that nation, growing on being guaranteed peaceful security, has become idle and vicious. But the charge often amounts to no more than that a people, as the result of peace, has been stifled in the use of the soldier's tools, and the experience of the recent war showed that peoples which accordingly should have become weak and spiritless had preserved unimpaired through a commercial era the strongest ancestral qualities of their stock.3

(ii) War, it is said, has not its equal as a school of the virtues. The most valuable ends are able to collect. Hence the culture of the Greeks and the religion of the Jews, both of which peoples went down in the military struggle, and it is unreasonable to expect that in the future great races will find it possible to come in the original leadership and service of the peace which has promoted the higher developmental interests claiming their opportunities by the exercise of brute force.

(iii) War, it is said, has supplied much of the inspiration and impulse which has promoted the higher developments of the life of the race. The great achievements of the nations in war have usually been followed by a golden age of spiritual achievement—in literature, in philosophic thought, and in art.4 Even great religious in their origins, and subsequent religious revivals, have been the result is not which not the nations incident to the deadly struggles of war. It appears that the tenacity of the spiritual movement is the spirits and to put forth its utmost powers, quicken its interest in the capital problems of existence, and also deepen its insight and increase its receptivity not only it is deep and realizable that the spiritual achievements of the race would be greater, not less, had we been able to suspend the occupation of generation on the best energies and material of the race, and that the gains credited to war are really due to the abeyance of the other. This is the common evidence which is able to do nothing to turn a curse into a blessing. That religion on the whole has

2. "Of the true Greatness of Kingdoms and Estates" (Essays, ed. A. Wright, London, 1833, p. 127.

prophesied by war is more than doubtful; the religious revival is a lesser fact in the midst of most wars than the besievement or eclipse of faith of the material triumph of moral maxims, and the diffusion of a pessimistic philosophy.

IX. THE POSSIBILITY OF THE CESSION OF WAR. The use of war will eventually cease has been entertained on various grounds.

(a) It is held that God's purpose with the world is to establish it in a Kingdom which will be a realm of peace: of righteousness and love, and that the omnipotent and all-wise God may be depended on to carry His purpose into execution. This confidence was the ground of the OT prediction that in the Messianic age 'they shall beat their swords into plowshares, and their spears into pruninghooks; nation shall not lift up the sword against nation, neither shall they learn war any more' (Is 2). The prediction has naturally been accepted by the Church as a promise of God vouched for by inspired prophets, but apart from the authority of the prophecies it is inevitable that those who share their faith in the divine government of the world should share their conviction that universal peace is an end worth of God which He will eventually attain in spite of human perversity and opposition.

(b) The hope of permanent peace has been based on a belief in the essential goodness of human nature, which it is supposed has sufficient idealism to respond in the long run to the message of justice and the appeal of brotherhood. Short of this it is sometimes argued that mankind is too fallible to ensure peace, and that unless the nation grows more humane and refined, it will turn in disgust from the wild and brutal work of war. The hope is based on much of fact, that human nature is highly fallible and that possibilities of an ethical kind, but the optimism resting on this foundation is happily reinforced by other considerations.

(c) The self-interest of the nations as a whole requires them to take measures for the abolition of war. The great difficulty, says Rousseau, is not even so much the wickedness as the stupidity of the rulers of states, who would be pacifists if they understood their own interests.

'They do not need to be good, generous, disinterested, public-spirited, humane. They may be unjust, greedy, putting their own interests above everything else and yet ask that they shall not be fools, and to this we come.'5

The same view is taken by Kant, who says that even a race of devils, provided only they were intelligent, would be for the destruction of other human wars for the benefit of humanity. "Nature guarantees the final establishment of peace through the mechanism of human inclinations." The view that the nations will eventually be driven by considerations of interest to protect themselves against war has been urged with renewed force in recent times on the ground that the civilized nations are now so intimately interdependent through trade and finance that in fighting one another they infallibly injure themselves, that as a fact the victors suffer harder than the vanquished,6 and that the destructiveness, not to speak of the cost, of modern armaments is so terrible that its persistence in war will imperil the very existence of civilization.7 These arguments have been powerfully reinforced by the latest chapter of history.

(d) The eventual cessation of war, further, has been expected to be due to the scientific machinery which has already annulled the right of the individual to take into his own hands the redress of his private wrongs. The civilized states have all succeeded in abstracting machinery which checks and punishes individual wrong-doers who

2. Werke, 'Zum ewigen Frieden,' viil. 299.
may be minded to rob or murder, and it seems to be essentially the same problem with which the race has to deal in repressing crimes attempted by those who are the enemies or other members of the human family. The same necessity, as Kant points out, "which forced men to take steps to secure the liberty of individuals within the particular territories and the institutions to take similar measures for their protection against violence and robbery."1 In opposition to this view it has been maintained that the nations have not the same reasons for instituting a system for the maintenance of international law and in order that a nation has for repressing crime within its own borders. It is not so necessary, it is said, to regulate the reciprocal relations of states as the reciprocal relations of fellow-citizens, since the former are not so inextricably bound together as the latter, and, further, a state has no right to limit its independence to the same extent to which the individual consents when he submits to the laws of his country.2 But those objections have been weakened since the 18th cent.—the first by the ever-increasing economic solidarity of the nations, the second by the demonstration afforded by the modern Empire and United States of the possibility of reconciling the rights of a central authority with the enjoyment of a satisfactory regional autonomy.

An optimistic attitude is justified in view of the progress that has been made towards the pacification of organizations and populations within which war formerly raged as part of the order of things. There has been a steady expansion of the areas within which war is regarded as illicit and even impossible. The history of Britain illustrates the evolutionary process. Time was when there were clashing nationalities, England, at least three in Scotland, which were chronically at war among themselves; later, war between England and Scotland had the aspect of a natural necessity, while the situation was further complicated by a chronic feud between Scottish Highlanders and Lowlanders, and by struggles between king and barons. But the stage was eventually reached at which the interests of each part of the country and all sections of the population were entrusted to the wisdom and equity of the representatives of the whole body, and the notion of a war between north and south, or other sections of the body politic, would be scoffed at as insane and unthinkable. Similarly the territorial conflicts of former days are no longer possible between the Departments of modern France or the provinces of unified Italy. It is reasonable to believe that at no distant date the problem which was solved by particular nations will be solved by Europe as a whole, and that to future generations European war, if not impossible, will be stamped with the criminal character of civil or fratricidal war. Some of the counter-arguments are weighty, but not unanswerable.

(1) It is said that, as war has prevailed from the beginning, so it will prevail to the end. But it has been the destiny of man to grapple with the most dire and formidable evils, and the marvellous progress he has made in knowledge, power, and skill would seem to be that he will maintain his dominion save the menace of death.

(2) The law of the world, we are reminded, has been progressing through struggle, and the nations may not expect to escape from a period of conflict. It is not necessary that the world should continue to be carried on by the method of violence, and it is quite conceivable that it is governed according to analogies that it should come to be confined to rational forms of simulation and competition.

(3) Civil war in nature, it is also said, contains within itself the permanent possibility, nay, the guarantee of war—in its ingrained selfishness, its cupidity, and its passions of rage, that is its essence. But, even where the spirit of wickedness in human nature, it is also true that it contains traits of distinction, and its expansion is necessarily in support of altruistic and chivalrous ideals. Moreover, as already pointed out, nations may be expected to find out, as individuals have found out, that fighting is at least bad and may even be ruinous policy.

(4) Religion has contributed the arguments that the permanence of war may be expected from the justice, and even from the goodness, of God. The argument from the divine justice is that a nation that ever punished guile and fraud, racial sin being inevitable, He will needs continue to employ the scourge of war. It is the necessary and appropriate method of the expression of His holy wrath. It is true that nation-sins are palliated by punishments that have often been used as the means of chastisement, but God hasample resources of other kinds in the providential order by which to reveal His anger against national corruptions. It has also been argued that God's goodness moves Him to send wars upon the earth to prevent mankind from fixing their affections on earthly things.

There is hardly to be found a child of fortune,' says Campanella, 'who would desire to exchange his terrestrial paradise for a celestial one; and so God applies a salutary remedy by sending upon us wars and persecutions.4 Similarly Hegel observes that humans and sabres discuss much more impressively than preachers on the editing text of the instability and vanity of earthly things.2 But surely there is enough of irresistible misery in human life to undertake the work of weaning us from affections on this world. Another branch of the religious argument from God's justice for the precipices of war and the revulsion of wars and rumours of wars. These, however, belong to the apocalyptic atrocity, which is concerned with events expected at the end of the world, and nothing to do with the necessit y which the human race is appointed to work out its destiny under the conditions of a natural development.

The immediate outlook.—While there is reason to hope for the eventual abolition of war, it is not to be forgotten that each successive generation is disposed to military adventure by its fresh energies and its youthful inexperience. Although no generation wants two great wars, every generation seems pleased to have one. Moreover, our world is full of tension which involves the possibility of manifold conflicts. There are many antitheses which, in addition to the lessening of the war from the past, disturb the present and menace the future. The antitheses are (a) between the unreconciled forces of autocracy and democracy, (b) between nationalities and empires, (c) between nationality and nationality, (d) between parties representing individualistic and communistic theories of social organization, while in the distance there even loom possible conflicts (e) between continent and continent and (f) between the dominant white race and the coloured races which it has taken under its tutelage. It was therefore worth while to seize the advantage of the present revision of feeling to place things on a better footing, and to secure that war shall be rendered, if not impossible, at least more difficult and odious, and more dangerous to those who play with the fire.

X. METHODS OF SECURING PERPETUAL PEACE.—There are three ways in which war might cease: (1) there might be no more aggression; (2) there might be no more resistance; (3) there might be a political organization whose function was to preserve peace. The first and second methods have been the dreams of prophets and idealists. The third has entered in different ways into history and practical policies.

(1) Clearly there would be no more war if all nations refrained from anything of the nature of aggression. This implies, however, a moral transformation of the race such as we are looking for in the present dispensation, and the hope of such radical conversion has chiefly been cherished as a sequel to the Second Coming and a visible rule of Christ.

(2) The end, also, would obviously be attained if those whose interests were assailed consistently agreed to offer no opposition, but to show forgive-
ness and goodwill. It is possible that, if this could be tried, it would have the effect of shaming hatred and aggression out of the world. But it seems even more probable that, if a nation could compose its quarrels without going to war, this would give a fresh impetus to criminal impulses. In any case the method is not practicable, as there is nothing about which human nature feels more strongly than injustice, and nothing in which men in the mass are less disposed tamely to acquiesce.

(3) Political organization might attain the end by one nation conquering the rest and compelling them to keep the peace, by nations forming them- selves into two or more groups to hold one another in check, or by all the nations, or the great majority, forming a society of nations for the mainten-ance of peace and order. The last arrangement, finally, might develop into a world republic with particular countries as its provinces.

(a) The formalistic method.—While the empires in the point of view have been centres of aggres- sive warfare, in another point of view they have made for peace within the area embraced in their dominion, and have compensated for loss of liberty by ensuring peace and tranquility. The great conquerors have usually quieted any compunctions of conscience by the reflexion that the end of their fighting would be peace, and that peace would be the more widely extended and the better assured the greater and more thorough their conquests. Rome gave a practical demonstra- tion that the power strong enough to master the nations of the civilized world was able to solve the problem of preserving a general peace. The Middle Ages inherited the Roman tradition, and inclined to believe that the ideal was the unifica- tion of the world under emperor and pope as repre- sentatives of the divine sovereignty.

Dante imagined a single authority, unshakable, inflexible, irresistible, which could make all smaller tyrannies to cease, and enable every man to live in peace and liberty, so that he lived in justice. He conceived of its accomplishment only in one form, as grand as it was impossible—a universal monarchy. The Holy Roman Empire was seldom, if ever, the effective master of Europe; during modern times there has been no acknowledged master; and the struggle for the hegemony among the European nations which has formed so large a part of modern history was doubtless prompted, not only by ambition and cupidity, but by the desire to secure a permanent basis of their rule, to include their enemies, against the bloodshed, to an end. Napoleon left it on record that he sought to conquer Europe, not only for glory, but to bless it with lasting peace. The Holy Alliance, formed after 1815, undertook to keep the peace, but unfortunately attached even more importance to its futile policy of stemming the rising tide of democracy. It was at least a tenable theory, favoured by some German historians, that, if Germany made itself master of Europe by the might of its sword, it would serve itself heir to the pacific mission of Rome. But this programme came into collision with deep-seated propensities—the prediction of Rousseau was twice fulfilled that no nation is strong enough to contend with the rest of Europe, and the course of events has happily shut up the world to attempting a co- operation of that solution.

(b) Defensive alliances.—For the last 400 years Europe has witnessed combinations of nearly equal strength which made it hazardous to itself for any single state, however powerful, to develop aggressive designs. The system of the balance of power was no doubt better than none in a world that was so suspiciously threatened by dreams of ambition and cupidity, but it had too little of an ethical basis—naked interest being palpably domi- nant on both sides—and as it was deemed proper to guard against the growing strength of a possible enemy as efficiently as to repel actual aggression, the general result was, not to avert war, but to make war almost the chronic experience of Europe, and, when it occurred, to extend the area of the con- vulsion and to increase the horrors of the struggle.

(c) The League of Nations.—The third method is that the nations, and at least as a beginning the civilized nations, should form themselves into a co- federation on the basis of an accepted code of rights and obligations. Such an organization was adumbrated in Greek and Germanic confederations, but the idea is modern of working out a scheme to embrace the whole of Europe and the rest of the civilized world, accom- panied by a recognition of moral relations with the other divisions of mankind.

The idea of a European League of Nations was conceived by M. de M. in 1889, and it is supposed that the great powers might be persuaded by the offer of certain adjustments and compensations to renounce their special aspirations, and to bind them- selves to resist any attempts to disturb the agreed settlement. To the Abbé de St. Pierre belongs the honour of having opened the modern discussion in his Projet de la paix universelle. As fundamental articles of the League he proposed the following:

(1) "There shall exist henceforth between the European sovereigns signing the five articles a perpetual alliance."

(2) "Each of the signatories shall contribute at its own expense to the protection of the League, and its members shall be paid for the services rendered according to their respective means."

(3) "The Grand Allies, for the termination of their present and future differences, have renounced and renounce for ever, for themselves and their successors, the method of arms and are agreed always to adopt henceforth the method of concilia- tion, through the mediation of the rest of the Allies at the meeting-place of the General Assembly, and in case of mediation being unsuccessful they agree to submit to the judgment of the Plenipotentiaries of the other Allies, a majority of votes to determine the matter provisionally, three-fourths finally after the lapse of six months."

(4) "If any one of the Grand Allies refuses to execute the findings and the regulations of the Grand Alliance, negotiate contrary treaties with foreign powers, make warlike preparations, the Grand Alliance shall arm, and take offensive action against the powers in question, unless the other Allies have complied with the Plenipotentiaries' find- ings and regulations, or given security for the repair of the injuries caused by its hostile measures, and made good the military expenses thus occasioned."

(5) "The Allies agree that the Plenipotentiaries, by a majority of votes, shall definitely regulate in their permanent Assembly all the articles which shall be judged necessary and important, in order to procure for the Grand Alliance more stability, security and other advantages, but the fundamental articles shall be unalterable save by unanimous consent of the Allies."

As regards the basis of the Concordat, it was proposed that the status quo should be accepted and maintained.

"To facilitate the formation of this Alliance, it is agreed to adopt as fundamental articles of possession and non-aggression the provisions of the latest treaties, and to guarantee to each Sovereign jointly, and to his house, all the territory and the rights which he actually possesses." 3

The main features of the project were reproduced in an influential essay by Rousseau, who laid stress on the following points as essentials of such a League as would include all considerable states, that it must have a judicial tribunal and an executive, and that it must have at its disposal sufficient force to prevent secession. In his final

3 P. 22.
judgment on the scheme Rousseau declared it to be hopeless to expect to convince autocratic sovereigns and self-seeking ministers that they would lend it to their interests to fall in with the project. The task of the League was to get rid of autocracy, and this operation might prove too painful and costly.

1 A Federative League," he concludes, "can only be established by law and not by force; but to say that its coming is more to be desired or feared?"

The subject was advanced by Kant, who, while own method, and Pierre and Rousseau, went somewhat deeper into the conditions of lasting peace.

The greatest problem set to the human race, he says, "is the formation of a political organisation under which justice will be dispensed to all, and a branch of this is the subordination to law of the external relations of the particular states."

The goal of the development on the international side is a Völkerbund, in which every state, even the smallest, may expect the maintenance of its security and its rights, not from the exercise of its own power or from its own decisions, but from the collective power of the League, and from judicial decisions of its collective will. He lays down the following among other conditions of enduring peace:

1. A treaty of peace should not contain matter provoking of future wars. (2) No existing state should be annexed by another state by conquest. (3) Standing armies should be abolished. (4) National debt should not be accumulated in support of foreign policy. (5) No state should interfere in another's domestic concerns.

Kant also expresses the opinion that perpetual peace has the best chance of being achieved under republican institutions, although he is careful to point out that a republic may exist in substance without democratic forms.

No recent writer has done so much to commend the scheme as Léon Bourgeois, who played a leading part in the judicial discussions of the Hague Conference. His definition of the essence of the scheme is that the nations should agree upon a code of national rights and bind themselves as a whole to enforce it. This would correspond to the conditions under which internal order is maintained by civilized states. The other presupposition of the preservation of peace is effective machinery for enforcing decisions.

Can we have a viable peace save under the reign of justice. To have material peace it is necessary to have first realized the political peace, and there cannot be political peace if the rights of any are felt to be, or really are, menaced. Rights must be determined before they can be guaranteed.

The project of world peace as it is often interpreted guarantees these rights is the essential condition of the establishment and the maintenance of peace.

The project was translated into a political institution by the Treaty of Versailles, which, incorporating the Covenant of the League of Nations, came into force on its ratification by Germany and Austria, and by three of the principal Allied and Associated Powers.

General Scope.-(a) Ends.—Promotion of international cooperation and achievement of international peace and security. (b) Means.—Acceptance of contracting parties of obligations not to resort to war, prescription of open, just, and honourable relations between nations for the establishment of understandings of international law as rules of conduct, maintenance of justice, and settlement of disputes. (c) Membership. — (1) Original members—those named as signatories and those named who shall sign within two months. (2) Additional members—such as may be added by agreement on the strength of a two-thirds of the vote of the Assembly, and on acceptance of the obligations of the League and special regulations of the Assembly (art. 1). (b) Organization. — Assembly and Council (art. II). 1

Volume XI. — 42

Assembly—Membership—representatives of the members of the League. Time and place of meetings—stated and occasional. Council—representatives—any matter with determination, or action affecting the peace of the world. Voting strength—each member to have one vote, and not more than three representatives (art. 4). 2. Council—Membership—representatives of the principal allied and associated members, and of four other members to be selected by the Assembly—in the first instance Belgium, Brazil, Greece, and Spain. Representatives of other members may have a permanent seat and a vote, and additional representatives may be increased. Time and place of meetings—stated and occasional. Council—Organization of the League when their interests are interfered. Voting strength—one member one representative only and one vote (art. 4). 3. Decisions of Assembly and Council, unless otherwise provided for, to be unanimous. First meeting to be summoned by President of the United States (art. v.). A permanent Secretariat at the seat of the League. Expenses to be shared by the members and officials (art. vi.). Seat of the League—Genena in the first instance. No sex disqualification for offices (art. vii.). 4. Reciprocal relations in the case of the Allied and Associated Powers. 5. Peaceful settlement of disputes.—Disputes likely to lead to a rupture to be submitted either to arbitration or to inquiry by the Council. 6. Arbitration.—(a) Suitable matters—interpretation of a treaty, alleged facts constituting breach of the Covenant or international obligation, extent and nature of reparation for injury, (b) court to be specially agreed on, (c) undertaken to abide by award, (d) Council to make rules for carrying out the award. International Court of International Justice a permanent institution. Its functions—to arbitrate as requested, and to advise the Council (art. xiv.). 7. Inquiry.—(a) Failing agreement to arbitrate, members agree to submit the issue to the Court of International Justice by action. (b) One party may effect the submission to the Court. (c) The Council, in order to effect a settlement, if the Council does not succeed, it will publish a report of its findings (whether unanimous or by a majority); if the award is unanimous, the members agree not to go to war with the power complying with the recommendations; if there is no unanimity, members are free to take such action as they deem necessary to maintain right and justice. No report shall be made on a matter which by international law falls within the domestic jurisdiction of a state (art. xv.). 8. Sanctions.—Penalties for a refusal to war in breach of art., xii., xiii., xv., (a) Economic boycott. (b) Employment of armed force contributed by the governments on the recommendations of the Council. (c) Material support, financial, economic, and military. (d) Expulsion of the members by the members of the powers of a covenant-breaking member (art. xvi.). 9. Disputes.—Maintenance outside of the Covenant of the League. Such powers are invited to act as if subject to the obligations of members, and to be dealt with accordingly. If both parties refuse, the members shall take such recommened action as will prevent hostilities (art. xvi.). 10. Open diplomatic relations. All future treaties and international agreements to be registered and published (art. xviii.). 11. Advisory and preconfinator function of Council.—Advises members to recommend inapplicable treaties and to consider threatening international conditions (art. xix.). 12. Inconsistent obligations and understandings.—Abrogation and release therefrom to be sought (art. xxi.). 13. Treaties of arbitration and regional understandings directed to be suspended—especially Monroe Doctrine (art. xxx.). 14. The mandate.—(a) Application—to territories by powers held by war to and backward or immature races. (b) Mandatories—two or more. (c) Economic boycotts. (d) Employment of armed force and are willing to accept it. (e) Types of mandates—to give administrative advice and assistance (e.g., to former portions of the Turkish Empire) to the state in possession of, to consider for order and morals, and the grant to other nations of economic advantages and commerce (e.g., in S. Africa), to administer territory as an integral portion of an empire (S.W. Africa, Oversea). The mandates to make an annual report (art. xxxi.). 15. Wider aims of the League.—Improvement in the conditions of labor and the improvement of native races, and the lessening of the struggle and the opinion and liquor traffic, and of trade in arms, secure freedom of communication, the prevention and control of disease (art. xxi.). 16. International Bureau and matters of kindred concern to be placed under the direction of the League (art. xxxii.).
WAR

Humanitarian agencies to be encouraged and promoted (art. xxv.).

O. Amendment to the Covenant—to take effect when ratified, a member dissenting having the remedy of withdrawing from the League (art. xxv.).

The Covenant of the League of Nations is founded on a skilful compromise between the dictates of ethico-political theory and considerations of political expediency. Of the two elements of the combination, the lower was necessary if it was to come into existence, and the development of the higher may safely be left to the future as its custodian and trustee.

The Covenant embodies provisions and regulations which involve a notable advance in the moralization of international relations. That the leading nations should form themselves into a confederation whose object is the preservation of the peace of the world on the basis of justice and right; that they should pledge themselves to refer their differences to arbitration, or at least take advice about them, and renounce the resort to arms until the resources of reason and conciliation have been exhausted; that they should agree in principle to the limitation of their armaments, and be willing to discuss with one another concrete proposals for a reduction; that they should consent to keep one another informed of treaties they may conclude; that they should assist any member threatened with aggression; that they should be willing to give protection to states against continuance of breaches of the peace; and that the League should have conciliatory functions are all provisions meriting the description of progressive and statesmen-like. The League, it is believed, will succeed in creating a world state, and the Covenant, with its novel and original provisions, is destined to become the basis of international law.

The Covenant recognizes the political sovereignty of states and their independence and equality, and provides for the protection of the smaller states against aggression. It is claimed that the Covenant contains nothing to conflict with the principles of national self-determination. The Covenant provides that the League may be dissolved by any fifteen of its members, which is a strong security for the purpose for which it is founded.

The protection of the smaller states against aggression, the right of nations to maintain a military defense, the protection of the peace of the world, the guarantee of the independence and territorial integrity of all nations, and the right of the League to act in case of breaches of its obligations form the basis of the League's constitution. The League is to be the arbiter of international disputes and the protector of peace. It is to be composed of states, each with one vote, and is to be governed by a council of thirty members, who are to be elected for three years. The council is to meet twice a year, and is to have the power to consider and report on international questions, to recommend measures for the settlement of disputes, and to make recommendations to the members of the League for the security of their territories.

The League is to be the arbiter of international disputes and the protector of peace. It is to be composed of states, each with one vote, and is to be governed by a council of thirty members, who are to be elected for three years. The council is to meet twice a year, and is to have the power to consider and report on international questions, to recommend measures for the settlement of disputes, and to make recommendations to the members of the League for the security of their territories.

The League is not to be a permanent organization, but is to be dissolved by any fifteen of its members. It is to be governed by a council of thirty members, who are to be elected for three years. The council is to meet twice a year, and is to have the power to consider and report on international questions, to recommend measures for the settlement of disputes, and to make recommendations to the members of the League for the security of their territories.
positive side is to persuade the nations to do more to bear one another's burdens, and to enrich one another's lives by reciprocal service.

'Of the constructive work we have an уверяю в earnest though it has already been given, is the conditions of labour in the communistic countries, and to the principles which have been laid down for the amelioration of the common lot. It will, moreover, obviously be the duty of the League, as encouraged, by every means in its power, the chief form, and one of its most useful contribution to the regeneration, not only the freest and fullest interchange in honest commerce of the products of the fields and the workshops of every continent and climate. I am therefore of opinion, at any time when a nation will seek to serve nation by imparting what the other may lack out of the manifold riches of a higher civilization.'

In its spiritual aspect this idea is not novel: it is an ancient possession of the Christian Church, underlying its enterprise of Foreign Missions, but little has been done to act on the idea in other fields. There is room for philanthropic schemes through which every civilized people as such will make an adequate contribution towards the provision of the rudiments of rational knowledge, and especially of modern medical skill, for the benefit of the savage and semi-civilized races of mankind. A great philanthropic opportunity was lost in the two years 1914-18, when the peoples of Great Britain and America might have agreed to ration themselves so that they might be in a position to release the necessary of life and some comforts for the starving populations of Europe. The response to the call of the Russian famine is, however, of good omen for the future. One very practical service would be to arrange that all manufacturing nations may have an adequate supply of raw materials. It may be added that the success of the League in developing the positive and constructive activities will be an important factor in determining the success of its efforts to avert armed conflicts. It is a law of human nature that an evil habit is best overcome through the expulsive power of a new affront, and, if the nations are to cease to have the desire to devour and plunder one another, it is imperative that, through reciprocal offices of service, they should learn to think of one another with kindly and grateful feelings, and respect one another as fellow-workers in the common cause of humanity.

W. P. FERSON.

WAR, WAR-GODS.

Gaelic (G. DOTTIN), p. 691.

Gaelic (Celtic).—At the time of the migrations of the Celts a war-god to whom the Greeks identified with Ares and the Romans with Mars, seems to have been the chief god worshipped by the Celtic tribes. Gods guide their migration and bear them on to a land and the territory destined for it; 2 to the gods they dedicate all or part of the booty in victory; 3 to them they sacrifice victims before the combat 5 and prisoners after victory; 4 in their honour they raise the war-cry.

Greek and Roman (E. A. GARDNER), p. 694.

The war-god to whom the Celts dedicated Roman arms in 203 B.C. is called Vulcan by Florus; 1 the one to whom the Gauls sacrificed men is called Saturn by Varro. 2 The ancient Celts probably had a goddess of war; this goddess has been identified by the Greeks with Ares and by the Romans with Minerva. 3 It was in the temple of this goddess that the Insulans kept their ensigns of war. 4

Cæsar gives us no more definite information; he mentions Mars third among the five chief gods of Gaul, and adds that Mars directs wars, and, after the issue is decided, the spoils are usually dedicated

WAR-GODS (Chinese)

1. To his; when the Gauls have carried off the victory, they sacrifice all the living beings that they have taken and gather the booty to one place; in many of the tribes heaps of war booty may be seen in the sacred places. 1 We must come to the GalloRoman inscriptions of Gaul, Great Britain, and the central Europe—with the Celtic epithets which there accompany the name of the god Mars—to get an idea of the variety of the war-deities of the Celts. The oldest of these have been found, 15 of Apollo, 7 of Jupiter, and 5 of Minerva: we can count 50 of Mars; and these epithets of Mars are particularly numerous in Great Britain. Some of them have a local meaning, in which cases it is not certain that we have to do with a Celtic god; we may be in presence of local cults of the Roman god Mars. But of the 40 epithets that remain after the local epithets have been deducted 8 are used alone as well as along with the name of Mars—e.g., Toutatis, which is probably a variant of the name Tautatis; 2 which scholars of Lucan elsewhere identify with Mars, and the god Esus, also mentioned by Lucan. They are probably, therefore, the names of the cults of the war-deities assimilated to Mars. As regards the others, it is probable that at least a number of them also indicate Gaulish deities. And it is impossible to ascertain whether the few that do not denote war-goddesses. Further, Mars Lucnctius is associated in two inscriptions with Nemeton, who is undoubtedly a war-goddess, and Mars Cicaulus is associated with Litas, whose helmeted character is undoubted, since in an inscription she is replaced by Bellona as the consort of Mars. Dio Cassius 3 mentions among the Britons of the time of Boniface the worship of a goddess of victory, Andarta, to whom human sacrifices are offered, and whose name presents a close resemblance to that of Andarta, a goddess of the Vocontii, on whose territory have been discovered the majority of the altars of Victory that belong to Southern Gaul.

The information that has come down to us from antiquity is so imperfect that we can merely state that the ancient Celts had numerous gods and goddesses of war, and it indicates several details of their worship. But we have no figured representations of war-deities among the numerous Gallo-Roman bas-reliefs, unless we regard as such the horse-wrestling horseman of so frequent occurrence under his horse's feet the monster dragon. The characteristic symbols of the Gaulish gods—the wheel, the hammer, and the em—can hardly be interpreted as warlike. As for the attempts to explain by means of Celtic languages the names and epithets of the Gaulish gods assimilated to Mars, they supply only vague characteristics—Albiox, 'the king of the world,' Delataeodros, 'comely in slaughter,' Caturix, 'the king of combat,' Lencetius or Lucntius, 'the brilliant.' 4 We have no reason to believe that the Mars of Gaul had, like the Mercurys, many famous temples in Gaul. Doubtless, the Roman pacification allowed far fewer as possible of their cults to subsist. Nevertheless we find in an inscription of the Rhine valley mention of a temple of Mars Camulonius.

2. From the text of the Irish epic, which has preserved some details of ancient Celtic mythology, we may glean some notions of war-gods and goddesses, and etymology helps us to recover others. In Cormac's Blossey Néit is described as 'a battlegod of the Gauls.' The name of the captured Dé Danann, Nuada, has been identified with the Deen Mars] Nodons known from inscriptions from Great Britain. Nennan, the name of Néit's wife, has been connected with Nemeton, the Gallo-Roman goddess, consort of Mars; and the name of Nét has been compared to the first part of the name Nantosueta, associated in a Gallo-Roman inscription with the god Sceulius, 'the good striker.' 5 In the mythological cycle three fairy warriors appear—a kind of valkyries with the power of changing into animals—the first Morrigan; wife or granddaughter of Nét, or wife of Dagda, the second Macha, granddaughter of Nét, or granddaughter of Nét, all three daughters of Ermons, one of the Tuatha Dé Danann. The name Balb, which in Irish means a scald-crow, and which has a variant Bodh, has been compared to the second part of the name of a Gallo-Roman goddess [Cathub-bodhe, in Irish Badbh-catha, 'battle-crow.']

It is much more difficult to discover traces of the ancient Celtic gods in the tradition and literature of Wales than in the Irish literature of the Middle Ages. Nevertheless scholars are probably right in identifying Nudd, the father of Gwvyn, in the early Welsh cults goddess, with the demon Annwfn, with the god Nodons of Romanized Great Britain.

This, then, as far as the evidence of the ancients and the evidence of the British of the British enable us to reconstruct it, is the fragmentary pantheon of the war-gods of one of the warlike races of ancient Europe.

WAR-GODS (Chinese).—China has no god of war, if by that term we imply a belief in the existence of a divine being similar in function, characteristics, or divine attributes to Ares or Mars. This, however, is not inconsistent with the fact that war, in China as elsewhere, has usually kept itself in close touch with religion. We read in Tso's famous Commentary on the Chun Chi that the Chinese were wont to say that 'the great affairs of a State are sacrifice and war,' and the latter unaccompanied by the former was a thing unheard of. A Chinese writer has recently remarked that from the earliest historic times up to the date of the Boxers (and he need not have drawn the line there) his countrymen have never ceased to regard supernatural or spiritual agencies as constituting an essential portion of the national military equipment.

It is not surprising, then, that among the most ancient ceremonial rites mentioned in Chinese classical literature are those which were carried out during warfare by rulers of states and leaders of armies with the direct object of invoking the aid of the unseen powers and impressing the troops with the belief that those powers would protect and help them in the hour of battle. The two most solemn ceremonies in ancient China connected with war were known as the lei and the mua sacrifices.

Very few details regarding them have come down to us, and we cannot always be sure that the records we possess are altogether worthy of trust. It is clear, however, that the lei was a sacrifice to God (Tien or Shang-Di) and that it was offered on marched for state occasions. The ceremony could be performed only by the sovereign himself, because it was the 'Son of Heaven' who alone had the prerogative of offering war...
sacrifices to Heaven. It was not exclusively associated with war, but it was always offered when an army was about to be set in motion, and has been regarded as pre-eminent- ly a military sacrifice.  

The sea was offered on the field of battle or at the army's halting place. There is great certainty of its being a sacrifice to this god; the most probable view is that it was offered to Ti'en or Ch'ien; but that each minor divinity was also invoked or associated with that high deity—namely, the local tutelary god—has led to the concentration of armed forces into their private spheres of activity or who might feel outraged by the shedding of blood on soil that was uncultivated.

It is highly improbable that the early Chinese ever regarded warfare abstractly, as a quasi-institution, or that they ever felt the need of nominating a deity to preside over it as 'god of war.'

1. Kuan Yu or Kuan T'ai, 'god of war.'—Although it is not correct to say that the Chinese pantheon contains a Mars, there are several famous warriors who, having shown themselves to be stout fighters and unsellable patriots during their earthly lives, have been deemed worthy of having their names and 'spirit-tablets' enshrined in a kind of national Valhalla. Apart from the Temple of Military Heroes, just as the names and tablets of great sages and philosophers and other public benefactors have been enshrined in the 'Hall of Wonders' or 'Hall of the Emptiness.' It is the most celebrated of these national heroes who has been so often described as 'god of war' and as the 'Chinese Mars,' and, although neither term is strictly applicable, and the latter is certainly inadmissible, the former may be retained if only because it has passed into common usage among Western writers on China and because there is no very suitable term in our language by which it can be replaced. Whether he is a god, as the Japanese believe, or a saint or a patriot, however, the Chinese have never lost sight of the fact that their god of war was once a man like themselves and lived at an epoch when Chinese annalists do not consider very remote. Even now his manhood is by no means altogether merged in his divinity; and, though he is regarded as a worker of miracles and has certainly been the object of much superstitious devotion, this seems hardly sufficient to justify us in regarding him as more than a very potent saint.

Though dead heroes have always been honoured in China, and the custom of 'pilgrimage' to those who deserved well of their country either in peace or in war is a very ancient one, it was not till China had fallen into a state of military decadence that this distinctive cult of great soldiers began to take a conspicuous place in the religious life of the Chinese people. Kuan Yu had been dead about eight hundred years when the Sung emperors set him up as the central figure in a national cult that has lasted to this day.

Kuan Yu, a native of the village of Chang-p'ing in Hai-chou (Shansi province), was born A.D. 162 and died in 219. He lived during the time of disunion and strife that is commonly known as the period of the Three Kingdoms, and he is regarded as the most romantic figure in one of the most romantic epochs of Chinese history. Of abnormal size and strength, he distinguished himself above all his contemporaries by his prowess and by his heroic sense of honour. The influence of the drama, coupled with that of a great novel known as the Sun Tzu—both full of fantastic details which can have had little or no foundation in fact—have raised him to a pitch of popularity which is really independent of his position in the other arts of China, and the sonorousness of his name is accounted for by the total withdrawal of official recognition. His surname is unknown; for Kuan was merely adopted by him in order to conceal his identity during his flight from his native place after he had entered upon his career of glory by slaying a tyrannical official. The most admirable feature of this quaint occurrence is the association of two other celebrated characters of the period—Liu Pei and Chang Fei. The three became devoted and lifelong friends and are forever linked together in the Chinese mind as taking the famous 'oath of the peach-orchard.' The leader of the Three Kingdoms—that of Shu—was the descendant of the founder of the Han dynasty and eventually brought his sway to the throne of one of the Three Kingdoms—that of Shu. We therefore see the survival into the present century of the legend of Kuan Yu. After a brilliant career which was not too uniformly successful in his lifetime, he was canonized and declared the great 'God of War' in 1123, during the lifetime of Sun Ch'uan and executed. Twenty years or (according to another authority) forty-one years after his death he was given the posthumous title of Ch'ang Yu Hsun, 'Martial Magnificence,' and various other titles were added throughout the centuries.

There is some doubt as to the exact date upon which Kuan Yu first acquired the high-sounding title of Ti—a term which is usually translated 'god,' but for which the word 'emperor' is, in this and many similar cases, a more fitting equivalent. The generally accepted date is A.D. 1615, when the emperor Wai-Li bestowed the title of Hsien-Tien Hu-Kuo Chung-I Tu T'ai, 'In harmony-with-Heaven Protector-of-the-State Loyally and Righteous Great Emperor.' For some reason not much notice seems to have been taken at first of this addition to Kuan Yu's honours, for no record was noted of a ti, or 'Marquis.' This was brought to the notice of the emperor Hsiao Tung (T'ung Hsing) in 1624 issued an edict declaring that the commands of his late master Shih Tsung (Wan-Li) were to be carried out, and confirming the titles, including that of emperor, on Kuan Yu by that monarch. He went on to say that time to the present the 'god of war' has been generally known as Kuan Ti.

2. Yo Fei, hero of the Sung dynasty.—The figure of Kuan Ti looms far larger than life-size through a mist of romance created by the popular drama and by the great novel of The Three Kingdoms. When one reads the stories which tell of the adventures of the Chinese people long ago have been disputed by another great national hero—Yo Fei. This high-souled patriot lived and died nearly a thousand years ago, and his name has been much less time, therefore, for the growth of legends. As a historical figure, however, it may be questioned whether Yo Fei should be regarded as any more inferior to Kuan Ti either as soldier or as patriot.

Yo Fei was a native of the province of Honan. As a boy he was studious, but the natural bent of his mind soon showed itself in the fact that his favourite books were those which discussed warfare and military tactics, such as the Ping Fa of Sun Tzu, described by his recent English translator as 'the oldest military treatise in the world.' As he grew up, Yo Fei became a noted archer, and soon distinguished himself in martial exercise by his feats. The Golden Tatars, who at that time engaged in gradually driving the Sung dynasty from the plains of North China, had Yo Fei engaged by the Court and Government, it is possible that the invaders would have been expelled from China. Unfortunately he incurred the enmity of the powerful Ch'ien Kuei, who was the emperor Kao Tsung's trusted minister. It was this minister who was many years later put to death by the emperor, and the emotions of the Chinese people at the time of his death appear to have entered into a treasonous agreement with Wu Shun, a Tartar prince, to bring about a peace advantage to the invaders. Yo Fei earnestly desired to continue the struggle, and stoutly opposed the purchase of peace by a disgraceful cession of territory. When compelled to retire and leave the enemy in possession of the territory that he felt quite competent to defend, he made bitter complaints that the fruits of his ten years of strenuous labour had been destroyed in a single day. As a vigorous opponent of the peace policy, Yo Fei was regarded by Ch'in Kuei as a dangerous enemy. He caused charges of treachery to be trumped up against him and in 1141 convicted in having him arrested. Shortly afterwards Ch'in Kuei personally issued a secret order for his summary execution, which was duly carried into effect by the military authorities of the state that Yo Fei had died a natural death in prison. As time went on, and the true history of the events that led to Yo Fei's betrayal and death gradually came to be known among the people, and, though Ch'in Kuei lived fourteen years longer, loaded with the honours and titles of the greatest man in the land, he earned an immortal memory in infancy in his country's annals. On the other hand, the turbulent career of the warrior who fought so stoutly and showed his faith and honour with the passing of the centuries, and his temple, which is situated near the margin of the beautiful Lake Hwang-tse, outside the walls of Hainan, is
WAR, WAR-GODS (Greek and Roman).

3. The cult of military heroes or 'war-gods' under the Republic.—As Kuang Ti was specially venerated by the late Mancha dynasty, it would not have been surprising if the victorious revolutionaries had decided to treat that divinity with cold disdain and to abolish the official rites connected with his cult. The establishment of a nominal Republic has not had this result; but Kuang Ti's position is not precisely what it was before 1911. In the third year of the Republic (1914), Yo Fei decreed that 'the President (Yuan Shih-k'’ai) that the 'Military Temple' was to be devoted to the cult not of Kuang Ti alone but of Kuang Ti and Yo Fei and twenty-four other celebrated military leaders and patriots. Kuang Ti and Yo Fei were the associates, and the twenty-four others were to be regarded as their spiritual associates. Nothing was done to interfere with the existing Kuang Ti temples or their rituals; but a new temple was dedicated to Kuang Ti and Yo Fei and their associates. The temple chosen for the purpose comprises a large group of buildings immediately to the north of the palace of Prince Ch'ung Hsing, ex-prince regent and father of the young emperor Hsian Tung. It was erected by the imperial government about a quarter of a century ago and was intended for use as an ancestral temple for Prince Ch'ung and his family. It is more fitting to the spirit-tablets of Kuang Ti's table does not bear all his titles or the highest of them. He is merely Kuang Chuang Mu Hou, ‘Kuan the Marquis of Martial Dignity,’ the earliest of his posthumous titles. The designation on Yo Fei's tablet also consists of four characters—Yo Chuang Wu Wang, ‘Yo the Prince of Loyalty and Martial Prowess.’ On the east and west sides of the hall stand the tablets of the twenty-four ‘associates,’ twelve on each side, all well-known historical characters.

The reorganization of the cult of heroes was largely due to considerations of practical statecraft and national expediency. The main objects were to encourage patriotic ideals among the people, to raise the public estimation of the profession of arms, and to inspire the soldiers themselves with military zeal and professional pride. On the occasions of the periodic ceremonies appointed to be carried out in honour of the twenty-six heroes army commanders are required to be present and to bear white splints. Military Temple, so that they may be spectators of the rites and have an opportunity of showing their reverence for the memory of the great soldiers of past days. The troops are also expected to take oaths of allegiance and good conduct.

The first ceremony at Peking took place in January 1915, General Yin Ch'ang, as deputy for Yuan Shih-k'’ai, led his officers and soldiers to the newly established temple, and there they took the military oaths, which may be summarized as follows: (1) to be loyal; (2) to be obedient; (3) to protect the people of China from enemies; (4) to be ready to die for their country; (5) to be diligent and zealous in their duties, to respect their superiors and comrades, and to be true and upright in speech and action; (6) to abstain from taking part in political movements and from joining political societies or parties. The ceremony is as simple as it is impressive, and, though Christian missionaries have asserted that it fosters superstition and shows in a painful manner the backwardness of our national life, it has been approved by the Government, 1 such complaints show a curious lack of sympathy and understanding. The religious significance of the cult is, indeed, very slight. The soldiers are not called upon to subscribe to any dogmas or beliefs regarding the powers or functions supposed to belong to the objects of the cult, nor do they prostrate themselves before any idol. They are merely expected to bow the head as they file past a row of wooden tablets bearing the honoured names of those who fought and in many cases died for their country. 2

Surely no more fitting place could be chosen for administering the military oaths of loyalty, obedience, and self-sacrifice than a building which has been dedicated to the memory of the heroes who are believed to have been the highest Chinese embodiments of those ideals.

LITERATURE.—This has been indicated in the footnotes. A large proportion of the material has, however, been taken from untranslated Chinese sources.

R. F. JOHNSTON.

WAR, WAR-GODS (Greek and Roman).—Greek.—The importance of war in early communities must always have been such as to bring it into close connection with the worship of war-gods.

In fact we usually find that it is one of the chief functions of any god to help and protect his people in war; and that they regard it as a matter of the highest importance to secure his approval for any such enterprise. In civilized warfare the conventions and rules generally observed, such as the sanctity of heralds and other envoys, or the inviolability of a truce, were also under the protection of the gods. But the ritual of declaration and conclusion of war was not so highly developed among the Greeks as among the Romans.

A curious instance is recorded by the scholiast on Eur. Phaon, 1377, who states that before truce was invented torches were used as a signal at the beginning of a battle; these were borne by two priests of Areus, one from each army, who were alone inviolable. Here we seem to see some approach to an international sanction under divine authority; another custom is that the truce is always allowed by the victors.

1 This sentence occurs in an account of the ceremony as held in a provincial city. See North China Daily News (Shanghai), 7th Oct., 1915.

2 A short account of the proceedings at Peking appeared in the North China Daily News, 20th Jan., 1915. Similar ceremonies have been carried out in several other cities in Peking and in the Provinces. The spring ceremony in 1910 took place on 30th March, and in Peking the President (Hsin Shih-ch'ang) was represented by the general who had attended the proceedings on behalf of Yuan Shih-k'’ai.
to the defeated army for collecting and burying the dead.

A typical example of a truce between combatant armies occurs in the Iliad, where a solemn sacrifice is made, and over it Ares is invoked and the gods on whoever may break the oath; but the gods are those who preside over the oath rather than over war.

In these cases both parties alike appeal to the same gods; in them we see merely a particular application of the principle that the gods, and Zeus as the chief god, enforce honour and mutual faith in all relations between strangers.

Examples like these are not, however, concerned with gods of war as such. The function of a war-god was above all to give victory to his own people, and to preside over such preparations as were likely to lead to it. These functions are sometimes attributed to a special deity, but more often to the chief god, or to the god who takes any town or people under his particular protection. Conversely, it might be an effective measure to withdraw from the enemy the protection of their own special divinity.

A good example is the secret expedition made by Odysseus and Diomedes, a number of the Trojan prisoners of war-goddess of Troy, because its presence prevented the capture of the town. A clear and instructive example of the gods to whom offerings were sacrificed occurs in a tradition found at Delphi, in which the Selinuntians say 'they are victors by the aid of the following gods—Zeus and Athena, and Hera and Poseidon and the Tymbalids (Dionysus) and Athene and Malephoros (Demeter) and Pankrateia (Persephone) and Ares and all the gods but above all Zeus.'

Here are to be noted the reiterated insistence on the predominance of Zeus in this capacity, and the placing next to him on the list of Phobos—here properly to be regarded, like other epithets of gods in the list, as a name for Ares himself rather than as a satellite of his. Some of the other divinities in the list are elsewhere regarded as especially given of victory to their devotees; but the whole is probably to be regarded rather as an enumeration of the chief deities of the State cultus.

In the Homeric poems we constantly find the gods not only as givers of victory and as strong partisans of one side or the other, but also as actually mingling in the fray among mortal combatants. This, however, though it applies to all the other gods, is not true of Zeus, who decides the issue by his will and imposes it by his emissaries. So in all great national crises or deliverances due to a successful war the victory is ascribed to Zeus, especially the divine helper of the Tyrones (Liberator). Thus at Platea, in commemoration of the decisive victory over the Persians, games called Eleutheria were celebrated at the altar of Zeus Eleutheros, and a race between men in armour was the chief event. An emblem of this power of Zeus is the agias (q.v.), which he lends to Apollo to turn the battle against the Greeks, and which is constantly worn by Athene. It has the power of causing terror and flight among those against whom it is shewn, and is used only by these three deities. All three have a specifically warlike side. Apollo was honoured in the festival of the Boehroidia, an offshoot of the Pythian festival at Delphi, both of a warlike character; he was especially the leader and giver of victory to the Dorian. After the Persian wars all the Greeks who had participated in the struggle set up a common thank-offering to him at Delphi. The same victory was attributed by the Athenians to their patron goddess, and commemorated in offerings or statues on the Acropolis and the Plateans who shared in the battle of Marathon set up, from the share of the spoils, a temple and statue at Platea to Athenian Ares as goddess of war. Another epithet of Athena which was probably of a warlike character was Nike, goddess of victory. Athene Nike had an altar to the east of the bastion south of the entrance to the Akropolis and guarding its approach; on this bastion was erected, in the time of Perikles, the little temple which commemorated in its relief the victories of the Greeks over the Persians. The goddesses we see to have been more impersonal, and rather less Victory' by a misconception; as a form of Athene she was distinct from the winged figure of Victory so common in Greek art of all periods. This latter, moreover, was a mere impersonation, whether in the games or in war. She has no separate cultus before the time of Alexander, and no place in mythology. She is placed on the hand of Zeus or of Athene in their great statues, and is regarded as their satellite. Winged victories are often to be seen crowning victors—but usually athletic, not martial ones—making sacrifices, and decked trophies. Famous statues of Nike are set up to commemorate victories in war—the best known are that by Praxiteles dedicated to Zeus by the Messenians at Olympia, and that from Samothrace, now in the Louvre, placed on a ship to record a naval victory of Demosthenes against the Athenians. It has been rightly observed that she is in each case represented as the messenger rather than the giver of victory. Trophies, set up on the field of battle, were discriminated as dedications of war to the god to whom the victory was ascribed. They were protected thus by a religious sanction, for they appear usually to have been respected even when set up in enemy territory.

The deities so far mentioned preside over war only as one of their activities, and as a necessary part of their protection and help to their chosen people. In Ares, on the other hand, we recognize a specialized god of war. It has indeed been suggested that his functions were once of a wider character, perhaps among the Thracians or some other foreign people; but there is little trace of any such character in Greek mythology or ritual. Some confusion has arisen in this matter from the misleading identification of Ares with the Roman Mars. Ares fares but poorly at the hands of the poets from Homer down. In the Iliad he is wounded by a mortal and overthrown by Athene. Sophocles actually calls him 'the god unhonoured among gods;' and the aid of other deities is implored against him; and this not as the war god of an adversary, but essentially as a god of horror and evils of war and pestilence. He is thus essentially the destructive god, delighting in slaughter; yet his worship, so far as we can judge, does not appear to have any connexion with the ritual and belief associated with terrible 'chthonic' powers or the possible spiritual influence which could arise from such belief. On the other hand, the name of Ares often occurs in conventional expressions and epithets applied to warriors implying military prowess; but in such cases it seems to be used as an impersonation of war rather than with any mythology of war. So too in expressions like 'Ares destroyed him' in an epitaph, or, in a hymn to Apollo, 'He stayed the Ares of the Gauls;' it even seems as if the name of Ares was used by preference as a symbol of the power of the enemy. One of the earliest and best attested shrines of Ares in Greece, that on the Areopagus at Athens, was said to have been founded by the Amazons, terrible women warriors of foreign origin who were defeated by Theseus. Whatever the origin of these beliefs, it seems in all these cases to represent the brutal and barbarous or 'barbarian' side of war, which is overcome by the Greeks with the help of their gods of ordeal, and with fate. Such an impression is confirmed by the legend that tells of the Herakles, 1

1. C. Michel, Recueil d'inscript. grecques, Brussels, 1860, no. 1246. 2. Il. xx. 299.
the typical Greek hero, by the aid of Athene, slew Kyknos, the son of Ares, in spite of Ares' attempt to support him. Ares indeed takes his place among the gods in their usual assemblies, and in such common exploits as the battle against the Giants; but even here he does not perform a leading role.

Ares is associated with a goddess Enyo (cf. his epithet or by-name Enyalio), who, however, has little mythical personality. His association with Aphrodite (which was given a scandalous turn by the poets from Homer down) is probably due in many ways to some of his god-like aspects as consort, who was identified, e.g., with the armed Aphrodite worshipped at Corinth—very probably a survival from primitive worship. Phobos, or "Fear," is either his satellite or another name for himself, rather in the sense of Terror, but is a mere impersonation, though sometimes represented on shields and similar objects—possibly originally with the magic intention of inspiring terror in the enemy. There are also demons of battle or strife who delight in slaughter, Eris (Strife) and the like; and Keres, demons of death, who drag away the corpses of warriors; but these belong to popular fancy, and it is in the poetic that their usage is most frequent. A curious myth about Ares is that he was bound in a pot for twelve months by the Aoadii.1 Similar stories of the binding and hiding of a monster, for a similar brief period, are to be found else; a similar notion is found in the binding of Satan for a thousand years (Rev 20).

To sum up, the gods who presided over war in Greece fall into two classes: those who gave the civilized art of war and the tempered civic courage exalted by Aristotle and other Greek moralists, and Ares, who inspired "the brute battle-rage," with which the Greeks had little sympathy.2 With the advance of ethical feeling in religion, the latter became the representative of the spirit of destruction and of barbarian rather than Hellenic warfare, though his cult still survived in many cities.

2. Roman.—In the religious usages of war, and in the beliefs as to war-gods and the practice of their ritual, Rome differs from Greece in two respects: (1) Mars, the specialized war-god, was also in many ways the chief national god, and so differs widely from Ares, with whom the Romans identified him; and (2) the ritual and observances of war were far more elaborate and more definitely prescribed, to a great extent under the charge of special priestly officials.

In addition to Mars, Janus, Jupiter, and Quirinus are concerned with war, though not as their special function. Janus, as the spirit of doorways, is usually first among gods to be invoked, in connection with every going out and coming in. His temple in Rome appears to have consisted of two doorways, with a kind of court between them. Here an image of Janus, with a head facing each way, was set up as guardian of the threshold. But this statue probably belongs to a later stratum of belief and ritual; originally the doors themselves were the symbol or even the habitation of the god. This temple was open in time of war and closed in time of peace—a custom which has puzzled mythological speculators alike in ancient and in modern times. The virgin in their usual assembly, and in that of the gods, rose up; within the doors stood bronze images of Jupiter, Juno, and Minerva; and the door opening, Horace suggests the bar of the slant in Janus, the guardian of peace. Virgil at least records the custom, common to other Latin towns as well, that the king or king-elect should formally open the doors as a declaration of war. An explanation that has appeared probable to modern mythologists, as to Ovid,1 is that the door was left open during an expedition so that there might be no obstacle to the return of those who had gone forth. The practice was formally closed during the reign of Augustus for the first time but one since the reign of Numa.

The worship of Jupiter was also in many ways associated with war. The most apparent example is in the case of the spolia opima, which consisted of the spoils of an enemy leader slain in single combat by the leader of a Roman army. These are said to have been first dedicated by Romulus in a temple to Jupiter Feretrius which he established for the purpose. In this temple was kept the sacred stone, Jupiter Lapis, which was taken with them by the Fates when they went out to ratify a treaty, and by which they swore on other solemn occasions. The god was probably in primitive times thought of as immanent in this stone and in the oak-tree on which Romulus hung the spoils. The rites of war connected with this primitive temple were later eclipsed by those of the great temple of Jupiter Capitolinus. This temple is especially associated with the celebration of the triumph which was the highest honour that could be conferred in general. The most remarkable feature of the triumph was that the general was actually invested with the insignia of the god, borrowed from the temple for the purpose for which it had been painted with vermilion, in imitation of the image of the god. He proceeded from the Campus Martius through the Forum to the temple of Jupiter Capitolinus, and there deposited the spoils from his fasces and the laurel branch which he carried on the knees of the god, thus assigning to him the glory.

The worship of Jupiter Latiaris on the Alban Mount belonged to the Latins generally rather than to Rome in particular; but it was adopted into the Roman State cultus. The celebration of the Feriae Latinae in his honour was the first duty of the consuls on their assuming office; and military disasters were attributed to its omission. A triumph was celebrated on certain occasions on the Alban Mount in honour of Jupiter Latiaris, especially by generals who had not obtained the Senate's sanction for a triumph in Rome. Other epithets of Jupiter which are obviously of a military character are Victor and Stator. There appear to have been three temples of Jupiter Victor in Rome, one dedicated on a spot near that of Jupiter Stator on the Palatine, on the spot where the flight of the Romans before the Sabines was stayed, was attributed to Romulus; it was renewed in consequence of a vow in battle against the Samnites. Jupiter was also worshipped in various forms as protector and giver of victory to the emperors on their military expeditions; and in the later imperial age the imperator is often portrayed with the attributes of Jupiter—an extension of the practice followed earlier in the case of a triumphing general.

The most important priestly college connected with the military side of the worship of Jupiter was that of the fates, who were concerned with questions of international faith and the sanctity of solemn pledges made in the name of the god. Their special function was the demands for reparation in cases of international offences, the declaration of war, and the conclusion of peace and of treaties. They had the inviolable character of sacred envoy, and carried with them on their expeditions the sacred stone and relics; they were invested with the imperator's and the pontifex's prerogatives, and were seated on the sacred chair, and on the gilded throne. Their spokesman was the pater patrum. In demands for reparation (clavigum) they had the authority of ten consuls. If by the thirty-day satisfaction was not given, war was declared. This was used to menace the enemy over the enemy frontier. When this in later times became impracticable owing to the distance of some military expeditions, a parcel of land near the temple of Boileus in Rome was estab-
tunately converted into enemy soil, its boundary being marked by the columna bellorum; and the spear was cast into this instead. A war-deity always had certain formalities which called upon the people until it was raised by the fetailes with a special form of sacrifice. In all these observ-
ances Mars was regarded as the guardian of interna-
tional faith and honour rather than as a war-god; but they are closely associated with war as supplying the religious sanction which success could not be expected. The fetailes naturally acquired some knowledge of international law, and doubtless drew up a code of law on that subject.

It has been much disputed among mythologists whether Mars should be regarded as specifically a war-god; the opinion now prevails that, although this side of his functions was prominent in early times and predominant in later, it was not the most primitive or the most important. Mars appears to have been a god of the land, not only in Rome, but also in many other Italian states. It is noteworthy that he had no temple within the pomarium at Rome. This is explained by some authorities as indicating a notion that his presence was undesirable or a desire that civil strife should not exist within the land; but it is more probably connected with other notions than that he was god of the town, of the country both cultivated and wild, especially the latter. As for this supposed desire to protect his worshipers when they ventured out on warlike expeditions. Similarly the spring and autumn ceremonies in his honour, such as the dances of the Salii with the sacred shields (scutum), are by some associated with the beginning and end of the campaigning season, and so with the activity of the war-god. But it has been pointed out that similar dances occur among many peoples in connexion with the cult of the powers of vegetation or the processes of agriculture at the most critical seasons of the year, and were intended to arouse the sleeping forces of such powers, or to avert or exorcise malefic influences. This may well have been the original meaning of these dances in honour of Mars, though they doubtless acquired a war-like meaning in quite early times. Though Mars had no temple within the city of Rome, sacred objects connected with his worship were preserved in some of the most ancient shrines in the city. The spears of Mars (hasta Martis) were kept in the sacrarium in the Regia, at the foot of the Capitoline, and were carried on warlike expeditions. Hence it was thought appropriate to enter on a campaign with the words: 'Mars, vigilia'; these were evidently regarded as the symbol of the god, who was in early times probably thought to be immanent in them; their spontaneous
ous shaking was regarded as a portent. In the Hall of the Salii on the Palatine were kept the sacred shields. These were of a very ancient pattern similar to those used in the Mycean age in Greece. One of them was believed to have fallen from heaven in the time of Numa; and the safety of the city was thought to be dependent on its preservation, as in the case of the Palladium at Troy. Numa had eleven other shields made to match it; and these were annually carried round various altars in the City by the Salii in the month of March; they were ceremonially purified and purified and placed on the altar of the Salii in October. The Salii on their way executed a kind of war-dance and beat the shields with sticks. Another ceremony in honour of Mars which was given in later times a warlike significance was that of the handicapped horse; the running horse in a race was sacred, and his head fixed up on the Regia, though too late investigators see a rite originally agricultural in intention. The sacrifice took place at the altar of Martis in this manner.

The identification or contamination of Mars with the Greek Ares, and the universal tendency of poetical mythology, led to Mars being more and more regarded as the god of war, the protector of Roman arms, and he is said to have sown the vineyard. At the conclusion of a treaty or truce at the end of a war the consul could only make a spolia, or agreement, which did not possess the same sanction as a war treaty. The fetailes naturally acquired some knowledge of international law, and doubtless drew up a code of law on that subject.

While the Greek Ares, and the universal tendency of poetical mythology, led to Mars being more and more regarded as the god of war, the protector of Roman arms, and he is said to have sown the vineyard, the traditional connexion with Mars was the ver sacrum, which was decreed to him in times of pestilence or disaster. In accordance with this the Marsian temple was erected on a site where a born within the succeeding spring were to be sacrificed or devoted to the service of the god. In the case of human beings this devotion took the form of being sent forth beyond the boundaries of the State. Hence arose cults of Mars, under whose guardianship the land was said to have been born to the god by Rea Silvia, show an anthropomorphism alien to primitive Italian religion, and are probably of Greek origin.

Another Roman or rather Italian war-god is Quirinus, who was later identified with Rômulus. He seems to belong to the Sabine settlement on the Quirinal Hill, though he came to be adopted as one of the chief gods. He and Mars do not apparently represent the same force. Mars had the more formidable or citizen side of the god, as Mars Gradius represents the warlike side; but he is expressly identified with Enyalios or Ares. It is significant that the three classes of spolia opima were offered, the first to Jupiter Penetras, the second to Mars, and the third to Quirinus.

Other minor divinities connected with war have little mythological significance. Bellona had a temple in the Campus Martius, which was dedicated after a vow made in battle in 296 B.C.; close to it was the columna bellorum mentioned in connexion with the fetailes. She seems, however, to have been placed more as a personification of Mars' mother; and her cult is of no great importance. She was later identified with an Asiatic warrior-goddess, or with the old Sabine Nerio. Nerio is by some writers regarded as the consort of Mars, but Nerio of Martis is more likely to be explained as a warlike strength or courage of Mars—an aspect, so to speak, of the god's manifestation. In later times Victoria, Virtus, and other impersonations were frequent, the latter being a goddess of war.

It is obvious that, in important undertakings such as military expeditions, sacrifice and divination would play a prominent part; especially among a people who, like the Romans, showed extreme anxiety to keep in right relations with divine powers. These, however, need not be more than mentioned here, since they are fully treated under their proper headings. A remarkable instance of devota is that in which, at a critical moment of the battle, a general 'devotes' himself and the enemy's forces.

A well-known example is the case of P. Decius Mus in 340 B.C. Here the devotion was said to be due to a dream; but the rites and formula provided by the pontifice maximus seem to show that the act had official precedence. The case of Cn. Eras at Athens is similar. Decius Mus was instructed to address in his devota 'Janus, Jupiter, Mars, Quirinus, Bellona, the Lares, the Gods Neapolitan and Indigetes, the gods of his own people and the enemy, and the Manes.'

The formula is instructive, as giving in accepted order the divinities to whom the result of war is ascribed; and these are here regarded as sources as to the order assigned to war-gods in Roman religion. It is noteworthy also that the national gods both of Rome and of the enemy are invoked; the invocation of ancestors, and of the gods of the enemy, as well as of the gods of Veii and Carthage, the national gods of the enemy were
invited to desert his city and transfer themselves to Rome. In all these matters, as in all other Roman religious life, we find an elaborate and highly developed ritual, with every possible safeguard against unintentional oversights. The personal character of the gods concerned comes to be realized only gradually in the case of those who were in the presence, but it is so strongly developed in later literature that it is by no means easy to recover the primitive meaning of the various rites and of the divine powers who were invoked from the first century B.C. onward.

The signs (signa) of Roman troops and the eagles (aquila) of the legions were objects of religious worship to the Roman soldier. The "birthday of the eagle" was celebrated as that of the legion; the "genius of the signa" is mentioned in inscriptions. We read in Livy of an oath "by the signa and the eagle," and in Tacitus of a commander who saved himself from the fury of a mutinous legion by "embracing the signa and the eagle and putting himself under the protection of their sanctity." In camp they were placed in a kind of small chapel. At Rome they were kept in the Aterrimus; hence it would seem that their sanctity was due rather to military feeling than to any official recognition or early sanction.

I. BABYLONIAN.—I. War.—The quarrels and feuds between rulers of early Babylonian city-states were the beginnings of strife which later developed into the elaborate warfare of the Assyrians. The king or head of the city, originally the patriarch of the clan, was the centre of all public life. As priest he was the sanga, as representative of the god he was the puttesi, and as war lord he was the bairra. Wars were begun by him and were carried on under his direction. But all wars were really the affair of the gods. 2 Warlike operations were usually of a military nature. But as early as the time of Samson-iluna, who in the first years of his reign led the Babylonian army against the Persians, himself and his men were the heroes. From Persia partly on land and partly by the use of boats, the Assyrians, indeed, although not seamen themselves, built a navy with the aid of Phoenician boat-builders, and Sennacherib employed Phoenician sailors in the pursuit of Merodach-baladan across the Persian Gulf. But the Neo-Babylonians not only had developed a great merchant fleet, but also had become a considerable naval power.

From the earliest times in Babylonia the support of warfare was considered a public obligation, and the military unit (the sarna) into which the body of troops were expected to furnish money to pay for a fighting unit. The army was recruited by conscription, each district being responsible for its quota. This militia, called the samitli, or summons, was placed at immediate call by the king. The levy (dilinu) was under the direction of a special officer, called the ragera, who saw to it that no liable person escaped, and, if a man so far forgot himself as to harbour a defaulter from the levy, he was put to death. All estates had to furnish troops at the command of the king, who could even impress the produce of the land and could also commandeer labourers for civilian purposes. By the time of the 1st Babylonian dynasty there is evidence of a regular standing army of professional soldiers, recruited partly from natives, but mostly from Amorites and other peoples of the inhabited places of the conquered territories. The body-guard of the king consisted of most trustworthy native soldiers. In the absence of the king the troops were led by the tartarum, or commander-in-chief, who often conducted the military campaigns. The Assyrians of these officers were formed a semi-caste of a military character, were paid with land, a house, and a garden, were assigned sheep and cattle, and received in addition a regular salary. But they were always at the service of the king, conducting especially the works of mobilization. In case of capture every effort was made to procure their ransom. Soldiers were well paid, were rewarded with land and a cow, and good discipline was observed among them. They were divided into cavalry and foot-soldiers, and a careful register of them was kept. The whole army was divided into companies of thousands, hundreds, fifties, and sometimes tens. In Assyria the army was still more highly developed until the time of Assurbanipal, who had created a fighting machine which has never been seen before. The military unit in Assyrian times was the bowman, who was accompanied by his pikeman and shield-bearer. According as Assyria became more and more a conqueror of foreign peoples the cohesion became the aim, and the house, as in the case of Sargon II., exempted certain cities from the obligation of the levy, as in the case of Asurbanipal, and depended upon her vast numbers of mercenaries, hired from conquered countries. The Neo-Babylonian army was modelled on that of Assyria, making extensive use of hired troops.

The steles of Vultures, which depict the successful war of Esarhaddon, in the name of his god Ninurta, against Umma, gives an excellent idea of some of the materials of war in that early period. In one battle, in which 3600 men (or perhaps 3000) men were slain, the troops were drawn up in a solid phalanx with long spears, protected by huge shields. The javelin-bearers carried an axe, and were protected by shields which were borne by the soldiers in the front rank. Each shield protected a soldier. The shield-bearers formed a galaxy of leather with bosses of metal, as were also the conical helmets, which extended down the neck, and were worn furrowed and criss-crossed with earlaces. A chariot is represented on the stele, but it was undoubtedly drawn by asses, for the use of the horse was not known till the time of Ashurnasirpal. Military standards made their appearance in early Babylonian times. The royal weapons consisted of a long lance or spear, and a broad sword in the left hand, and a bow with earlaces. Naram-Sin is represented armed with battle-axe, bow, and helmet. In his chariot the king carried a flat-headed axe and a number of light darts, acme fitted with double points. It was Dungi of Ur who adopted the bow as a national weapon. 1

WAR, WAR-GODS (Semitic)

After the introduction of the horse by the Kassites the cavalry took the place of chariots. Chariots were still used, but only on ceremonial occasions. Even when used, the horses were more ornamental than useful. The cavalry at first used only the bow and spear. But in the last phase, and the horseman was furnished with a complete coat-of-mail. In Assyrian times industry was divided into light and heavy-armed troops. The light troops included the chariots, equipped only with a kite and a fillet round the head—and were armed with spears. The heavy troops were equipped with cuirass and helmet, a long fringed robe (over which was a cavassara), and a peaked helmet; they carried a short sword and were furnished with a large, rectangular shield of wicker-work covered with leather. Infantry were usually divided into archers and spearmen. Sometimes an army would travel on camel, carrying the heavy-armed and light troops. The Assyrians fought with metal weapons. Their spear-heads and arrows were usually of bronze, mere rarely of iron; their coat-of-mail consisted of bronze scales, sewn to a leather shirt; and many shields were of metal, though others were of wicker-work covered with metal. The army was supplied with abundant wagons for transportation of baggage, food, furniture, tents, ladders, and battering rams; and much skill was expended upon the building of canals and fortifications.

Wars were waged very often for the sake of booty and spoils, and the usual demand made by the victor of the vanquished was payment of tribute. The favourite method of attack was by surprise, but, when that was impossible, a frontal assault was made. Many inducements were offered the foe to come being more common than the proclamation of the prowess of the reigning king; but very often a third party intervened to bring about peace and conclude a treaty, as in the case of Muslim of Khish, who was instrumental in settling a dispute between the kings of Umma and Lagash. Peace was declared and a treaty made.

2. War-gods.—The Early Babylonians, like other primitive folk, peopled their world with gods. Filenments of men were given to them, vegetation, storms, war, and all the forces with which men were brought into frequent contact—was the abode of gods or demons, and usually they were war-gods, wearing the costumes and armed in the same manner as the heroes of the population. Around the abode of the gods men gathered and formed a settlement, which was often called after the god, just as Shuruppak was named from the god Shuruppak. Such a deity was always a war-god, and often the people depended upon him for defence. War was not incompatible with the character of a god, for did not Ea and Apsu, Enil and Tiamat, Marduk and Tiamat, engage in deadly warfare? So, too, in ancient warfare, it was because their gods were at feud, and because their gods had ordered the strife. The war between Umma and Lagash, as told on the Stela of the Vultures, was waged by the command of the god of Umma upon the territory of Ningirsu, god of Lagash, and Ningirsu, backed up by Enil, joined battle. It was Zamaua, god of Khish, who achieved victory over the land of Khamuzi, just as it was Ashur, the great Assyrian war-god, who won military fame for Assyria.

And, when peace was declared and treaties were made, it was the gods who did it, for Moslem records the treaty of peace which the gods of Umma and Lagash themselves had drawn up. The city-gods were thus the real kings and rulers, and so the very title potesi, borne by early rulers of Babylonian states, designated them as representative, even their state-god, for it was a religious title. This explains how it happened that certain Babylonian kings, desiring to enhance their own power, assumed the title of ils, +god+; and, when a king felt himself powerful enough to risk the displeasure of his own god, he would appeal to the god of a city other than his own, when the petition was for something which the foreign god alone could provide.

Whenever, as often happened, two or more settlements amalgamated into one city or state, the various gods sometimes amalgamated, transferring the title of war-god. However, as a war-god, Enil was originally a war-god, yet when, by amalgamation, a state acquired a pantheon, only one of the members of that pantheon, as a rule, retained the title of war-god; it was sometimes carried on in the name of that particular god. And so it was that, while the Babylonians of the period of Hammurabi recognized many gods, Marduk was the war-god +par excellence, although Naban was also recognized as a war-god. The following are the Babylonian and Assyrian deities who retained more or less of their warlike characteristics.

Enil, son of Anu and chief god of Nippur, whose temple was the mighty Ekur, was originally a storm-god, and he had his origin and home in a mountain. Although he is most commonly known as a storm- and vegetation-god, he was also, as astron deity, the war-god and patron of the war-god, Enil, was the head of an early Babylonian pantheon, +king of the gods, +father of the gods, +husband of the great goddess Ninlil. But he never lost that attribute which made him the most powerful Babylonian gods, viz. +warrior. He was the +mighty warrior, +and, as such, retained his place as supreme war-god when Nippur, his own city, became mighty. Among all the other cities that came under the sway of Nippur no one possessed a war-god as powerful as Enil, and so Enil, the son of Anu, and consequently solar deity, became the official war-god of Nippur. No one could hope to fight victoriously against Enil; hence his fame as a great warrior-god. As all gods were represented by symbols, as seen on the numerous +kudurru, or boundary-stones, so Enil was symbolized by his weapon, an +ensurming net which encircles the hostile land, and is pictured carrying away his enemies who are entangled in his net.

Istar, or, according to the Sumerians, Ninl or Ninluna, was daughter of Enzu, and +mistress of the lands, She was also +mistress of heaven and earth, and had her home in Uruk. The word +Istar +is Semitic, and perhaps indicates that she was of foreign origin; it was, however, the idol of the free town, +tree, +wood. She was considered a solar deity at a very early period, and is referred to as the +light of heaven and earth. But with the passage of time she assumed other attributes. She was the mother-goddess +par excellence and the goddess of love; she was identified with Venus as the +queen of heaven; she was the patroness of law and order; she was the razing storm that devates heaven and earth; and she and Tammuz were associated in a way suggesting the female and male principles of life. But more than all else she was +mistress of battles and +mistress of war and battle. She is the +mustatiibflk hishika, the +beaker of the bearers of arms, the goddess of battle and warfare, who goes by the side of the king, favourite one, the terrible one of his enemies. Her warlike +attributes comprised:

1 After Hammurabi's conquest of Rim-Sin, and his control of Sumer, Enil, the chief Sumerian deity, lost of many city-states, surrendered his chief attributes to Marduk.

character is excellently brought out in Asurbanipal's dream. As a war-goddess she is frequently (and as early as 3000 B.C.) depicted on seals, where she is usually represented with clubs, scimitars, bows, and other weapons, leading captives before the king. In the Gilgamesh epic Istār is a war-goddess, and in the time of Hammurabi, and more especially in Assyrian times, she was 'mistress of war and of battle.' As Assyrian war-goddess she occupied the place of the consort of Assur and was the special war-protector of Assyrian kings. Asurbanipal's description of the warlike Istār is famous, and, when he founded his capital at Nineveh, he established there the cult of Istār of battles. In fact, the goddess became so popular in warlike Assyria that she was identified with three great shrines, Nineveh, Arbela, and Kidnmu, and became sometimes three separate goddesses, although usually only two, because of the comparative unimportance of Kidnmu. There was an Istār of the north as well as of the south—a differentiation which resulted in the belief in a male and female Istār. As a male Istār was the morning star, and as a female she was the evening star. To the very end of the Neo-Babylonian dynasty she was the war-goddess, who carried order and bow and flew to battle like a swallow. Her symbol as war-goddess was the lion and the five- or eight-pointed star Sirius, but sometimes she was symbolized by a bow. Istār, as goddess of war, was identified with several of their chief goddesses especially Ištah, who was 'lady of conquest' and 'lady of victory over the lands'; Innīn, who, originally a goddess of light and the star Venus, because of warlike qualities, was identified by the Sumerians as a conquering deity; the 'lady of battle,' and was represented in a standing position leading a captive by a string inserted in his nose, her symbol being the bow; Anūnī, who was worshipped as a goddess of battle at Agade and Sippar, of whom Nabonidus said that he built a temple to Anūnī, the lady of battle, that she bears bow and quiver, who executes perfectly the command of Enlil her father, who exterminates the foe, who annihilates the evil, who walks before the gods, who at sunrise and sunset renders favourable my omens. She is also identified with Antu, a heavenly deity, whom Hamurabi calls the Astar of Agade, and with Aīšā, a goddess of light and of war; with the warlike Nīnī, to whom Kānauhum on the Stela of Vultures dedicates the victory; with Nānā. Marduk, the 'first-born son of Ea,' was originally a solar deity, but his warlike character became prominent in the time of the Hamurabi dynasty, when his city, Babylon, became great. When the creation legends were recast, during this same dynasty, Hammurabi's war-god (often addressed as such in hymns), Marduk, was the warrior-hero who slew Tiamat, the spirit of chaos. He became so great that he outlived all gods with him. His greatness outlived the Assyrian empire, when he was called Bel-Marduk, having absorbed the characteristics of the old Bel, second son of the god Anu, enemy of Assur, and lived on till the end of the Neo-Babylonian period. He is often pictured as a warrior with semicircle, and his symbol was the flaming sun.

Nergal, son of Enil, was originally god of the midday or scorching sun, and was often identified with Samas. He then was associated with disease and death, and from that he developed into a war-god. As such he was called Marduk a ša ḫabbû, 'Marduk of war,' the lord of spears and bows, ur-aṣṣīr karradû, 'the warrior, the great sword-god,' and, as destruction that accompanies war, he was identified with the planet Mars. He first became known as a war-god during the Hamurrabi dynasty, and continued so throughout the Assyrian and Neo-Babylonian periods.

Ninib, son of Enil and god of Nippur, was originally a god of fertility. The daughter born of Ea, she was a vegetation- and water-god. As early as the Hamurabi dynasty he was called Marduk a ša ālûti, 'Marduk of strength,' and in Samsuiluna's reign he was called 'the great warrior.' He is also addressed as 'mighty god, warrior, ruler of the Annunaki, controller of the Igigi.' In a text translated and discussed by Pinches in PSBA xxvii. (1906) 203-218, 270-253, Ninib is fully described as a war-god of the mountains. He is called 'the lord, the destroyer of the mountains, who hath no rival,' 'the warrior who is like a steer'; and he is said to collect his army in order to spoil the land of the enemy. In Assyrian and Neo-Babylonian times, especially the former, Ninib continued to be 'the destroyer of the king's enemies' and 'the mighty one of the gods.' He was symbolized as a wild bull, as a double-headed vulture, and later as an eagle.

Nin-šarratu, son of Enil, and god of Nineveh, was usually called Nin-šarratu, who was also identified in this rôle with Ninib. On the Stela of the Vultures he is shown clubbing the enemies of Lagash, whom he has bound in a net; and he is symbolized by the divine storm-bird. Nin-gisíkida, son of Enil, was prototype of the great protective god of Gudea, was perhaps also a war-god, although no reference to him as such has been found. Nin-sakh, prototype of Ninib, and Nin-sī, called also Nin-du, are also thought to have been war-deities. Ramman, whose ideogram is IM, and who is identified with Adad, Mer, and Ishkur, was known as early as the time of Hammurabi as a 'warrior,' although he is the storm-god, he is also thought to have been war-deities. From the time of Hammurabi, however, he was recognized as a war-god, except...
in Assyria, where he played just one rôle, that of god of storms. In Babylonia he was associated—e.g., with Tur-lil-en, patron deity of Kish, as war-deity, and was pictured with a club. 1 Samân (Sumerian Babbar), although the sun-god par excellence, was known as ‘the conqueror of foreign lands,’ 2 and as such was a war-god, whose weapon was a great mace. 3 But the case was a Kassite god of war, whose symbol was the midday sun, and, therefore, a destructive power like Nergal. Tur-il-en, a Neo-Babylonian deity, was described as ‘the break of the warner’ 4 and the carrier of war. 5 Zama-nâma, patron deity of Kish, was early associated with Istar as a war-god, 6 and was called Marduk ta tenub, ‘Marduk of battles,’ 7 as well as ‘the king of battle.’ 8

Asur, the great god, Assyria’s war-god par excellence, was originally a solar deity, his symbol representing a sun-disk with protruding rays. Then he developed into a god of fertility—a corn- and water-god—and finally became a war-god. According as Assyria became more and more militaristic, so Asur’s attribute as war-god became more and more all-absorbing, until he became the dominating character in Assyrian religion. His divine city depended upon the location of the royal residence, and from there all warfare was carried on in his name. His popularity was due to the fact that war, which is always associated with mighty weapons (bakkha donna), and is he who protects the troops. 9 The disk as his symbol was surmounted by the figure of a war god.

II. EGYPTIAN.—I. WAR.—While some classical writers say that Egypt was divided among the king, priests, and warriors, others assert that from the beginning Egypt was a peaceful country. At any rate, it can truly be said that the Egyptians never admired a military career, nor were the conditions under which they lived favourable to the development of a military nature; e.g., Egypt was shut in geographically from the rest of the world; there were no great peoples in her neighbourhood to contend with, and no fertile lands within her reach to covet. Nevertheless, from the very first Egypt was called upon to wage war. Her literature attests this, and her earliest none standards are, in all probability, military in character. Pre-dynastic and proto-dynastic monuments, such as the Palette of Nar-Mer, preserve evidence of victory, and Uri, a noblesman of the VIIth dynasty, tells of important wars (although they are the only known important ones of the Old Kingdom) carried on against the Bedawin in the time of Peqi. 10 There were other military expeditions during this early period, and by the time of Sesostris III of the XIIth dynasty rather formidable armies were mustered. Yet, when compared with the wars of later periods or with those of Assyria, these military expeditions of the Old and Middle Kingdoms must be pronounced mere razzias—raids for loot, slaves, cattle, gold, etc.

Nor was the period of disintegration which followed the XIIth dynasty conducive to the growth of militarism. But the conquest of Egypt by the Hyksos (q.v.) breathed a new spirit into the land. The foreigners must be exterminated, and Egypt proved herself, under Ahmosè I., equal to the occasion. Thenceforth she began her career of conquest under the empire-builders, Thoutmose III., Seti I., Rameses I., 1 II., and Rameses III. She became a great military power, and took up the offensive against her erstwhile enemies, while Assyria was embroiled in a military caste, and for a while the military profession ranked high. Her military character, however, was not enduring; the Egyptians lacked that gallantry and chivalry which are essential to a truly military character. There it was the fact that the Egyptians were as destructive to the living and as savage to the dead—whose corpses they often mutilated—as other peoples, although Diodorus 3 seeks to excuse their cruelty. 4

Norse were the Egyptians a naval people, although they possessed considerable fleets of merchant ships, which navigated the Mediterranean, the Red Sea, and the Nile. But the same great national crisis which developed a strong army and a shortlived liking for conquest developed also a navy. When Ahmosè I. attacked the Hyksos, he did so by sea as well as by land. Of course there were warships before his time. Uni escorted his flotilla of merchants from Elephantine down the Nile to Memphis; Khetti II. of the IXth dynasty had ships; and Sesostris III. re-made a canal in the Fayum with which warships could pass. By the time of the XVIIIth dynasty a real navy had developed, and was employed in connexion with the campaigns in Syria. Although the Egyptian, as a rule, was an enemy of sea, the first king to recognize the true importance of the navy was Rameses III., who established a fleet in the Mediterranean and another in the Red Sea. The naval battles of this king are splendidly pictured at Medinet Habu. With the exception of the battle with the Hyksos, 2 the battles of Rameses III. are the only real naval conflicts known to Egyptian history. The navy, like the army, soon deteriorated, and never more played any important part in Egypt, not even in the time of Cleopatra, who is credited by Orosius 3 with a fleet of 170 large ships.

Egyptian religion never condemned war. The most ancient of Egyptian wars were among the gods themselves or between gods and men; and so Egyptian kings in making war claimed divine example. The Egyptians named all wars revolt, because they were presumed to be against the Egyptian gods. The duty of the king was to avenge the gods of impurity, the word for ‘impurity’ (anotic) being the same as for ‘enemy.’ 4 In short, all wars were supposed to be wars of supernatural, and sanctioned by divine precedent.

In earliest Egypt there were soldiers who were selected from all parts of the political district, and, as early as Pepi I., conquered territories were compelled to contribute men in case of war. But there did not exist an army in the modern sense of the term. In the Middle Kingdom there were professional soldiers who were called ‘followers of his majesty.’ They were divided into companies of 100 men, and they garrisoned the palace and the strongholds of the royal house from Nubia to the Asiatic frontier. They were the nucleus of a standing army. In case of actual war, the great nobles, or nomarchs, sent their quota of men, whom they had carefully trained, armed with bows and arrows. Then there were contingents supplied by the estates of the great temples, besides mercenaries of friendly chiefs. These armies were often called upon to do guard duty, as in the case of the army of Sesostris I., which was employed in the defence of the Delta. With the rise of the Empire, and as a result of the Hyksos overlordship, a regular army was gradually developed. It had

two grand divisions, composed of experienced troops who had learned tactics in Syria. These two grand armies were divided into divisions, each division named after a god — e.g., Amen, Ra, Ptah, etc. The infantry and cavalry were drawn to the battle-hallows at Abydos, and the warships to those of Thutmose III. At once, therefore, it was expected that the necessary arms and equipment were ready, and that the eastern vassals would not be cast into prison for debt, and was expected to provide himself with the necessary arms and everything requisite for a campaign. If he were brave, distinctions and other signs of honour were showered upon him, and, as a result of his service, the mercenaries were employed, and these were allowed to retain their own arms and customs. The peoples most commonly engaged to fight the wars of Egypt were the 'Nine-bow Barbarians' from Nubia, the 'Sharadana' from Europe, the Libyans, and the Syrians. The last-named were so frequently employed that the term harer-srij, 'young Syrian,' became a synonym of a soldier. Most of the mercenaries of Ramses III. were mercenaries, and after his reign these men were so much accustomed to the country that they in turn as foreigners conquered and dominated Egypt — such were the Libyans, the Sudanese, the Persians, the Greeks, and the Romans.

In early Egypt some soldiers carried a large bow, had one or two ostrich feathers on their head, and a narrow band around the upper part of their body; others carried a large shield and a spear, or a small shield, over which skin was stretched, and a battle-axe; still others carried no shield but had a large axe, a lance, and a sling. During the Empire regiments of light infantry carried a golden, a lace, and a long spear; the heavy infantry bore spears and a curved sword. The cavalry were armed with the battle-axe, and most of them and the charioteers were armed with lances, while bronze helmets were worn, although a more common head-dress was a helmeted cap, the colour of which depended on the regiment, some with fringes, others with tassels. The archers were the most important soldiers in the army. They were divided into companies, which were drawn to the chariot and tassels. They wore quilted helmets with coloured tassels. The arrows were about two and a half feet long, and were of wood, and tipped with metal. They sometimes carried an axe or boomerang. The cavalry were not known till the Hyksos period, for it was these Semites who introduced the horse into Egypt. Thenceforth chariots drawn by horses and cavalry became very popular. Shebokk is reported to have had 60,000 horses in his army which marched into Palestine.

The weapons of the earliest Egyptians were very simple. At first they consisted of large stout sticks. But later the offensive weapons were bow, spear, javelin, sling, sword, dagger, knife, falchion, axe, and club; defensive arms were made of a sand which was hardened, or quilled head-piece, coat of armour, and shield.

The Egyptians fought best behind walls, and many forts were therefore built in Egypt, especially at the Second Cataract and on the north-eastern boundary of Egypt. Towns were fortified, such as Peliumon, Syene, Elephantine, Sennub in Nubia; and Thutmose i. fortified the island of Tombos at the Third Cataract, and swimming pools for the campaigns of the Eighteenth dynasty. All sorts of siege, such as scaling ladders and battering-rams, for transportation, such as wagons and baggage-trucks, and for communication, such as wagons, chariots, tables, and chairs, and tables, were provided. Each company had its own standard, which was held up by a regiment and furnished with musical instruments, usually trumpets and drums.

The only Egyptian campaign conducted on any definite plan was that of Ramses II. against the Hittites. But there is evidence of the use of a great deal of strategy in the manoeuvres of the soldiers of Thutmose III., and especially in the way in which Joppa was taken by Thutyi. Armies of Ramses II. were drawn up in battle-order in a grand manner, and the line was composed of phalanxes, and the left was extended as far as the wing, centre, and flanks. The Egyptian inscriptions afford an excellent idea of the way in which Egyptian battles were fought. As a result of these conquests, the Egyptians were left free for skirmishing and for flank movements, such as those which were so well carried out at Kadesh by Ramses II. The Egyptian phalanx became so famous that Cossus used it most effectively against Cyrus.

War at all times and especially under the Theban monarchs was a means of procuring slaves and booty. The Egyptians divided the prisoners into different classes, and these were sold under the name of the group of which they were members. In the battle of Kadesh, which was fought before the Asiatic conquests, although ransom seems to appear as early as the civil wars which preceded the XIXth dynasty. In order to prove to the king the completeness of victory, warriors who were prisoners were cut off the head and sometimes the heads 1 of the vanquished and placing them in heaps before him. But the Egyptian was always glad when peace came and a treaty was drawn up. The most famous treaty in Egyptian history, and the most detailed known to the ancient world, was that drawn up between Ramses II. and Hattusil II. the Hittite king.

2 War-gods. — Originally seven social groups had their gods and every god was in some sense a war-god. When smaller groups amalgamated into larger cities and nomes, the gods of the constituent groups amalgamated into the god of the most powerful unit in the group, just as Sekhet and Hathor were absorbed into Amon of Thebes, and to him were ascribed the characteristics of the absorbed gods. If the age was warlike, one of the attributes of such a deity would be that of war-god. Whenever the age and location were warlike, the war attribute of the deity reeded into the background. Thus it is that previous to the Hyksos period there are no prominent Egyptian war-gods. But as a matter of fact, the Egyptians were warlike, and sometimes the heads of the vanquished and placing them in heaps before him. But the Egyptian was always glad when peace came and a treaty was drawn up. The most famous treaty in Egyptian history, and the most detailed known to the ancient world, was that drawn up between Ramses II. and Hattusil II. the Hittite king. Did not Horus battle with Set, and did not every king, as son of Horus, have to fight the god's enemies? The fierceness of the wars with the Hittites was due to the fact that Egypt's gods were at war with the hated gods of the Asiatics.

The following deities, almost all of whom are foreign, are the war-deities known to Egyptian literature. Aseth is usually represented as a woman armed with shield and club, riding a horse into the battle-field. She is a war-goddess of Senitic origin in whom W. Max Müller sees the counterpart of Esen. A seti i. at Rodesiyeh, on the road to the gold-mines of Mt. Zalabir, connects her with the desert. Amon-Ra, one of the primeval deities of Egypt, whose chief seat of worship was at Thebes, became very prominent as a war-god in the XVIIIth dynasty as a result of the victories of that pharaoh. An-horet, or Anhur, local god of Abydos, was god of the dead, but was also represented as a man standing with a spear in his raised hand. He was a warrior.

WAR, WAR-GODS (Semitic)

god, and as such became identified in the Greek period with Ares. *Anat*, 'queen of heaven, mistress of the Asiatic plains of war. She was the same as the Sumerian An, with Semitic feminine termination, Antu. She is represented as sitting with a spear in one hand and swinging a battle-axe. She is probably the same as Astarte. 

*Anthyt* was a Syro-Phoenician war-goddess, represented with shield and spear in the right hand and club in the left. Her cult was associated with N. and S. Syria and Lebanon was Turboth. She was named after her—e.g., Seth-Ántht, probably another name of the same goddess, is known only in late sources. She was worshipped at Antiochopolis, and was represented as a warrior or hunter with a high feather on her head and clad in Roman armour. *Ánthrtyt* of Apollinopolis was introduced into Egypt in the XVIIIth dynasty. She is the same as Astarte, a Syrian war-goddess, and was depicted as a lion-headed human figure, driving a chariot drawn by four horses over her prostrate foe. *Asit* may be another form of *Ánthrthyt*. Bár, or Pu-Bár, was a Syro-Phoenician war-god, the Baal of the OT. He was introduced into Egypt in the XVIth dynasty. Originally he was the personification of the burning and destroying heat of the sun and of the blazing desert wind. He was worshipped in the temples of Times, and was the favourite of *Hammurabi*. Another, the *Sjrja*, was depicted with a club in his right hand and a spear in his left hand. As a war-god he appears in the XVIIIth dynasty. *Hér-Bhuqet* is a form of Horus, under which he was worshipped with Set or Typhon. *His* symbol is the Sphinx at Gizeh. Another form of *Horus* is *Hér-Sept*, the smiter of the Mentu, and god of battle; and still another form of Horus, who 'loved an hour of fighting more than a day of rejoicing,' is *Hér-Thémá*, the piercer, and, as such, a god of war. *Mafet* is a war-goddess, whose symbol is the sign 'to follow,' *Amun*. *Menthu* was an ancient Egyptian war-god, whose seat was at Thebes. He was represented in human form with a bull's tail and head of a hawk. His head is surrounded by a sun-disk between double plumes. Sometimes he is depicted as a hawk-headed sphinx. He is represented with bow and arrows, a club, and a knife. He is seen on the prow of the sun-boat and slays the demon with his lance. He was an old local god, a personification of the destructive heat of the sun, but in later times he became *Mentu-Rá*. He was *Hammurabi* 's patron-war-god. *Neith* was worshipped in the Delta in pre-dynastic times. While she was, at an early period, a personification of a form of the great rain primeval war-god, she was later represented with bow and arrows, and as such was considered a war-goddess as well as a goddess of the chase. *Nephebet* and her twin-sister Uatchet were destroyers of the enemies of the gods. *Reshpu*, or *Resheph*, had his centre of worship at *Hét-Resheph in the Delta, but was an imported Syrian deity. In *Egyptian* texts he is called 'lord of the two-fold kingdom of the name of the gods.' He is represented as a warrior with spear and shield in the left hand, and club in the right hand. As his Semitic name shows, he was a personification of the burning and destruction of fire and lightning. *Sekhmet, or Sekhet*, 'the powerful,' is represented wearing a solar disc on her head, symbolizing the warlike attributes of the sun. She was called *the fiery one emitting flames against the enemies* of the god, and her duty was to scourge and consume the enemies of her father. *Up-Uaut, the opener of the way,* was originally a war-god, who opened the way for troops through the enemies' land. He is sometimes represented in the prov of the bow and arrows.

III. HEREW.—I. War.—Although the ideal of the great prophets of the 8th and 7th centuries was peace, war was approved by the prophets of early Israel. The Hebrew people were not unwarlike, and with them, as with other Oriental peoples, war was sanctioned by the deity. From the earliest to the latest times in the history of Israel Jahweh fought for His people, and they followed Him to battle. Before battle oracles were consulted to learn Jahweh's will; 2 prophets of Jahweh were appealed to for guidance; and prayer was offered up to Him before the attack. Jahweh Himself was identified with the war of the Xlth and Xllth dynasties. Originally he was the personification of the burning and destroying heat of the sun and of the blazing desert wind. He was worshipped in the temples of Times, and was the favourite of *Hammurabi*. Another, the *Sjrja*, was depicted with a club in his right hand and a spear in his left hand. As a war-god he appears in the XVIIIth dynasty. *Hér-Bhuqet* is a form of Horus, under which he was worshipped with Set or Typhon. *His* symbol is the Sphinx at Gizeh. Another form of *Horus* is *Hér-Sept*, the smiter of the Mentu, and god of battle; and still another form of Horus, who 'loved an hour of fighting more than a day of rejoicing,' is *Hér-Thémá*, the piercer, and, as such, a god of war. *Mafet* is a war-goddess, whose symbol is the sign 'to follow,' *Amun*. *Menthu* was an ancient Egyptian war-god, whose seat was at Thebes. He was represented in human form with a bull's tail and head of a hawk. His head is surrounded by a sun-disk between double plumes. Sometimes he is depicted as a hawk-headed sphinx. He is represented with bow and arrows, a club, and a knife. He is seen on the prow of the sun-boat and slays the demon with his lance. He was an old local god, a personification of the destructive heat of the sun, but in later times he became *Mentu-Rá*. He was *Hammurabi* 's patron-war-god. *Neith* was worshipped in the Delta in pre-dynastic times. While she was, at an early period, a personification of a form of the great rain primeval war-god, she was later represented with bow and arrows, and as such was considered a war-goddess as well as a goddess of the chase. *Nephebet* and her twin-sister Uatchet were destroyers of the enemies of the gods. *Reshpu*, or *Resheph*, had his centre of worship at *Hét-Resheph in the Delta, but was an imported Syrian deity. In *Egyptian* texts he is called 'lord of the two-fold kingdom of the name of the gods.' He is represented as a warrior with spear and shield in the left hand, and club in the right hand. As his Semitic name shows, he was a personification of the burning and destruction of fire and lightning. *Sekhmet, or Sekhet*, 'the powerful,' is represented wearing a solar disc on her head, symbolizing the warlike attributes of the sun. She was called *the fiery one emitting flames against the enemies* of the god, and her duty was to scourge and consume the enemies of her father. *Up-Uaut, the opener of the way,* was originally a war-god, who opened the way for troops through the enemies' land. He is sometimes represented in the prov of the bow and arrows.

1 *Cic.* 43, 4. To the same cycle of divine beings belong *Bitar* of Nineveh and Antu, mistress of horses, who was confounded with the Sumerian *Anu* and his son *Enlil*. All of them were known and recognized as war-goddesses in Egypt.

708
prove the warlike character of Jahweh. He it was, as a warrior, who brought His people out of Egypt, and who drove out the nations before Israel; He revealed Himself to Joshua as the captain of His hosts; His angels led the hosts of Joshua and Barak, and gave David victories over Aram and the peoples round about. It is true that He was considered a mountain deity and was associated with Sinai-Horeb, and, as such, a storm-god, controlling and regulating the weather; He was "beau of the land, and therefore a vegetation-god; He was perhaps a lion-god, and an ox-god, and He was god of heaven and of earth; but He was pre-eminently "a man of war," whose peoples' victories were His "righteous acts," whose exploits were recorded in the "Book of the Wars of Jahweh," and whose favourite servant was the warrior David, a man after Jahweh's own heart; Israel's battle-cry was "the sword of Jahweh and of Gideon;" and Meroz was cursed because it did not come to battle, "to the help of Jahweh." The title "Jahweh Sebôth," whatever its original meaning, designates Jahweh as god of battles. The term "Sebôth" may have referred sometimes to the hosts of heaven. But warlike qualities were ascribed to the stars not only by the Hebrews, but also by the Babylonians. It may have referred sometimes to Israel as a people. But it certainly had reference to the title of Jahweh as leader of the armies of His people Israel. The term as used in the OT regularly denotes armies of men, and it formed the title of Jahweh as war-god. A similar title is found applied to the Babylonian Tîspak, who is called Marduk at ummanî, "Marduk of hosts," and Tîspak was a war-god.

Jahweh's emblem, as war-god, was an ark. Eleven of the occurrences of Jahweh Sebôth in the books of Samuel are connected with the ark. It was the symbol of the presence of Jahweh, and was perhaps a throne upon which Jahweh sat, when He was carried into war, just as the Babylonians carried their gods on thrones in processions. In fact, the ark was so closely associated with Jahweh, as war-god, that it was identified with Him, and was greeted as if it were Jahweh Himself.

LITERATURE.—With the exception of T. G. Pinches, 'The Babylonian Gods of War and their Legends,' 'PSAs xxviii. 1909' 252-255, and of a discussion of Nisibis mentioned in a separate article, monograph, or book on this subject. Besides E. A. W. Budge, 'The Gods of the Egyptians,' 2 vols., London and Chicago, 1906, and likewise the author has made full use of the original inscriptions. In the case of the Hebrew Bible, the Standard Dictionaries of the Bible have been consulted, besides Nowack and Benziger.

S. A. B. MERCER.
WATER, WATER-Gods (Primitive and Savage)

from the North Sea to the Euphrates, to celebrate the summer solstice. None of them, while they differed in some things, yet agreed closely in others; that in historical times a wave of Oriental influence, starting perhaps from Babylonian, carried the idea of such festivals, and the ritual connected with them, westward till it met with native forms of a similar festival; and that under the influence of this the Roman civilization developed a different yet kindred festivals fused with each other and crystallized into a variety of forms which more or less separately side by side, till the Church, unable to subdue them altogether, stripped them so far as it could of their grosser features, and thereafter changing the names allowed them to pass muster as Christian.1

In Mesopotamia the year is divided into two seasons—the rainy and the dry. The welfare of the country depends upon the abundant rains which continue uninterrupted for several months. In the earliest period to which the history of the Euphrates valley can be traced, a system of canals existed, serving the purpose both of irrigation and of avoiding disastrous floods. It is not surprising, therefore, that the early Babylonians regarded water as possessed of mana, and in later times that it became for them the abode of spirits and gods. Similarly, commerce, following in the wake of agriculture, would lend an additional importance to water as a means of transportation, which again would find expression in a cult of water-spirits. As the Babylonian deities, man's progenitors, these spirits would assume the role of gods ruling over the various functions formerly controlled by lesser spirits.2

Now, we know that Tamnuz was an ancient personification of the sun of the springtime, his name consisting of a Sumerian phrase Dumu-Zi, 'true (or faithful) son of the deep,' and that he was the first lover of Ishtar, the great mother-goddess. He became her consort, was slain by the goddess, and descended into the under world, while Ishtar went in quest of him. The promise made to her by Gilgamesh to present him with a chariot of lapis-lazuli, and to shelter him in a palace of plenty, unmistakably points to the triumph of the sun when vegetation is at its height. Tamnuz and Ishtar, like Gilgamesh and Ishtar, thus represent the combination of the two principles which bring about life, and upon their separation follow death and decay. It appears from the fragmentary documentary evidence that the early Babylonians supposed that every year the goddess went to 'the land of No-return,' and that during her absence man and beast alike could not discharge their sexual functions, so intimately was Ishtar associated with fertility. If Tamnuz was the personification of the hot sun, and if his return from the under world bore a direct relationship to the revivification of nature, it must have been intimately connected with fertility. But the close relation that existed between vegetation and the water supply in the Euphrates valley would inevitably lead to his association with a water cult, and to his rites being performed about midsummer.3

At the festival of Tamnuz in Babylon the image of the god was washed with pure water, just as in the summer festival the image of Adonis was thrown into the sea at Alexandria, and in Greece 'the gardens of Adonis' were similarly treated, to secure a due supply of fertilizing rain.4 But originally it must have been the mana in the water, and not the deity, that was regarded as the means by which the desert in the springtime was suddenly made to blossom as the rose. It was not that primeval man was so overawed by the miracle of spring, the radiance of the flowers, and the singing of the birds; it was not that his heart went out in gratitude to the High God who was the giver of life and fertility; he simply expected rain, and it was only after he had lived that he uttered and represented in his elaborate spring and summer ceremonies—the promotion of life and fertility in plants, animals, and man. Since then, and particularly the outstanding factor in the preservation of life and the growth of the crops, it naturally plays a conspicuous part in rain-making ceremonies and other seasonal rites among primitive peoples.

2. Water as a rain-charm.—Water is widely used in ceremonies for bringing rain.

In Australia, among the Arunta, a group of people have water for a rain-charm and men of them go from time to time by their alatunja, or leader (a celebrated rainmaker), and perform rites. In the rites that ensue water does not play a part, the ceremonies, according to Frager, representing a rising storm.5 Among the Kalahari, the spirits of water are goddesses, and personification is the totem of the spirits of water.6 Now, C.F. Jastrow, Zimmern, have been among the ancient Babylonians, who traced, in the Temple of Central Celebes, pictures of the rain, as the grave of a chief to procure rain. After that they hang a bamboo funnel over the grave, a small hole in the bamboo is pierced in the lower end of the bamboo, so that the water drips on it continually. The bamboo is kept re-filled with water until rain descends on the ground. Conversely, it is thought that to desire rain in the same manner is to cause rain. In the island of Celebes, the rain-doctor (tandu) assiduously avoids touching water during the spring. If by accident he comes in contact with it, he must bathe or wash himself, he drinks nothing but palm-oil, and, when crossing a river, he is careful not to step in the water. Should rain again be desired, he has deplorably wanted, he has covered himself with a hide on his face, and immediately the rain will descend in sheets.7 In India the rain-charm of the rain-maker had to 'drench' the deity and unite him with water by touching it three times a day as well as on various special occasions, to make himself, as they were, an ally of the water-powers, and to guard himself against their hostility. The Ita-thongs, a Bantu tribe in S. Africa, think that droughts are the result of the displacement of rain-charms by women. To procure rain they bury a pot in the ground and cause it to be filled with water by girls who have not ardently desired rain, the age of puberty, till it overflows into four channels which run in the direction of the cardinal points of the compass. The women then hold a rain-charm and pour water on the graves of prematurely born infants and of twins to 'extinguish' (tinsula) them, thereby restoring the cause of the drought to make rain.8

In S.E. Europe, at the present day, rain is made by pouring a call of water over a boy or girl clothed from head to foot in grass, flowers, or corn.9 H. S. Moore records a similar practice at Poona (India). When rain is needed, the boys dress up to one of them in number in nothing but leaves and call him 'king of the rain,' (mara'je). They then visit all the houses in the village, the householder sprinkles the rain-kings with water, and makes offerings of dates and wine. In Indonesia, the rain-maker substituted for a living person in the rain-making rites. The image, which was depicted on a bamboo, was drenched with rain, and carried by children in a funeral procession, with a burning candle before it. Finally, the coffin and candle are thrown into a stream, as they are in Egypt. In Indonesia, long sticks were dipped in water to procure rain, just as the Shans drench statues of Buddha with water when the rice-crop is in danger of withering from drought.10 In Arcadia, in the classical period, the priest of Zeus dipped an oak branch into a certain spring on Mount Lycaeus in times of drought, to cause the water to send up a misty cloud, from which rain would soon fall.11 The Athenians sacrificed boar, not as meat, but as the season began, because they imagined that the water in the pot would be transmitted to the gods, and return to them as rain.12

That the use of water as a rain-charm was directly connected with fertility is shown in the custom of clothing the person (or image), apparently the personification of vegetation, in leaves, corn, vines, etc., before water is poured on him. In support of this view may be quoted the European spring celebrations of St. George's Day.13 It is

Water, Water-Gods (Primitive and Savage)

difficult to avoid the conclusion that originally these rites were performed to promote vegetation, and secure an abundant food supply, just as, until quite recently, the gong is struck to cut at harvest in this country to procure rain for next year's crops.

3. Water in purification ceremonies.—Just as water is necessary to the course of the land during the process of fertilization, so it appears to the savage as the normal means of washing away material or spiritual pollution. As this subject has been treated separately,1 we shall here confine our attention to the ceremonial use of water, the universal cleanser, in ritual purification.

After childbirth and menstruation, and in fact after sickness generally, the contagion is removed by a bath, while the contagion of death and the sins of the penitent are often got rid of in the same way. It is a common belief that the effect of contact with a sacred object must be removed by washing before a man may freely mix with his fellows.

Thus the high-priest was required by the Jewish Law to wash himself and put off the garments which he had worn in the holy of holies, ‘from the camp forth to the east, and after offering his burnt offering’ (Le 16:4). Likewise Greek ritual decreed that the corpse must be washed after entombment and the explanatory sacrifice. Water must wash his body and his clothes in a river or spring before he entered a city or his own house.2 In like manner, among the Jews the ceremonial washing of the hands was decreed by a law of the Mosaic Law (Ezk 43:12, ‘defiled the hands,’ and called for an ablution.3 Among the Matabele of S. Africa, a priest before the people ate of the new fruits they went down to the river to wash, and before changing from one food to another the Ekkimis must wash themselves,4 as a kind of ‘rite de passage.’

(a) Childbirth. — Birth, the attainment of puberty, marriage, death are great personal events associated with the mysteries of life, and at these times the individual is especially exposed to mystic and dangerous sacred forces. A pregnant woman is, in consequence of her condition, a dangerous person and one to be avoided until all traces of her ‘sacredness’ have been removed. Similarly, a newly-born infant is in fullest contact with the sacred world, and, therefore, he is subject to attacks from malignant influences, from which he must be guarded by rites. Like his parents, he is unclean, and, in consequence, some form of regeneration is necessary to remove this original taint.

The mother and child among the Koryagkas of West India are ceremonially unclean for five days, when both are restored to purity by a yojid bath.5 The Hotentots considered a mother and child uncleon till they had been washed and their bodies anointed after the approach of the agents. Lustrations with water are common in W. Africa. The Mantras of the Malay Peninsula regard water as a cleansing vehicle, especially of infants. The river indigenous to the country of the Kuna is held sacred, and they bathe in it. The Ateke mid-wife washed the infant with the prayer, ‘May this water purify and whiten thy heart; may it wash away all that is evil.’6 The lustration speedily took definite form in the Mediterranean religions, and passed from the idea of washing away of defilement and sin to that of spiritual new birth. In the Isis rites the baptism with water was thought to raise the mortal to the divinity, although it is not clear that there was any ceremonial purification of the new-born infant with water in Greece. It appears that the rite called σινελούσα, in which the infant was carried round the domestic hearth, took the place of a baptism by water.

(b) Initiation and marriages.—Water is some times substituted for other purificatory rites (such as tatuating, setting the novice on a smoking fire, scourging, etc.) in initiation ceremonies.7

(c) The shedding of blood.—To the primitive mind nothing is more uncanny than the sight of death and blood are the great primeval mysteries, and all the substances that are associated with the inner principle of either partake of this sacredness.

For the savage what is sacred is also dangerous and a source of contumacious impurity. Therefore, when a man has shed blood, he is tabu until the ‘niawsa’ has been removed by purification rites.

In New Guinea, priestesses to the spirit called the ‘fruit spirit’ and the ‘tree spirit’ live in a hut a week after their return from battle, during which time they may not come in contact with their wives, and they may not touch food with their hands. On the 31st day of his seclusion the spirit who has taken life walks solemnly down to the nearest water, after having been washed, he ‘cleanses the spleen and liver of a kangaroo, and, standing straddle-legs in it, washes himself.’8 Among the Bantu warriors go straight from battle to a stream, where they purify themselves and their implements of war by washing away the tabu in the water, and putting themselves out of reach of the revenge of the slain.2 Similar rites are performed by the Akituru, in which the final ablutions consist in cleansing with water.2 In the Fijian isles the young warriors, on their return from their first fight, are shut up for three days, and then, after smearing their bodies with charmed leaves and honey, bathe together as near as possible to the spot where the killing took place.4 When a Fima Indian killed an enemy, he was tabu for sixteen days, and returned to the groves along the river bottom, and there, after smoking about the adjacent hills. During this period he was forbidden to touch his head or his face, and before he might go to his home he had to bathe in the river, no matter how cold the temperature.5

(d) Death.—Contact with death and the spirit-world is a strong source of impurity in primitive society and all the places where death is connected with purification rites. Bathing and purification are the usual modes of purification. See art. DEATH AND DISPOSAL OF THE DEAD (Introductory), vol. iv. p. 427, col. xiv.

(e) Disease.—Water is frequently regarded by primitive peoples as having the power to wash away sickness, especially if the disease is in the nature of skin eruptions. The healing of Naanan (2 K 5:9) reflects an ancient Semitic belief in the efficacy of water as a cure of leprosy. Of all inanimate things that which has the most marked supernatural virtues among the Semites is running (or, as the Hebrews said, ‘living’) water (cf. Nu 21:7, Ezkh 47:12). It is, therefore, not surprising that certain wells and rivers were credited with the power of healing.

In Babylonia a sick person was sprinkled with water while the priest pronounced certain sacred formulas, having the power of ‘cleansing’ a patient from sickness. The water was specially sanctified for this purpose, and was sprinkled over such sacred streams as the Tigris and Euphrates. One or more springs, and a particular fountain, called a bath-house, were attached to every large temple, where purification rites were performed. Details of the rites varied in different cities, and there are indications that they may have had this origin, a matter of course, as the banks of running streams—perhaps a survival of the period when the incantation incantations created the sacred spring—have often been the objects of sacred cult.6 To this day a ‘bath-house’ is sometimes attached to synagogues, whither women resort monthly to cleanse themselves—a remnant of the old Semitic personal purification ritual, now restricted to women.7

The importance of water as a means of healing must have been greatly reinforced by the growth of Baal-worship, in which the deity as the giver of life was specially connected with life-giving waters. The indignation of Naanan when he was told to wash in Jordan, and his confidence that the rivers of Dananues were better than all the waters of Israel, probably arose from the idea that the Jordan was a sacred healing stream of the Hebrews, which came to them through the sacred waters of the Syriasm, and not from any astonishment at being asked to participate in a rite which he must have been well acquainted with. In the time of Antionius Martyr8 patients frequently bathed ceremonially by night

WATER, WATER-GODS (Pringte and Savage)

in the thermal waters of Gadara, and in the Middle Ages it was still believed that he who bathed in the springtime in the source of the Euopus would be free from sickness for the whole year. 1

In Europe water figures conspicuously in folklore as a means of preventing and curing disease. The May water at Sparr, near Stockholm, was drunk at the Midsummer celebrations by the young people of that town as a cure against the ills of the body. 2 Similarly, in Sweden, certain holy springs are supposed to have been discovered by the horsemen who travelled there for the Midsummer. 3

In Ireland, on Midsummer Eve, three wells to which extraordinary virtues are attributed, are thronged by crowds of halt, maimed and sick, who wish to wash away their infirmities with water consecrated by their patron saint, and so powerful is its efficacy on their minds, that many of those who go to be healed, and who are not totally blind, or altogether crippled, really believe for a time that they are by means of its miraculous virtues perfectly restored. 4 At Moravia in Sicily the sick resort to a spring in a subterranean grotto, called the Grotto of the Sibyl, to be cured of their diseases by bathing in the water; 5 just as on the same day people of Constantinople used to go on pilgrimage to a neighbouring spring to heal and strengthen themselves. 6 In the water font grotto at Locronas, which has been the reputed source of so many miracles since the time of the Blessed Virgin to Bernadette Soubirous on 11th Feb. 1858, belongs, perhaps, to a different category, since the existence of the spring was unknown to the inhabitants of the appurtenances to the appurtenances to the other.

4. WATER AS A MEANS OF DIVINATION.—The use of water in divination has been common in ancient and in modern times among people in a primitive state of culture.

Thus the Tahitii seek to discover the identity of a thief by digging a hole in the floor of the house in which the robbery occurred, pouring water into it, and seeing if it is drained off; 7 this act invokes the aid of his god to conduct the spirit of the thief to the water, so that his image may be reflected in it and perceived by the diviner. 8 Similarly a criminal's face is thought to be seen in a pool of water into which coco-nut oil has been squeezed; 9 the accused is then plunged hy two people holding a bowl of water between their fingers and presenting it to the gnostic names of the suspected person; at that of the gods, if he is innocent and faithful, the water will remain clear; if he is guilty, the water will become turbid. 10 Among the Habrims of Central Africa a medicine-man puts herbs and coffee-bark into a pot of water and ascertain the omens of the gods according to the direction in which the berries lie. 11 The Eskimos determine the fate of a man who has not returned from a voyage by causing a wizard to gaze into a tub of water. 12 In Greece the favourable or unfavourable disposition of the gods was declared by casting offerings into holy wells. If the gift was accepted, it sank; if it was unacceptable, it was cast overboard. At Delphi, to the east of Apollo's temple, there was a sacred spring which proceeded from a sacred spring潜水 is in a rocky valley, the waters of which were supposed to be Oraculic. The priest ascended a flight of steps, held a piece of wood in spring and chewed the sacred laurel before he prophesied. 13 Among the Hittite and especially in the reign of king Lagash (c. 2200 B.C.), there is evidence of divination by oil, and from the olives of a later period (c. 2000 B.C.) it appears that the medium of the Hittites consisted in drawing water from the well, and determining future events by the behaviour of the water. 14 If the well was left with tears and the water showed no tears of the tears of the events, the method is traced back to the legendary founder of the bard priesthood. 15 Two of the texts, dating from the Hammurabi period, describe the signs to be observed in the mingling of oil and water, together with the interpretation thereof. 16 On the early monuments there is also an interesting allusion to the use of this method of divination by a priest of the Ctesis period (c. 1700 B.C.), before undertaking an expedition to a distant land.

To bring back the statues of Mars and his consort, which had been carried off by an enemy. 1 In ancient Egypt divination did not play a part in popular life so conspicuous a part as in the Hellenic world. The Egyptian texts do not mention hydromancy, although they are replete with the tales of the chaste Nephthys, who was invoked by a vase full of liquid or a flame. 2 In the story of the homeward journey of Joseph’s brethren (Gen 41-42) from Egypt to Palestine they were met by a diviner of a diversified and móndomantic purpose of which would seem to have been that of detecting a thief. "Know ye not that God can give you water out of the stone?" There is good reason to believe, however, that the episode connected with Joseph belongs to the Hyska period, 3 and that the diviner’s cassia or a sistrum was introduced into the valley of the Nile from the east by the invading ‘shepherd kings.’

In modern Egypt the custom of divination has survived. In Cairo, in Crumara, maidens go into a well at daybreak on St. George’s Day, till their eyes fill with water, and they think they see the image of their future husbands reflected in the water. 4 In the Highlands of Scotland apples and a sixpence were put in a tub of water and Hallowe’en for oracular purposes. 5 The person who could extract either of these articles from the water with his mouth without using his teeth was regarded as likely to be very lucky. Similarly three plates were placed on the hearth, one filled with clean water, another with dirty water, and the third empty. A blindfold youth then knelt in front of the hearth and groped about till he put his finger in one of them. "If he lighted on the plate with the clean water, he would be a maid; if on the plate with the dirty water, he would marry a widow; and if on the empty plate, he would remain a bachelor. For a girl the answer of the dish was analogous. . . . But to make sure, the operation had to be repeated thrice, the position of the plates being changed each time. If the boy put his finger into the plate thrice or even twice, it was quite conclusive." 6

An oracle may very readily pass into an ordeal, where the person accused of a crime is tested by being subjected to a process which would normally prove fatal, or at least injurious to him. People accused of witchcraft and other offences are frequently tested by being compelled to drink water into which a poisonous substance has been placed. If the stomach rejects the draught, the accused is declared innocent and released; if, on the other hand, he has partaken of it, his body is evacuated by purging, he is pronounced guilty. 7

5. WATER-SPIRITS AND WATER-GODS.—To say with Tylor that a ‘belief in the existence of spiritual beings’ constitutes the minimum of what we should call ‘religion’ is to forget that the outlook of primitive man is towards the sacred and mysterious rather than in the direction of the spiritual. Psychologically the religious sense manifests itself on the emotional plane before the mind is capable of forming definite notions like spirits or gods. Primitive man sees around him certain phenomena which puzzle him, and, long before he has evolved a belief in spiritual beings, he is conscious of mysterious and ominous objects in terms of the supernatural. Now, water is most certainly calculated to arouse in the primeval consciousness the animistic attitude of mind dictated by aversions and fears. Upon it man depends for his very existence, through its agency he sees the desert made to blossom as the rose, and in it he beholds the manifestation of life and movement, and even the power of death and destruction. He regards it therefore as possessed of mana, and, in consequence, sacred. But there is always a tendency to personify the sacred.

The mysterious roll of thunder becomes associated with the voice of the tribal All-Father, and the magic downfall of rain is explained as the work of spirits or gods. So with water. Originally the Trojans regarded their sacred river, Skamandros, as containing a multinistic way of obligations cast live bulls and horses into its depths. In later times, when they had reached an animistic or theistic stage, Homer speaks of altars or shrines being erected on the bed of the river—bank, on which a bull was sacrificed, the belief being that the spirit in

WATER-GODS (Babylonian)

The water, or the god of the stream, was capable of departing from his element to consume the essence of the offerings in the holy place on the shore of the Ganges. We do not know, however, how it was done. But it seems possible that there was a pre-monastic religious practice that transferred the power of the water-god from his natural habitat to the sacred site.

The conception of the sacred river is undoubtedly psychologically a more rudimentary notion than the more complex animistic and theistic beliefs of later times. It cannot be said that there was a pre-animistic era in the history of religion, when animism was not and nevertheless religion of a kind existed. Some sort of animism may have been a primary condition of the most primitive conception of water-god.

Among people in a more developed state of culture, water-gods and water-godesses are of frequent occurrence. Stories of the Persians and the Armenians have been found from Japan and Annam to Scotland, and it is in the details that the central feature is always connected with the sacrifice of a human victim (generally a virgin) to a water-god. It is, however, a matter of debate whether these legends reflect a real custom of sacrificing girls to the waters of water-gods, since we know that girls are frequently married to river-gods, etc., in primitive ages. The custom may have arisen from the belief that water-gods are the bestowers of life and fertility, whose kind gifts of rain from above and springs from below produce pasture for the cattle and fruits for the service of man. In Syria the life-giving operation of Isar was connected with springs, streams, and underground water, and therefore the Baalim had their seats on the banks of rivers and by deep water-courses, in spots of natural fertility. As authors of fertility in general, it is in accordance with the working of the primitive mind that these water-gods should be regarded as the bestowers of offspring. Accordingly we find that barren women used to do themselves into a stream known to be inhabited by a water-god, and bathe in the waters. Down to classical times girls bathed in the Skanandros before their marriage, perhaps because they did so, 'Skannader, take my virginity.'

Sometimes, however, human beings are cast into water simply as a propitiatory sacrifice to appease the wrath of the indwelling spirit. The frequency with which maritime people are reminded of the dangers of the seas would naturally lead to a belief that water-gods are dangerous and malignant beings capable of assuming monstrous forms. Thus the Warrnambool of Central Australia perform elaborate ceremonies to coerce a gigantic but purely mythical water-serpent who is said to have destroyed a number of people. The Tasmanians place their houses at a distance from the water and never sleep near it when on a journey lest they should be molested by the indwelling spirit. Whenever they make war to catch fish, they are careful to offer fish to the water-serpent of the river. To ensure a good catch of fish the fishermen of Etta throw a human victim into the water at the mouth of the river, and in the St. George's Day rites in England the Green George was thrown into the water to secure the favour of the water-god. The water-god represents the god of the deep or meadowsweet, and the meadowsweet gods are also water-gods. The idea of propitiating a malignant water-god is undoubtedly connected with the underlying belief that people are parts of the water-god, and in its medieval counterpart of St. George and the Dragon.

WATER-GODS—Authorities have been given in the footnotes.

1. WATER. The Babylonians divided their universe into three parts—the heavens, the earth, and the sea—which they personified as the gods Anu, Enlil, and Marduk, respectively. Each element was considered divine. But more emphasis was placed upon the divinity of the sea, because the water of the 'great deep' was considered the element out of which all things were generated. This 'great deep,' or Apan, encircled the earth, was the source of all irrigation, and was the home of Ea, the god of waters. The Euphrates and the Tigris as children of the great deep were 'the soul of the land' and 'the bestower of blessings' respectively. But there was a sense in which the waters were regarded as an agent of destruction, viz. in their appearance in the form of violent rains and floods. Under this aspect they were personified as Tiamat, the Télôm of the ancient Egyptians, emphasized in the Old Testament. There Télôm is opposed to Jahweh, and is the cause of much dread to the people. In Babylonia, however, the beneficent aspects of the water-gods were most pronounced. It was not only one of the comest parts of natural phenomena, appearing as rivers, streams, seas, lakes, ponds, brooks, springs, fountains, wells, mist, dew, rain, hail, snow, ice, vapour, fog, and clouds, but also indispensable to men, animals, and vegetables. Water was divine and holy, and as such was worshipped as a god. It played a very important part in omens and oracles and all kinds of magic. It could dispel demons, wash away disease, and purify from sin. It acted as a divine power in decisions by ordeal, and in it flowed the blood of the gods.

The Babylonians believed that all waters were peopled by living creatures, actual and mythical, some of which were beneficial and others harmful. The anunnakū (a, 'water,' and nun, 'strength') were probably beneficial water-spirits, and the seven utes of the Tigris and Euphrates were demons of the sea. Both spirits and demons were controlled by Ea, or by the ferryman who kept watch over the river of death, who was called Arad-Ea, 'servant of Ea.' Water, being associated with the source of life, was usually considered the source of life, and at Eridu there was a sacred spring which figured in early Babylonian mythology and in ancestral rituals. Because of its sacred properties, water played the chief rôle in incantations. Ea, by virtue of his being a water-god, was the most prominent figure in the ritual of incantations, being called the great physician. But Marduk, in later times, usurped much of his power, and always acted as mediator between the patient and Ea. The ritual in incantations involved washing and sprinkling of the body of the patient from the Euphrates and Tigris from the bubbling source coming directly out of the earth. Then an image was made of the demon or sorcerer who controlled the victim, and it was placed in a boat. The image was drowned in sacred water, and the patient was relieved.

2. WATER-GODS—Babylonia was always sorely dependent upon her streams and canals, and this partly accounts for her numerous water-gods. But
WATER, WATER-GODS (Babylonian) 709

more important in the minds of the people were the waters of the Euphrates and the Tigris and the Persian Gulf. Being mysterious, often beneficent, frequently destructive, never subject to control, they were regarded as the very earliest of all manifestations of divine beings. They were worshipped, propiti;ated, and supplicated. All things, good and bad, came from them, and in them not only life, but death, consisted.

The source of all water was thought to be situated at the head of the Persian Gulf, or to be the head of the Persian Gulf. At a very early period Ea, the "lord of the abyss," became the fish-god. As a water-god, all fountains and streams were sacred to him. Water, being a sacred, healing, and fertilizing agency, became the symbol of life, and Ea, as we have seen, became the judge of the universal utility of water. Ea was claimed by all Babylonians as his champion, and, according to the Legend of Creation, when the gods decided to destroy mankind, Ea, in the person of his consort, the Babylonian Noah, Ut-napishtim, advising him to build a vessel so as to be prepared for the approaching deluge. He thus became the wise one, who taught men all the arts, and who even created mankind. Ea's consort was sometimes called Dam-gal-nan-na, "great wife of the deep," her Sumerian name being Nin-ki, "lady of the earth"; but she was also called "queen of the deep." The god himself sometimes appeared under the name Nin-a-gal, "god of great strength." Ea is represented on a seal cylinder as sitting on his throne, while Damkina is leading a worshipper into his presence. The great fish or capricorn under the seat is the symbol of the god. Sometimes he is seen carrying a vase of water with flowing streams and fish, and standing on a capricorn. He is very often represented in the form of a fish, or of a man covered by scales of a fish. In Assyria Ea appears as "king of the ocean," " opener of fountains," "creator," and god of wisdom. He is described by Berosus, under the name of the god of Babylon, as being a man, with a body like that of a fish, with feet below like those of a man, with a fish's tail. When Babylon became prominent in the time of Hammurabi, Marduk was classed as son of Ea, and collaborated with him in incantations, being associated, as Ea was, with waters of life.

Adad (Sumerian, Enin), or Ramman, was a god of rain and lord of subterranean waters. He was never associated with any particular city, nor was he a very early Sumerian deity. He came from the west-lands, where he was a solar deity. In Babylonia he was usually associated with the desert—"lord of the dry rain" when accompanied by thunder and lightning; although sometimes he was considered a vegetation-god. Hammurabi, in the epilogue to his Code, calls upon Adad to deprive his enemy of "the rain from heaven and the water-floods from the springs." Nebuchadrezzar I calls him "the lord of springs and rains," and Melishipak beseeches him to bestow "abundant streams." Adad was symbolized by a thunder-bolt, was associated with the sky-god, Anu, at Asur, and often appeared under the name Nanshu. Although he was associated as an early creature supposed to have brought on the flood, he was not very prominent as a water-deity. In like manner Assur, the great Assyrian war-god, was associated with water, especially deep and war-god as a god of fertility, but his rôle as such was not very important. Innin, primarily the heavenly queen, was a water-goddess. She is represented with heads of serpents and blades of grass, which in Oriental art are associated with water and vegetation. She bore the title azag-sug, "sacred libation," and, like Anah, a grain-goddess, was described as goddess of the "holy meal." 12 Ishtar, the great mother-goddess and goddess of love, was also prominently associated with water. She referred to herself as 'daughter of the ocean stream'; she was connected with the cleansing power of water; she was par excellence of streams and canals, without whom "no stream is opened, no stream is closed, which brings life," without whom "no canal is opened, no canal is closed, which gives the wide-dwelling power of water." 13 She is addressed as "thus that rulest over springs and mountains and seas." 14 She is represented in art with a vase of water. Besides being identified with Kiri-du, 15 or Nin-kis, the rain-god, or with Nin-anu, 16 as Nin'a, Ea's daughter, who was originally a water-deity, and quite distinct from Ishtar. But from time to time the goddesses Ishtar, Nin'a, Innin, and Anunit were confused one with another. Nin'a was the goddess who rode upon the sea in a boat, was at one time known as Geštinanna, "queen of waters," and was a fish-goddess. In fact, her name is written with the ideogram which means "goddess of the fish-house." In time she became sister of Ningirsu, lord of the freshets. She was also called Nin-en and Nin-en-nga, "lady of incantation." Nin'a was also identified with Ishara, goddess of water-animals, whose symbol was the scorpion, and who bore the title, lamāt (dragon) of the primeval waters. 17 Ishara appeared at an earlier period as Ishtans, "heavenly goddess of the fish-house," and daughter of Adad. She is personified as a fish, or as a woman, and was worshipped as the "queen of waters." She is a great water-goddess, and in later times she was identified with Inanna, the great-hearted goddess of love, and with Ishtar, the lady of the abyss. 18 Ishara became all-powerful, and was called "king of the abyss." A hymn says of him: "Command the sea and the sea obeyeth"; he was addressed as "lord of the mountain stream and of water, opener of sources and cisterns, controller of streams." He and she is represented in company with a water-drone, and standing above the watery deep. His cult has been traced to Eridu. Nabu, a patron deity of Borsippa and Babylon, and Marduk, was a god of waters. 1

14 "He is the lord of the springs and rains;" Melishipak.
counterpart of En. He was therefore a water-god and god of vegetation. He was also a god of wisdom, and as such was associated with the watery deep. In later times his character as a water-god was also associated with the wisdom of the soul, and he became secretary of the gods and inspirer of mankind. His symbol was the stylus with which he recorded the decisions of fate. Nāru was his water-god, a wife or he character is otherwise unknown. Langdon says he was ‘probably a male deity,’ although he also refers to her as a river-goddess.2 Nīdāba, a grain-goddess, was closely connected with the water-goddess Nīn-Išāra, one of her titles being mu-na-dē-zi-na-nu, which Langdon connects with mumadē, a title of Nina.3 J. Krauss4 likewise identifies Lugal-ki-si-a, a consort of Nina, with Lugal-ki-si-a, a consort of Nīdāba. Nina refers to Nīdāba as her sister,5 and is called the ‘holy reed-Nīdāba’;6 and, on a seal dedicated to Naram-Sin, Nīdāla is connected with the water-goddess Nina.7 Nina-akha-ka-duu, also known as Nin-karrak and Gula, was a goddess of purification, and was also connected with Ea and Erīd. In incantation texts she is associated with Ea and is called ‘the lady of incantation.’ In like manner Ninabursidu, goddess of water, is connected with incantations. She was symbolized by a jar of holy water (epagidē). The war-god Ninib preserved water attributes. As the first-born of Ea, he was known as ‘lord of wells and of the sea’ and ‘opener of wells.’ He was therefore also a vegetation-god. According to a hymn to Emesēarra,8 Nina, brother of Ninib, was connected with irrigation. It is there said, ‘Great lord, without whom Ningirra does not direct the water-course and canal.’ He was also associated with Scorpio and the scorpion of Išāra. The Sumerian name of Tammuz is Dumu-zi-arku, ‘the faithful child of the deep.’9 Tammuz was called ‘the real son of the deep,’ and belonged to the family of En.10 Of course he is well known as the Babylonian corn-spirit, who dies and comes to life again every year. He was one of Sumeria’s oldest gods, and, when the Sumerians moved into the Tigris-Euphrates valley, Tammuz became a god of the fertilizing waters. He was then called bił ĝirati, ‘lord of the flood,’11 and under this name or his equivalent, Nin-gir, he became the local lord of Lagash. To his holy circle, he employed the holy water of the great basin, posīd apei, in incantations, and as the youthful god par excellence he represented the beneficent waters which fertile the valley of the Tigris and Euphrates in winter and which died away in summer. He bore the title ‘Nītra-alam, ‘image of Ea.’ Many hymns were sung to Tammuz as vegetation-god, but in them there is frequent reference to his water attributes. The death of Tammuz was said to have been marked by the cessation of laving the waters of Eridu, but drowning in the waters was meant to Tammuz to send refreshing floods.

WATER, WATER-GODS (Egyptian).—1. Water.—The Egyptians believed in a primeval watery mass, deep and boundless, out of which had come into existence the heavens, the earth, and everything that is the object of wisdom and mercy. The generative virtue of all life, human and divine, were in the watery mass, which was personified and received the name Nu. It was eternal, and part male and part female. The closest circle of the watery mass was described as Oisir who encircles the under world; but the whole watery realm was frequently identified or summarized as the ocean or the Nile. It was believed that the Nile sprang from the great watery abyss and divided into two rivers—the one the Nile of Egypt, and the other that of which it was said, ‘Great and mighty is the river of the sky, flowing across the heavens and through the Duat, the world of night and thick darkness, and on that river floats the boat of Ra.’ In other words, there were two rivers which sprang out of the watery abyss—an earthly and a heavenly. Water was sacred to the Egyptians and possessed all the qualities of a divine being. In all lakes, rivers, fountains, wells, and streams the divine essence was present. For this reason all fish1 were sacred, and were venerated from the earliest to the latest period. For example, fish venerated at Latopolis and Oxyrhynchus were eaten sacramentally on the ninth day of the month Thoth. Some water-animals were even given names as deities—e.g., the hippopotamus (Taur) and the crocodile (Sebek). Fish were thus considered the abode of the gods.

Because of the divine character of water, it was considered fortunate to be drowned, a drowned person being sometimes regarded as a deity. Osiris was drowned,2 just as in Greece and Bharwanand in India. The greatest service one could render a god was to be drowned, and thus be united with him. The word for ‘drown,’ hwy, originally meant ‘praise,’3 Gods and great men loved to be associated with sacred water; thus the ‘mother of Mendes’ is depicted carrying a fish upon her head, and Rameses II. was credited with powers as a rain-maker. To control divine water was greatly desired. Chapters lvi. and lviii. of the Book of the Dead are called ‘The Chapter . . . of having the Mastery over the Water in the Underworld.’ For the earliest time the spellant prayed: ‘Grant that I may have dominion over the water.’ Water is not only a fertilizing and destroying force, to which offerings are made, but also a means of warding off evil. It played a great rôle in illuminations and incantations.

As a deity water was worshipped. The water-worship of Canopus and its cult in Egypt are well known.4 There were many instances of sacrifice to water, the victims being usually bulls, horses, or human beings. Even as men were sacrificed to the Tiber in Rome, and to the Ganges in India, so in Egypt human beings, especially girls, were sacrificed to the Nile. A favourite place for an altar, therefore, was on the banks of the Nile. But all streams and fountains, lakes and rivers, were the abode of spirits, which had to be propitiated.5

Even as Egypt was the gift of the Nile, so all life was sustained by the Nile, and the Nile was the water of life; and, as the inhabitants of Egypt depended upon the waters of the Nile for daily life, so to the departed they were represented in the watery life of the celestial Nile. In this world sacred water was used for purification, and in pre-

WATER, WATER-GODS (Egyptian) 711

paration for the next world it was used in an interesting ceremony called the 'Opening of the Mouth,' which consisted of sprinkling or pouring water over the statue and to make it fit for a pure abode for the ka. This ceremony not only purified and sanctified the person represented by the statue, but also removed from him all possibly of decay and death that might come. 1

2. Water-gods.—At a time which antedates the earliest records Egyptians had deified the Nile and worshipped it under the name Hapi. 2 In the Pyramid Texts his name occurs as that of a well-springs of life. It was natural that such should be the case, for Egypt's welfare depended more upon the Nile than upon any other one thing. Because of the two great divisions of Egypt, Hapi was personified in two distinct forms. In the north and south. In the north he was Hap-Mebt and in the south he was Hap-Reset. But there were not two gods, for Hapi is represented holding two muffled waters of the Nile which embrace from which the North and South Nile poured. He is usually depicted in the form of a man, with hanging breasts from which water streams, wearing the sign of water in the world to come. 1

In a hymn to the Nile it is said of him that he 'cannot be figured in the image on which are set the crown of the South and the North with their emblems, offerings cannot be made to him, he cannot be brought forth from his secret places, his dwelling-place is not to be found out, he is not to be found in the shrine which are inscribed with texts: it is the day for the elevation which is exalted for him to dwell in, and the heart of (man) is unable to depict him.' 4

Because of his great reputation, he was called 'father of the gods,' 'creator of things which exist,' 'vivifier, 'the lord of fishes,' was identified with Osiris, Amen, and Ptah, and was considered greater than Re. In later times a festival of the annual rise of the Nile was celebrated with great solemnity throughout Egypt—an event mentioned by Heliodorus. He was a personification of a sanctuary of the Nile, and the early Church Fathers bore witness to his worship. 5 During the Nile festivals 6 hymns were sung to Hapi in which the worshippers said:

1. Offerings are made, oxen are slain to thee, great festivals are kept for thee, tools are sacrificed to thee, beasts of the field and fowls of the air, are offered to thee.

Even the Nile's inundations were personified and called Bâh, and the waters of the Nile were sometimes deified as Ankhût, a goddess, usually represented in the form of a woman with a crown of feathers on her head, arranged in such a way as to suggest a savage origin. Originally she was a goddess of some island in the First Cataract, but she was later identified with Nephthys. She personifies the waters of the Nile and fructifies the fields. She is sometimes pictured in a boat, seated in a shrine, with a table of offerings before her. Set, the personification of the forces of water which were supposed to resist light and order, was symbolized by the serpent Aep, the great monster of the deep, whose four heads represent the four quarters of the Nile. She was mentioned in the Pyramid Texts as a god of the deep. Hathor, the cow-goddess and personification of the house in which Horus dwelt, was one of the oldest of Egypt's goddesses. She was the principal counterpart of Re, and became the great mother-goddess. She was identified astronomically with the star Sept, and was thereby connected with the Nile by the phases of the Nile inundation. Being the mother of all, she was easily identified with phases of the Nile. There were supposed to be seven Hathors, but this is not surprising, since her popularity as mother-goddess caused many secondary deities to be identified with her and gave rise to a Hathor cult in many localities. She is represented in many forms and attitudes, but none is more interesting than a picture in a Theban tomb which depicts her in a papyrus-boating giving drink to a soul in Amentet. Heles, 'lord of the mouth of the river,' is a rarely met god with stellar characteristics. 1 Isis, or Aset, was in primitive times the water-goddess, probably Libyan in origin. From the earliest to the latest times she was Egypt's greatest goddess, the beneficent goddess and mother, the highest type of mother, in fact. As mother of Horus, the giver of food and life to the dead, 'wife of the lord of the abyss,' 'wife of the lord of the inundation,' 'goddess of the Nile,' as the power of the Nile, she was called Sati and Sepet, and, as the embracer of the land and producer of fertility by means of water, she was called Ankhût. She was the female counterpart of the primordial abyss from which all life sprang, and she was so popular that at an early period she absorbed all characteristics of other goddesses. She was not only a water-goddess, but also an earth-, corn-, and star-goddess. She is usually depicted as a woman with a natural head-dress and with a papyrus-sceptre in her hand. Sometimes she is crowned with a pair of horns, between which is a solar disk, surmounted by the sign for 'seat,' the symbol of her name. With the horns she often has two plumes; sometimes she wears the double crown of Egypt, to the back of which is attached the feather maât. Her symbol was the star Sept, which announced the inundation of the Nile. In the elaborate ceremonies, related by Apuleius and Pausanias, were conducted in connexion with the use of a vessel of Nile water in the Isis festival, which took place at the time of the Nile's inundation. Khennu, the first member of the great triad, Khnum, Sati, and Ankhût, at Abu, or Elephantine, was originally a river- or water-god, as were the other members of the triad. He was often identified with Nu and Hapi. He was one of the oldest of Egypt's gods, being mentioned in the text of Uni. He was without doubt a pre-dynastic god, symbolized by the flat-horned ram from the Edfu. At a very early period he became god of the Nile and of the annual Nile flood, and as such bore the name Kebb. He was called 'maker of heaven and earth, and Dunt, the waters, and the mountains.' He says of himself, 'I am the primordial watery abyss, and I am the Nile who riseth at his will.' As a water-god, he became almost universal in Egypt, uniting in himself the attributes of Osiris, the God, and Osiris-God, and with four ram's heads represented the four elements—earth, air, fire, and water—and perhaps also the four sources of the Nile. He is depicted in the form of a ram-headed man, and, as a water-god, he is seen with an outstretched hand, from which flow several streams over which

2. A. Erman holds that the original form of the name was beyer (Z 'X xir. [1909] 114), but S. H. Gambrill suggests the possibility of bâyer or bâyr (Z 'X xiv. [1910] 116 f.).

7. An excellent description of two Nile festivals instituted by Ramses II. is given in Lepsius, iv. 175a, 1900, 2184.
WATER, WATER-GODS (Greek and Roman)

flows water. He is sometimes represented with a jug above his horns. His worship was especially common in that part of Egypt extending from Philis to Syene. Mektet, the emblem of the prehistoric female creative principle, and the name of the celestial cow, was originally a female personification of the watery matter which formed the body of which the Nile proceeded. She is a pre-dynastic goddess, and is mentioned in the texts of Uni. Meret, depicted with an aquatic plant on her head, and therefore a water-goddess, was associated with Mut. Her name occurs in a dual form, Merti, and is represented on the Southern and Northern Nile. Mut, the great mother-goddess, 'who giveth birth, but was herself not born of any,' was an ancient water-goddess. She was called 'the watery one,' 'the watery flood,' and as such was called the wife of the Nile. Her principal temple was in Asker, a quarter of Thebes, which probably derived its name from the sacred lake which existed there. Neith, one of the oldest of Egyptian goddesses, was the personification of a form of the great primeval watery mass. At a later period she was represented with bow and arrows as a goddess of war and of the chase. Nu, in his pre-dynastic form, was the watery mass of heaven, whose counterpart was Nut. He was called 'the great god whose dwelling is in the waters of the sky,' and was sometimes identified with the selfsame one. He was represented as an oblong fish, like the Nile, with whom he was often identified. Nut was the personification of the female aspect of the great watery mass of which all things came. She was the daughter of Shu and Tefnut, the wife of Geb, and mother of Osiris, Isis, Nephthys, and Set. She is usually represented as a woman with a vase of water on her head. She sometimes wears the horns and disk of Hathor, and holds a papyrus-sceptre and sign of life in her hand. She is also depicted as a woman standing in a sycamore-tree pouring out water from a vase. In the Book of the Dead a supplicant prays, 'Grant thou to me of the water of the and of the air which dwell in thee,' Her attributes were many, because, like all water-deities, she absorbed the characteristics of many minor deities, and was recognized and worshipped in many different places in Egypt. Of all was the god of the dead par excellence. He may have originally been a human being who was deified. When such transformation was made cannot be determined, but in the early historical period till the latest he was worshipped. He became the most popular, best known, and most powerful Egyptian deity. But what interests us is that he was originally a water-spirit or god of some portion of the waters of the Nile, and with the passage of time he became a great water-god, representing in general the creative and nutritive powers of the Nile, and particularly the inundation. As a Nile-god he naturally became a creative and generative power. And, just as the Nile sank and rose, so Osiris died and rose again, becoming thus the god of resurrection. Osiris was depicted in many forms, the most usual being that of a mummy with a beard and wearing the white crown and a menat. He was from time to time identified with most of the greatest gods until he attained a position which made him par converso the natural god of Egypt. As a water-god he was identified with Hapi, and later with Nu, representing water as a life-giving element. As there were thought to be four sources of the Nile, so Osiris had four bodies, and each one was called Osiris of the Nile. Plutarch records the belief of the Egyptian of his day when he says that Osiris was looked upon as not only the Nile but also the ocean. Osorkon II, as an embodiment of Osiris, was represented with streams of water pouring from his hands. In the Nebesdii papyrus of the Book of the Dead Osiris himself says, 'I am the god with whom the Black and Great Black One is my name;' and in the papyrus of Nu he says, 'I am the god of inundation and Great Black One of the Lake is my name;' and as Osiris is the god of the Nile, so was Nu, the primeval abyss, and with Hapi, and he was called 'lord of fish.' Rem was perhaps the personification of Râ's tears. He may have been the same as Rem, who was probably a fish-god, and associated with Senek, a personification of Nu. Sani, originally connected with the chase, was worshipped at the First Cataract, where he was associated with Khnum. His name probably refers to the falling waters of the Cataract. She thus became a goddess of inundation, who pours out and spreads over the land the life-giving waters of the Nile. She is usually represented in human form with a high conical crown. Sebek, the crocodile, was most probably a water-god. Selkht was a scorpion-deity, and one of the four goddesses who assisted Nu and protected the four sources of the Nile. Tefzen was usually identified with Taph, and sometimes with Nu. Tefnut was a rain-goddess whose male counterpart was Shu. She was the personification of the moisture of the sky. She was both born of the great watery mass. The cult of Tefnut does not seem to have been associated with any special city.

LITERATURE.—On this subject there exist no separate articles, monographs, or books. Besides original texts, the literature used has been mentioned in the course of the article. Special mention should be made of E. A. W. Budge's great work, The Gods of the Egyptians, 2 vols., London and Chicago, 1914.

S. A. B. MERCER.

WATER, WATER-GODS (Greek and Roman).—I. GREEK.—The account given in art. Nature (Greek) includes much information on this subject which need not be repeated here, especially as to the cult of river-gods, nymphs, and similar divinities. There are, however, certain important aspects of the subject which require some addition.

The worship of rivers or of water generally as the origin of life was one expression of a belief which is a very ancient and universal philosophy. Thus Homer speaks of Ὑδάν ττ, δεόν γένεσιν, κα κρίνει θύειν, and says that Ocean is the origin of all things. Hesiód fuses Oceanus and Tethys into his Theogony as children of Earth and Heaven. Ocean, according to the Homeric conception, was regarded as a river flowing round and bounding the earth; thus it was set around the rim of the shield of Achilles. It is personified in art as an elephant with flowing locks and beard, but has little importance in religious cult.

The gods of the sea may be divided into two classes: (1) the elemental beings who constantly occur in folk-lore and popular belief, and (2) the clearly defined and personal Olympian gods who rule over the sea. The former had as a rule little importance in the official worship, though we hear of the famous cult of the Old Man of the Sea (Ἀνδρέ Υπεροχής) at Byzantium. Triton, Proteus, Glaucon, Nereus, and the Nereids have many of the qualities attributed to sea-divinities or demons born of the sea. The life-giving power of water was the peculiar concern of the two great goddesses of Water—Hera (who is the wife of Zeus and daughter of Oceanus) and the personification of the Great Temple of Bubaste (ΕΕΕΝ Μαμα). London, 1892, pi. xi.

5 Il. xii. 158-159.
in the folk-lore of various nations, such as the gift of soothsaying or foretelling the future, and the power of transforming themselves into various shapes. The Proteus, when he was changed into various beasts, and into water, and could change into fire; but, if bound, he could be compelled to impart his knowledge. Similarly Theon the Nereus was changed into various forms when seized by the martial Poseidon, and so identified in the systematized religion of Greece all these were regarded as subordinate to Poseidon as supreme god of the sea. In this capacity Poseidon was associated with Amphitrite, possibly an old goddess or personification of the sea, though in later mythology sometimes regarded as one of the Nereids. She is often represented in art as the consort of Poseidon, both in the assembly of the gods on Olympus and in her bridal procession, which is escorted by Tritons and Nereids on hippocamps and other sea-monsters; but she has no important place in official worship. Poseidon, on the other hand, is one of the chief gods of the State worship of many Greek cities, and was regarded as the ancestor of many leading families, especially among the Ionians and Minyans. The tale of his contest with Athena for the land of the_validate, and the subject of the western pediment of the Parthenon. The Isthmian games at Corinth were celebrated in his honour. As god of the sea, Poseidon can arouse and pacify storms, and so is applied to by sea-farers; but it is noteworthy that, in the greatest of sea-poems, the Odyssey, he appears as a malignant, rather than a beneficent, god. He has little or nothing to do with ships. The Argos was built under the direction of Athena, and mariners often attribute their safety to Aphrodite Euploia or to the Dioscures rather than to him. Odysseus owed his safe return to Leucothea, who was often appealed to by sailors.

As sea-god Poseidon is the sender of earthquakes (Ehoorgas). He split the mountains to make the ravine of Tempe, and hurled about or submerged islands. Salt springs inland are also attributed to him. By a symbolism which is common and easy to understand, waves are often compared to sea-horses; and either the origin of the horse or its training to human service is attributed to Poseidon or Hippo. Horses were sacrificed to him, sometimes by being thrown into the sea. The bull also was especially sacred to him, and bull-sacrifice in his honour and with connexion with this we are reminded of the mixed human and bull form often taken by river-gods. We might naturally expect Poseidon, as the chief sea-god, to give victory in sea-fights; and in fact Persian galley's were dedicated to him at the Isthmus and at Sounion after the great naval victory at Salamis. But other gods often received thank-offerings for such victories.

A characteristic of all water-divinities and demons, from Poseidon down, in later Greek art is an expression of restless and passionate yearning, which is attributed to them as impersonating the restlessness of their element and its desire to embrace and engulf the land and its creatures. Apart from representations of sea-gods, the sea itself is often represented in art by conventional water-patterns and by dolphins, fishes, and other sea-creatures.

2. Roman.—Here also the art. Nature (Roman) gives most of the information required. The Romans were not so seafaring people, and their god Neptune was not originally so-called, though he came later to be identified with the Greek Poseidon; but he may have been a nympha associated with water, though very little is known and little was paid worship. He appears, however, to be a god of springs, and so associated in worship with the nymphs. The worship of the nymphs in connexion with springs was very wide-spread in Italy and throughout the Roman empire, though it is not easy to distinguish how much was merely borrowed from Greece. Their frequent representations in art, like those of river-gods, evidently follow Greek models. The Camene, associated with soothsaying and poetry, appear to have been transferred from one of the Greek rural nymphs, Egeria, Numa's counsellor, also had a similar character. River-gods, nymphs (often holding shells), and similar representations of water-deities are very common in Greek and Roman art, but they do not, as a rule, bear any distinctively Italian character. A more original conception is that of the famous figure of Jupiter Platius, the rain-god, on the Antonine Column, who is represented hovering over the sea in his chariot, with wings, and pouring down rain in torrents from his beard and outstretched arms. Such a naturalistic personification is alien to Greek anthropomorphism, and much more akin to medieval and modern symbolism.

LITERATURE.—In addition to works quoted in artt. Nature (Greek) and (Roman), articles in Roscher on 'Okeanos,' Poseidon, 'Theogonie,' 'Biblia,' Metaphysik und Relativierungsschichte, 2 vols., Munich, 1897-1900; G. Wisowa, Religion und Cultur der Rurer, no. 1910, 1902; L. R. Farnell, Cults of the Greek States, 5 vols., Oxford, 1896-1910, ii. 1-97. E. A. GARDNER.

WATER (Hebrew and Jewish).—The importance attached to water in Jewish belief and practice is so great that it embraces almost every manifestation of life, and can be studied in the following subdivisions: (1) cosmogony, in its widest sense, (2) instituted, (3) rain.

1. Cosmogony.—According to the record of the Bible, the cosmogonomic elements of water and land were created apart. Only by the separation between the waters above and the waters below could the earth appear, but the waters above the firmament were not entirely separated from those that were gathering below, first into a great sea and then into rivers, lakes, and fountains of the deep. On the contrary, an intimate connexion between the two was continually kept up. A connexion was believed to exist between the upper and lower waters in the form of pipes which led from the heavens above to the sea below, and through the medium of such pipes the waters that had come down from above, and which had slowly gathered into the river, would flow back into the heavens, thence to descend again upon earth.

The primeval sea surrounds the earth like a snake; so it is seen by Alexander the Great in his attempted ascent to heaven. This view is found often repeated in rabbinical writings. The sea stands under the rule of a special prince or spirit (Sat), who opposes Moses when he tries to cleave the waters of the Red Sea. He refuses to obey a being created on the sixth day, whilst the sea was created on the second. He is conjured by the sages to cast up the strength of a man thrown into the sea by a witch.

The sea is the counterpart of the earth, and it contains every creature that is found upon the earth, save the fox, which by a stratagem escapes the fate of being cast into the sea. The waves of the sea can be appeased by magical formulae. On the other hand, the waves and storm are messengers sent to carry out divine ordinances and to call a man a freedbooted boat whom divine provisdes wishes to save. Thus Asaph is saved. But ever since the flood, which in a supreme

WATER, WATER-GODS (Hebrew and Jewish)

WATER-GODS

Water, and the waters of the deep are also part of the cosmogonic process. They are kept under ground; and species they were believed to be the origin of the first soil. Water flows and kept in check by the Eben Sletiyah, or 'the stone of foundation,' which, according to legend, is the centre of the world. Its location is the corner-stone of the Temple in Jerusalem or the stones upon which the Ark of the Covenant rested. When Jesus washed the feet of his disciples, he did so in the same pool of the flood; they started surging up, threatening to flood the world. David receded slowly step by step, and, while the deluge receded, the seventh SONG of Steps, until at last, writing the ineffable name of God upon a stone of granite, he fell down with the mouth of the deluge, when the waters saw the divine name, they withdrew in terror, and thus the world was saved from a second flood.2

The waters under ground are flowing close to the free of hell, hence the hot springs; and the waters of the flood which surged up from the deep are holing and helped in the destruction of the wicked world, from which Or, king of Bashan, alone escaped through his gigantic stature. (He had boasted that he and the other giants could stop up with their heels the openings of the fountains.)

There are miraculous wells and rivers. The well in the desert, created on the sixth day, accompanied the Israelites in their wanderings through the desert and ceased to flow with the death of Miriam.3 There is the famous Sambatsuy (q.v.), which plays a great role in the history of the people, as the abode of the ark of the covenant.4

Just as Moses, Joshua, and Eliphaz divided the waters, so did also sages of a later period. Jesus walked upon the waters, and in another connection we are told that the waters of the flood flowed backwards when appealed to by them as a proof of the correctness of his interpretation of the Law.4

On the other hand, wells and rain-pipes were considered to be haunted by demons.

On one occasion a man who rested on one of the gutters was hurt by a demon because he trod upon his toe. Abhayh helped one demon to fight another who was trying to drive him from his own habitation. At the end of the fight some drops of blood of the slain demon were seen floating on the surface of the water of the gutter.5

The Angel of Death is said to dip the sword by which he has taken the life of man in the water found in the well. All the vessels must therefore be emptied. This, however, is a popular interpretation of the ancient law of purity, according to which death defiles all food and drink found under the same roof as a dead body.

2. Lustration.—Water is the great purifier and cleanser.7 Practically and symbolically, just as water is identified with the spirit and the Law is described as the water of life, water cleances man from all kinds of physical contaminations, mostly after contact either with dead bodies or with anything described by the Law as impure.8 The degree of levitical purity claimed for service in the Temple and the regulations transferred to private life, and the sect of the Essenes obtained their name in all probability from their habit of constant lustration and purification, reaffirming as they did from mixing with a profane object or object not properly purified. The only means for such purification were bathing and ablation—complete immersion in a sufficient quantity of water, more especially running water, or the pouring of a quantity of water over the naked body. The spiritual significance attached to a ritual bath is of later origin; for bathing was never understood in Judaism to mean also washing of the soul. Physical contamination could be eliminated by immersion or by ablation, but the spiritual contamination remained the same; for, as one of the sages puts it, 'a man who sins and confesses him, and yet continues to live in sin is like a man who takes the bath of purification and holds an unclean animal in his hand.'

3. The question whether both immersion and ablation were required for purification from defilement seems to be considered differently by Jews, Samaritans, and Karaites. The two last hold that ablation (pouring of the water over the body without immersion) is sufficient. How far this practice prevailed in practice is a question which lies outside the scope of this article and may have some importance for the history of baptism.5 In later times the washing of hands alone was considered sufficient to eliminate the charge of defilement,6 although, as no ashes of the red heifer are to be found—which were an indispensable adjunct to religious purification—all the people in modern times must be considered as living in a state of defilement, kept at this by constant washing of hands and by occasional immersions in properly constructed baths. The priests, the descendants of the Cohenim, even now have their hands washed by the Levites present in the synagogue before they ascend the rostrum to recite in a special cantillation the priestly benediction. Moreover, no dead person is shriven without being specially washed,7 and the mourners when leaving the cemetery are also expected to wash their hands, for they have been in a place considered impure by the Law.

Water, again, was used for purification or as a token of integrity by the elders who defiled a dead body was found and the murdering could not be traced; they went to the banks of a roaring stream and, washing their hands, declared publicly and solemnly their innocence of the murder (De 21, 19). In the ceremony for testing the purity of a suspected wife she had to drink bitter waters (or rather 'waters of curse'), prepared by the priest.

8. It is not unimportant to explain the words used in connexion with this kind of water. It is called 'holy water' (Neh 8, 5), whilst in connexion with the purification of the leper the priest used 'living water' or, according to the RV, 'running water' (Lev 14, 6), but the same word occurs in Genesis to denote the well dug by Isaac's servants where they found 'living water.' it is difficult to imagine how running water could be in a vessel. The operation in each case is the purification and magical cleansing and the designation of the water as 'holy' can best be understood by comparing the use of water in other mystical processes. The vessel or the bowl must be filled with water which no one else has touched, and of which no one else has drunk. It is kept intact and sanctified for the purpose to which it is to be put. The moment it has been touched or some of it drunk, it becomes defiled or dead.

Bows for water with magical inscriptions have
often been used for such purposes in the well-known Lekanatomy. 1

3. Rain.—It was natural that in an agricultural land like Palestine rain should be considered a blessing and drought a curse. In Dt 11:14 the early agricultural settlements worshiped the sources of rain believed to be treasuries in the heavens. The 'waters above' are mentioned in Gn 1:2, and at the flood the 'windows of heaven were opened' (77). They are described in greater detail in Enoch, xlf. 4, and in the Revelation of Moses. 2 According to the legend, the key which locks and unlocks this treasury was one of the three keys which God kept, and He only once delivered it up to man when He handed it over to the prophet Elijah, upon whose 'word' alone depended the drought or rainfall (1 K 17). The rainfall was therefore regarded as a divine gift and a blessing which followed the fulfillment of the oath of the drought was caused by sin; a moral connexion was established between the phenomena of nature and man's moral actions. It was thus natural that the natural result of the sin should have a direct bearing upon obtaining rain or causing the withholding of it, and, furthermore, that the intercession of the pious could under certain conditions counteract the consequences of evil deeds.

According to the teaching of the Rabbis, rain fell only for the sake of the righteous, and was withheld when the Israelites deserved punishment. Drought was the consequence of remissness in paying tithes and heave offerings, or of slander, impudence, and neglect of study of the Law. 3 Collective action no less than individual intercession would also have the desired effect of breaking up the drought. Prayers for rain and symbolic ceremonies would then become efficacious. The prophet, through his action on Mt. Carmel, brings back rain (1 K 18:37). In later times the high-priest prayed especially for rain on the Day of Atonement, when he performed the service in the Temple. He not only prayed for rain in due season, but went out of his way to pray that God should not heed the prayers of the wayfarers who might be detained by drought on the road.

There was a special festival held in the Temple, the Day of the Water-Liberation, which was the occasion of rather boisterous rejoicings. The Mishnah state the conditions and the description of it. It was called Simchath bet ha-shoebah, 'the rejoicing at the place of the drawing' (i.e. of the water), and was kept on the 21st day of Tishri, the 7th day of the Feast of Tabernacles, the day of the Great Hosha-a-na. No explanation has hitherto been given for the use of water as a libation on that day instead of the regular wine-libation. It is, no doubt, of a prophylactic and symbolic character. It is an offering of the element which the people prayed to be blessed with during the year at the threshold of which they were standing. There may have been another reason for the libation as well as for the season chosen. According to the Bible narrative (Gn 7:11), the flood began and terminated about this time (it began on the 17th and ended on the 27th of the second month). There is now a difference of about a month between the two dates. Probably the coincidence of time was considered sufficient to celebrate the anniversary of the flood by a water-libation, and by such an act to obviate the recur-

ence of a flood and to show gratitude for the promise that henceforth the rain would come only as a blessing. There may also have been a closer correspondence of the time in the intercalary year, if the intercalation was made at the close of the civil year, the' two months of the blessing were reckoned as the sixth month, but is really the twelfth month. Thus the seventh would become the eighth (second) and on the 17th of the second (eighth) the sluices through which the heave offering went on. With the destruction of the Temple a special prayer for rain had been added to the service of the eighth day of Tabernacles. 4 Though the ceremony ceased in the Temple, the remembrance has been kept in the service of the seventh day of the Great Hosh-a-na, which is modelled on the service arranged for the occasion of drought. 2 A special significance has been given in later times to the service of the seventh day, for people seem to have forgotten the real meaning and origin of these supplementary prayers and ceremonies. Moreover, since Temple times special prayers are recited in the additional mishap (57a) for the Day of Festive Assembly. Corresponding to the change of season, similar prayers for dew form an integral part of the Liturgy for the first day of Passover. 5 The month of Tishri is celebrated as one of the most propitious for prognosticating the weather. 6

A most elaborate description has been preserved of the ceremonies instituted and the service arranged for the occasion of drought. It is, in fact, the most complete description found in the Talmud. The solemnity was increased by the strewing of ashes on the head, the blowing of trumpets, the institution of supplicatory prayers, and the extension of a rigorous fast for young and old, strong and infirm, male and female. It was made the occasion of general mourning also by performing that service in the open market-place. The severity of the penance and the multiplication of prayers increased with the fear that the rain might fail. Such a service could not be performed anywhere except in the Holy Land. 7 Great men enjoyed the reputation of having obtained rain by their own merits.

Outside of Palestine no special service could be arranged on the lines of the Talmudic prescription. As far as possible, fasting and special prayers were included, but the rain was no fixed form. Each community may arrange it in its own way, and either use older compositions or compose its own prayers. They do not follow the form part of the regular description in the recognized standard forms of the Prayer-Book. Such prayers may be met with in collections of Occasional Prayers both in MS and in print.

The most important feature of that service has been introduced in a reduced form into that of the seventh day of Tabernacles, the exact day of the water-libation. It has been invested with the solemnity and character of a second Day of Atonement. In order to explain the supplicatory prayers and the other ceremonies which now form part of the additional service, it must also be remembered that the trumpets are blown exactly as prescribed in the Talmud for the day of solemn prayer for rain. The attributes of God are recited.

3 Bibkha Etzvah, 147a; see Gaster, *Jewish Weather Lore*, in Jubilee number of Jewish Chronicle, 1901.
4 This ceremony is described in the first chapter of the Mishnah Ta'muth and the treatise of that name. It is still more fully dealt with in our period, as can be seen from Tur Orach Hayyim. A fuller, though not complete, MS of this service, with its explanatory and supplicatory sections, has come from the Holy Land into the possession of the present writer. It must be anterior to the Sixte centry.
the procession of the palm-leaf and the willow takes place, just as in the time of the Temple; and prayers are offered up almost exclusively for rain in its due season. They are, in fact, the very prayers found in the Midrash on Genesis V, 1, and the Talmud, and also in the description of Asheri. Curiously enough, similar prayers have also been arranged for the cessation of rain. In fact, all the supplications of the Talmud for rain, or for beliefs like plague, etc., follow the lines of this liturgy for rain. In addition to these special services, a regular change takes place in the form of the daily prayer (amidah), or eighteen benedictions, in the special blessing for rain and dew. It is connected with the change of the equinox. It begins approximately sixty days after the winter solstice. This is also a season which is not free from superstitions and beliefs and practices. A Talmodic legend tells of a certain Nicodemus (Nakdimon), son of Gorion, who had obtained from the Hellenen a monument of pits filled with water, which he distributed among the poor at the time of a great drought. He promised to pay a heavy fine before a certain date the rain would fill the pits. In the afternoon of the appointed day the area was still shining bright, and no sign of rain was visible. Nicodemus went up to the Temple, was received, and the sun began to wane, rose up again and thus prolonged the day, before the close of which a heavy rain fell. This proves the law of nicodem ground obligation. Honi, another pious man, drew a circle, and, standing within it, prayed to God, and the rain came down in heavy drops. In another legend it is said that during this drought, when the clouds gathering first in the corner where she was praying. The drought, according to a legend, is also broken up by the cry of the raven. It is said that it was granted to him as his reward for the sacrifice of thenodeValue, now to bury Abel, by digging a grave and burying a dead raven.

A new element has been added to these prayers for rain, in the processions to the cemetery and in the prayers to the pious and illustrious dead for their intercession. No man is found in the later generations so worthy of appealing to God as were those of old times; they therefore pray that those who are buried in the dust may intercede with God in favour of the suffering people. Such processions are headed, as a rule, by the Rabbi, who is accompanied by the elders and the children. Sometimes—but rarely—the scrolls of the Law are carried in the procession. Litanies are sung and recited, and prayers are said over the graves. It is the Jewish counterpart to the Christian procession, notably of the Eastern Church, in times of severe drought, when the relics of the saint are carried on the shoulders of the clergy in a solemn procession through the town, headed by the bishop or the metropolitan of the place.

A Jewish poet named Saloedia heard by the present writer tells that the Jews who fled from the Inquisition in Spain at the end of the 15th cent., were admitted into Tiberias on condition that they would bring rain in time of drought. The people of that town, especially the children, used to gather under the window of the Halakh sitting for rain. It is told that on such an occasion the late Rabbi Kovo, going out in procession to the cemetery, warned his people to prepare themselves with coverings for the rain, and they returned under such a downpour that the streets were turned into rivers.

The rain thus plays a very important part in the Jewish service. The prayer which is recited daily, and the introduction of special prayers on important occasions into the liturgy, as well as other ceremonies and practices, testify to the belief that a divine gift such as rain can be obtained only through piety and uprightness and by means of supplication and self-chastisement.

WATER, WATER-GODS (Indian).—The special conditions of the Indian climate, producing, as in the western desert, a scanty and irregular rainfall, in other places excessive downpour resulting in floods and inundations. The seasons, and the constant risk of failure or irregularity of the monsoon, promote the popular animistic beliefs and that of special deities ruling the ocean, rivers, tanks, and wells.

Water runs up this whole gamut or scale of religious expression. The honours paid to the running brook, a hot spring or a river then exaggerated by floods and failures, bringing riches or rain—'are intended for the living water itself by a large class of votaries; and this notion of material identity seems preserved by the custom of bathing in sacred streams, of self-drowning, and of witch-dipping, which last custom resembles exactly that of England. Suicide and witch-dipping in rivers present both sides of the same conception, acceptance or rejection by the divine element. Further on, the water-power is no longer defined Nature, but controlled by a supernatural spirit we have the kelpie who inhabits rivers under the form of a buffalo, and personifies their effects. His name is Mahilasu; he has no image, but a buffalo's head is cut off and deposited on his altar. After this we ascend to mythological legends about the origins and descent of the greater rivers from the Hindu deities, and to legends of streams turned to stone, or otherwise engineered by interposition of the divine energy incarnate.4

In Mizrapur a pool in which some buffaloes were once drowned is now inhabited by the buffalo demon, Dilinasa, who in company with the demon Vatsak, or some similar demon, destroys any one dares to fish there until he has propitiated these powers by an offering; another form of demon attacks fishermen, appearing in the shape of a turban which fixes itself to his book and increases in length as he tries to drag it ashore.

Sometimes the demon, as in the case of the Zalgr of Kashmir, takes the shape of a horse, the foamed waves breaking on the bank naturally assuming this shape in the popular fancy. Such sea-horses in the Hindu legend are provided by Varuna, the sea-god. The custom of taking oaths on water conceived as a spirit is common among the Karests and other primitive tribes.

1. Water-gods in the Veda and later literature.—Much controversy has arisen on the question of the amount of knowledge of the sea possessed by the Indo-Aryans. On the one hand, writers like H. H. Wilson7 assert that they were a maritime and seafaring people, familiar with the ocean and its phenomena; and references in the Veda are quoted of merchants making expeditions to some foreign country or islands. Other writers represent them as living far from the coast and unfamiliar with the sea. The evidence quoted by Bühler of voyages in the Indian Ocean seems inadequate, and the charge of ignorance of the ocean implies a knowledge of the sea which needs not to be confined to the estuary of the Indus.

"This is to circumscribe too narrowly the Vedic knowledge of the ocean which was almost inevitable to people who knew the Indus." In later times this knowledge gradually increased. There seems to be no proof of sea trade with Babylon in the Vedic times; this probably developed about A.D. 700.8

The extensive and long-continued emigration from India to the East—including Pegu, Siam and Cambodia on the main route—would naturally lead to increased seafaring.8

WATER, WATER-GODS (Indian)

Nicholas of Dwārakī (q.v.), to whom sailors pray to save them from shipwreck. Siva, an inland god, is worshipped at river junctions. But the place of the primitive sea-river-god hardly assumed by figures drawn from the local animism. In Madras in time of drought, instead of worshiping Varuna, men pray to the spirit Kudumpāvī (the wicks) or to some other local spirit, to send the rain. The Apsaras (Skr. ap, áreas; 'water,' ēri, 'going,' in the sense of moving in the waters or between the waters of the clouds), a kind of nymph who even in the Rigveda appear completely submerged, have a particular abode in the oceans, and in post-Vedic literature frequent lakes and rivers, especially the Ganges, were in later times believed by the Rajputs to convey the souls of dead warriors from the battlefield to the mansion of the sun, and have now little influence over the waters or on the rain.

4. Modern ocean-worship. The sea, known to modern Hindus as Ratnagurā ('filled with jewels'), is revered by the pious, and at the Amāvaśyas or new moon, a sea bath is considered cleansing. On that day the waves of 990 rivers are supposed to be brought into the sea by the spring tides. Bathing is also efficacious during the whole of the Urand, or intercalary month, and in parts of Kālīyugā on the bright second of every month, many people light a fire on the shore, throw butter into the fire, and on the day when the fleet puts to sea fisherman pour milk, sugar, and liquor into the water and throw in flowers and coco-nuts. In W. Bengal the Dussehra Day (navarātrī or varuṇāṭha puruniha) is held at the full moon of the month Śrāvanī (July–August) in the height of the annual monsoon, when flowers and coco-nuts are thrown into the sea, and offerings of the sea-goddess Gangā at the confluence of that river with the sea. He is invoked in daily worship as 'king of waters, who curse the wicked, who made a road in the heavens to receive the rays of the Sun. I therefore follow that route.' Like many various gods, he is commemorated as a fertility-deity at marriages.

3. Kṛṣṇa and Śiva; the Apsaras. The place of Varuṇa as a sea-god was at a later period some extent made by the Kṛṣṇa and Śiva. Kṛṣṇa, a god who is the hero of many solar myths, the slayer of the demons, who dives under the sea and slays Kṛṣṇa and Karttikeya, his semi-divine, semi-solar or atmospheric god is evidently connected with the dark sun and the storms of the rainy season, and his shrine is at Dwārakī on the west coast, where the Sūrya into the boundless western ocean.

During the 5th and 6th centuries A.D., on the arrival of the Chinese Hiuns in Gujarat and Kālīyugā, the sea began to influence these new-comers, as is shown by the fame which gathered round the new or revived gods. Kṛṣṇa in his form as Somānaśa or Someśvara ('lord of the moon'), with his shrine at Somnāth (q.v.), and Kṛṣṇa, the Apollo or St. Nicholas, still retains some of the functions of a sea- or water-god. The most famous festival in E. Bengal is his festival on the full moon of the month Kārttika (Oct.–Nov.), when devout Hindus bathe at a famous bathing-place. In other parts of Bengal no image of Varuṇa is made, nor is he honoured at any festival or temple; but he is identified as the god of the south-west winds of the earth, and by fishermen before they start their work, or in time of drought to secure the needed rain.

In Gujarāt he is believed to live in the water, in a boat account, his five abodes, — the sea, the river, the pond, the spring, and the well. In ancient times, he received human sacrifices, as in the story of Śūnaśeṇa, the prototype of the god's adventure to secure the fire-goddess Gangā at the confluence of that river with the sea. He is invested in daily worship as 'king of waters, who curse the wicked, who made a road in the heavens to receive the rays of the Sun. I therefore follow that route.' Like many various gods, he is commemorated as a fertility-deity at marriages.

catches a man, she compels him to cohabit with her, and kills him if he refuses. In the Panjáb plagues the yoqini, or joqini, haunts waterfalls, while the jol-yoqini occupies wells and streams. The following passage, and others which follow, must help to explain why sailors, and he is said to have done many strange miracles.  

Dáryá Pír, the 'sea-saint,' sometimes identified with Khwásá Khidár, is in Gujarát patron of the community of sailors. He is represented as having a blue body, and held to help the voyagers of the sea, and his offerings are made to him by pouring a little water on the ground through a sieve dedicated to him.  

6. Water-sprits or spirits. — Besides the greater water-gods a host of spirits or spirits are worshipped. This cult is specially prominent in the Buddhist Játaka. Some of them are malevolent; in a bas-relief at the stupa of Bhirákút a sea-monster devours a ship and its crew. Others, again, are kindly and are worshipped in conjunction with the nádás, or serpent-gods. Among spirits of this class at the present day in the Konkan, Bombay, the ancurás, or avarás, are ghosts of young women who, after giving birth to one or more children, committed suicide by drowning; they live in water, attack any one who approaches them, and go about in groups of seven; their victims are young women, and, when a girl is attacked, her father, uncle, or any relative who makes an offering of food, red powder, and green clothes to the sprites. Another Konkání sprite of the same kind is Hálád, the ghost of a drowned woman, who wears yellow clothes, lets her hair flow loosely, and is plump in front and a skeleton behind; when women are attacked by her, they let their hair flow loose, shake all over, and scream. The giriíáb endows them with deep water. In Gujarát the nádá, or 'mother,' and the saknáhá, or 'gress,' haunt springs and pools and drown or enter the persons of those who venture near their haunts; an exorcist effects a cure by giving a charmed thread to the patient. In Mysore the akkgápará, or 'seven sisters,' attack women, and in such cases the village washerman performs a rite of propitiation by setting up seven stones near the water and making an offering. In the Salem District, Madras, the ákkánamél is female sprites who occupy tanks and cause the environs to burst as they tread on them while they are quarrelling.  

In N. India the ghátháká, or 'ferry brother,' must be compelled to cross the rítes of black sheep, and allow them to eat. In the United Provinces within the border of the Jumna 'was the fearful pool of the serpent Kálíyá ("the black one") boiling with the fires of poison, from the roots of which huge large trees were flung, or were lighted and burnt; by whose waters, when raised by a gate into the air, birds were scorched; the demon was conquered by Kíjña and driven into the ocean.' In the Panjáb District of Kála the jol-pat, or water-fairy, can be conciliated by offering a lamb and flowers on the bank of a watercourse; if she catch a man, she compels him to cohabit with her, and kills him if he refuses. In the Panjáb plagues the yoqini, or joqini, haunts waterfalls, while the jol-yoqini occupies wells and streams. The following passage, and others which follow, must help to explain why sailors,

The wide-spread belief that a ghost cannot cross running water prevails in India;1 a thread is passed over a stream to help the soul to return to its own house, and to the Bridge of Death and Charon, the ferryman.2

7. Wells, tanks, lakes—All over the country sacred wells, tanks, and lakes, and their indwellings. These are expiatory. That expiatory arises in various ways: they have been made, discovered, or occupied by some god or saint; hot water flows in them, a special mark of divine power;3 their waters periodically increase or decrease; they possess certain plants (especially in cases of leprosy); bathing in them may cause a change of sex.4 No well is considered lucky until its spirit is solemnly welded to that of the garden which it is intended to water, the former being represented by the sâlgârâna, or amoma, sacred to Vignû, and the latter by the holy tulasi, or basil plant (ocimum sanctum).5 In the same way, every tank should have a wooden pole in its centre to which the water-spirit is married; until this is done, the water will increase and not allay thirst and may cause disease; the pole also protects the tank-spirit from the attacks of demons.6 The prince of Jannfer goes annually to the lake Gharsar to perform the sacred act of cleansing it from the accumulated mud and sand; first he takes out a handful, and then rich and poor follow his example.

LITERATURE.—This is quoted in the footnotes.

W. CROOKE.

WEALTH.—Wealth is variously defined according to the standpoint from which it is regarded. But, in whatever aspect it may be viewed, its significance lies in its relation to life as a whole, and it can only be adequately understood when treated as a part of the larger study of man. It cannot be dissociated from the social and moral development of the race. It obtains its ultimate meaning from its place in the scale of values which determine the worth of life. Ethical considerations must therefore be dominant throughout the entire treatment of the subject. "It is man's 'good,' or rather his goodness, that endows wealth with all its value."1 Various the whiles of the question shade into each other, for the purpose of this article it will be convenient to consider the theme under those three aspects—economic, ethical, and Christian.

I. ECONOMIC ASPECT.—I. Historical sketch of the creation and increase of wealth.

Man alone among the denizens of the earth is the conscious possessor of its resources. Though he has many primary instincts in common with the lower animals, he differs from the brute creation in that he has the faculty of unifying his desires, postponing the present to the future, and making the accumulations of past labour the basis of fresh endeavour. In the growth of his needs and the methods of satisfying them we can trace the economic development of the human race. Very early in history questions of the right of property arose. In the patriarchate period, as depicted in the Old Testament, there is evidence in the existence of private possessions. In early Greek philosophy investigations into the nature and extent of economic law occurred. By Plato and Aristotle the

industrial aspect of social life is treated as a part of politics. The Roman jurists, while recognizing the sacredness of property, direct their attention chiefly to the ulterior successions of its tenure. The asceticism of the early and medieval Church cast suspicion upon all forms of wealth and tended to check individual enterprise and private possession.7 The Renaissance gradually broke down the feudal system, armed with the end of the spirit which the Reformation brought, trade and adventure awoke and the possibilities of the physical world came within the vision of man. The search for gold and silver underlay important economic facts was greatly stimulated by the researches of Bacon and Newton, while the investigations of Grotius and Leibnitz on the Continent and of Hobbes, Locke, and Hume in England aroused the thinking world to the bearing of industrial questions upon the progress of mankind.

With the exception of the writings of French physiocrats, of whom Quesnay was the leader, there was no really scientific treatment of the nature and functions of wealth till the appearance of Adam Smith's treatise on The Wealth of Nations in 1776:

This book marks an epoch in industrial thought and enterprise. Political economy for the first time becomes a science. Following Smith's work there appeared in quick succession Malthus's Essay on the Principles of Political Economy and Taxation (1817), and J. S. Mill's Principles of Political Economy (1848). Smith dealt with the causes of wealth, Malthus with the causes of poverty, while Bentham and Mill treated mainly the ways and means of distribution. The Wealth of Nations appeared at a propitious hour.

During the Middle Ages the successive phases of social disability which feudalism and serfdom had bequeathed tended to hinder the free life and development of man; and it was not till the individualistic gospel of Rousseau found a response among thinkers that a new sense of human right and freedom awoke. Adam Smith claimed to be the champion of popular liberties. He exposed several traditional fallacies in regard to property and its rights and uses. He showed that the progress of society depended upon individual initiative, division of labour, freedom of contract, and unrestricted interchange of goods. Money, he maintained, was not in itself wealth, but only a measure of the social commodities which constitute wealth; and the riches of a nation consisted not in the amount of gold hoarded in its coffers, but in the quantity, variety, and facility of its exports and imports. Unrestrained and widely distributed industry, he held, was the prime and dominant factor of a country's prosperity.

The historical treatment of economics generally adopted in recent years by French and German writers owes its inception largely to the historical insight and philosophical grasp of Adam Smith. But, though he was in advance of his times, many facts have emerged since his day which necessitate a reconstruction of economic science. The new historical instinct which was just awakening and has since been applied so effectively to many departments of inquiry; the general acceptance of the 'evolution theory,' with light that it has thrown upon the conflict and co-operation of man in the development of the race; the industrial reaction caused by the development of science, and the invention of machinery for hand labour; the growth of democracy, with the spread of new ideas of liberty following in the wake of the French Revolution—these are among the factors which have greatly

1 See Adam Smith, Wealth of Nations, bk. 1, ch.
modified economic study and made the problem of wealth a theme of vastly wider implication than its early investigators dreamt. Later writers, such as Ricardo, Say, Say, Bagehot, Toynbee, and Marshall, have shown that political economy must be subservient to human progress in the highest sense and that the moral element cannot be eliminated.

2. Meaning of wealth,—We are now in a position to state generally what economists mean by wealth. The 'good' in the economic sense is every natural product which serves as satisfaction of man. By universal consent the word is applied to things which are material and exchangeable. Four attributes are usually comprehended in its definition: (1) materiality, (2) transferability, (3) limitation in quantity, (4) utility. Of these the first is now regarded as doubtful, since wealth may embrace things not entirely material, such as some forms of service. The last is essential, but a larger meaning must be given to 'utility.' Shortly, wealth is said to consist of things that can be bought and sold, the amount they represent being measured by the quantity of money that they would fetch in the market. The definition, however, leaves out of sight of the occupational inclusion and exclusion. On the one hand, a large trade exists in supplying certain satisfactions of a sensual nature which cannot be regarded as economic; and some of this kind, though involving exchange of money, does not contribute in any sense to the well of man. On the other hand, light, air, even water, unless involving conveyance, have apparently no exchange value; but indirectly they are considerable elements in the wealth of nations.

Further, 'potentiality of being bought and sold' excludes many goods, such as health, integrity of character, parental affection, which, though not saleable, have undoubted value, since they render their possessors more fit for the battle of life and more capable members of the national organism.

In protesting against the crude conception that wealth consists in the amount of gold or silver a nation possesses, Adam Smith deliberately describes the wealth of a country as 'the annual produce of its land and labour,' or 'the necessaries and conveniences of life which is annually consumed.' The important point in this statement is that wealth is not land, cattle, machinery, etc. possessed at a particular point of time, but rather the substances consumed or things deriving their utility through active use. The English statisticians of the 17th cent. regarded the wealth of the country with the eyes of a farmer, and, like the French physiocratic school, denied the quality of productivity to all labour not employed immediately on the land. Hence a second important point to be noted is that Adam Smith rightly included in 'productive labour' not only labour employed on the land, but all kinds of work which improve material objects.

The French economist, J. B. Say, extended the idea of productive labour to cover 'non-material products.' And from his time the annual produce has been conceived as including 'productive' as well as commodities. Economically, wealth may be summed up as the product of what in modern life is termed 'the economic or industrial system,' meaning by industry 'all those articles which go to make any sort of wealth including the services of the judge, the clergyman, the acrobat,' 2 not material goods alone, but 'the work of government, the legal professions, the fine arts, all grateful recreations, must be brought under the "industrial system."'

3. The factors of wealth.—In the production of wealth economists enumerate three factors: land, labour, capital. Land and labour are obviously requisite at all times and places; and, though in primitive societies capital existed only in very rudimentary forms, it also becomes essential in any community which is organized on a large scale.

(a) Land.—The two primary sources of wealth are material for work and work for material—Nature and man. The starting-point is found in the original needs which stimulate men to engage in labour for their satisfaction. But labour itself produces nothing. It can exercise itself only upon the given. In one sense Nature is the mother of all wealth. We are rich when she gives, poor when she withholds. Yet Nature yields nothing for nothing. Her gifts are available only as man brings the tool of hand and brain to bear upon them. As economists put it (though not quite accurately), it is the land—including not its surface fruits only, but all that is contained in the bowels of the earth, coal, iron ore, minerals of all kinds, and even the sea with its manifold treasures—that is the prime source or factor of potential wealth.

(b) Labour.—It is the function of labour not to create but to extract, transform, and shape to the uses of man the potencies and raw material of the earth. The supreme service which labour renders to society is defined by J. S. Mill as 'putting things in fit places.'

Labour in the physical world,' he says, 'is always and solely employed in putting objects in motion; the properties of matter, the laws of nature, do the rest.'

Though no wealth can be produced without labour, there are some kinds of labour which may be very useless and not actually for the production of material wealth. Hence a distinction has been drawn between 'productive' and 'non-productive' labour. But this distinction can hardly be sustained.

Can it be said, e.g., that the work of a miner is productive, that of a teacher, a poet, or a statesman unproductive? Men who do not work with their hands may be really contributing to the material well-being of man. And what seems at first sight to be fruitless or even wasted activity may in the highest sense be conducive to life. Indeed there are some things which, though not computable in money, greatly tend to increase the productive power even of physical labour. Three elements at least may be mentioned: division of labour, combination in effort, invention and application of tools and machinery. 'All tools and engines of the earth,' says Emerson, 'are only ex- tension of man's limbs and senses.' But machines can only second; they cannot supply his enabled faculties. To these means must be added what, after all, is of most importance—the moral and intellectual elements—the skill, intelligence, character, and fidelity of the worker himself. A man is more than a machine; and, without the personality behind, physical and mechanical appliances, however complete, would fail of their results. In the production of wealth the economist is apt to overlook spiritual values. Education, the discipline and training of the home, the school, the college, the hardships and hazards of life, and all the moulding and informing institutions of society may appear to have no immediate monetary worth, but they are inestimable forces in the making of the workman, rendering him to himself and the community more fit and effective agent of productive service.

(c) Capital.—It is difficult to define this element or designate precisely its functions. The term has become the stock-in-trade of modern industrial con-

1 See Dic. of Political Economy, s. v. 'Wealth.'
dict. Capital has unfortunately been regarded by labour as the instrument by which owners of productive property exploit and without money make their own terms and manipulate work in their own interests. Capitalism has undoubtedly been a stern taskmaster in the past. The owners of capital may be said to have been, and to be still, the controlling power of our industrial system. They have taken the place formerly held by the landed aristocracy as the pivot of the social and industrial order. That the hopes which assuredly they have offered a stubborn disposition to all encroachments upon their privileges; and during the last quarter of a century all advancement of wages and improvement of environment on behalf of labour have been secured only by the pressure of trade unionism and the employment of the strike weapon. Hence the interests of employers and workmen have come to be regarded as inimical; and bitterness and class hatred have ensued which have led to conflicts costly alike to masters and to men. An impartial judgment is bound to recognize faults on both sides. At bottom of the perversity there has prevailed a materialistic philosophy involving a false exaltation of money and a vulgar conception of life which, as a result of the spell of commercial prosperity at the close of last century, has pervaded all classes of society. It is the result of the richness, the indifference, the cruelty, and the vulgarity—in a word, the selfishness of wealth that has roused jealousy and suspicion and become a danger to the community. The working classes have been too apt pupils of their masters and have indulged in habits of laxity and impropriety which are a menace to the true weal of the nation. But, whatever may have been its abuses, and however it may have tended to ex-ploit labour for its own ends, absorbing within itself the legitimate fruits of toil, capital is an indispensable element in the production of wealth and an instrument of incalculable service in the development of the resources of civilization. In the economic sense, capital is wealth appropriated to productive employment. It may be defined as the aggregation of the surplus which has been saved from immediate use and is available for the further development of industry. It is of two kinds, circulating and fixed. Circulating capital consists of the wages paid to the workmen and of the raw materials essential to the scien-tific process of work. Fixed capital consists of buildings, machinery, tools, railway plant, shipping, etc. Circulating capital is being constantly used up, while fixed capital is permanent, more or less. Capital generally is the result of the industry of past generations used to promote and facilitate the industry of the present and the future. In every form of capital we trace the labour, ingenuity, and foresight of men who have built up the trade of the present. For the development of capital it is necessary that production should exceed consumption, leaving a margin for future increase and development of trade. It cannot be denied that labour has contributed to the making of capital and ought to have a share in its possession and employment. It is the duty and task of the capitalist to organize, direct, and supervise the labours of the country, so that it shall adequately meet the needs of the community. These services have been rendered in the past principally by private individuals. It has been argued that they might be performed by the State, if necessary, and that the State should assume the police and protective functions of the State, in which all have a stake and in the prosperity of which all have a claim to participate. But, whatever may be said in favour of collective ownership, it must be noted that, while not controlled by the nation and supervised by State officials or possessed by private individuals, capital in the form of liquid assets is absolutely necessary for the organization and development of commerce; and without money it is not capable of producing its maximum results or obtaining for itself an assured or adequate return for its efforts. It is evident that the interests of capital and labour are not always or even in the common enterprise depends upon their harmonious co-operation. But, to attain this unity of aim, both labour and capital will have to revise their ideas. Instead of an unending strife, by which each party seeks to secure as many wealth and give as little as possible, a wider outlook must be sought in which each party shall realize that industry is only a means to an end and that life has more to offer than the things which can be estimated in terms of money alone.

II. ETHICAL ASPECT. From the foregoing sketch of the economic aspects of wealth it will be evident that the subject is one which lends itself naturally to ethical issues. Economic proposals for the re-adjustment of society assert a principle the neglect of which was the great failure of the 19th century and is still the source of much of our unavoidable social unrest.

1 That principle is simply that industrial prosperity is not to be measured solely in terms of material wealth; or, in other words, that industry must be regulated by the very ethical ends of economic ends. Its profit and loss account must show human as well as material values; and its industry is neither prosperous nor healthy which shows a great output of material goods at the cost of a great deterioration of health, the character and the human capacities of the worker.1

1. Relation of economics and ethics. If economic science is designed for the advancement of life itself (and this is its tacit claim), then human considerations must be ignored. Wealth is not the individual, not man work. Our starting-point must be that life is the principal thing and that every human being has a right to live and work; and that in giving his services to the good of the community he ought to have some share in the common weal. Even if a living wage be conceded, a living wage must be interpreted not as that which gives a mere subsistence, but as that which affords to each the opportunity of human self-expression. It has been truly said that 'life without the means of living, personal gifts or skill that have no outlet, liberty that is only an inner consciousness and has no sphere of exercise, are all alike meaningless.'2

2 Considerations like these have led many to be suspicious of the methods of producing the wealth of the economy, and especially doubtful whether the conception of wealth as usually assumed in scientific works can be accepted as ultimate. The common fallacy of confounding wealth and money is not yet obsolete. The idea that the wealth of a society is the necessary things of utility dies hard and continues to exert considerable influence upon economic thought.

1 Property is meaningless, not wealth at all, apart from its purpose, or apart from its possible or actual practical use. . . We have fallen into the error of regarding material wealth as having intrinsic value, and we tend not consciously to devote our energies to gaining possession of it, irrespective, or with the slightest consideration, of what is to be done with it. . . Wealth is not wealth, but only its unrealized possibility, apart from the spending of it.3

If hoarded wealth is not really wealth, and even less is misappropriated wealth. Even the phrase 'satisfaction of wants' is ambiguous. 'What we want' may mean either what a particular individual or class desires at the moment or what is an essential need of our whole nature as men. In other words, in order to decide what constitutes wealth in its largest sense, it is necessary to know what is the true good of man—an inquiry with which political economy must reckon if its results are to be of vital import for mankind.4

The economist defines his subject as one of 'the sciences of man,' the conception of the human value of wealth does not rule either his thought or our principles. But it is clear that from this point of view that the problems of capital and labour, profit and wages, free trade and protection, or the respective rights and limits of production by and the individual are to be considered. It is the personal element that brings the science of economics into closest touch with ethics. Both have to do with the 'good'; but the economic 'goods' are mostly regarded as material, whereas the 'goods' with which ethics is concerned are those acts which are the conditions of the attainment of the highest end of life. While it is perfectly legitimate to consider what will increase or diminish the material side of human happiness, it must never be forgotten that neither an individual nor a nation's life consists in the abundance of the things which it possesses. If we are rightly to estimate the worth of economic goods, we must consider them ultimately in their relation to the highest good—the good of life itself. Social reform has been a little retarded by writers who have been too much in a hurry to encourage the belief that the possession of riches is the secret of happiness and the only reasonable motive of human endeavour.

2. Doctrine of values. The conception of values, which is the basic dominant idea of modern thought, has been applied with considerable effect by some recent writers to economic subjects. A distinction is drawn between 'intrinsic' and ' instrumental' values. A thing has intrinsic value when it is an end in itself or is valued for its own sake apart from anything else to which it leads. A thing has instrumental value when it is merely a means to something else that follows from it as an effect, when it does not exist for itself but only for the sake of a further good. The value of any economic good is determined by its relation to other things which can be got in exchange for it. Thus, to use the technical phrase of economists, 'a thing's price is its value.' It is 'its value in exchange.' Its worth depends on what at the moment it can bring. It is relative, not absolute. It may be said that nearly everything in the world, the whole apparatus of living, has, in this sense, merely an instrumental or relative value. Things are nothing in themselves and would be useless in other conditions. Money, jewels, etc., would be of no value, unless the methods of measuring value, of determining value, are there some things that must always retain their value in every world. If life has any meaning at all, there are objects, ideals, such as honour, purity, truth, belonging to life itself, and of the essence of man, which cannot be bought or sold, and are incomparable, unexchangeable, absolute. In the last resort it may be said that intrinsic value belongs to personalities rather than things—to things of the soul rather than things of the sense. All other values are relative and obtain such worth as they have from their power to minister to the highest enrichment of man. Real wealth. Along this line of thought we are led to the absolute and all-inclusive conception of wealth as embracing everything that contributes to the fullness of life. There is no wealth but life,' says Ruskin, 'including all its powers of love, joy, and admiration.' It is true that merely instrumental objects may be transmuted by their use into more than means and may partake of the character of which they contribute. Objects of natural beauty, works of art, and the affec-

WELFARE

rests not in change of outward condition, but in the regeneration of inward character. And an honest application of the teaching of Christ to the practical life is in itself the secret of social and industrial betterment. It seems fitting here to give a brief review of Christ's teaching in reference to wealth.

Jesus has much to say concerning wealth. The subject bulks largely in His teaching and enters prominently into the frame-work of nearly all His parables.

1. The teaching of Jesus.—Though Jesus dwells frequently on the perils of wealth, He does not condemn the possession of property or denounce ownership in land, goods, or money. There is no depreciation of riches in themselves. He lays emphasis on their destructiveness (Mt 19:18); He warns His disciples against covetousness (Lk 12:15); and especially does He point out the danger of accumulating earthly treasures (Mt 6:9) and the impossibility of serving God and mammon (6:24). He lays down the principle that 'a man's life consisteth not in the abundance of the things which he possesseth' (Lk 12:15). Yet these sayings and warnings are not to be dismissed from impelling approval, imply rather that property and trading are the indispensable bases upon which the outward fabric of the social order is built. It shows no trace of belief that temporal possessions are evils in themselves. His parables constantly assume the right and indeed the responsibility of the individual to hold and administer wealth (Mt 25:14, Lk 19:14-26). Many of His sayings would be devoid of meaning if His attitude to the industrial system of His day had been one of uncompromising hostility. He could not, e.g., have justly advised the young ruler to sell what was not really his, or have suggested that he should induce another to accept for money what it was unlawful for him to retain. Many of His parables deal with the use of money, without indicating a single reproach on account of its possession (Mt 25:14, Lk 19:14-26). Christ does not demand withdrawal from the activities of the world. The asceticism of the early Church and the renunciation practised by those sects which make a profession of poverty and no countenance in the Gospels. Jesus and His disciples honour work and recognize trade. Christ acknowledges the rights of the wage-earner. Within the circle of His followers were men and women who worked at ordinary tradesmanship (Mt 25:14, Lk 8:19). His disciples had a common purse, and one of their number acted as treasurer.

2. Wealth and the supreme end of life.—The one and only aim of our Lord was the establishment of the rule of God in the hearts of men.1 The Kingdom of God is first; all else is secondary and subsidiary. This is the test of all earthly things. Possessions and occupations have validity only in relation to the supreme end of life. His calls to renunciation were made not because He deemed wealth to be inherently evil, but because in each case the required act of denial would remove the special hindrance to the realization of the spiritual life (Mt 19:18, Mk 4:9, Lk 6:4). In Mk 10:8 it is to be noticed that it is a deficiency of character that necessitates the repudiation of earthly possessions. Christ thus raises the whole question of material wealth to a spiritual plane. What He really condemns in connexion with riches is the spirit which holds them falsely, by non-use, misuse, or abuse.

Wealth and trust and a test.—Finally, wealth is everywhere regarded in reference to man's relation to God. It has thus a twofold significance. It is a trust and a test. There is no such thing as 1 See W. M. Clow, Christ and the Social Order, London, 1915, p. 81.

absolute ownership. All things belong to God our Father. We are but the pensioners on His bounty and the trustees for what He lends to us. No one can say, 'This is mine like with my own' (Mt 20:25, Lk 19:12). The Gospels indicate three in which the stewardship of wealth may be exercised.

(a) Almsgiving (Lk 12:21).—The beauty of charity may be measured by ostentation (Mt 6:3-4) or consciousness of merit. A man's gift of money has no value except as the expression of himself (Lk 12:42).

(b) Fidelity to one's daily work.—Those who receive Christ's severest commendation are the persons who have been unfaithful in the task entrusted to them (Mt 21:10, Mt. 22:29, Mk 12:20-21); while those most highly commended are such as conscientiously discharge their duties in the appointed sphere of life.

(c) Ministry of joy and beauty.—A third form of stewardship is indicated in the employment of gifts in the ministry of joy and beauty of life. The most impressive instance of this use of wealth is the administration of the hands of the Master who anointed the head and feet of Jesus with precious ointment. In answer to the reproachful question, 'To what purpose is this waste? Jesus defends the act and appreciation of the Master who took the ointment off his head and feet and applied it to the hands of the Creator. There is no such thing as mere money. It is always a symbol or a measure. Property is but the expression and instrument of personality. We have only what we own. Heaven's wealth is barren. And only as we give forth our life in service and sacrifice is it fruitful.

WELFARE.—(1) By the ethical term 'welfare' is meant the highest human good, the fating well or properly, the desirable human experience. In this formal use of the term nothing is implied as to the nature or constituents of this good. Aristotle notes this as the accepted usage in his day of the term as applied. 3

(2) The term usually implies the highest human good conceived as consisting in certain objective conditions rather than in subjective feelings. In this sense it is opposed to pleasure as the supreme good. The term 'perfection' is nearly his equivalent.

1 F. G. Peabody, Jesus Christ and the Social Question, p. 21.

2 Noam, Ethics, i.

3 Aristotle, Nicom. Eth., i.
lent, but has usually a somewhat narrower significance, exclusion of pleasure, whereas welfare, though not in its essence pleasure, involves pleasure as the end under which perfect activity and happiness are usually conjoined, while welfare involves this conjunction.

Aristotle's usage is typical, but not without difficulties of interpretation. Human welfare is not simply the activity of an abstract nature, but is the activity proper to man as man. This is reason, and human welfare consists in the excellence of rational activity. This rational activity includes theoretical and practical; in the former man is akin to the divine, but in the latter he is more specifically human. Outward goods, wealth, health, children, fame—these are good in so far as they are conditions of, or illustrations of, man's rational activity, but have no independent value. They exist for the sake of the rational life and not for the life for them. The position of pleasure relative to welfare is not wholly clear in the details of Aristotle's treatment, yet his fundamental principles seem certain. Pleasure is not the end of human action; yet it is the universal concomitant of perfect activity and that which serves to perfect this perfection. If the two could be separated, the wise man would choose the activity without the pleasure rather than the pleasure without the activity, but, as a matter of fact, this separation is not possible. Yet, in all cases, it is the objective nature of the activity that determines the value of a pleasure, and not the amount of the pleasure itself. The emphasis in Aristotle's treatment is upon the idea of welfare and the right conditions of the whole mode of life. It consists in rational activity because this is not a specific and exclusive form of activity, but is one which includes and harmonizes all others. In reason all human activities and their interpretation and completion and hence their well-being.

So also Paulsen:

'The goal at which the will of every living creature aims (welfare) is the normal exercise of the vital functions which constitute its nature. Man 'desires to live a human life and all that is implied in it; that is, a mental, historical life, in which there is room for the exercise of all human, mental powers and virtues.'

WERWOLF.—See LYCANTHROPY.

WESLEY.—I. Early life.—John Wesley was born on 17th June (O.S.) 1703, at the rectory of Epworth, being the son of Samuel and Susannah Wesley. Both his grandfathers were among the ejected ministers of 1662, so there was a strong Puritan strain in him. His father, Samuel, was rector, poet, scholar: he spent ten years in preparing his work on the Book of Job. The mother, Susannah, trained her children in the great truths of the Christian faith. There is something singular in the way in which his mother brought her many children into the audience chamber of God. On 28th Jan., 1714, John Wesley was nominated a pupil at Charterhouse, London. The treatment meted out to the boys of those days was Spartan, but Wesley's activity and enjoyment of being at school. As we read his Journal, and see him lovingly wander each year about the grounds, we note that Wesley never forgot his boyhood, and

that age could not wither his affection for Charterhouse. On 24th June, 1720, he was elected to Christ Church, Oxford, and remained there until 1725, when he went to Leiden and New College, Potter. About this time the Imitatio Christi and The Rules for Holy Living and Dying became his frequent companions. The Imitatio taught him that 'true religion was sented to the heart, and that God's will was extended to all our thoughts as well as words and actions.' It is of the Rules that Wesley writes:

'In reading the first parts of this book, I was exceedingly affected with that part in particular which relates to purity of Intention. Instantly I resolved to dedicate all my life to God: all my thoughts, and words, and actions.'

Wesley was now a determined seeker, there was a great hunger within him for something beyond the experience which he had—for thirteen years he sought peace by prayer, tears, and through difficult and tragic experience, and on 24th May, 1738, entered into a true evangelical experience of Divine love.

In March, 1738, he was elected Fellow of Lincoln College, Oxford. It is with this College, rather than Christ Church, that Wesley's name is so closely linked: for, though the great hall of Christ Church is best known by name, the College of Lincoln, now called Wesley, Lincoln College has a greater treasure in the room in which the Holy Club met, and where the movement began which was to give new life to the Churches of this and other lands.

MUCH help came to Wesley by the reading of William Law's Serious Call and his Christian Perfection. Although some parts of Law's work offended him, he tells us: 'The light shone in so mighty an influence upon my soul, that everything appeared in a new view.' Readers of the Journal, and especially of the diary, remember the strenuous efforts of Wesley to be accounted worthy; his early rising, his long, earnest prayer over his immature, methodically planned day, with a task for every hour, his thoughtful care for his pupils, his ejaculations which sob forth even now after the lapse of so many years, his passionate and unceasing quest for a deeper experience—all these things are clearly recorded there. The Castle and the Rocardo at Oxford were both visited by him; for to the prisoners he must preach the message of Divine grace—even though he had not yet entered consciously into it. In August, 1727, Samuel Wesley being infirm, John went to his help, and remained in his parish for about two years. He then returned to Oxford. Later (1734) he had pleaded with that insistence that he should take his work and rectory. The reply of Wesley is elaborately wrought, and is a strong plea that his sphere is in Oxford, and not in Epworth. There is in it no splendid disregard of self such as we see in his later days; he seems more anxious to have circumstances conducive to his own soul's culture than to save the souls of others. On his return to Oxford he found that his brother Charles, who was then at Christ Church, had gathered round him a small group of men to read the New Testament. John Wesley joined this company, and soon became its leader. It is well to remember that the Holy Club showed a much greater diligence with regard to Holy Communion than the Church of those times, a tendency to guide their life by early Church practice, a passion for prisoners and outcasts, and a diligent and careful appreciation of the times. As the members went with regularity to take the sacrament, they received much taunting from the undergraduates. It was at that time that they were called 'Sacramentarians.'

3 Journal, i. 467.
WESLEY

'Bible Moths,' and Methodists (a double reference—both to a medical sect and to their 'method' in all religious practices). John Wesley was now, in deeds, a man of God to Oxford. A band of keen undergraduates gathered round him; he believed that he had found his work. Owing to the insistance of his family, however, he applied for the living of Epworth, but without success. His dying father spoke prophetic words; to John he said: 'The inward witness, son—the inward witness, that is the proof, the strongest proof of Christ's faith,' he said: 'Be steady. The Christian faith will surely revive in this Kingdom; you shall see it, though I shall not.'

2. The Georgia ministry.—In 1735 Wesley was invited to go on a mission to the colony of Georgia. His father now being dead, he with some diffidence mentioned the fact of the offer to his mother, who said: 'If I had twenty sons, I should rejoice if they were all so employed, though I should never see them more.' John and Charles Wesley embarked at Gravesend on 14th Oct. 1735. He tells a friend the motives which sent him forth as a missionary.

Chief motive to save my own soul. . . I hope to learn the true sense of the Gospel of Christ by preaching it to the heathen.'

In later years he was not so anxious about his own spiritual condition, but about those of others. Of the voyage, as at Oxford, he showed meticulous strictness in the apportioning of time: he learned German and studied his Greek Testament, and held and wrote sermons. He was greatly impressed by a party of Moravians on board, especially by their conduct in the tempest. Amidst the storm they were quite unalarmed and went on singing. Wesley asked one of them, 'Are you not afraid?' He replied, 'I thank God, no.' 'But were not your women and children?' 'No, our women and children are not afraid to die.' Wesley landed at Savannah on 6th Feb. 1736. He soon met Spangenberg, the Moravian, who asked him, 'Do you know Jesus Christ?' 'I know He is the Saviour of the world.' 'True, but do you know that He has saved you?' 'I hope He has died to save me.' Spangenberg then asked, 'Do you know yourself?' Wesley answered, 'I do,' but, in telling the story of this conversation, says, 'I fear they were vain words. Wesley's main purpose in going to Georgia was to become a missionary to the Indians. This was frustrated by the governor of the colony, General Oglethorpe, who desired his presence in the European settlement. Denied his chief end in coming, he nevertheless found work for each moment in the day; he taught the children, visited the sick, reproved the sinner, and gathered a few folk together for mutual conversation. He encouraged, he rebuked, he prepared communicants, and repelled those whom he thought not worthy. He was a vigorous High Churchman, and a most earnest seeker of the Light. In summing up the matter in his Journal Wesley tells us that he was a child of wrath, an heir of hell, but in later years, when he revised his writings, he says, 'I believe not . . . I had even then the faith of a servant, though not of a son.' Grave misunderstandings arose between Oglethorpe and the Wesley; but they were later reconciled. Suspicious and misunderstanding grew like weeds in the garden of this colony. As we now know from the standard edition of the Journal, Wesley's love, to his love of Savannah, Mr. Causton. A change, however, came in her affection, and she swiftly married Mr. Williamson. Soon after Wesley repelled her from Holy Communion, and refused to acknowledge that she was not in a fit state of heart to receive it; but on the surface it appeared like the act of a disappointed man. Her uncle brought a charge against John Wesley, who refused to acknowledge the power of a civil court in ecclesiastical affairs. Wesley, realizing that no further good would come from his ministry there, left the colony, and sailed for England on 22nd Dec. 1757.

3. His evangelical conversion.—Wesley's comment on his Georgia ministry was:

'I went to America to convert the Indians; but oh, who shall convert me? . . . I have a fair summer religion. I can talk well; say, and believe myself, while I see. But let death look me in the face, and my spirit is troubled. . . . Oh, what I have ever been afraid of death?'

Eager and hungry, on his return to England he met Peter Böhler, who told him, 'My brother, your brother, that philosophy of yours must be purged away.' 'Preach faith till you have it, and then because you have it you will preach faith. He gathered with the members of the Little society in Fetter Lane. On 24th May, 1738, there came to Wesley his Magna Dies—the day of his evangelical conversion. No one had ever sought the haven of faith with more passionate devotion—it was a day never to be forgotten. He describes every part of it:

'I think,' he says, 'it was about five this morning, that I opened my Testament on those words, "There are given unto us exceeding great and precious promises." He wrote that, just as he went out, he opened the New Testament again on those words, "Then art thou far from the presence of God." He tells of his afternoon visit to St. Paul's, and notes that the anthem was 'Out of the deep have I called unto Thee, O Lord.' We now come to the locus classicus of the life of Wesley. In the evening I went very unwillingly to a society in Aldersgate Street, where one was reading Luther's preface to the Epistle to the Romans. About a quarter before nine, while he was describing the change which God works in the heart through faith in Christ, I felt my heart strangely warmed. At that season I felt my heart strangely warmed, but that the fire of that love never died down. His eye was indeed single, and thus his whole body was full of light.'

4. The great offensive.—From 1738 to 1791 Wesley led the great offensive—he attacked sin in its strongholds, and everywhere proclaimed the free grace of Christ. He seized every opportunity: if he were in a conclave, he spoke to his fellow-travellers; if he were staying at an inn, he told his fellow-guests of the love of Jesus; even when crossing to Ireland, when the ship was tossed by the storm, he held a service for the passengers. Driven out of churches, he thrashed out his case and quite against his taste, followed the example of Whitefield, and took his stand in the open air, and preached to the crowds at Kingswood, Bristol, and Moorfields. His greatest help came from his brother Charles, who worked and spoke among the miners of Kingswood, the labourers of Lincoln.

WESLEY

dry every morning. I have a lingering fever almost every day. . . . Horrid! But, be He God, I do not slack my labour. I can preach and write still."

He died on 2d March, 1791.

5. His controversies.—As we have seen, Wesley owed a great deal to the Moravians, and Zinzendorf was for a short time a great admirer of Zinzendorf. At first he hailed Herrnhut as a new city of God. But the breach between Wesley and the Moravians came soon after Wesley launched his great offensive. A seine of theologically had a tendency towards a mistaken kind of piety; they preached that there was no need for Bible or sacraments, that there was nothing to be done, and that the soul must wait for God to work. These they were styled, raised his ire, and the break between the Methodist Societies and the Moravians was soon complete. The indictment of Wesley could only have referred to a small section, for in that Moravian band there were men and women of real saintliness. It was, however, an unfortunate happening, for it gave Wesley a somewhat violent antipathy to mysticism.

It speaks of the 'poison of mysticism,' and refers to 'Ralph Mather, a devoted young man, but almost driven out of his senses by Mystic Divinity. If he escapes out of this precious share of the devil, it will be a wonder.'

Wesley was right in speaking strongly against that which was mysticism falsely so called, but he was a mystic himself. The man who translated with such passion Tersteegen's hymn, 'Thou hidden love of God,' could not have been anything else. His controversy with William Law is surely due to a misunderstanding on the part of Wesley. Wesley wrote when he was perplexed, and his soul was strangely restless, and the honours are chiefly on the side of his teacher, Law. His greater and most fundamental controversy was with the Calvinists—and with logic and passionate love he claimed that Calvinists did not stick, as they were fighting for all. They fought and won, but the victory came not through the strident notes of controversy, but rather through the rousing strains of song—

"For all, my Lord was erected,
For all, for all my Sav'rd!"

One of the most beautiful things in the history of this controversy is the fact that such vital theological disagreements as there were between Wesley and his colleague never broke their friendship, but seemed rather to deepen and strengthen it.

6. Wesley and the Church of England.—The Church of England never had a more loving son than John Wesley, and never one who strove more loyally to help it. He was driven out of the Church of England, yet in 1780 he wrote:

"I declare once more that I live and die a member of the Church of England; and that none who regard my judgment or advice will separate from it."

But he did things which show that in another sense he did not belong to her. He believed in her, but he saw with his quick eye the needs of his age, and the organization of the Church of England was not flexible enough to meet the changing conditions of the time. He saw the great needs of America, and, realizing the urgency of its claims, in 1784 consecrated Coke as bishop and Whatcoat and Vesey as presbyters for that continent. In 1788 Wesley ordained preachers for Scotland. His loyalty was of that higher kind which would not allow rules to interfere with the advance to which he believed Christ was calling His people. This is shown in the encounter with Joseph Butler, when bishop of Bristol. The great writer of The Anatomy said that Wesley had no right to preach in that diocese. Wesley said, "I can do . . . ."

2. For the theology of Methodism see art. METHODISM.
3. By the grace of God I never fret. I repine at nothing. I am discontented with nothing (Journal, iv, 131, note).
4. "Farther Thoughts on Separation from the Church," (written 11th Dec. 1789), Works, vili. 246.

Shire and Cornwall and throughout the land. The Evangelical Revival spread by song as well as by sermon. There was much of the great military commander about Wesley; he chose three military strategic points—London, Bristol, and Newcastle-on-Tyne—and for the conquest of Ireland he made Dublin his base. When others were deaf to the call of the Spirit he sent out a band of preachers to capture that continent for Christ. He moved constantly from place to place, riding on horseback until his later years, a sort of aswand-carrion of the Kingdom, a tireless rider, the champion of the fighter, and the herald of the grace of God. J. Hampson, one of Wesley's preachers, who left with a grudge against him, published in 1791 a Life of Wesley. In its admirations it is of immense value, for he writes critically, and is a contemporary of the man of whom he writes. He thus sums up Wesley's life of toil:

His public administrations were but a part of his labours, but from these we may form some conception of the rest. During fifty-two years he generally preached two sermons a day. He laboured with all his might, in fact, twice a day, and allowing fifty sermons annually for extraordinary occasions, which is the lowest computation that can be made, the whole number in fifty-two years will be 49,452. To these may be added an infinite number of exhortations to society, which he delivered at all times and seasons. He made is 4,000 miles annually, which, in fifty-two years, will give 209,000 miles. An almost incredible degree of labour: and which, nourished by the most active spirit, could have enabled him to support.

Augustine Birrell epitomizes his labours, and minglest with the telling of them his peculiar piquancy:

"John Wesley contested the whole kingdom in the cause of Christian Truth during a long and furious contest. He did it for the most part on horseback. He paid more tumpsies than any man who ever breastred a beast. Had he not preserved his sobriety, which he loved, he would have made himself a historical curiosity by the price of his services and his labours. As it is, he has done the world a great service, and he has left a distinguished name, and the traces of the times during which he lived and moved, and had his being."

This leads us to one of the most wonderful of his gifts, the power of being everywhere. He had visited his societies, entered prisons, galloped along the highways of England, the programme varying but little, and yet he never became stale; each day called him to a new adventure and was a fresh gift from God. His work never became to him a commonplace; he thrilled to it, he hailed it over with a song. A comparison of the early years after his evangelical conversion and the later years of his life reveals that his enthusiasm never waned, but rather waxed stronger and stronger. Here is the record of 11th Sept. 1759.

"I went over to Kingwood. Sweet recuss! where everything is just said and done."

"Man was not born in shades to lie!"

Let us work now, we shall rest by-and-by."

In March, 1790, he began a great preaching tour through England and Scotland, which lasted five months. Here is another entry—1st Jan. 1790:

"I am now an old man, decayed from head to foot. My eyes are dim, my ears are dull, my right hand shakes much; my memory is hot and

4 Birrell, Miscellanea, p. 55.
5 Journal, viii. 10.
most good here, so here I stay.' That was his one test. He was at heart a Catholic and like the scribe who brought gold dust to the treasure things new and old. So see this in his Christian Library, in which he included writings from men of all Christian communities, the only requirement being that each reprint should give spiritual strength to its readers.

7. Wesley and humanism. — It was the boast of Wesley that he was 'homo unius libri, and so he was, though few men of his age read more books. The spiritual appeal was rather to Scripture, or to the Journal — the Journal could have been written only by a man who had read enthusiastically the book of life. There may be little charm of style, but there is a conciseness, a fact of rightness, of writing, a peripatetic, that is hard to excel. He had not studied his Addison for nothing; the references in his early diary — 'Read Addison' — are illuminating. He had much humour, but he never forgot that Alexander Knox writes that his 'sportive sallies of innocent mirth delighted even the young and the thoughtless,' and Thomas Walsh writes of his 'witty proverbs.' Hampson says, 'It is as impossible to be long in his company without partaking his hilarity.' This man, who could have chosen the company of the great, lived and loved to live with the unknown. There are many parallels between St. Francis of Assisi, and one is to be found in this, that both went to the people — what the Little Brothers were to Francis that wonderful band of men, the early Methodist preachers, were to Wesley. It is interesting to note that two command the 18th cent., and one (Dr. Johnson) said of the other, 'He can talk well on any subject.' Johnson would fain have seen more of Wesley.

John Wesley's conversation is good, but he is never at leisure. He is always obliged to go at a certain hour. This is very disagreeable to a man who loves to hold his lace, and have out his talk 1 do. *

Southey says:

*His manners were always irresistibly winning, and his cheerfulness was like perpetual sunshine. It is true that his printed sermons do not best reveal his humanism; but they are treatises. A study of the Journal teaches us that the texts upon which he preached most were those which reveal his tenderness and his love of the doctrines of grace. The text 'When they had nothing to say, he frankly forgave them both,' I can understand, and again in the Journal, and the motif of his ministry. Horace Walpole informs us of his vivid way of preaching. 'I have been at one opera — Mr. Wesley's. . . Wondrous clever, but as evidently an actor as Garrick, when he told stories like Latimer, of the fool of his college said 'he and I thank God for everything.'

John Nelson, one of his early helpers, describes the power of Wesley's preaching:

*But I was like a wandering bird, cast out of the nest, till

John Wesley came to preach his first sermon in Mowbray. O that was a morning: morning to my soul; short to make his hair, and turned his face towards where I stood, and I thought fixed his eyes upon me. When he had done said, 'This man can tell the secrets of my heart; he hath not left me there; he showed me the remedy, even the blood of Jesus.' *

Sir Walter Scott tells us that he heard Wesley preach more than once in the churchyard at Kelso.

*He was a most venerable figure, but his sermons were vastly too colloquial for the taste of Saunders. He told many excellent stories. *

This man, of five feet three inches, of weight eight stone, an eye the brightest and most piercing that can be conceived, with his finely chiselled face which came to view again in that of the Iron Duke,* loved men and women not for what they were but for what they might be: he loved colliers, drunkards, cock-fighters, prisoners, because he saw in them the children of the One Father. He gave first his love to God, and that exalted his love for men — that is why it never grew cold. He commanded the 18th cent. on the religious side as much as Johnson on the literary.

Lecky has told us that Wesley saved England from a revolution, but we must remember that he brought about another, and that he has done more to break down social barriers than men realize — for he taught men and women the essential oneness of us all, that One is our Father and we are all brethren. His doctrine of faith stripped off the superficial disguises of life and revealed the divine possibilities of all men. Wesley was always ahead of his century; he was a great forerunner with regard to social reform; he lived on as little as possible, and gave the rest away. Hampson says, 'Perhaps the most liberal man in England was Mr. Wesley. His liberality to the poor knew no bounds.' He gave the people cheap literature, founded schools and orphanages, wrote numerous pamphlets on public questions, and his last letter was one in which he encouraged Wilberforce in his great fight against slavery — that traffic which he termed 'that horrible villainy, which is the scandal of England, of religion, and of human nature.' This 'brand plucked from the burning' broke up the frost of the 18th cent. by the glow of his flaming message. He formed a society which has become a worldwide Church; he brought inspiration to all the Churches, and his message still rings down the years — 'The best of all is God is with us.'

ton's account of the branches of the same Church.

See art. EASTERN CHURCH, Greek Orthodox Church, Russian Church.
tinction between these two branches of the Holy Catholic Church arose from the interaction of many causes, geographical, political, and theological. In part it may be traced to a single event of supreme importance in the historic evolution of the Christian faith.

1. Introduction; schism of East and West.—Up to A.D. 325, the church of the ancient Byzantium as the new capital of the Roman Empire and its name of Constanti-

nople, the Catholic Church of Christendom had remained one and indivisible; and, though the final schism was to be delayed for centuries, the rivalry between the old and the new Rome at one time introduces a divisive factor into the ecclesiastical relationships of the empire. Constantinople, already a Greek city with a large Greek population, was destined to become a second metropolis of the faith, representing Christian life and thought of a distinctively Greek type. Indeed, it may be said that imperial Christianity had shifted its centre of gravity to the Hellenistic world of intellectual and spiritual. It is significant that, when it was found necessary to formulate the teaching of the Second Council in order to finish the desolating heresy of Arianism, the list of the newly elected pope of Rome had been chosen in A.D. 325 as the place of assembly for the historic council which, so far from pacifying the Christian world, was the forerunner of schisms, schismology, and Schismatologists—where the various phases of the seemingly perpetual Christological problem received discussion and authoritative settlement. Christianity had spread with a relatively greater rapidity over the Eastern empire than in the provinces of the West. The Greek language known as 'common' Greek—the lingua franca in which the early records of the faith were written.—was naturally the medium by which the symbols of the Christian faith found their most logical and accurate expression. It is true that the patriarch of Constantinople, who was always under the control of the emperor, was never to achieve a position like that of the pope, who, left free from civil control, became the undisputed pontiff and vicar of Christ upon earth; but by the 5th and 6th centuries he had secured a commanding influence and bore the title of 'ecclesiastical patriarch'—a designation which, in spite of papal protests, has continued till to-day. The relations of emperor and pope were severely strained during the period of the Christological controversy, when the Emperor, when he condemned the Monothelite position, did not hesitate to anathematize the memory of Pope Honorius I. In A.D. 725 the opposition of Pope Gregory II. to Leo the Isaurian, who on the outbreak of the Iconoclastic controversy had vehemently condemned, and commended a crusade against, the use of images, led to a fatal separation between East and West; for Leo transferred Sicily, Southern Italy, and Illyricum from the ecclesiastical jurisdiction of the pope to that of Constantinople. A reaction in favour of images took place in the reign of Constantine VI., and in 780 the so-called Council of Nicaea gave a decision in favor of image-worship, which the pope approved. But this reconciliation was temporary and in effect was nullified in 800 on the coronation of Charlemagne by the pope; for, while in the West the pope became the religious head and the emperor the secular head of the Church, this process was reversed in the East, the emperor becoming head of the same Christian Church with a patriarch as subordinate to him. Still, though the separation between East and West was complete in secular matters, the final breach did not occur for two centuries. The rejection of the Filioque clause,1 which had been inserted in the Spanish Church to the Nicene creed in the 5th cent., and which was subsequently inserted in the Roman creed, was definitely decreed by the Council of Constantinople (A.D. 680) to which anathema was pronounced by the pope. But, though this was significant of the steadily widening breach between the two sections of Catholicism, it was not till a century and a half later that the final blow was struck. The patriarch of Constantinople, Michael Cerularius, closed the Latin churches and convoked of the city in 1054, and this drastic act was followed by the written attacks of his clergy on the Latin religion and its observances, and especially the practice of celibacy on the part of its clergy. The pope's legate, Cardinal Humbert, entered St. Sophia on 16th July during divine service and laid on the altar a decree of excommunication against the patriarch and his adherents. This act rent the Catholic world in twain, and it was the climax of the long-continued and deep-rooted misunderstanding between the two great geographical sections of Christendom. The Crusade of the Latin army to the Greek populace in 1182 and the sack and capture of the city by the forces of the Venetian of the Fourth Crusade in 1204 were events which revealed to the Greek church and the imperial court the far-reaching power and influence of the Church of the East, and led up to the fateful capture of Constantinople by Muhammad II. in 1453. Western Europe had left the Christian capital of the East to its fate; divided Christendom had enabled Muhammadanism to enshrine itself in Europe, and a sultan sat on the throne which Christian emperors had occupied since the days of Constantine.

The following survey is limited (1) to the general development in history of the polity, organization, and secular relationships of the Western Church, and (2) to its dogmatic history and its position in Christian thought, leaving the reader to study in other articles (to which reference is made) the more specialized treatment of the inner life of the Church, its observances and sacraments, its ritual and its liturgy, its canon law and discipline, its orders and congregations, the history of its moves- ments in their religious, intellectual, and social aspects, and finally the biographies of its outstanding personalities in the annals of its government, sainthood, and scholarship.

For the sake of the latter sections, the history of Christendom is conveniently treated in chronological order under the following heads: (a) the early period (from Constantine to Charlemagne [A.D. 312–800]); (b) the medieval period (from Charlemagne to Boniface VIII. [A.D. 1050–1303]); (c) the modern period (from the later Middle Ages to the present time [A.D. 1300–1920]).

In the first period, the period of expansion, we have the rise of the papacy2 with the conversion of the Teutonic races to Christianity; in the second, the period of consolidation, we have the papacy supreme in Europe, having attained the zenith of its influence and prosperity; in the third period the papacy was on the wane as the vanishing power of the papacy and the rise of Protestantism, which eventually led up to the distinction between religions of authority and a religion of the spine, and their conflicting ideals of ecclesiastical unity and catholicism.

2. Ecclesiastical polity and organization.—(a) Early period.—With the accession of Constantine in 325, Christianity became the imperial religion, and henceforth the Church was to be identified with that of the empire. The vicissitudes through which the empire passed during the three

1 See art. ARIANISM.
2 See arts. COUNCILS AND SYNODS (Christian), CREEDS (Eccumenical), and CONFESSIONS.
3 See art. ICONOCLASM.
succeeding centuries under the attacks of the bar- 
barian races of the West, Rome left an 
enduring mark on the constitution and organi-
tzation of the Church. The monarchical episcopate, 
which was recognized by Ignatius and accepted by 
Cyprian as the basis of Church government, was 
the governing feature of the Church of Rome. The 
Bishop of Rome was evolved. The doctrine of apostolic 
succession (q.v.) laid down by Irenaeus ascribed 
a spiritual pre-eminence to the Church of Rome as 
founded by St. Peter and St. Paul, and Tertullian in his early pre-
Montanist treatise, the Description of Heresy— 
always a favourite with the Roman Church— 
eloquently adopted the same line of argument, 
proclaiming the transmission of the apostolic 
'deposit' through the succession of the bishops. 
Established in the Eternal City, which was the 
visible focus of imperial greatness and might, the 
bishops of Rome were invested with a dignity 
which far surpassed that of the rival sees of 
Alexandria and Antioch. Moreover, the Latin 
conception of the Church as an external institution, 
more closely identified with the city than with the 
spirit, was controlled by bishops who were the vicars of an 
absent Christ and depositaries of saving grace, led 
up to the papacy as a logical conclusion. No 
similar tradition, the Church built on 
St. Peter as chief of the apostolic college, a 
hierarchy which traced its lineal descent by due suc-
cession from the first of apostles—these are the 
principles upon which the supremacy of the Roman 
see was established by Augustine, the greatest of 
the Latin theologians. In the 4th and 5th centuries 
the Church as it developed its organization on the 
new political divisions of the empire—especially 
Italy and Spain, following the conquest by Christi-
anity of the nations of the Franks and the 
Spaniards or Iberians—rose, by its beauty of 
ritual, its succession of distinguished Christian 
leaders, bishops, and kings, and its moral influence, 
to a position of great splendour. A generation after Augustine, Leo the Great, bishop of Rome (440-461), put forth a claim 1 for the authority of the 
Roman see which was never afterwards relaxed, 
and which saw its realization in the imperial 
authority over Christendom wielded by Hildebrand 
and Innocent III.

In 445 the emperor Valentinian III. issued a law 
decreeing that the see of Rome the supreme head of 
the Western Church on the three grounds of the 
primacy of St. Peter, the dignity of the city, and 
the decree of a holy synod. Resistance to the 
authority of St. Peter's successors in the Roman 
see was thus constituted a State offence. 

The title 'papa' (pope), which was applied in the West to 
all the bishops, became in the 5th cent. the exclusive designation 
of the bishop of Rome. Gregory VI. was responsible for the 
dereek which thenceforth limited the title to the occupant of 
the Roman see. 2

Although for a short time Justinian the Great 
(527-565) held sway over Italy and placed the 
Roman bishops on a level with those of Constantin-
apolis, the Lombards finally broke the power of the 
Byzantine emperor in Italy and the bishops of 
Rome practically assured the independence of the 
bishops of Rome. The decrees of the popes 
codified in the year 560 by Dionysius Exiguus, 
who founded this collection the decrees of the 
councils and the chief canons of the provincial 
synods. The Donatist position, 3 which made holiness 
of life the test of Catholicity, was defended by 
1 Cfr. Ser. Inf. 2, 'De toto mundo unus Petrus eligitur, qui et in omnibus episcopatibus vocationis apostolici, 
cuncteque ecclesiae patribus praepositor: ut quamvis in populo Dei multiplicem sint multiplices sunt nomen 
Dei, quod petitum est patribus, Petrus, quos principaliter regit et Christianum.'
2 See Ebrar, s. v. 'Papa'; Ducange, Gloss. Mederi et Inhære Latinis, s. v. 'Papa.'
3 See art. DONATISM.

the influence of Augustine, and the Donatists were 
in the end declared to be heretics. The supre-
macv of the hierarchy and the efficacy of baptism 
and the Lord's Supper were maintained to be in-
deerent of the personal character of individual 
officials and members of a Church which was 
found on the 'rock' of Peter and over its Catholic 
authority as a visible holy community to its apas-
tolic descent. On the other hand, the rise of 
monasticism in this period—first in the form of 
hermit colonies under the inspiration of 
Ignatius, then in the form of religious communities with a 
regula, or rule, of common-life discipline under 
Cassian at Marseilles, Benedict of Nursia (480-545) 
at Monte Cassino, and his disciple Maurus (St. 
Maur) in Gaul and Sicily—was a movement within 
the Church towards a higher type of spirituality, 
though it tended to fix the orthodox separation etwheen things sacred and profane or secular. 
From 590 to 800 Christianity spread over Western 
Europe, Anglo-Saxon England, Germany, and the 
new nations along the Danube, the missionary 
movement owing much to the inspiring zeal of 
Gregory II., known as 'the Great.' That the papal 
power not only survived the political and ecclesi-
alistical fluctuations and unrest of the times, but 
emerged with added prestige, is due to the person-
ality of Gregory's immediate successor, Pe
cardinal of the Church in England, consolidated the Church in Spain, brought the Church of Gaul into close 
connexion with Rome, and checked the abuses 
which had crept into his own diocese. In contra-
distinction to the Eastern title of pontifical 
patriarch, he assumed as pope (590-604) the title of 
'servus servorum,' which his successors have 
always maintained. After Gregory's death the 
outstanding event is the accession of Pepin, king 
of the Franks, in 751, probably by Boniface, 
Archbishop of Mainz, with the sanction of Pope 
 Zacharias. A second coronation by Stephen II. of 
the same king at St. Denis in 754 was the 
price which a grateful papacy paid to him for his 
help against the Lombards and his presentation of 
the lost lands to the Roman Church. Here 
is a sequence of events which marks a beginning 
of the long-coveted temporal dominion of the 
papacy. But the political troubles were not at 
an end, and Pope Leo III., owing to the disaffection 
of the Roman nobles, had to flee for his life to the 
court of Charlemagne, king of the Franks, in 752. The 
result was that, when Charlemagne came to Rome 
re-establish order, Leo crowned him at St. 
Peter's on Christmas Day 800 as emperor of 
Rome. This event, the significance of which can 
be paralleled only by Constantine's establishment of 
Christianity as the religion of the Roman Empire, 
revealed the fact that the majestic traditions of 
that empire—formed three centuries merely 
Sommun unburd in the West—still swayed the 
minds of men. Church and State were once more 
united, and the Holy Roman Empire became a 
compelling ideal, if not as yet a historic reality. 

(b) Modern period.—In this period the papacy 
held undisputed sway over Western Europe. 
Missionary enterprise widened the scope of its 
influence. If to Eastern Christianity is due the 
credit of the conversion of Russia under Vladimir, 
Scandinavia, the Slav nations, the Moravians, 
Bohemia and Hungary, the Wends of the north 
and east of Germany were Christianized by the 
Church of Rome. When warring factions 
broke up the empire on the death of Charlemagne, 
the popes took advantage of political changes to 
secure greater independence and strove to establish 
the ascendancy of the papal see over the State as 
the one sovereign of the European princes. The 
pseudo-Isidorian decrees (c. 589) proclaimed the 
1 See art. MONASTICISM.
inviability of the hierarchy and the pope as the fountainhead of justice, while the Donation of 430 was a further blow to the pretensions of both. While William of Occam (1280–1347) placed the emperor and the general council above the pope as his judges, and Marsilius of Padua in his Defender of the Church argued in the matter of the supremacy of St. Peter and the primacy of the Roman see, France reduced the pope to complete submission and Germany disregarded his anathemas. When Wyclif protested that the papacy was not the chief magistrates of Christ and that the Church, the great schism which had resulted in the election of two popes in 1378 was the basis of his argument —an argument which became irresistible when, on the failure of the Council of Pisa in 1409 to solve the problem, three popes instead of two widened the schism. Five years later the Council of Constance condemned John Hus to death. Stimulated by the writings of Wyclif, he had inaugurated a new religious movement in Bohemia and had been invited to the council under a safe-conduct granted by the Holy Roman Emperor Sigismund. There he expounded his views and was called to return to Bohemia on the understanding that he was to be erroneous teachings subservisive of the authority of the pope. He refused on the grounds of fidelity to conscience, was condemned and on 27th July 1415 burnt at the stake. His occasion and disciple, Jerome of Prague, suffered the same fate. The essence of the Hussite movement was its insistence on the rights of conscience and its appeal to a higher tribunal than that of pope and council. On the other hand, the Council of Constance had ended the schism by asserting its supreme authority over pope and Church. It had established its right to regulate the action of the pope and by the Council of Constance (1417) declared the papacy from an absolute into a constitutional monarchy—an event of great significance for the future history of the papacy. Constauinople fell in 1453, and in the latter half of this century the popes sought to restore their waning supremacy by invoking crusades against the Muslim. Savonarola (1452–98), a Dominican monk of Florence under the rule of the Medici, became alarmed by the prevailing decadence of morals, and owing to his zeal for the purification of society was excommunicated by Pope Alexander VI, who after failing to bribe him into silence secured his death by working on the hands of an inquisitor and his noblest fellow-citizen. Such movements as those of Hus and Savonarola, who were both martyrs in the cause of a higher morality, and the exemplification of an inward and spiritual religion in the lives of mystics like Tauler and Thomas à Kempis, were signs of the coming change. It was in vain that Pope Leo x. (1513–21) sealed the republic of the ‘pragmatic sanction’ by which Louis IX. of France had in 1299 asserted the right of the State to refuse papal taxation—and in vain that his imitation of the warlike policy of his predecessor Julius II. and his successful diplomacy had enabled him to recover something of the old papal prestige. It was but a momentary rekindling of the embers of a dying cause. The Reformation had arrived. It is true that the Protestant movement, triumphant in Northern Europe, was checked in Italy, though even in the native land of the papacy hatred of the vices and corruptions of the papal régime rallied many adherents to the new movement. The traditional Catholic Church, which had brought wealth and influence to the Italian

2 See, besides art. MONASTICISM, art. RELIGIOUS ORDERS (Christian).
people evoked a patriotic response to the forces of the Counter-Reformation. Moreover, the foundation of the Society of Jesus by Loyola (1491-1556),\(^1\) with its rigid observance of obedience to the will of its general and its unswerving devotion to the papal see, was a powerful factor in withstanding the advance of Protestantism, while by its missionary activity and Catholic influence it opened new lands and reconquered lost territory. The Council of Trent met in 1545 and after two interruptions produced in 1563 under Pius IV, the famous "Jesuitical" constitution, which led to the creation of new ecclesiasticates and was required to assent. The Catholic theologian Bellarmine with uncompromising dogmatism expounded the Tridentine symbol and the Roman Catechism, which even more rigidly supported the papal supremacy, and his labours for orthodoxy were continued by the Jesuit theologians Suarez and Petavium, while the mysticism of Francis of Sales, Molinos, and Fénelon wielded a powerful influence in favour of the Roman type of piety. The publication of the Catechism, the Breviary, and the Missal, together with an authorized edition of the Vulgate, aided the work of the Church in promoting the standards of Catholic orthodoxy. The Inquisition\(^2\) was re-organized and carried on in Italy, though not with the fanatical excesses which in Spain under the Inquisition and Spanish Inquisition had been a source of lasting infamy. The Index Expurgatorium pronounced its ban on all anti-Roman books and particular passages of books. In 1588 the repeal of the Edict of Nantes, which was the great charter of Huguenot rights in France, marked the climax of a half-century of persecution and political ostracism. In the 18th cent., the efforts of the Western Church to withstand the Protestant movement found a formidable ally in the Catholic Church. where the Inquisition had lost its earlier glow and enthusiasm. A spiritual and intellectual latitude prevailed—a reaction partly from the theological strife of the previous generations and partly from the dynastic struggles caused by the ambitions of Louis XIV. and Frederick the Great. The Society of Jesus was temporarily extinguished. Where religious reforms were attempted—e.g., by Joseph II. in Austria—they proved abortive, probably because they were inspired by the free-thinking spirit rather than by genuine religious earnestness.

Under the French revolution the Church shared the fate of the state, but Catholicism was not formally abolished as being hostile to the new republic. The Goddess of Reason was enthroned in Notre Dame, and Robespierre's attempt to restore religion by enforcing a belief in God only checked for a moment the torrent of infidelity. In 1801 Napoleon concluded a concordat with Pius VII., in which the Catholic religion was declared to be the religion of the majority of the French people; but he provoked the pope's hostility by demanding the right to appoint a patriarch of France, the abolition of clerical celibacy, and the support of the pope against England. Excommunication of Napoleon was followed by a protracted struggle with the pope, which was only ended in 1814 by the fall of Napoleon. In Germany the ecclesiastical states were secularized and subjected to civil rule. In Spain the Inquisition was abolished. The pope espoused the cause of absolutism which the formation of the Holy Alliance of European Powers was intended to maintain. Tyranny, reaction, revolution, and democratic movements aimed at the authority of kings. In 1814 the Jesuit order was revived. Lamennais's attempt in France to associate ultramontane ideas of the pope's spiritual supremacy\(^3\) with the advocacy of freedom of worship and liberty of conscience was repudiated by Pope Gregory XVI. On the other hand, in England Catholic emancipation and the return of Roman Catholics from the political disabilities imposed at the Restoration. In 1846 Pope Pius IX. began his policy of liberalizing by providing for his kingdom a constitution and a hierarchy for the Church of Rome under his temporal authority. A quarter of a century later, on the capture of Rome by Victor Emmanuel (1870), Italy was unified and the Church was placed under one temporal head. All ecclesiastics were required to assent. The pope's temporal authority was finally lost. In 1854 Pius IX. had promulgated on his own authority without any conciliar sanction the dogma of the Immaculate conception (p.c.), and in 1870 at the Vatican Council the dogma of papal infallibility\(^4\) was decreed in spite of the opposition of the 'Old Catholics'\(^5\) of Germany, who held that the concurrence of pope and council was required for the validity of a doctrinal definition. Some of these, like Hefele, submitted, but Dollinger and his associates seceded and formed a confederation of English, Americans, Swiss, Russians, and Greeks, who together with Pius IX. provided a nucleus of what was to become an Old Catholic congregation. The movement never captured the people. Both England and Germany were alarmed by the prospect of ultramontanism and of the Holy Father's reaction, but a spiritual and political reaction followed, and under Ferry and Gambetta (1850-81) the 'March decrees,' breaking up the Jesuit Society and congregations not recognized as Catholic, and requiring Catholic students to be enrolled in State universities, were carried. During the last generation the secularist movement in France advanced stage by stage—until in 1905 the separation of Church and State was decreed by the French government and all churches and church property became the possession of the State. A situation was thus created for both Catholics and Protestants which called for voluntary organization on the part of their adherents, with the result that the cause of religion in France has not lost but rather gained in public esteem.

Even from this rapid survey, which has selected what may be regarded the most significant facts, and the fundamental aims of the papacy, and the development of ecclesiastical life and order within the Roman Church, we may infer what the Western Church has stood for in European history since the days beginning with the age of Constantine. Its aim has been to include humanity within its spiritual fold, while exercising a dominating control over the secular fabric of the State, its kings and governing authorities. This fundamental duality of spiritual authority and temporal domination, which reached its climax in the Holy Roman Empire, was held to be the secret of progress religious and social, and none can deny the splendour of the conception which inspired Hildebrand and lifted the Mediæval Church to a position of majestic influence and striking prosperity. But it was a glorious dream destined to vanish at the touch of reality, a harmony of incompatible opposites which could not endure, a service of two masters which was to end in disillusion and disaster. The intolerance of the Church and its relations to the State, its attitude towards ecclesiastical and political aspirations and with worldly aims of knighthood tempered to weaken its spiritual life. History has but recorded its verdict on the unreality of the Western claim to holiness by adopting the

limiting epithet 'Roman' in its designation of the Catholic Church of the West. The narrowness of its conception of what constitutes Catholicity also appears in its attempt to describe the leaders of the Church as the 'children of the Logos,' thus raising the question of the powers of evil—its enduring services in the task of redeeming the world from atheism and saving it from sin, and further in its self-renouncing ministries to the poor, the infirm, and others. From age to age it has received warnings and calls to forsake the path of earthly domination and to seek only the unity and freedom of the spirit; but its answer is the dogma of papal infallibility, which is the admission of a fatal weakness—a bold but despairing attempt to enforce an authority which cannot endure the light of reason and spiritual liberty. Paganism and traditionalism are the perils of most forms of faith—the one, according to Sabatier, finding 'its most obvious and crudest expression in Catholicism, in the constitution of its priestly hierarchy, in the opus operum of its officers, and in the dis- tinctive practices with which Catholic devotion persists in over-laying itself'; the other revealing itself in the Catholic apotheosis of the past—whether the history of a period or the body of cultive traditions,--dogmas—which in the course of time becomes a hindrance and a despotism fatal to spiritual progress. And the view that the Western Church has been materialized and narrowed by its persistent policy of confining the Spirit within forms and rites and hierarchical authority, and by its fatal distrust of reason and conscience, is confirmed as we trace the attitude of Rome to the developments of Christian thought in the ages under review.

3. Development of theology and religious thought in the Church of the West.—(a) Early period: Augustinianism and influence of Greek theology.—The evolution of the Christian Church into the unity of Catholicism was not entirely a development of organization necessitated by its progress over the Roman Empire and moulded by its imperial environment and its secondary relationships. The external and institutional form of the Latin Church cannot be explained if the influence of its theological standpoint and its fundamental dogmas is ignored. Its claim to authority over the soul of the Christian is based on a distinct type of theology to which the distinguishing epithet 'Latin' has invariably been applied. From this point of view Augustine is more palpably the founder of the Western Church than St. Peter. This remarkable thinker is revered by the Catholic and the Protestant alike: by the former because of his emphasis on the authority of the Church and the imposibility of salvation outside the Church, by the latter because of his assertion of the divine sovereignty and of predestination (q.v.) and his interpretation and practice of evangelical and experimental piety. But, though it is true that his personal witness to Christ is his life, his thought lifts him beyond all the divisions of Christianity, the fact remains that he devoted all the resources of his intellect and spiritual zeal to the service of the Catholic Church, which he believed to be the only possible medium of salvation to the world. The grace (q.v.) which saved came indeed from above, but it was deposited with the succession of bishops who alone were empowered to administer it to the elect. His God was essentially a deistic or transcendental Deity, developing itself in and regulating human affairs by His commissioned agents, the hierarchy of the Catholic Church. Original sin (q.v.) was an effectual barrier to man's reconciliation with God; and the Church was to place a greater emphasis on the external rite of baptism (q.v.) as a mode of regeneration than on the merits of Christ. The power of sin which is seated in the heart of the individual will could be broken by the ordinance of the Church as the appointed channel of grace. In fact, 'grace' takes the place of Christ in Augustinian theolocy: on the one hand, it is the sovereign will of God who decrees the salvation of the elect, and, on the other, 'a kind of spiritual potency' deposited in the hierarchy and mediated by the priesthood in the sacraments to the people. Only a portion of the race could be generated in baptism; the residue were doomed to eternal punishment. It was by these views that Augustine made possible the development of the Church of the 5th cent. into the papal empire of the Middle Ages. There is hardly a side of the Church's life or practice—purgatory, the intermediate state, the celibacy of the clergy, the invocation of saints, reverence for relics and images, the distinction between mortal and venial sins, the loss of unbaptized children—without Augustine's influence among his opinions. With all its defects, however, this can be said in favour of the Augustinian theology, that it consolidated the Western Church, its thinking and its discipline, and saved it from the wave of Mahometanism which overwhelmed the Church of the East. Augustine was powerfully influenced by the Platonism of the Alexandrian teachers, especially in his earlier life; but his mature treatises show but scanty traces of sympathy with the standpoint of the Greek theologians and are obsessed by his theory of the Church, which in its rigidity and narrowness reveals the mind of a great ecclesiastic rather than of a profound philosopher. It has often been asked if the principles of Greek theology influenced the thought of the West. While it is universally agreed that the Latin Church borrowed freely from the customs and ritual of paganism, to what extent was it dogmatic teaching affected by the views of Clement of Alexandria, who proclaimed the continuity between Christianity and the higher thought of the Greek philosophers and theologians? But Alexandria derived this idea of continuity from the truth of the divine immanence (q.v.) in human nature, taught that the Incarnation revealed the organic union between God and man and was the real atonement for sin, asserted that there was no opposition between reason and faith, regarded the Church as a community whose spiritual life was that of the Logos (q.v.), and its sacraments as symbols of inner processes, and proclaimed that heresy was an aid to the discovery of truth. Origen followed with a profound learning and philosophic insight to lay the foundation of the doctrine of the Trinity in his teaching respecting the 'eternal generation of the Son.' Athanasius (q.v.) shaped in an atmosphere of controversy the orthodox Trinitarian formula against the deistic interpretation of Arius, and secured the insertion of the vital term παράγωγος in the Nicene symbol. His triumph is for ever significant, and the creeds of Christendom show that Greek thought fulfilled a providential task in the reconciliation of Christianity with reason, while the genius of Latin Christi-
spirit of Tertullian's *Prescription of Heresy* always hostile to heretical thought1 and the independent activities of reason, owed to Greek theology the intellectual gifts of the mind and a philosophic and accurate definition of the logical subtlety and lucidity by which alone the truth could be established on a firm basis. It owed its symbols and the power of defending them, its doctrine, and its apologia to Greek theology. The dogmas of Greek theology were held to be valid only when enforced by its authority. Without the beneficence of the hierarchy, no truth, no new conception of truth, could be tolerated. Tertullian were certain principles of Greek thought, such as the essential kinship of man with God, which the Western Church has never regarded with complete conviction; rather it has clung to the conception of the infinite distance between the human and the divine which was characteristic of the theology of Antioch. It has to be remembered that, when Greek theology passed into the Western Church, new peoples and races were coming to the front and were eventually to be won to Christianity; hence the method of presenting the simpler type of Christian thought based on Church authority, rather than the doctrine and the emanations of truth, might be justified on grounds of expediency. It remains true, however, that the earlier Greek theology of the Alexandrian type has left its traces in the consciousness of the Latin Church; its breadth and universality of vision, its synthesis of the human and divine, has illuminated but not transformed the dogmatic teaching of Catholicism. With Clement and Origen Rome has shown less affinity than with the pseudo-Dionysius. The *Celestial Hierarchy* (translated by John Scotus Erigena2), with its ranges of angelic intermediaries between God on the one hand and the bishops and deacons of the Church and finally common humanity on the other, and with its path to God by the practice of Oriental asceticism, was the very negation of the same and logical teaching of the Christian Platonists of Alexandria.

(b) Medieval period: scholasticism.—The age of Charlemagne marked a low stage of religious thought, although the culture of John Scotus Erigena,3 based on his knowledge of Greek and in particular of Plato and Origen, enabled him to produce a philosophy of religion far ahead of his times. Alcuin of York was a popular teacher, but he was not an original theologian and has a larger place in history than in the office of being a compiler of the Lectionary and works of private devotion. It is significant that in the 9th cent., the dogma of transubstantiation4 first became the subject of formal discussion. Neither Cyprian nor Tertullian was an exponent of a materialistic conception of the Lord's Supper, while Augustine held that its benefits were available only for the elect. To the monk Paschasius Radbertus, who wrote about 881 a treatise *De Corpore et Sanguine Domini*, belongs the credit of introducing the view that the presence of Christ was not in the soul of the worshippers but in the eucharistic elements. On the other hand, the early Middle Ages had rejected the image-worship of the degenerate East, and it was at a later period, when society was in the state of confusion and unrest caused by the invasions of Huns and Northmen, Danes and Saxons, that a reaction in favour of the Church as the one stable institution and refuge in a world of chaos took place; the great cathedrals were built; great ages and people were lost in that majestic Gothic temple. The art ministered to religious devotion in music, in the impressive ritual and fair

conferred indisputable benefits on the world, was found unequal to the opportunity. The world had widened; new nations and new languages had appeared. Latin was no longer a medium of communication which enabled Wyclif and Melanchthon, the first translation of the Scriptures into homely English had opened the way to a new authority. The Bible, not the Church, was the source of revela-
tions. In Scotland, outstanding of the French saints belonging to the order of St. Victor, who used the tender and almost voluptuous imagery of love, or of the German saints like Eckhart and Tauler, whose expositions were cast in a stern and more ethical mould, impressed on the world the truths of the immediate intuition of God by the soul and the divine immanence. The air of Europe was alive with new currents of spiritual and intellec-
tual power. Even prior to the fall of Constantin-
ople in 1453, when Greek scholarship and learning sought a fresh habitation in the cities of Europe, the Renaissance had inaugurated in Italy under Pico della Mirandola, a new simplicity and classical literature and evoked a new sense of the many-sided interest of the present life—in a word, the humanism which was hitherto not only to transform the intellectual and ethical life of society as a whole but also to look on the world and the course of Christian thought and theology. It was on the intellectual side an expression of the individualism which within the realm of the spirit ecclesiasticism had failed to quench. By the work of Wyclif and Hus, by evangelical movements like that of the Wyclifians, by the mysticism of the cloister and the pulpits and lay-societies such as the "Friends of God" in Germany, the individual soul had expressed its spiritual conviction and ideals and the way had been prepared for a revolution in Christian thought. Luther entered into the heritage won for spiritual freedom by Wyclif and Hus, the latter of whom had died for the rights of con-
science. The Reformation was not a break but a fresh stage in the evolution of Christianity. It was the re-assertion of vital principles of faith which had found expression from time to time in the history of the Church from the days of St. Paul onwards. In essence, the position taken up by Luther was not the negative conviction that certain abuses which called for destruction had crept into the Church: he declared afresh the positive conditions of human salvation. He began with the people, not the cloister, nor the hierarchy. It was the people who carried the Church to the prinal and absolute authority upon whose well depended the destiny of the soul; but his rejection arose from his broad and clear conception of the value of the individual soul. His emphasis on justication by faith was in effect a plea for human rights—the right of access to God and the right of communion with Him as the condition of ultimate salvation. In other words, Luther came into con-
lict with the Roman Church because it was founded on ideas repugnant to the Christian conscience. The practice of selling indulgences by which the sinner obtained remission of the 'temporal' penali-
ties of his offences was to him only one among many results of the false assumptions on which Rome based her claims, viz. the supreme authority of the episcopate as constituting the Church and the denial of spiritual privilege to the laity (q.v.). He opined the fatal distortion of 'Western' Church, in which the Medieval Church had emphasized between things divine and human as inherently incompatible with each other —the distinction which had created the opposites, Church and State, of the Sarrazinian and the re-
grance. It followed, if this dualism was erroneous, that a layman had the power to interpret the written revelation which hitherto had been claimed as a priestly prerogative. Finally, from these premises flowed the truth of private judgment on the part of each man—"a position upon which Luther maintained when he appealed for the retention of a viable authority while admitting its human origin. In Switzerland Zwingli (q.v.) and Calvin were the leaders of this movement. The former by his emphasis on the divine in-
manence re-affirmed the standpoint of Greek theology, and he was Greek in his denial of original sin, in his assertion of the salvability of the heathen, and in his doctrine of the sacraments as symbolic and memorial. Calvin stood for order and discipline, and founded a Church the peltie of which took root in Scotland, the Netherlands, in Germany, in Switzerland, in France among the Huguenots, and in England among the Puritans. He held that the Church consisted of the elect and that the clergy were endowed by the Holy Spirit in ordina-
tion with powers which gave them an age of the people. It was, however, less as an ecclesiasti-
cal administrator than as a theologian that he left his mark upon the world. His rigid insistence on the verbal inspiration of Scripture, his theory of the fall of man, his doctrine of grace, imman-
ent, his assertion of the divine sovereignty which rendered God remote from nature and humanity and made progress depend on His arbitrary will, are the familiar elements of his theology. As compared with Zwingli, he continued the Latin tradition, but, on the other hand, he was essentially Protestant in his doctrine of the individual who, though his conscience was controlled by the clergy, yet owed his ultimate destiny to the sovereign majesty of God—a theory which made for human freedom and was destruc-
tive of clerical tyranny, while it disposed at once of the customs of image-worship and Mortality and brought to the profession of the Christian a robust ethical standard based on the teaching and example of Christ. As Thomism was wrought into the texture of Dante's Divina Commedia, Calvinism received a majestic setting in the epic of Milton, while Bunyan made an appeal alike to the humblest and to the most enlightened intellects by his immortal delineation of the Reformed the-
ology in his Pilgrim's Progress. Protestantism left its mark on Catholicism by producing the kindred movements of Jansenism (q.v.) and Gallicanism (q.v.), the former for ever to be associated with France and the latter with the prom-
thenceforth to be distinguished by the great name of Bossuet. Pascal (q.v.) opposed the Jesuits with much of the Calvinistic fighting spirit and stands in the line of Augustine and Calvin as a theologi-
gian, though at heart a melancholy sceptic who never succeeded in harmonizing his beliefs with the dictates of reason and conscience. Calvinistic Protestantism had left to Christian thought the necessity of defending the Scriptures in an age of cold and unsparing rationalism. The Augsburg Confession (1530) and the Institutes of Calvin had proclaimed Scripture to be the very word of God —in fact it was the infallible external author-
ity by which Protestantism had superseded the authorite of Rome. The 18th century, the age of Voltaire and Rousseau in France and of the English deists, 2 notwithstanding its open-ended tendenciess—Cambridge Platonism (q.v.) upholding the divinity of reason, natural theology contesting the supremacy of revealed religion, new scientific discoveries revealing the law of nature in man, and the attack on the Christian truth—that was not wholly the barren and unspiritual

4 See art. BRASS AND ALLEN, p. 287 f.
epoch which it is often supposed to have been. The controversy aided the progress of vital Christianity in the sense that the deists were repudiated, and a more rational conception of the divine nature and government, while their opponents remained loyal to the truth of a divine revelation which had been made. While directly saving the doctrine of Christian Doctrine (1845, new ed. 1878), but the logical issues of his attempt to bridge the chasm between Protestantism and Catholicism were repudiated by the papal see when they were expounded by Alfred Loisy and George Tyrrell, Pius X. (1903-14) in his decree Lamentabili (July 1907) condemned the 90 propositions in which he summed up the Modernist doctrine, and by its ecumenical Paschendi shortly afterwards reasserted the scholastic dogmas of the Middle Ages as the necessary faith of a true Catholic.

The drift to Rome of individual medievalists within the Anglican pale will continue, but there are no signs of any approach to reunion between Rome and Anglicanism, the validity of whose orders received contemptuous rejection in the bull Apostolicae Curae (1864) of Roman Catholicism and the Holy Orthodox Church remains apparently without the slightest sign of a possible reconciliation. In the Reformed and Protestant Churches the cause of intellectual and religious freedom has been impeded by the secular tendencies of the salient, while there are symptoms both in England and in Scotland of a growing movement towards reunion—in England taking the form of a proposed federation of the Free Churches, which inherit the Protestant tradition, while in Scotland the union of the Established Church and the United Free Church is widely desired and anticipated. Generally speaking, among such Churches, the necessary re-adjustments of religious thought and restatements of doctrine are likely to be carried through without any controversial strain, while the authority of the Scriptures will be associated with a more profound and broader view of the Spirit of Truth as 'the Lord and Giver of Life,' not only to the writers and 'holy men' of the Scripture dispensations, but to all the saints of Christ in all ages and in the future. Already with this larger conception of revelation as the perpetual work of a controlling Spirit who is the eternal source of light amidst the fluctuations of the times, and men, instead of the preponderance of the rule of Western Christendom has tended to a clearer vision of the social and spiritual needs of humanity. The reaction of the European War, which has affected nearly every country in the world, has deepened the sense of international solidarity and has created the ideal of a League of Nations. Whether this new vision of brotherhood will result in a new synthesis of the rival ideals of Catholic and Protestant remains to be seen. For the moment the vision of a new Catholicism of Christendom appears to be both less convincing and less capable of realization than that of a political League of Nations. The old Catholicism, in the sense of ecclesiasticism, is dead or dying. So long as Rome claims absorption into her fold as the price of Christian reunion and so long as she asserts her mediaval standard of authority, she will stand outside the progressive movements of social and spiritual thought. The trend of the modern mind is against any external authority, whether of pope or priesthood or sacred book; and this is in effect a reaction against appearances which both Catholic and Protestant have put forth on behalf of their respective standards of authority—claims which offend the moral consciousness and the intellect of mankind. Nevertheless the Holy Catholic Church and the written Word

4 Cf. his work Du Poème, Lyons, 1819.

Rome. Science, comparative religion, psychology, have their place in the world, but are banned by the infallible fiat of the Church, whenever Catholic dogma is subverted or underthrown.

Newman paved the way to Modernism (q.v.)—the name given by Pope Leo XIII. (1878-1903) to the liberalizing movement within the Roman Catholic Church—by his direct attacks in Fugit Impressa, the evangelical revival under Whitehead and Wesley 1 provided a memorable and impressive demonstration of the truth which the orthodox apologists had propounded, by bringing to the soul of the 'conscience' the divine salutary and assurance of pardon which were declared to be available for simple faith. The 'saving faith,' which enabled the sinner by immediate contact with God to find peace and the strength for a new life of ethical holiness, was the mighty note upon which a renascence of spiritual religion sounded abroad its message of hope for a world in transition.

The Illuminism of Germany 2 may also be claimed as a renaissance of the spirit, if on intellectual lines, by virtue of its proclamation of the gospel that the moral consciousness is divinely inspired, and that the divine Spirit, the Divine Light, the Letter of Scripture is not bound to it, is universally revealing Himself in history. But the witness of Lessing (1729-81) was of less value as an example of the Christian view of history than that of a greater thinker, Schiller (1759-1805), to whom belongs the credit of originating the critical method as applied to Scripture and religion. His clear grasp of the solidarity of the race, his disbelieve in the individualism of Protestant and Catholic as expressed in the doctrines of election and predestination, his loyalty to the Church as an institution which expressed the idea that man is saved by grace, not by merit, and his conception of the progressiveness of revelation place him in the succession of Greek theologians as they make him the most formative of the Christian thinkers of the last century. His firm conviction of the immanence of God powerfully affected the art, literature, philosophy, and science of the 19th century. Romanticism, the poetry of Wordsworth and Shelley, the truth of evolution as expounded by Darwin, the art of Turner and his interpreter Ruskin, the Christian socialism of Maurice (q.v.) and Kingsley, Hegelianism, 3 and the Neo-Hegelianism (q.v.) of the Caird and T. H. Green (q.v.)—all the movements and men, insisted upon the prevalence of a new spirit. The Victorian Age was in effect a period of revolt. The triumph of the critical and scientific method was not less marked in the realm of theology than in other fields of knowledge. De Maistre 4 (1754-1821) in France and John Henry Newman (q.v.), from quite different standpoints, opposed what appeared to them the deadly liberalism of Christian thought. Tractarianism resulted in a revival of mediaval practices and ritual in the worship of the Church of England; but Anglo-Catholicism has never, like Roman Catholicism, repudiated the methods and results of modern criticism. Mediavalism in the Anglican Church has shown itself in ecclesiastical observance and in a revival of the Catholic view of the continuity of orders and ecclesiastical tradition, but the Erastianism of the English Church has been a safeguard against the triumph of a narrow orthodoxy and has in fact aided the forces of liberal thought.

As we have already seen, the Roman Church under Pius IX. and his successors has shown itself impervious to the movements of thought. The critical method is anathema to

WHEEL OF THE LAW

alike reveal the directing and controlling authority of the Spirit of Truth: the one proclaims the reality of the conscius sumotorum—the community of experience and witness—in the life of Christendom; the other declares the reality of God's perpetual self-revelation in the history of the race.

In this corporate and individual response to the Spirit of Truth, which is the life of all Scripturists and the Church as an institution are witnesses, is to be found the ground of our hope for mankind. The future lies with the religion of the Spirit of Christ which under many forms of worship, or systems of discipline and organization, with interpretations and settings suited to the various peoples of the world, will yet embody the Christian idea. The essence of Christianity is not to be confined to this or that dogma, creed, or institution, but is at once a spiritual experience and an activity of love—a kingdom of heaven within—inspired by the unifying control of the Spirit of Truth over the individual and collective consciousness of mankind. However desirable the consummation of an organic union of Christendom may be to many minds, a review of the history of the Church affords but scanty support to the idea that this result is attainable, or that any authority or center with which it would minister to the highest welfare of humanity.

On the other hand there is a wide-spread and growing assent to the interpretation of both Scriptures and sacred symbols which will be a neophyte's burden. That will be not less real because it will co-exist with diversity—the etos evymatos for which St. Paul intercedes—the oneness given by the Divine Spirit who at once makes and is immmanent within the whole body of the faithful upon earth.

LITERATURE. The leading authorities have already been given under articles referred to above. For the general history of the Western Church the reader should consult the following: CHRISTIANTIES, PAPACY, CHURCH; for doctrine Church, DOCTRINE OF (Roman Catholic), CREEDS, CONFESSIONS, and special phases under their own heading—e.g., Arianism, Nestorianism, etc.; for worship SACRAMENTS (Christian, Western), Eucharist, etc.; for law LAW (Christian, Western). In the field of modern literature the following book may be listed: 'Bibliographical Suggestions' in Williston Walker, A Hist. of the Christian Church, Edinburgh, 1939, the reader will find the most recent literature in Church History indicated and classified.

R. MARTIN POPE.

WHEEL. See JEWEL (Buddhist), PRAYER-WHEELS.

WHEEL OF THE LAW. This Buddhist expression is derived from the earlier Buddhist legend of the Mystical Wheel. This legend, or edifying fairy tale, is told in almost identical terms in several of the most ancient Buddhist documents. It is generally less essentially Buddhist, i.e., because several details (the ethical, not the essential ones) can be traced back to details in one or other of the pre-Buddhist sun-myths. The Wheel is said to be one of the treasures of a righteous king who rules in righteousness; and it is because of that righteousness that the Wheel appears. The legend says:

1. When he [i.e., the king; the name of course differs] had gone up to the upper story of his palace on the sacred day, the day of the full moon, and had purified himself to keep the sacred day, then there appeared to him the heavenly treasure of the Wheel, with its nave, its tire, and all its thousand spokes connected.

2. Then the king arose from his seat, and reverently uncovering his robe from his right shoulder, he held in his left hand a pitcher and with this he sprinkled water over the Wheel, as he said: "Roll on, O my lord the Wheel! O my lord, go forward!

3. Then the wondrous Wheel rolled onward toward the region of the East. And, after it, went the king with his fourfold army (cavalry, infantry, and chariots, war elephants, and yeomen). And wheresoever the Wheel stopped, there too the king stayed, and with him lived his fourfold army.

4. Then all the rival kings in the region of the East came to the king and said: "Come on, O mighty king! Welcome, O mighty king! All is thine, O mighty king! Do thou, O mighty king, be a Teacher and guide us!"

And the king said: "Ye shall ask no living thing. Ye shall not take that which has not been given. Ye shall not act wrongly touch the body of holy life. Ye shall drink no merchandise drink. And ye may still enjoy such privileges as are left in this world.

Then all the rival kings in the region of the East became subject to the king. And the wondrous Wheel having ploughed down into the holy earth in the field, was rolled onward to the South... and to the West... and to the North (and all happened in each region as had happened in the region of the East).

Now when the wondrous Wheel went forth conquering and to conquer over the whole earth to its very ocean boundary, it returned back again to the royal city and remained fixed on the open terrace in the front of the entrance to the inner apartments of the great king, shedding glory over them all."

So far the appearance and work of the Wheel. In another passage we are told that on the approach of the death of the righteous king the Wheel falls from its place, and on his death or abdication disappears. Should the successor carry on the Law of the Wheel, it will reappear and act as before, and this may continue for generations. But, should the successor fail in righteous rule, then the country will fall gradually into utter ruin, and remain so for generations till the Law of the Wheel has been revived. Then only will the wondrous Wheel reappear, and with wealth and power and the happiness of the people. All this is set out at length in the Chakka-vati Sīka-nada Suttanta.

The Chakka-vati, literally the 'Wheel-turner,' and by implication the ruler who conducts himself (and whose subjects therefore conduct themselves) according to the Law of the Wheel, is the technical term for the righteous king or over-lord. It has not been found in any pre-Buddhist literature; and, though it is so frequent in later books, it has, in Hindu works, lost its ethical connotation, and simply means a war-lord, a mighty emperor, 'one who unhindered drives the wheels of his chariot over all lands.' But it should be noticed that the wondrous Wheel of the Buddhist legend is not really a chariot wheel. The idea of sovereignty is no doubt linked up with it. The Wheel, however, is a single disk, not one of a pair. And it is very clear that it is really a reminiscence, not of a chariot wheel, but of the disk of the sun, which travels over all lands from sea to sea and sheds glory over all. By the pouring of new wine into the old bottles, it has, in the sun-god himself, transmuted into a forerunner of the king of righteousness, whose rule of life brings happiness to all.

This is the legend made use of to give a title to the doctrine of the reign of law, i.e., the basis of the reformists of the Western world, called Buddhists, of which the leaders of that reformation called 'the Law.' The discourse summarizing this doctrine, the first discourse delivered by the founder of the new movement, is entitled 'The Setting in Motion of the Wheel of Law' (Dhamma-chakkanipat- tana). The allusion is to the action of the king of righteousness in the foregoing legend when he baptizes the Wheel, and exhorts it to roll onward, to go forth and overcome. The allusion is apt; and it gains both in poetry and in its appeal to the mental attitude of the time by the irony with which it enlists the service of the ancient and the Buddha's doctrine that the gods too are under the domain of law. Just so was Brahman made into a convert to the new teaching, and the old god of war and drink, the mighty Indra, had been transmuted into the peace-loving and sober Sakra, devoted to the doctrine of the reign, not of divine whim, but of law.
and ignorant also of the doctrine of the reign of law, completely failed to understand this curious title of the oldest summary of the new teaching. It would be wearisome to point out all their mistakes. Perhaps the worst of all many blunders is the identification of the Wheel with what Anglo-Indian writers call, quite erroneously, the praying-wheels of Tibet. They are not so called by any authority, Tibetan or Buddhist. They are not praying-wheels of Tibet, continuing an invocation to some deity—the contrary therefore to the old doctrine of the Wheel. We may learn some day what the original meaning in Tibetan of maṇḍāra hūs really was. The phrase is not likely to be less than about 1400 years later than the time of the Buddha. And it is most unlikely that, after that long lapse of time, any memory of the legend of the Wheel or of its adoption to the title of the First Discourse had still survived. To judge from what we know of Lāmaism, the Tibetans had quite forgotten that, in very Buddhism, the reign of gods had been superseded by the reign of law (or, to express the same fact in modern technical terms, that animism had given way to normalism).

It remains to add that some centuries after the conquest the new teaching lost also many of the uses of the figure or simile of the wheel. Only the wheel is here, not the disk of the sun, but a chariot wheel. The figure is used of the circle or cycle of rebirths.

Mrs. Rhys Davids has pointed out the use of this simile in Greek and Sanskrit, and it has since then been discovered in Pāli. This is in harmony with the doctrine of the Wheel of Law in early Buddhism, but it is a somewhat curious idea, and has a different origin, and is never called the Wheel of the Law. It is samadra-chakka, not dhamma-chakka.

WIDOW.—See MARRIAGE, SATI.

WIFE.—See MARRIAGE.

WILL.—The word 'will' (Gr. ἐπιθυμία, Lat. voluntas, Germ. Wille, Wollen, Fr. volonté) is used in a wide variety of senses by philosophical and psychological writers. In the widest sense it is the power to act, and in that sense was used by the Aristotelian bipartite division in psychology contrasted with the 'intellectual,' and so includes all striving, appetite, and interest, even at an intraconscious level. In the narrowest sense it is taken to mean, or at least to imply, deliberate and responsible choice.

1. Physiological basis.—The analysis of will in the widest sense requires the analysis of the physiology of movement. Physiologists base their concepts upon reflex action, and then discuss the integration of reflexes in the brain and spinal cord. The unit of this explanation is the simple reflex. The stimulation of an end-organ must issue in movement, and a simple reflex is the simplest possible response of an organism to stimulation. The simplicity of a simple reflex, however, is the result of analysis rather than a fact of observation. What we find in fact is a combination of reflexes into reflex patterns of various kinds.

All reflexes take place through a chain or arc of neurons which passes through the central nervous system. Connections between neurons form the synapses by which they mutually interact.

2. Instinctive action.—The theory of impulse and instinct is the natural corollary to this account of neural integration. The connection between reflexes and impulses or appetites is usually close indeed, and instincts are the great 'rational' patterns of co-ordinated action. The moor-hen has a driving 'set' in its muscles when it is little
more than a dabling, and it dives as soon as cause and opportunity offer.

The question how far human action or the action of the organs is influenced by instinct is still hotly debated, but the debate tends to become verbal since the partisans of the instincts insist upon the indefinite pliability of these responses, while their opponents try to narrow instincts down to more racial routine. The point in dispute is the relation of nature to nurture, and this also is a thorny topic which a wise man leaves alone. It is clear, however, that many actions which we perform with the aid of what we have become habitual, are acquired in individual experience (even if they are grafted upon a primitive instinctive root), and all these problems are highly speculative in comparison with the fact of the reflective adaptation of human beings to their circumstances. Again, there is another reason why the analysis of will suffers when psychologists devote themselves exclusively to speculative theories concerning the instincts. However important the instincts may be, and however closely allied with normal human perception and action, the consciousness in instinctive behaviour does not differ in kind from the reflective consciousness, and its principal features cannot be discerned so readily at the instinctive level of consciousness as at others. It is best, therefore, to try to give a direct psychological analysis of the consciousness in ordinary human action.

3. Ideno-motor theory.—Probably the simplest type of conscious action is that which is called ideno-motor. This occurs when the thought of a movement leads directly so far as consciousness is concerned) to the execution of the movement. A great many movements need no other explanation. Those who take the injunction ‘Kill that fly!’ seriously begin hostilities as soon as they see the fly; and ‘Eight o’clock and time to get up’ is frequently a sufficient and the only mental prelude to getting out of bed in the morning. These instances show that the idea of a movement tends of itself to the execution of the movement, and some psychologists, generalizing somewhat hastily, have concluded that all voluntary action is ideno-motor and nothing else. According to this theory, we learn from impulse, imitation, and random muscular play what movements can be executed. The immediate antecedent of any movement which is consciously directed, however, may be any desire, or capacity, or consciousness of the idea of that movement; and this idea is always the cause of the movement.

This theory is plausible because the idea of a future action is a sine qua non of voluntary action of any kind; but there are serious objections to it.

(1) Our ideas of movement are usually suffused with feeling and tense with conscious endeavour. It is a mistake, therefore, to suppose that these feelings, desires, and strivings do not play their part as directly and as effectually as the bare idea of movement.

(2) There is universal testimony to prove that much of our action does not seem to be merely ideno-motor. The bare idea of movement is sometimes merely an idea. We may have to strive most resolutely to bring ourselves to the point of acting—i.e., we may have to reinforce the idea by endeavouring after its end. And sometimes we have to choose between several conflicting ideas of movement simultaneously present to minds.

Since the ideno-motor theory does not dispute these facts (it would not be worth considering if it did), it is hard to provide an alternative explanation, and so it maintains that striving or choice in these cases secures the temporary dominance of some particular idea of movement. The only possible cause of conscious action, according to this way of thinking, is a man’s temporary single-mindedness towards the idea of the action, and his temporary oblivion of all else. Choice or striving influences the action, but not the temporary dominance of the idea of the action.

This theory is unnecessarily complicated. We seem to ourselves to choose this or that, and not merely to attend to some idea of movement exclusively; and there is no good reason why this seeming should not be actuality. Again, the idea of our chosen course of action often does not seem to be the only alternative before the mind either at the time of decision. They have been granting that we ought to stick to our plan, after we have adopted it, on pain of inefficiency or Hamlet-like vacillation. It is false in fact, therefore, that conscious action is always preceded by this exclusive possession of consciousness. Moreover, this theory is just an attempt to save the ‘strongest motive’ theory with as little violence as may be. It is assumed that action must be due to the ‘strongest motive’; and therefore the motive which immediately precedes the action is assumed to be either predominant or else the only one present; but this argument is circular, since there is no means of deciding which was the strongest by excepting, après coup, that it was the motive of the action which followed in fact. Again, even if this theory could account for most specific voluntary movements, it would still be too narrow for voluntary choice as a whole. When a barrister resolves to make out a case for his client, or a journalist tries to discover the gist of Einstein’s theory or of Ludendorff’s influence, the movements they make in the way of speaking, writing, or travel are quite subsidiary in importance. And the ideno-motor theory simply omits these cases. Movements are seldom chosen for their own sakes. They are usually chosen because they are means to an end, and the ideno-motor theory is so preoccupied with the means that it neglects the end altogether.

This theory, indeed, is too intellectual; for it resolves action into the automatic effect of mere thinking, and rejects the primary and direct influence of interest, passion, and striving. This mistake is not uncommon; it permeates, e.g., the Benthamite theory of psychological hedonism (p. 296). To say, with Mill,1 that ‘happiness is the sole end of human action’ may mean many things. It might mean, e.g., that no one, on reflection, judges anything to be good. It might also mean, in that case the theory would have no bearing on unreflective action. It might also mean that the anticipation of pleasure is the only possible motive for action. This form of the argument is required as a premise in many of the utilitarian arguments, and it is postpositively false. In impulsive or instinctive action, e.g., the impulse comes first, and the gratification follows; and the banked dispositions which are the root of psychasthenia (in nine cases out of ten) must exist before there is pain in the baulking of them.

4. Reason and will.—On the other hand, many theories are intellectually adequate enough, for the temptation to be an affair of impulse or desire, and they leave no place for reason, except the recognition of means and the discovery of bad reasons for some sentimental or impulsive partis pris. Most of the modern theories of this type, it is

1 Bentham’s argument (Introd. to the Principles of Morals and Legislation, ch. i. 1) is even more explicitly fallacious. "Nature," he says, "has placed mankind under two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do, and what we ought not to do. On one hand the standard of right and wrong, on the other the chain of causes and effects are fastened to their thron..." as well as another argument in all we think and do; every effort we can make to throw off our subjection, will serve but to demonstrate and confirm it.
true, do not seem to have descended in *linea recta* from Hume, but Hume gave what is still the clearest and the most concise expression of them. Reason, as we have seen, is the sovereign of the will, for reason is either the abstract demonstration of relationships or else the discovery of causes and effects. The will, however, has to do with sensible realities and with abstract relationships; and the discovery of causes and effects cannot concern us at the least if we are to avoid the error in which Hume assumes in the next place that the difference between interest and difference is identical with the presence of a beneficial or abhorrent passion, and then he argues with perfect logic that ‘since reason alone cannot produce any action, or give rise to volition, it must be the case of preventing volition, or of disputing the preference with any action or negation.’  

He concludes that the so-called conflict between reason and passion is really the battle between calm emotions and sudden, tempestuous ones.  

There is a double fallacy in this argument. (1) Even if reason were restricted to the means to action, and if the knowledge of these causes and effects were indifferent without emotion, it would not follow that reason was ineffective when allied with emotion. (2) Reason (unless it is robbed of this function by an arbitrary definition) can discriminate the values of ends as well as ascertain the means to them. The values that are important for reason are those to which he is felt with emotion and followed with conviction, but this fact does not imply that the intellectual recognition of these values is of no account.  

This consequence would not follow even if all these feelings were emotion emotions. That, however, is not the case. The principal values which we admit to be intrinsically good are happiness, social intercourse, knowledge, beauty, and righteousness; and perhaps also the bearers of these values—Plato, who had the knowledge, Koats, who was touched with the beauty, Cato, who did what was right, and the greyhound which leaps with joy the breath of the world. These values are not emotions, though all are felt with emotion. And there is another point. A man’s emotion is his own; and, if nothing but emotion could touch his will, the happiness of others or the honour of his country could not influence him directly. In fact, however, we do not merely judge intellectually that another’s is good as much as our own, but we frequently choose to sacrifice our own good to his. This personal sacrifice, it is true, is sometimes superficial only. That occurs when we choose a less obvious instead of a more commonplace personal satisfaction; and the existence of non-instrumental impulses and emotions certainly lessens the gap between this theory and the facts. But often we have to accept the truth that a man may sacrifice ease, culture, and leisure to undertake work which he loses, though he knows that his own loss is certain. For the good, he thinks, constrains him.

5. Analysis of voluntary action.—We may now analyse deliberate voluntary action. Action of this kind implies knowledge of the means which are needed, choice between alternative ends, and the belief that we can achieve, or help to achieve, the end by adopting the means. The end, to be sure, may not be wholly attainable by us, but we believe, in that case, that we can contribute towards its attainment; and, for the rest, the thought of will implies the thought of can. No one deliberately chooses anything which he knows to be utterly out of his reach. We choose between alternatives which we believe are within our power, and our choice, in the end, is a choice between conflicting values.  

If, then, the two fundamental choice are due to the false perspective which nearer values may have in comparison with more remote ones, to preoccupation with our own personal welfare and our concern to blind ourselves towards the claims of other people, to our lack of acquaintance with many attainable values, to our ignorance concerning the means which are necessary in fact, to the difficulty of knowing or of conceiving the manner of achieving the end, it is most probable, to the doubt whether some means could ever justify some ends, and so on. This subject is too wide to be treated adequately here, even in outline. And there are other complications.  

(1) We usually have too little time for mature reflection. Most of our deliberations are cut short by our life, and the need for action clamant. We have to distinguish between voluntary action and deliberate reflective action. Voluntary action is the genus of which deliberate choice is the species. It implies the adoption of an end (the fact of ‘consent’) together with belief in the possibility of attaining the end; but there need not be choice between alternatives, since we may be too much pressed for time to take account of more than the first expedient that occurs to us, and our belief may be little more than a vague expectation that something may be done on the lines we have adopted.  

(2) The analysis of give action was restricted to the deliberate choice of a single course of action, but will is a subtler thing than this, with a wider net. When we speak of a formed will, we mean the whole character of a man so far as it can be expressed in action. A man’s habits of choice pertain to his will as well as his choice on this or the other occasion, and so do his capacities and his general aims. The formed or stable will, therefore, has to be examined very carefully in connection with physiological and instinctive dispositions on the one hand and with conscious personality on the other, and the ramifications extend very far. On the other hand, it is quite possible to do one thing by the path of personality and its ‘tunicle’ the body (to use Berkeley’s phrase). We have no acquaintance with any will that is superpersonal, and, in particular, we are not acquainted with any voluntarius. The will of society is not a will any more than the spirit of the times is a mind. The general will, so called, means (a) that the majority of the members of a community may resolve, or act as if they were resolved, to pursue a common end each of which end furthers the one in his own way; and (b) that each member must take account of the other members when he is considering the means of attaining. More than that it should not mean.  

6. Voluntarism.—The most interesting questions arising out of the theory of will are voluntarism, or the metaphysical theory that the will is sovereign over the self or the world, and the perennial problem of the freedom of the will. While voluntarism has many varieties, its main contention is either that knowledge is a phase of willing, or perhaps, subordinate to it or else that will is the *causa essendi* of all existing things. Knowing, we are told, must be only a phase of willing, because all speculative activities are either virtual actions or else merely delayed reactions. The psychology of development, e.g., shows that knowledge is a kind of virtual action. *Am Anfang war die That*. Man’s earliest and most fundamental business is just to adapt himself to his environment, and so his earliest and most important knowledge is only a retainer to this fundamental need. And it is claimed that knowledge must never outgrow its substantial applications. In sum, broadly speaking, is the application of their knowledge in the way of machinery, armaments, navigation, and government for the ultimate purpose of maintaining human subsistence as

1 *Treatise of Human Nature*, bk. II, pt. II.
agreeably as possible on a large social scale. The theoretical adventures of the intellect are practical in their germ and in their fruit, and belief is either action or readiness for action.

This line of argument is obviously incoclusive. Even if it be granted that, at the beginning, had to use all his wits to keep alive, and that most of the able-bodied members of a community have still, in a way, to co-operate for this purpose, there is a large gap between the premises of this argument and its conclusion. For, even if much knowledge has to be given to the necessities of action, it does not follow that all must be given. The argument, indeed, is quite consistent with the belief that knowledge, originally a servant, may become a master and reign in its own right, or that it is possible, in an ordinary human community, for many people to spend their lives in the pursuit of knowledge for its own sake, and for all members of the community to do so at some times. And the facts seem to support this hypothesis. Those who maintain that all knowledge is only preparatory to their condition, may be invited to say what preparation for action is implied in my knowledge that Bolingbroke wore a wig, or that Sophocles was a greater poet than Dryden, and to explain why gossipy reminiscences or involuntary salience concerning Chinese puzzles (to mention trivial instances only) must be 'virtual actions.' They may also be reminded that practical men need not act the worse because their information is accurate. True belief is the most useful guide to action, but some truths do not concern action directly, and it is only a quibble to say that any connexion with action, however remote, is the same thing as 'virtual action.'

Similar arguments apply to the theory that all speculation is delayed reaction and nothing else. It is true, no doubt, that there cannot be deliberate reflective choice without delay in reaction, and that deliberation is a speculative activity. But controversies with circle-squarers, e.g., are not merely delayed reactions; and it is a fallacy to argue either that all speculation is only delayed reaction because some speculations imply delayed reactions, or that the speculative activities which may occur during certain delayed reactions are themselves only delayed reactions.

The theory that knowledge is subordinate to will shows itself in psychological descriptions or on metaphysical grounds. In the former case it is argued, as a matter of psychological fact, that knowledge is only the attempt to discover ways and means for satisfying impulses. It is sufficient to reply to this argument that these impulses may include curiosity and disinterested impulses towards knowledge for its own sake, and that, even if impulses are always the primary causes of knowledge, it does not follow that the effect is subordinate to the cause.

The metaphysical argument is a non sequitur of the same type. It maintains that effects are always only in part due to their condition, and that will is the cause of all mental process including every piece of knowing. This principle, as we have seen, is false, and, apart from that, the premises of the argument are highly dubious. Will, in the sense of striving or of deliberate choice, is not the sole cause of mental process in any intelligible sense. We have no right to exclude any antecedent from the list of causes of any effect if this antecedent is not present in fact, and if it always seems to play its part along with the other antecedents. And knowledge and feeling are antecedents of any mental process just as plainly as any physical argument, in a word, finds no support in the psychological phenomenon of will.

It may be argued, to be sure, that the scholastic maxim Operari sequitur esse is false, or that 'function always determines structure'; and views of this kind (usually with more enthusiasm than knowledge) may even claim kinship with certain modern theories of psychology. These theories are irreconcilable, however, because voluntarism is meaningless unless it is based on the psychological phenomenon of will. The will, as we experience it, is a kind of pre-existing, not a posteriori, causal force for such theories; and those pluralisms which maintain that the conatus (or the desires and appetitions) of every existing thing is its causus essendi cannot claim more than a metaphorical support from the facts of will, as we find them. A spiritualistic pluralism of this kind may be true in fact; and voluntarism, possibly, may be the least inept name for it, but it is not a logical consequence from the relation of willing to personality, and it becomes nothing but conjecture when this vague psychological analogy is extended to unconscious things.

On voluntarism: Schopenhauer, Die Welt als Wille und Vorstellung, the works, e.g., of Fichte or Bergson. On freedom of the will: J. F. Mill. WIND, WIND-GODS.—See AIR AND GODS OF THE AIR.

WINGS (Greek and Roman).—Wings, as an attribute of animals to whom they do not properly belong, were borrowed by the Greeks from Oriental art, mostly that of Mesopotamia. They probably appeared first on composite animals into which the bird form entered as an element, such as the griffon, sphinx, and gryphon; and the griffon is almost indiscriminately to quadruped and even human forms as symbolic of divine strength and swiftness. It is doubtful, however, whether this symbolism was what attracted the early Greeks, probably it was the decorative value of wings, as seen in Oriental carvings and woven stuffs, that first appealed to the Greek artistic sense, though they doubts were given a symbolic meaning in later Greek art.

In the art of Crote and Myceae we find both griffons and sphinxes with wings, but we have no means of judging whether these had any meaning, and if not metaphorically borrowed as elements of decoration; the fact that the sphinx is female and winged suffices to show that it came from Mesopotamia and not from Egypt. But the frequent appearance of winged creatures is highly suggestive of Eastern influence, at first through the medium of the Phoenicians and later, more directly, in the 'Orientalizing' Greek vases and in decorative carvings and reliefs of a similar period, and also the sculptural ornamentations of Cyprus are various winged animals, including centaurs (a winged centaur appears in Mesopotamia about 1200 B.C.). On the later Orientalizing pottery from Mesopotamia, Minor, and Corinth...
The commonest winged forms, other than birds, are the griffin, the sphinx, human-headed birds, and human beings; winged horses are also found, especially in chariots of the gods, on Melian and other early vases, bears, dolphins, and other animals, such as the griffin and sphinx, are common on the so-called ‘island gens’ and on early coins.

In many of these cases it is evident that the decorative value of the wings, as helping the design to fill a given field, has been paramount; but there are other examples, in which a symbolic meaning may be inferred, and where such winged forms have become the accepted type of characteristic creations of Greek myth. In most of these instances, however, the types were not invented or composed by the Greek artist to express the idea of the myth, but were adopted from foreign or borrowed forms. Thus there is no evidence that the Sirens (q.v.) were thought of by Homer and his contemporaries in the form assigned to them by later art; either a fancied appropriateness or a chance coincidence may sometimes have led to such identifications. The type of the human-headed bird was not, however, used only for the Sirens. If we look for a connexion with them, and appear to represent a death-daemon. The best known instance is on the misnamed ‘Harpy monument,’ which, though not Greek but Lycean, shows evident affinity with Greek ideas. Here the figures in question have not only human heads and breasts, but also human arms, as well as birds’ legs and talons, both of which they use to carry off the souls of the dead. Thus they show the same unnatural reduplication of limbs which we find in other winged creatures, and which the human-headed bird sometimes escapes. The wings, here as in human or quadruped winged forms, appear to grow from the shoulders-blades, and yet to work independently of the arms. Such an inorganic composition seems to confirm the view that the wings, except where they belong properly to the bird form, are borrowed from an art in which they were purely symbolic. The funereal connexion in the case of the Sirens may perhaps be explained by Egyptian influence, since the human-headed bird is used in Egypt as a symbol of the soul. It is often found as the crown of a tombstone in Athens.

It is not certain that the wonder-horse, Pegasus, was at first thought of as having wings; he appears without them on an early relief; but he early adopted winged forms, and has been familiar to all later art. Gryphons have a place in myth, since they fought with the Arimaspai in the far North; though they have beaks, their body is that of a quadruped rather than a bird, and their wings are consequently as much out of place as on a horse or lion.

What is, however, most characteristic of the Greek application of wings is their addition to the human form. This also appears first in borrowed forms, such as that of the Oriental Artemis; a similar form is that of the Gorgon, whose hideous grimacing face is set in a human body with wings; here again we have no evidence that the ‘head of the terrible monster, the Gorgon,’ 1 was thought of in this form by the poet of the Odyssey. Another shape akin to the Gorgon is the Harpy. This sometimes seems to be a death-daemon, though the bird-like figures on the Harpy tomb are probably wrongly named. On early vases Harpies appear in completely human form, winged, and sometimes bird-like; they are often called Erotes; there is no doubt as to identification, since the name is written beside them. These Harpies are sometimes interpreted as malevolent wind-demons; and this is consistent with the tale of their being chased away by the Boreads, the sons of the North Wind. Wind-gods generally appear as winged human figures, and the small winged figures that are commonly found in early vases, as amours, bears, etc., are probably to be interpreted thus. Boeas himself, who is represented on Attic vases and elsewhere as carrying off Oreithyia, appears as a winged, bearded man, sometimes with a mane of feathers for hair and beard.

It is probable that in early Greek art such winged figures are used with many different meanings; but they are usually differentiated into two main types of constant occurrence—the winged nude male figure or Eros, and the winged drapéd female figure or Nike. The sculptor Archermos of Chios is said to have been the first to represent Nike with wings, and the statue in which he did this has been discovered in Delos; it represents a female figure in rapid flight, with wings not only on the shoulders, but also on the ankles. Floating figures of winged Victories, as symbolical of victory either in war or in athletic contests, are extremely common throughout Greek and Roman art. Nike was placed on the out-stretched rim of a chariot or in connexion with the statues of Zeus and Athena at Olympia and Athens, by Phidias. Eros in earlier Greek art always appears as a youth of fully-grown proportions, though sometimes of diminutive size. In the Hellenistic and Roman ages he becomes the baby Cupid familiar to Renaissance and modern art, and his wings are correspondingly small. Iris, as the messenger of the gods, is usually winged, and so is hardy to be distinguished from Nike, apart from her attribute of the rainbow.

A different series of winged figures, usually diminutive, represent the souls of the dead; as such they are sometimes depicted on Attic vases as hovering about the tomb. Similarly, in the weighing of the Keres of two warriors by the gods—as of Achilles and Hector in the Iliad—the usual representation is of two minute winged figures placed in the scales. Homer describes them as δύο κέρει . . . ἀεικόνα, and hence it seems doubtful whether the two figures are to be regarded as the souls or lives of the heroes or rather their fates of death. Thus the resemblance to the little souls on the vases is striking. Keres (q.v.) seems to vary in meaning between death-deemons, who seem usually thought of as horrible, though not necessarily winged, and ghosts or souls of the dead, who almost always are winged. The Psalm of later times, who is associated with Eros and has butterfly wings—sometimes even takes the shape of a butterfly—is a creation of later allegory.

Death (Thanatos) often appears as a winged figure in art; on Attic funereal vases he, with his brother Sleep, often bears the deceased to the tomb. Sleep is similar to him, but beardless, while he is bearded; and both usually have similar wings growing from their shoulders. But in the beautiful figure of Sleep of the Praxitelean age the god has only a small pair of wings growing from his temples; a similar position for the wings is seen in later sentimental verses of Moschus, who has exchanged the horror of the Gorgon for a death-like beauty, and occasionally in other figures.

A variation on wings actually growing from a part of the body, head, or limbs is seen in wings that can be attached to some article of dress, and so put on and off. The most familiar example is offered by the winged sandals of Hermes, which he lends to his friends; the thin strap which to the feet is also seen in the earliest Nike, and in later allegorical figures such as Kairos (Occasion). Hermes sometimes wears also wings attached to

1 Od. xi. 634.
his cap; the resemblance to wings on Scandinavian helmets is probably accidental. Wings are sometimes attached to other objects—e.g., to the tripod of Apollo when he travels on it, or to the chariot on which Thetis is borne over the earth, or to that in which Medea escapes after her revenge on Jason. Other gods also have means of swift flight, as exemplified by Athena, when she describes how she came τροών ἄνευ ἀποθεώσεως κατ' αὐτόν.

It is with much the same associations that gods are often described as coming like birds or even taking the shape of birds. The fatal attempt of Daidalos and Icarus to fly with mechanical wings is probably to be regarded as similar magic. The desires of mankind in this direction are wittily parodied in Aristophanes' Birds.

In Roman art the types handed down from the Greek and Hellenistic periods frequently recur, but without any essential additions or difference. Victories, both in the round and in relief, are especially common, and are chiefly interesting as supplying the typically, and as often as not, the material of sculptors and plaque painters—wings, for example, are naturally noted, with change or rather absence of sex—for the angel of Christian art.

So far, though the position of wings has been noted nothing has been said about birds, and wings have no connection with them. The wings of early decorative types are always, or almost always, cut back at the end, in a manner which, if not quite unnatural, is at least greatly exaggerated. This is a characteristic which is also found among the winged creatures of Oriental art, and is borrowed from them, but is emphasized for decorative reasons in archaic Greek art. When wings came to be applied freely by Greek artists to various figures, human or divine, they naturally supplemented and corrected the conventional forms by their own observation, using especially the wings of large birds as their models, often probably those of the eagle. The wings are frequently out-stretched as in flight; when lowered, they do not lie folded close to the body, as in the case of a bird, but usually project at right angles behind the back of the figure. Smaller wings show many varieties; thus, according to H. Brunn, the wings on the temples of the head of Sleep are those of a night-hawk. Such variety of imagination was readily suggested by the subjects themselves.

E. A. GARDNER

WISDOM.—As distinguished from the reasoned, systematic view of the world and man which is the conscious aim of philosophy (q.v.), wisdom may be defined as the direct, practical insight into the meaning and purpose of things that comes to 'shrewd, penetrating, and observant minds, from their own experience of life, and their daily commerce with the world.' It is the fruit not so much of speculation as of native sagacity and wit. Consequently, while philosophy appeals only to the intellectual dítes, wisdom appeals to all who are interested in life and have understanding enough to appreciate a word of truth well spoken, and who are not, as to this distinction, however, the two are closely allied. The knowledge of life reached intuitively by wisdom is the raw material out of which philosophical systems are evolved. And, as with all wisdom moves in the atmosphere of philosophy.

1. Proverbial wisdom.—The beginnings of wisdom are found embodied in the terse, sen.

2. Egyptian wisdom.—While the proverbial lore of Arabia brings us close to the running fountain of Semitic wisdom, the Egyptian sages had at a far earlier date evolved a gnomic literature, in which the shape of books of moral precept or instruction ('sphinx', 'harpía', 'niké', 'erós', 'kéros') is evident.

3. W. of Gift.—The wisdom of the gift is a reflection of the festival of the gift, and no doubt is enlightening self-interest, they are by no means forgetful of the noble qualities of character. Especially do they delight in extolling the virtues of contentment, observant kindness, and restrained restraint in word and action, perseverance, kindness, friendship, neighbourliness, hospitality, and love of home and country. In all this they are a mirror of Arabian life at its best.
WISDOM

fidence in those around him. The only influence that really appeals to men is terror; so let him 'harden himself against all subordinates, 'know neither friends nor intimates,' wherever there is no end, 'and guard himself well as he sleeps, 'for a man has no people in the day of evil.' Equally depressing are the Lament of Khedkeperi-Setbu, priests of Beloypo, (B.M. 381 c.c.), with its dismal picture of the corruptions of the time, the Dialogue of a Misanthrope with his Soul, ending in a wistful longing for death as the only release from evil, and the Admonitions of Upu/ner, the gloom of which, however, is relieved at the end by the vision of a righteous ruler, 'with no evil in his heart,' who goes about like a 'shepherd,' gathering together his scattered and 'fervent' herd. On a different key are the Precepts of Denvuf, urging his son Pepi to diligence in learning, as the most 'beautiful and honourable of callings, and the remarkable Song of the Harper, which finds the only consolation against the vanity and transience of life in the frank pursuit of pleasure.

'Give comfort to thy heart, And let thy heart forget these things; What is best for thee to do Is to follow thy heart's desire as long as thou livest.

Ancient thy head with scented unguments,
Let thine apparel be of byssus
Dip thy feet in perfumed water
In the veritable products of the gods.

Enjoy thyself more than thou hast ever done before,
And let not thy heart pine for lack of pleasure.

Pursue thy heart's desire and thine own happiness.

Order thy surroundings on earth in such a way That thy house minister to the desire of thy heart; [For] at length that day of lamentation shall come, Whereas his heart is still shall not hear the lamentation. Never shall cries of grief cease
To beat [again] the heart of a man who is in the grave.'

3. Babylonian wisdom.—Thus far the cuneiform records have yielded little in the way of wisdom literature. In Rawlinson, II. p. 16, however, there is found an interesting bilingual tablet (Sumerian and Assyrian), containing a number of riddles, proverbs, and gnomic maxims, apparently but specimens of a class (selected for the training of scholars in the grammatical construction of short phrases), and therefore evidence that in Babylonian also proverbial wisdom was the basis of more conscious reflection on life and conduct. The following may be quoted as typical:

'The life of yesterday goeth on daily the same.'

'Thou guest and takest the field (i.e. property) of thine enemy;
The enemy is thy companion and thy sleep.'

'If the seed be not good, the stalk will not grow, nor will grain be produced.'

'I am a young heifer, yoked with a yoke;
On the wagon to which we are harnessed... I bear the yoke.'

'What man eateth when he is dead?
Why then should he tell when he is alive?'

'In the case of incurable sickness and insatiable hunger, a box full of silver and a chest full of gold are powerless to restore the health and to satiate the hunger.'

'He who says, 'O that I might have revenge, and more so!'
draws from a well without water, peers from a skin that is empty.'

The Epicurean tendency revealed in the Egyptian Song of the Harper finds expression also in a remarkable case of the Gilgames epics;4 while the high ethical and religious note we have heard in Patuk-hotep and Ami rings through the Wisdom Tablet5 declassified and translated by K. D. Macmillan.

4. Chinese wisdom.—Passing eastward to China, we enter upon a larger field. The grave, practical temperament of the Chinese predisposed them to ethical reflexion. And the logical sharpness and balanced harmony of their speech made it a happy medium for sententious expression. The old classics, especially the Shu King, are rich in proverbial lore. Confucius and his grandson Tse-ssu, Mencius (p.v.), and the Confucian school generally are distinguished, not for originality or depth of thought, but for the terseness and point of their sayings as well as for the attractive grace of their personalities. Even the mystical and sectarian writers, like Lao-tse, Yang Ch'ung, and Hui Shih, make their impression not so much by the reasoned compatness of their systems as by the beauty and force of their aphorisms. Chinese literature as a whole is 'seasoned with the salt' of proverbs. And the common people are not far inferior to their masters in the use of the art. 'Chinese may be almost said to think in proverb.'6 And instruc-

4 Their freedom (I) thou shalt not take away,
Thou shalt not tyrannically oppress them.
For this (I, who give thee this), his god is angry with him: It is not pleasing to Samas, he will requite him with evil.
Give food to eat, give wine to drink, Seek the right, provide for and .
For this (or, he who acts thus), his god is pleased with him: It is pleasing to Samas, he will requite him [with good].
Thou shalt not slander, but speak kindly,
Thou shalt not speak evil, but show mercy.
Him who slander's and speaks evil,
With its recompenses will Samas visit (§) his head.
Thou shalt not make large thy mouth, but guard thy lip;
In the time of thine anger thou shalt not speak at once.
If thou art quickly, thou wilt repent (§) afterward,
And in silence thou willst soothe thy mind.
Daily present to thy god
Offering and prayer, appropriate to intense.
Before thy god mayest thou have a pure heart,
For that is appropriate to the deity.'

5 Akin to the more pessimistic wisdom literature of Egypt is the Lament of Tudi-natu-lid, in which the old king grieves over his own misfortunes and the general evil in the world. As for himself, he has sought consistently to honour God's name and follow His righteous ways.

'I myself took thought only for prayers and supplication.
Prayer was my rule, sacrifice my order, The day of God's honouring was my heart's joy,
The day of God's anger was for me gain and riches. . . .
I taught my hand to keep God's name;
To the honour of the name of the goddess I cautioned my people.'

6 But how differently from his deserts has God treated him.

'My house is become a prison for me,
In the chains of my flesh are my arms laid,
In my own bonds (§) are my feet cast.
A whip while he has beaten me, not . . .
With a staff has pierced me, the point was strong.
All day long doth follow the avenger
In the middle of the night he lets me not breathe for a moment.'

Both theme and language remind one of Job. But the dénouement is different. Whereas Job returns to a deeper, more personal faith in God, the Babylonian sage finds no help in god or goddess. God's ways are too inscrutable for man to rely on Him. The only hope is in the mercy of one's 'guardian angel'—the ancestral spirit of the family.

But I knew the time, of all my family,
When among the guardian angels their divinity had mercy.'

tion in proverbs is a main element in the education of the young.

The centre of interest throughout is the Tao— the intrinsic nature of all things and all human qualities that are singled out by the classical writers as essential to an all-round moral character. But these are reduced by Confucius to the five cardinal virtues of benevolence, righteousness, propriety, wisdom, and integrity. As a virtue, therefore, wisdom (chih) is moral rather than intellectual. It includes, no doubt, knowledge of men and their affairs, acquaintance with the rules of propriety, and the combination of language as the key to success in the world; but its chief concern is with matters of ethical conduct. The wise man (tsé) is he who knows the principles of right living and is able to instruct his fellows in them. Still higher stands the sage or holy man (shén jén), who not merely knows these principles, but conducts his life in perfect harmony with them and thus becomes the moral teacher and guide of the ages.

Such a man is the constant subject of praise in the Chinese classics:

'Perfection of nature is characteristic of Heaven. To attain to that perfection belongs to man. He who possesses that perfection which is right without any effort, and apprehends what is true without any exercise of thought— he is the sage who has reached his consummation (as distinguishes him from the wise). He who attains to perfection is he who chooses what is good, and firmly holds it fast.\(^5\) Therefore the movements of the superior man (tsé) for ages for all under heaven; his actions are the law for ages for all under heaven; and his words are the pattern for ages for all under heaven. Those who are far from him look longingly for him, and those who are near are never weary of him.\(^6\)

The superior man (tsé) does not even, for the space of a single meal, act contrary to virtue. In moments of haste, he does not lose the true or normal way of life. Various affairs are at hand, and yet there is no murmur.\(^7\) He is seen, and the people all revere him; he speaks, and the people all believe him; he acts, and the people are all pleased with him.\(^8\)

A man who commands our liking is what is called good. He whose goodness is part of himself is what is called a real man. He whose goodness is accumulated in full measure is called a heaven-embarking. A man whose completed goodness is brightly displayed is called a great man. When this great man exercises a transforming influence (over others), he is what is called a sage.\(^7\)

On the more philosophical developments of Chinese wisdom see artt. MYSTICISM (Chinese), PHILOSOPHY (Chinese).

3 Indian wisdom. The wisdom of the Semitic and Turanian races we have found to be predominantly practical; that of the higher Indo-European peoples is as distinctively intellectual. This underlying quality of Indian wisdom is suggested from the outset in the name Veda, 'knowledge,' applied to its classical literature; and bright foregoals of its future triumphs in speculative thought appear even in the Rigveda, with its questionings as to the 'wood' and the 'tree' from which were fashioned 'the earth and the heaven,'\(^8\) and its bold theories of the evolution of sat, the existent, from aat, the non-existent.\(^9\)

At the same time, the poets of the Rigveda are not low in thought, feeling for human life, both in its dignity and in its weakness, and clothe this in sententious sayings which are worthy of comparison with the best in other writers. They are mildly humorous, such as the song on the pursuit of gain,\(^1\) others pathetic, like the fine Lament of the Gambler,\(^2\) still others cynical, especially those that moralize on women and their ways.\(^3\) But others strike a high note—e.g., the hymn in praise of wise speech,\(^4\) and that on generosity:

'Who has the power should give unto the needy, Regarding the course of life hereafter; Fortune, like the chariot wheels revolving, Now to one man comes nigh, now to another.\(^5\)

Ploughing the soil, the share produces nurture; He who beds his feet performs his journeys;\(^6\) A priest who speaks earns more than one who's silent; A friend who gives is better than the sinner.'\(^7\)

In the Upaniṣads and the fully developed Vedantic system the incipient gnosticism of the Vedic poets reaches its climax. The sumum bonum is union with Brahman, attained by the jñāna-mārga, 'way of knowledge,' though on the higher planes even knowledge is dispensed with, and the individual soul with all its activities is merged in the timeless ocean of the unknown and unknowable. The same intellectualism pervades the other orthodox systems as well as the heresies of Jainism and Buddhism. Salvation is won by ātma (Pāli viññā), jñāna, or prajña (Pāli paññā), knowledge of the real, bodhi, enlightenment, which is the higher stage of jñāna, i.e., mere empirical knowledge, mātyā, illusion, delusion. But for the ordinary man this way of salvation is too high to attain to. Thus we find a lower way offered him—the karma-mārga, 'way of works,' or salvation through sacrifice and moral conduct. The choiceist expression is given to this 'way' in the later dramas and epics, notably the Mahābhārata and the Rāmāyana (q.v.), the former of which is an inexhaustible mine of pros- verbal philosophy— and in the niti, or wisdom literature, which corresponds very closely to the gnomic poetry of Greece. The outstanding examples of niti—the Pañchatantra and Hitopadeśa—are manuals of instruction for rulers. But others, both Sanskrit and vernacular, are written for the people. With these may be classed the ethical sections of the Bhagavat-Gītā (q.v.), and the beautiful catena of Buddhist aphorisms entitled the Dhammapada, 'Pathway of Virtue.' A few examples of this wisdom may be given:

'To injure none, by thought or word or deed, To give to others, and be kind to all.\(^5\)

'This is the constant duty of the good.\(^7\)

'High-minded men delight in doing good, Without a thought of their own interest; When they confer a benefit on others, They reckon not on favours in return.\(^9\)

'Hear thou a summary of righteousness, And ponder well the maxim: Never do To other persons what would pain thyself.\(^10\)

'A man of truest wisdom will resign His wealth, and e'en his life, for good of others; Better abandon life in a good cause, When death in any case is sure to happen.\(^12\)

'The good show pity even to the worthless, (As) the moon irradiates the meanest herb.\(^13\)

'Act then and do thine own appointed task, In every action my (i.e. Kṛṣṇa's) assistance ask; Do all with heart and soul absorbed in me, So shalt thou have prosperity, and be from trouble free.\(^14\)

'Like a beautiful flower, full of colour but without scent, are the fine but fruitless words of he who does not act accord-

WISDOM

ingly. But like a beautiful flower, full of colour and full of scent, are the fine and fruitful words of him who acts accordingly.1

1 Do not have evil doers for friends, do not have low people for friends; high people have for friends the best of men.2

2 Let him who would make for himself his own duty for the sake of another's, however great; let a man, after he has discerned his own duty, be always attentive to his duty.3

3 If anything else is to be done, let him attach it vigorously! A carelessly inquired only scatters the dust of his passions.4

6. Greek wisdom.—Intellectualism is as definitely the quality of Greek wisdom as of Indian. 5 Sophia (from root soph, 'to know') is primarily 'cleverness' or 'skill' in any of the arts or professions of life—e.g., carpentry, medicine or surgery, poetry, music and singing.5 Hence it comes to mean 'sagacity,' 'soundness of judgment,' 'intelligence,' 'prudence,' 'political tact,' and general 'knowledge of life,' sometimes with the sinister suggestion of 'shrewdness,' 'cunning,' 'craft.' Finally, it is applied to knowledge in the pure sense of the term—'learning,' 'science,' and 'philosophy' (as the harmony of all the sciences).

The beginnings of Greek wisdom are found in the outcrop of gnomic poetry associated with the names of Hesiod (q.v.), Mimnermus, Solon, Phocylides, and especially Theognis (q.v.), who crystallized the current morality in lucid phrases and thus became the favourite teachers of their people. As a whole, their wisdom is trite and prosaic, the keynotes being moderation (μέτρησις) and fitness of act to time and situation (εὐρρήματα), though they have all an instinct for justice as the fundamental element in every true life. Through most of them, also, runs the strain of melancholy which reaches such tragic depths in later Greek literature. The Seven Wise Men did little more than point the maxims of the poets. Chilon's γνῶσις σαφῆ, 'Know thyself,' however, lent the initial impulse to the great philosophical movement in Greece. Its first efforts, no doubt, were spent in rather futile cosmicogonic speculations; but Pythagoras held fast to the idea that philosophy was above all a 'way of life,'6 while the fragments of Heraclitus and Democritus (q.v.) abound in moral maxims of considerable insight and aptness of expression. With the Sophists (q.v.) ϑεοφανή, 'masters of wisdom') the interest reverted once for all to the problems of human life and conduct. In their persons the wisdom of philosophy—practically equivalent to intellectual culture as a preparation for private and public life—became a conscious profession. The love of money, so often associated with professionalism, the critical and sceptical tendency of their teaching, the charge that they subordinated moral issues to expediency—that in fact they identified right with might—22 all conspired to bring the later Sophists into disrepute as subverters of the popular faith and jugglers with the great spiritual realities of life. As a school, however, they deserve credit for having broken the crust of dead tradition, and cleared the way for the intellectual renaissance under Socrates and his disciples.

Socrates (q.v.) refused to be called either a σοφος or a μηχανή. For him God alone was wise; and the man who claimed actual possession of wisdom was guilty of presumption, if not blasphemy.10

10 Taking up, then, a term already used by Pythagoras, he described himself as ἀληθεύοντα, 'a lover of

of wisdom.' The wisdom he thus sought was essentially ethical; it turned on the principles of virtuous conduct. But with Socrates virtue was identified with wisdom. The enlightened understanding of paideia, morally correct, was wisdom, courage, temperance, and justice. Of these, reason or rationality, the highest phase of virtue, for it inspires and regulates the whole inner life. Though he recognizes the rationality of virtue in all men, Plato was conscious of a distinction between the virtue of the workaday world and that of the philosopher, who spends his days in the disinterested pursuit of truth.2

2 The distinction thus vaguely apprehended by Plato was sharply drawn by Aristotle (q.v.). Practical wisdom, prudence, or good sense (φιλόσοφος) deals with matters of ordinary human interest; speculative wisdom, which is wisdom par excellence (σοφία), with the first principles of things. The former enables a man to apply the 'right rule' to every line of activity, whether professional, civic, or strictly moral; the latter leads, by a union of science and intuitive apprehension, to a knowledge of 'those things which are most precious in their nature.'3

3 The later schools also honoured wisdom as the root of all the virtues. For only through wisdom was man able to know or to pursue the true end of life. Naturally their conceptions of wisdom differed according to their different ideals. For the Sceptics (q.v.) it meant the wholesome sense of the relativity of knowledge that permitted a man to suspend judgment where it was impossible to be certain; for the Epicureans (q.v.) the insight into life's conflicting motives and desires that set him free from false opinion and helped him to choose the sweetest and most lasting pleasures; for the Stoics (q.v.) the grasp of truth, both human and divine, that made him possessor of all virtue, freedom, and inward happiness. In their delineations of the 'wise man' the various schools reach their highest level. He knows all there is to know, for he alone maintains that serenity of soul which is the spiritual presupposition of knowledge. He is thus fitted for every sphere of life. He is likewise free from fault or failing, weakness or passion. He is lord of his actions, as being responsible only to himself. He is truly rich, for he has all he needs. He is also happy at all times and under all circumstances, for the springs of his happiness are in himself.4

4 7. Hebrew wisdom.—In Israel we pass once more to the practical side of wisdom. 7770 is used in a general sense of 'skill' in the ordinary affairs of life—e.g., technical work (Ex 38 26 sqq.), spinning (Ex 35 22), war (Is 10 26), shipbuilding (Ps 107 25), and often of 'sound judgment' in administration (On 41 22, Dt 54, 1 K 3 2 sqq.)—but it comes to be applied peculiarly to 'moral principle.' The wise man is he who directs his life worthily and well. His wisdom is thus virtually equivalent to 'goodness.' And the root of this wisdom lies in religion. The fool says in his heart, 'There is no God' (Ps 14 1); the wise man makes God the centre of all his thoughts, hopes, and endeavours. For him the 'fear of the Lord is not only the beginning' (Pr 17), but also 'the crown' and 'the perfect fulness' of wisdom (Sir 11 26).

As elsewhere, the simplest expressions of Israelite wisdom are in the shape of proverbs. Originally pointed sayings (mashal), like the Arabic amthal —— etc.—likewise Nauny a mighty hunter before the

Lord' (Gn 10:8), or 'Like mother, like daughter!' (Ezk 16:4—6)—they gradually assume the perfect balance of thought and literary finish which we find in the couplets of Proverbs and Ben Sira. There is a great width of view, a breadth of wisdom at its purest. In clear-cut vignettes they portray the good man at his various tasks—as workman, citizen, neighbour, friend, husband, and father. They reveal the principles by which he conducts his life. The general motive may be eudemonistic. Both collections show an undigusted appreciation of the good things of this world—its prizes, honours, riches, and pleasures—and direct men to the best way of winning these. Nevertheless, the moral tone is throughout honest and true. Righteousness is the first concern. Only as men follow after righteousness do they reach prosperity. In the emphasis thus laid on righteousness the proverbs of Israel outshine all other prudential literature. And at their higher levels they draw very near to the standard of Christ.

With this growing refinement in the art of proverb there developed in Israel also a more professional interest in wisdom. On the pages of the greater prophets 'the wise' appear as a separate gild of spiritual advisers, whose 'counsel' radiated from the throne of the priests and the 'word' of the prophets (Is 29:4, Jer 18:18 etc.). In the post-Exilic period the 'wise men' practically replaced the prophets as moral guides and teachers. Gaining wisdom from the study of the older Scriptures, or through prayer and supplication, or in the school of experience, as they wandered about the world, 'travelling through strange countries,' mingling with kings and princes, and 'testing the good and evil among men' (Sir 30:18), they took their stand in the market-place, or at the corners of bustling streets, or by the gates where people congregated, and appealed to the simple ones to embrace wisdom and to fools to turn from their folly and live (Pr 1st. 8:14), or in their homes and lecture-halls instructed their pupils in the ways of wisdom (Sir 5:18). Out of this formal discipline arose not merely the gnomic wisdom of the Prophets, 'Sayings of the Fathers,' but also the wisdom-speculation which we find in later elements of Proverbs, in the Apocryphal books of Sirach, Wisdom, Ben Sira, Baruch, and 4 Maccabees, and in outside sources like Philo and the Odes of Solomon.

In Pr 24:32 Wisdom appears as the first creation of God, the 'mouth-child,' who played beside Him as His Thought, 'opened her mouth and gave a ray of light to the wise and pleasant words to the simple. She was a child of the Most High, and dwelt in the holy place of the Father.' This is the wisdom of a time very remote, before the world was formed, and before there was a man in the world. Wisdom has no archetypal hypothesis emanating from the divine. She is still the impersonation of a moral quality, endowed with life by Jahweh, whose place in creation she nowhere usurps. The ethical character of Wisdom is equally evident in the great Song of Praise, Sir 24:1, where Wisdom is ultimately identified with 'the law that Moses commanded,' which found its resting-place and seat of authority in the Temples of Jerusalem. Wisdom with the Law appears in Bar 4:12 and 4 Mac 17. Following out the more ethical line, Enoch 42:3, 49 et al. pictures her as descending from her father's seat to her mother's, her dwelling turning to heaven, and there awaiting the Messianic age, when she will be poured out in her fullness on the elect. A much bolder attitude is assumed in Wh. 32:17, 'We read of the spiritual 'artificer of all things,' an 'effulgence of the everlasting light, and an unstained mirror of the power of God,' which by her purity and mobility penetrates and permeates all things.' Here the concrete imagination of Israel has been caught up in the full sweep of Greek influence, and we seem to be actually moving within the inner circle of the Neo-Paulyan procedure. But the most systematic attempt to blend Hebrew wisdom with Greek idealism is met with in Philo (q.v.), whose doctrine of the Logos finds poetical reflection in certain of the Odes of Solomon (15:5—15:18 etc.).

In other phases of Hebrew literature there is a decided protest against the current ideas of wisdom. The book of Job challenges the whole theory that outward prosperity is the reward of righteousness, while孔则the leaves us with the cynical conclusion that 'all is vanity.' Elsewhere the speculations of the wise are traversed by a species of agnosticism which insists that Wisdom is undiscoverable by man. The most brilliant, poetic expression is given to this tendency in the Song of Wisdom incorporated in Job 28. The poet has sought wisdom in the depths of the earth, where miners dig for gold and silver, in the heights of heaven, whither the eagles soar in flight, and in the desert places, where the beasts roam in solitary majesty. But nowhere can he find the object of his quest. A still more depressing view is expressed in 'the words of Agur, the son of Jakeh,' incorporated in Proverbs:—

'If I am weary, O God, I am weary; I am altogetherspent. I am but a brute, and no man: I have nought of human intelligence. No wisdom have I learned. No knowledge I have of the holy One. Who is He that hath mounted to heaven, and come down? That hath gathered the wind in His fists, The waters hath wrapped in His cloak, And embraced the massaics of earth? What is His name, and His sons' name, If thou dost know it?'

It is significant, however, that Hebrew scepticism never touches the being of God. The beginning of wisdom was 'the fear of the Lord'; and, even when wisdom was despised of, the fear of the Lord remained the sheet-anchor of faith and hope. However perplexed he was with the mysteries of Providence, Job still clung to God; and at the end he rose beyond himself and his questionings to a new sense of God's wisdom, power, and grace in the boundless universe of nature. Even Koheleth's 'boecissinism is the fear of God into a certain sanctified common sense. The poet of Job 28 has failed to reach wisdom. But 'God knoweth the place thereof'; He hath 'established and searched out' (v. 25). And for Agur, too, God is the great energizing Force behind all the phenomena of nature. He may not be able to 'name' Him; yet he feels His presence all about him. And to Him he addresses his prayer:

'Give me neither poverty nor riches, Feed me with food sufficient for my wants, Let me be full, and deny thee, And say, Who is Jahweh? Or be poor, and steal, And profane the name of my God.'

8. Christian wisdom.—Early Christianity is a return from speculation to the simple realities of faith and life, which are 'hid from the wise and prudent,' but 'revealed unto babes' (Mt 11:25, Lk 10:21). It is teaching the gospel of the King- dom Jesus avoided the idiom of the schools and addressed men in that concrete, parabolic style which we have found to be of the essence of the popular prose of the Near East. But the teaching of Jesus in the Gospels is not a 'wisdom' beyond that of all their teachers (Mt 13:4, Mk 6:2). He Himself claimed to be 'greater than Solomon,' to hear 'whose wisdom and prudence' of Shemuel 'from the uttermost parts of the earth' (Mt 12:40, Lk 11:31), and this because He had been supremely endowd

1 304, 3 290.
with 'the grace of God' (Lk 21:28), so that the words He addressed to the very wisest of God (Mt 11:27, Lk 10:12) to Jesus 'wisdom' was that practical understanding of the mind of God, that entire sympathy with His will and purpose, which enabled men to walk in His ways and do His will in 'the grace and power of heaven' (cf. Mt 6:10; 23 etc.). The same idea is set forth in Js 3:17, where 'the wisdom that is from above' is contrasted with the wisdom that is earthly, sensual, devilish by the sanctity, meekness and humility, purity, peace, patience, wisdom, and, 'a good conversation.' The Pauline Epistles and the Fourth Gospel show a much closer affinity with the Wisdom literature. The apostle, it is true, renounces the 'wisdom of the wise,' which leads to no real knowledge of God, and even observes the gospel of 'Christ crucified' (1 Co 1:23). But in Him he finds a wisdom higher than that of men, even 'the power of God, and the wisdom of God' (v. 34). In the sanctified, quaterns of graces personally manifested in Christ—wisdom, righteousness, sanctification, and redemption—wisdom takes the foremost place (v. 18). But the purer kind of wisdom is in Js 3:17. For it, W. C. Renan, is full-grown in Christ (1 Thess. 2:1), which alone, as I have seen, the deeper plays before the polytheistic wisdom and the Hellenistic and Ephesian a real speculative philosophy, based on Him in whom are hid all the treasures of wisdom and knowledge (Col 2:3). Adapting ideas and phrases from the Wisdom of Solomon, he worships Christ as 'the image of the invisible God, the firstborn of the whole creation,' by whom all things were created—that are in heaven, and that are in earth, visible and invisible (Col 1:16). Similarly, the Logos philosophy of the Fourth Gospel has no available only for its results in character. The Logos became flesh and dwelt among us, so that we might behold His glory—'glory as of the only begotten of the Father'—and be progressively transfigured with the glory of God (1 In 4:14).

A. R. GORDON.

WISDOM TREE.—The venerable Bo-tree at Anuradhapura is the oldest historical tree in the world. The planting of the Bo-, or Bodhi-, tree (the Sinhalese base is merely a contraction of the Pali Bodhi, both meaning 'wisdom') is ascribed at length in the Chronicles of Ceylon as having taken place in about 245 B.C.1 Incidental references, in later centuries, to repairs to the enclosure, or to gifts of staircases or statues or ornaments by subsequent kings, show that it has been continually devoted to it. It is now (1920) 2106 years old.

Its botanical name is ficus religiosa (the Anglo-Indian pidu, and the Greek Bontlingk, anurak, or malaius, a flower-stand, has been provided for the memorial presentation of the white blossoms of the champaka. Everything about the spot gives the impression of a holy antiquity. But we could not be sure of the identity of the tree without the long chain of documentary evidence.2 The tree shows the earth, that like earth and shape; but the tapering leaves, above six inches long and four inches across the broadest part, are lighter in colour underneath, and the never-ceasing rustling of the leaves causes a constant flush of vanishing and reappearing light and colour curiously suggestive of one of the main doctrines both of the ancient Buddhist and of much modern philosophy. Anuradhapura (g.v.) and the country round had been for nearly seven centuries, from the middle of the 12th to the middle of the 19th cent., almost abandoned. The Tamilis, after centuries of intermittent attempts to take it, had been driven back to the north of the island. The Sinhalese, out-numbered ten to one, had retired to the fastnesses of the mountains to the east. East to west the jungle stretched from shore to shore, and north to south for a hundred miles. In what had been the most populous and prosperous part of Ceylon there were left a few far-scattered peasantry and wood-men; and the great capital had become a few mud huts. But there were always devoted bhikkhus to tend the Bodhi, the Wisdom Tree. A railway now runs through the jungle, and roads have been made. The magnificent reservoir, 50 miles in circumference, which had supplied half the country-side with water, has been restored to working order; and population and prosperity are slowly being restored. One consequence is

1 De Grammont, ch. xi.; Madraswans, ch. xix.

3 Much of the text is in an appendix to the second volume of Tennent's Ceylon.
that a constant stream of pilgrims comes from all parts of the world to pay reverence to the tree.

Various different, and indeed contradictory, explanations have been given of this reverence paid to the Bodhi-tree. The oldest explanation is found in Ceylon itself. This can be gathered from different passages in the Chronicles and in the Commentaries on the canon, and is best summarized in a book called the Mahā-

bodhi-vidyā, written about 500 A.D. This book, probably written about A.D. 599. It is an ampli-

fied version in bombastic Sanskritized Pali prose of what had been already said in the older authorities just referred to; and, however interesting as a literary work, the oldest to show that acquaintance with Sanskrit then just beginning in Ceylon, it really adds nothing to the historical details contained in the older documents. The Ceylon view is that the tree is held in so much affectionate esteem and awe because it was grown from a branch of the original Bodhi-tree at Gayā (q.v.) in India (often distinguished as Both-Gayā, 'Gayā of the Buddha') under which Buddha had actually sat when he passed through the intense mental crisis, the turning-point of his career, which led to his coming forward as the teacher of a new religion. The 'wisdom' is the wisdom of the tree, not of the teacher, but of the teacher. It is derived not from the tree, or from any fruit of the tree, but from the mental struggles and the victory won by the founder of their faith. They adore the tree, not because of the power of any spirit or dryad within the tree, but because the outward form of it is a constant reminder of what they hold to have been the most important event in the history of the world. In their view, the attitude towards the tree is much the same as that of many Christians towards the Cross. And, just as opponents of Christianity have thought, quite illogically, that they could score a point against it by showing that the cross was a religious symbol (with quite different associations) before the rise of Christianity, so opponents of Buddhism have sought, and quite successfully, to show that the tree was a religious symbol (with quite different associations) before the rise of Buddhism. They fail to see that that is not the point. Granted that other people had previously used the same (or a similar) symbol in a different sense, the question is, What sense did the Buddhists use it? We shall deal with only the more important of these theories of the tree.

James Fergusson, the eminent historian of Indian archi-

tecture, has pointed out the main features of 'Bodhi-tree belief' were tree- and serpent-worship, that the despatch of a branch of the Bodhi-tree by Aśoka to Ceylon is a proof of the Turanian tree-worship practised by that Buddhist emperor of India, and that the monuments show that early Buddhism was 'a Turanian faith.' What exactly he means by Turanian he does not state. The conclusions put forward in his massive volume, entitled Tree and Serpent Worship, have not been accepted by any other scholar who has written on the subject.

E. Senart, the editor of the Mahābodhiya and the interpreter of Aśoka's inscriptions, will have none of this. He holds that Buddhism was, in its origin, Aryan; that it was derived almost entirely from the Brahmanic mythic cult based on the Vedā records; that the legend of the Buddha is almost a myth; that in that myth the tree is almost, if not quite, as important as the teacher; that the tree is the clearest expression of the famous atmospheric struggle for the rain when the god with his thunderbolt defeats the demon who keeps back the rain in the clouds. The wisdom of the tree is the ambrosial rain, for is not their nibbāna sometimes called by the Buddhists 'ambrosial' above the clouds? The author's literary imagination, and great learning have not availed to secure acceptance for this; they have brought no new rain how come, why, or why or where or where the transmission of the one set of ideas into the other can have taken place.

Professor C. F. Warren, late professor of Sanskrit at Leyden, was of yet another opinion. In his view the Buddhist account of the Bodhi-tree marks the first authenticated sun-rise, for the Buddha is really the sun, and his disciples are the stars. He regards the tree, not (with Senart) as the cloud-tree, but as 'the world tree, the tree of life.' This is obscure, but the two are quite different; and he refers only to a post-Buddhist Upaniṣad (Saugas ṣūkha, vi, 1) which has clearly used it all along. Even if it did, what evidence could there be of Buddhist belief?

It should be pointed out, firstly, that these theories are mutually exclusive, and cannot be combined. The tree is the main feature of one of them, and that of the others is wrong. Secondly, they are all almost exclusively based, so far as the Buddhist side of the question is concerned, on late records—records eight to ten centuries after the events they purport to describe. To the present writer it seems indisputable that, if a historian wishes to ascertain the genesis of a 'legend,' the only scientific method is, first of all, to ascertain what is the earliest form in which the legend is recorded. The earliest form of the legend about the original tree is as follows.

It is well known that there is no consecutive life (or legend) of the Buddha in the Canon. But there are incidental references to certain episodes in his career. Of these at least twelve refer to the episode of the Wisdom Tree. But only two of them even mention the tree; one talks of a tree under the tree the Teacher thought such and such things. This simple fact is enough to dispose of the theory that the tree was merely, if not quite, as important as the teacher. In the longer chapters of the Mahā-bodhiya contained in the Dhūpa there is a short account of six previous Buddhas with a sketch of the life of Ṭipāsī, the first of the six. This is so evidently drawn up as a mere imitation of the life of the historical Buddha that it is suggestive to find that the sketch contains no reference to a wisdom tree. This is the more remarkable since in the tabular paragraphs giving certain details about each of the six the various accounts of the tree under which each attained to enlightenment is also given. In none of the cases is the tree called a wisdom tree.

If the above statements of fact are correct, it follows that the expression 'wisdom tree' or 'tree of enlightenment' does not occur at all in any of the oldest of those canonical works which deal with the Dhamma (the law or religion), that it occurs once in all the other canonical works on the Dhamma, that it occurs only once in those that deal with the regulations of the order (the Vinaya), that that single reference is in the very latest portion of the Vinaya, and that the expression is thus used only to distinguitshly mark the lives of the same kind and name that particular one under which the teacher was seated when he obtained enlightenment.

For the later history of the original 'wisdom tree' at Bodh-Gaya in India see art. GAYĀ.

The mention of the tree is at the opening page of the Vinaya (transl. in Légende des Vie Textes, i, 2, Udana, i, 1, and in Udana, ii, 10). The other passages, which do not refer to the tree, are Sārnāvatī, 90, 191; and the Buddha is called the Buddha, in the Mahāvīra, 171 (H.). Majjhima, i, 22, 167 ff., 240 ff., ii, 93-96; Udana, i, 4, i, 1, ii, 10.

On the chronological relations of the various portions of the Vinaya to one another see the Introduction to Vinaya Texts.
WORD (Sumerian and Babylonian).—1. Original ideas.—The Sumerian vocabular for 'word,' or formal expression of command, is inim, deflected early to enem, and it was carefully distinguished from the noun dug, 'discourse,' speech,' and the verb dug, 'to speak.' Inim, enem, is always a noun and was translated into Senitic by amutu. Both enem and amutu obtained the secondary meanings 'affair,' 'matter' (Latin res). The Sumerian word also developed the sense 'incantation,' i.e., the formal words of the magician, and hence the re-duplicated form inim-inim-ma (pronounced inin-nin-ma) became the ordinary rubric in the magic literature as 'enunciation' (Seminipsis). The present writer derives the noun inim from the verbal root nin, 'utter a decision,' 'issue a formal word,' whence is also derived the noun nam, 'fate,' 'decree.' The Senitic noun amutu is derived from a root wadu (wadu), 'speak,' 'curse,' found otherwise only in Aramaic in the forms idama, 'idamun. The Sumerians and consequently the Semites regarded a formally spoken 'word,' containing the force of a command or promise, as a definite and real thing. It possessed magical and terrible power if it issued from a deity, from a priest, or from a human being under formal circumsances. Hence witnesses who were present at a legal transaction which ordinarily involved an oath were called gatu inim-inim-ma, 'men of the words,' or men who were present when formal 'words' or matters were arranged. A witness is sometimes called inim-su, 'one who knows the word,' i.e., one who knows what formal words were stated in a transaction.

The formally spoken word of any of the great gods was regarded by the Sumerians as a real divine entity. For the early period we have only the personal names of Sumerians as a source for our study, but undoubtedly the conception of the word as an agent of power, or as a word of wrath, became in later times one of the principal features of Sumer-Babylonian religion, arose long before the liturgical texts in which alone this doctrine has been preserved. This is the aspect of the word which was chiefly developed in Sumerian theolgy, but they also held that the enem, or word, of a great god might be a good and kind agent of deity when not uttered in wrath to punish the sins of men. Before 2000 B.C. occur such personal names as the following: Enem-na-zi-id, 'His word is true,' i.e., the god's word is a faithful support; Enem-azag-uzu-du-ri, 'The word of the wise one is eternal.' In the period of the Ur (25th cent.) occur the names Enem-dug-ga-ni, 'His good word,' and Enim* Bau-ni-gi, 'The word of the goddess Bau is true. Even in a passage to the destructive word of the gods Anu, Enil, Marduk, and Nebo from a liturgy of the 21st cent. a line runs, 'His word has no end, his will, i.e. does no wrong.' It is, therefore, certain that the Sumerian conception of the word of the god was not necessarily that of an avenging messenger. Nor is the idea of a curse inherent in the original use of the term. They simply attributed to the formally spoken word of a great god a semi-personality; they thought of it as a divine agent. The word of wrath.—The Sumerian liturgies in all periods for their evolution changed at great length the destructive work of the avenging word which is sent by the angered gods to chastise mankind for their sins. In the earliest known liturgical fragment (of the Gedeon, c. 2630) a passage to the Verbun Tree occurs.

'The Word upon the sea has been projected and returns not.' But passages on the 'word of wrath' must have been employed in public choral services in pre-Sargonic times, i.e., before 2600 B.C. The name Enem-dug-dug-ga-ni an-deh, 'The word which he spoke shaker destruction befalls,' is found on a temple record of Lagalanda (c. 2850), and an abbreviated form of it, Enem-du-du, occurs in the period of Ur. This name, like so many Sumerian personal names, has developed from the liturgies, and the line which supplied it recurs frequently in passages to the destructive word.

'The Word which on high shaketh the heavens, The Word which is the root to tremble.' That alone is conclusive evidence for the existence of this theological conception and for these doeful descriptions of the destructive word in public song services at the very beginning of Sumerian civilization.

In the earlier stages of Sumerian liturgical worship, when simple song melodies or laments were employed, we find references to this 'word of wrath.' A liturgy, which is represented, as so frequently in later compositions, in the rôlë of a mother-goddess wailing for her people, has in the very opening lines a passage which attributes all the woes of humanity to the words of Anu and Enlil. Sin invariably provokes the anger of the gods and they send the word of wrath 'to hasten forth and afflict mankind.' Hence the great earth-mother, who loves men and shares their sorrows, is also afflicted by the word. 'In the home it causes life to cease, in the flocks (?) it causes life to cease, To the woods ones it causes life to cease, among children it causes life to cease. It has taken them as prey, it has caused them to disappear. His Word speeds me, speeds me forth, as oft as it causes me my face to protrude.'

When the Word of Anu came to me, When the Word of Enlil came to me, When by the mountain road he entered. A liturgy of the compiled type, which preceded in order of evolution the canonical compositions of the Isin period, has a remarkable melody of the Weeping Mother, in which she thus describes the misery of the city of Ur: 'May Anu prevent his Word, May Enlil order kindness.

Of these personal names which refer to the hymns on the Word see ERE 212, 175. 8. Langdon, 'Liturgy to Ininni,' R.A. iv. (1913) 5-11. 9. See the Introduction to Langdon, Sumerian Liturgies and Psalms (hereafter cited as SLP), Philadelphia, 1919.
(Enlil series: elum genadum-um nu-zi kurkurnu; "Mighty one that overwhelmeth, thy name is upon all lands"); fourth song. A tempest it is, shattering the mountains. As for the lord his word is a tempest. The heart of Enlil is a tempest. 3

(Enlil (II) series: ululim gi-di-di-ka, "When like a storm he cries"); first song on tablet 2 of the Assyrian edition; song to the ensu of Ann, Enlil, and Adad. 4

(4) Weeping Mother series: minima in-dii-dig ku-di-bi-da-na-ad, "The cow wailed in and her place lay down"; song to the word inserted in the first melody, lines 11-15. 5 An extremely long text; the word for the word of Ann and Enlil of this series occupies two tablets. 6

(Nergal series: song addressed to the word of Nergal; the last song of the series, followed by the ereduna, or recension. 4

(Nergal series: two long hymns to the word of Nergal, the first of which is a duplicate of the one cited in no. 5; the last two songs of a Blurry to Nergal followed by the ereduna. 3

(7) Nebo series; two songs to the word of Nebo in the third tablet which has not yet been recovered. 6

(8) Weeping Mother series contains two passages to the word of Ann and Enlil inserted into two songs. 7

(9) A Blurry of songs, all devoted to the word. Particular attention is given to the word of Marduk, and the Weeping Mother is represented in two songs as afflicted by the word: The exalted one like a wind, like a wind, The exalted one like a wind has cast me down, even me. 

(10) In the exalted one, the word of Anu, the Lord of heavens, He of Intangible thoughts, whose word is true, Against whose word there is no turning back, The exalted Enlil, the utterance of whose mouth is unalterable. This angry spirit destroys the folds, rends the stalls. My roots are rent, my forests are despoiled of leaves. 8

Like a lone willow-tree by the river's bank he made me, like a cedar in the desert he has made me. Like a lone tamarisk on the storm he has made me. Behold the mighty one like a lone rush-reed has brought me low.

An exceedingly difficult passage attributes the following passage to the mother-goddess: 1 The word of the lord, because of its mischievous wailing I sit. 2 The first half of the line is interpreted to mean that the mother-goddess is possessed by the wailing word, she is completely in its power. 3

(11) Nergal series: apapallu el-mus, "Flood through the heavens the harvest"; a song to the word of Nergal is inscribed into the first liturgy, and it was followed by a second hymn to the word which has not yet been recovered. 7

(12) A liturgy to the word of Anu arranged to commemorate the destruction of the city Ur; sama el-mus uma musun, "Of exalted heavens lofty is his word." The first two tablets only are preserved. They include hymns to the words of Enlil, the sun-god. The second song of the liturgy, following the hymn to the word of Anu and Enlil, is devoted to the Weeping Mother. 9

(13) Selection from an unknown series containing two hymns to the word, the first hymn begins, "He that makes forth from the sea, his word is the burden of the storm." It is an old hymn to the word of rain, the cloud-god. The liturgy includes references to the word of Ea, of Damkina his spouse, of Marduk, of Nebo and of Sakkut, all of which are said to be sent down from Ekur, the source of Enlil in Nippur. 10

The second hymn on this tablet is among the most remarkable of all the songs to the word. Fifteen

1 The text (after Zimmermann) is ed. in SLP, pp. 292-305; see, for the song to the word, p. 262. Published as Bab-er-su-er-rana in "Ritu de la vie religieuse des Sumeriens," 2 Published in BR, p. 43, and SLP, pp. 13-35. 3 Published in BR, 11, no. 73, pp. 41-49, to be restored from the duplicate, SLP, p. 7. 4 Text in G. Reinsch, Sumerisch-babylonische hymnen, Berlin, 1896, no. 27, in SLP, pp. 68-69. 5 BR, pp. 66-68. 6 For the text see BR plates ibis-xxx. For a tr. of the first passage see p. 74. For the second passage see pp. 107 and 741.

That is clearly the meaning of the line (see SLP, p. 46, 15, where the end of the line should be read ida-da-ad ida-da). 8

The series is called adad ensu adad-ensu; "Like the wontful spirit (his word) has been established." Six songs of tablets 1 and 2 are edited in SLP, pp. 35-39. The remainder of the series, i.e., tablets 4 to 6, are supposed to be in a similar medium material.

This remarkable hymn to the word is ed. in SLP, pp. 72-74 (lines 1-30), and a remainder of the hymn will be found on pp. 76-78, lines 16 reverse 4.
The baptized, orform. It is the mother of Enlil, who was destroyed,‘he whose city was destroyed.’ Four of the six tablets of this liturgy are known. Of the one employed in the first tablet of the Enlil series, no. 1 above.

3. The spirit (ud) — In the preceding discussion some attention is necessarily given to the identification of the word of a god with his breath or spirit. As in the case of the word ‘enem, i.nim,’ the term for ‘spirit’ or ‘breath’ (ud) of a god has not originally a destructive and violent sense, but in that sense became almost universal and consequently should be rendered in most passages by ‘angry spirit,’ ‘spirit of wrath.’ In all of the present writer’s translations ‘angry spirit’ renders the Sumerian ud—Semitic dmu. The Sumerian ud is the ordinary word for ‘day,’ and so is the Semitic dmu. The Sumerians, and after them the Semites, conceived the breath of a god as a whole of light. When a god’s anger was aroused, his breath went forth as a storm, and consequently both ud and dmu came to mean ‘storm.’ But the original idea of the divine spirit or breath must be defined. A passage on the whole breath of Enlil is interesting by the remarkable statement, ‘The utterance of thy mouth is a beneficent wind, the breath of life of the lands.’ The soul of the god is here defined as a kind of wind which gives life to mankind. A proper name of a man in the period of the Ur dynasty was Udde-nisig, ‘the spirit (of god) is a blessing;’ and another is Udde-nisig, ‘the spirit is good news.’ A name in the pre-Sumeric period in Ud-malku, ‘the spirit has been reconciled,’ the spirit of wrath is appraised.1 It is said of the mother of Enlil, ‘Ishtar, ud-de-la has brought, by the spirit thou art filled,’ i.e., the spirit of one of the great gods was given unto her. She is thus endowed with supreme power. In the same manner kings and their divine patrons, like Ur-Ninah is called the ‘Ishtar of Ninda, unto whom was given the word of the goddess Ninah.’ Ur-Bau is described as the man ‘inim-ma-a-ga of Ninim, unto whom was given the word of Istari.’ It is obvious, therefore, that the spirit or breath of a god was practically identical with his word, and it was personified as an agent of good works. This phase of its activity as a verbum creativum, a spirit of wisdom and cosmic reason, appears only in Semitic texts where the Semitic word mwmw is employed. In Sumerian texts the beneficent and philosophic aspect of the word is wholly overshadowed by its activity as an agent of wrath.

The spirit (ud) of the heart of Anu which has become evilly sound, ‘she says a line of a hymn to the word, and the ud is called the messenger of the lord of the lands (i.e., Enlil).’ Another passage states explicitly, ‘The spirit is the word of Enlil.’14 The expression, ‘the merciless spirit,’ is so common that it appears in grammatical texts.15 And when the wrathful spirit had exalted judgment on the earth, the god who sent him forth recalled him. ‘When Anu spoke to the ud sent to its place.’16

4. The ‘word of wrath’ in Hebrew — The Sumerian belief in the wrathful word of the gods passed into late Hebrew theological descriptions. The designation of Jehovah’s word by an Alexandrian Jew in the Greek book, the Wisdom of Solomon, is obviously under the influence of Sumerian liturgies which were being sung everywhere in Babylonia at that time: ‘Thee all-powerful Word leaped from heaven down from the royal throne. A stern warrior, into the midst of the doomed land, bearing as a sharp sword thine unconquered commandment, And standing filled all things with death.’17 A post-Exilic Psalm reflects clearly the Sumerian idea: ‘He sends his commandment upon the earth; His Word runneth very swiftly.’18 Even more direct is the evidence of the post-Exilic Isaiah, for here we have words from a prophet who almost certainly lived in Babylonia: ‘So shall my word be which goeth out from my mouth; it shall not return unto me void, For it shall have the effect which I desired, And shall have accomplished that for which I sent it.’19

5. The word as creative wisdom — The Sumerians and Babylonians thought that the word was the uncreated first principle and source of all things created. The creative form or principle resided in the primordial watery chaos. Since we do not have any Sumerian sources for the doctrine of the cosmic word, but only a syllabar which gave the term, now unfortunately broken away, it is impossible to state exactly what it was. Evidence deduced above for the beneficent activity of a god’s word and breath induces the conjecture that the Sumerians employed the term i.nim, ‘word,’ for cosmic creative form or reason. At any rate we know that the term mwmw was said to mean ‘loud voice,’ apparently because of the roar of the thunder or rain-god was adopted as a term for the indwelling wisdom of water. We know that ud, mwmw

WORSHIP

Leipzig, or voice

(Job the and one time
cannot concept writing and son of Enki, god of writing and son of Enki, was identified with mummu, 'who fashions the things created.' When Marduk, at the hands of the Babylonian priests, became the son of Enki and creator of the world, he also was identified with mummu.

According to Sumero-Babylonian philosophy, the reality of anything consists in its 'form (jor; Semitic 'ursive), i.e. the divine mental concept which is revealed to mankind by its name. For example, the word 'bowl' is a name by means of which its 'form' or the divine concept is revealed to man. All knowledge is revelation, and the reality of things is not only their tangibleness but the mental concept, and things cannot exist until a god has this mental concept. Fundamentally all things, material and immaterial, redemptive activity of the water-god, which is mummu and was personified as cosmic reason. Hence the universe was conceived to be held together by a band or cord, ribu, markasu, a divine creative reason. Such was the philosophical and mystic concept of the word in Babylonian.

6. The Greeks borrow the Babylonian idea of creative reason.---There can be little doubt but that Thales, founder of the Ionian school of philosophy, who regarded water as the first principle, borrowed his ideas from Babylonian. Here in the Ionian school of Thales, Anaximander, and Anaximenes, all of Miletus, cosmic substance itself is reason, wisdom, and harmony.1 That strikingly corresponds to the activity of the Babylonian Logos or Mummu. Hormitius (q.v.) of Ephesus, who developed the ideas of his predecessors at Miletus at the end of the 6th cent. shortly after the fall of Babylon, adopted fire as the universal element. Sometimes defined as hot breath in his writings. He is the originator of the cosmic philosophy of 'becoming,' the ceaseless transformation of all things from fire or heat through various stages back again to fire. And the cosmic law or reason working beneath all this process of becoming is λογος, or the word. We do not know whether the earlier Ionian philosophers employed λογος in this sense, but there seems to be an apparent connexion between the creative wisdom or word of the Babylonians and the law of eternal becoming or the 'word' of Heraclitus.2

7. Influence of Babylonian creative word in Hebrew.---The Hebrew employs both 'word' (כין) and 'spirit' (רו) in much the same way as the Babylonians employed mummu. We have seen that the Sumerians and Babylonians regarded the spoken word and the breath of the god as intimately connected and originally the same agents. Although Hebrew has not the profound mystic and cosmic philosophy of the Babylonian, there is an obvious connexion between the two cultures at this point. We may not borrow here borrowing, but the similarity must be noted. A passage of an Exilic Psalm confirms the suspicion that the writer knew Babylonian theological ideas:

'By the word of Jehovah were the heavens created,
And by the breath of his mouth all their host.'

WORSHIP. (Primitive).---What is worship?

The word itself is English, and almost untranslatable into other languages. Originally it implied acts prompted by veneration, but with stress of time and weight of usage it has come to be applied to the whole range of religious behaviour, so that one might well say that worship is the active side of religion. Even so, the meaning does not stop with this active side. It also has the attitude which prompts the act; it is the belief which stays the attitude; it is the faculty which empowers the belief. In each of these guises it is multiformal: guilt in whole cult and table rites. Supernatural mummu as 'voice' would then be based upon a false etymology or be influenced by their use of the term anuma, 'word,' as a verbal concept.1

1 E. Grimmow, A Classified List of Cow. Cornish Idioglossia, p. l., Leyden, 1831., pp. 7794. It should be noted also that the Hebrews often spoke of the breath (כין) of Jehovah as a storm-wind (Ex 15, 19; Ps 104 and as his wrath (Gen. 38).2

---And rites associating indulgence and devotion, feast and penance; guilt it pairs off fear and love, dread and adoration, or it mingleth them in the sense of awe; guilt belief it ranges from myth to philosophy, from creed to science, from passion for ideas to respect for truth; and guilt faculty it is said to be absent in some men. Nor can it be defined by its objects; for in the context of worship is included not only song by beighth but also traffic with the devil, while it cannot be

WORSHIP (Primitive) 753

separated from the intercourse of man with man. If we were to judge by phrase alone, its comprehensive complexity would be apparent: along with "divination," "prophecy," "sorcery," etc., we come "ancestor-worship," "idol-worship," "nature-worship," "snake-worship," "tree-worship," and what not? The residual fact seems to us that the whole activities—physical, psychological—to which the adjective "religious" can be applied; while, by discountory, it passes on to every other kind of pursuit that may be regarded as governed by a sufficiently intense interest and "spiritual" value, is, in fact, a distinct variable of culture; it possesses a type and significance of its own which must be dissected out from the accompanying contexts of economic, political, aesthetic, and intellectual life, before it can be properly comprehended.

It is at this point that the third mode of consideration, the psychological and the philosophical, becomes important. Recent years have seen the rapid growth of a very considerable literature devoted to the psychology of religion, its effort being (1) to describe the particular states and processes of mind which lead to worship and define it, and (2) to determine their function within the whole context of human nature and the world which has created it. If there is a religious "instinct," the definition of its forms and occasions is the patent problem; or, to speak more specifically, in what sense, and from it the "primitive" in religion must be tried to type. This is the task of the psychologist, while on the side of the philosopher there remains to be put the great problems of the truth and value of religion. The philosophic task, too, is receiving yearly more attention, with the "philosophy of values" as the central controversy.

A broad observation of the whole range of facts connected with the relation of cult to culture fortifies the significance of the psychologico-philosophical viewpoint. Shamanism (q.v.), in one form or another, with its accompaniments of trance and ecstasy, is the most universal of the ritual forms known to the least cultivated peoples; that it is primarily the development of a psychical aptitude is evident. In the higher societies by far the greater number of cults trace their foundation to an "inspired" founder, be he ancestor or prophet. The great syncretistic religions hark directly back to the life of a master as their source and explanation. In every level of civilization the origin of religion food and, in fact, the individual experiences of individual men for foundation and guidance; nowhere is there evidence of an original religious "compact" (unless totemism may be regarded as such), although, of course, there are plenty of instances of the application of religious forms to social and state interests. On the whole, the type of cult development, in high civilization and low, is (1) the moral or mystical teacher; (2) the ritualization of the original ceremonies, songs, or prayers, accompanied by social recognition; (3) their corruption, partial or whole, through syncretism (q.v.); and (4) not infrequently an effort, through a subsequent prophet or reformer, to purify the cult and bring it back to norm. This is obviously the Hebrew development as represented by the OT; it may fairly be applied to Christianity, to Buddhism, to Brahmanism; and it finds signal illustration in the more backward regions of the world; e.g., the majority opinion of Americanists is that in the Aztec cults, with their horrible rites, the same belief in the pollution and redemption from what had once been a religion (probably Maya in origin) containing much that was clean and noble, while in Peru there is evidence of several successive purifications and degradations of worship; and in neither centre was the highest...
WORSHIP (Primitive)

religious development invariably concomitant with the greatest material power. Finally, in modern society, the Protestant tendency to identify 'paganism with'spirit' and, therefore, the whole of primitive Christianity is clearly a reaction towards a psychical valuation of worship; and, indeed, it is altogether pertinent to note that the three Christian virtues, faith, hope, and love, are essentially and exclusively personal and psychical; here the primitive in religion is clearly individual experience.

2. Ritualism.—However founded, worship inevitably passes over into ritual forms. Rites are variously termed ceremonies, enterprises, or by other terms. Rites are either simple or complex, intrinsically or extrinsically distinguished, and their observation serves to articulate the character and tendencies of the group. Worship is no longer governed by the 'inner light' of the elemental instincts, but is established as a moral law.

(3) Still more complex, although by no means rare even among savage peoples, is the level marked by motives which govern proselytizing. Cults pass readily from people to people, along with other customs, but there is an especial inclination for the divine to become a problem of reason versus faith, of intellectual as against spiritual interests.

(4) Doubtless, a last level should be added—that in which the secular life is felt to be lived in more or less separation from the religions, and in which the motives of the latter become matter of critical and sceptical interest. Conscious study of religion, conscious philosophizing about it, mark this finality; but it is to the point to observe that even here the essential experience maintains itself in the Protestant seclusion of the individual soul.

The final rite, the ultimate worship, is retirement into the closet in the hour of spiritual need; and this, after all, is not radically different from the elemental act of instinctive worship, in propitiation or thanksgiving.

5. Object of Worship.—As the occasions of worship give only a partial key to its forms, so the forms afford but a partial clue to its objects. Not all ritual observances are regarded as worship; magical rites are usually placed in another class, and many rites having obvious social values—marriage rites, chief-making rites, the potlatch—are examples—are connected with worship only incidentally, if at all. In order that the ritual form may be recognized as true worship, it must be accompanied by some evidence of a religious sanction; i.e., it must in some sense be directed to powers superhuman, if not supernatural. This means recognition of deity. Or, equally, deities are defined as the objects of worship; the better mode would be to say that the act of worship is the definition of the god. Wherever the religious sanction is present, the conception of God is being created.

Such a reversal in the order of definition would clear the atmosphere of much controversial dust. Many a missionary has been accused of atheism because of his failure to find belief in a Supreme Being with Christian attributes (not infrequently among people incapable of thinking either 'being' or 'attribute'), and many a field
anthropologist has described his savages as totally irreligious in one sentence and in the next has gone forward to describe rites which were obviously directed to superhuman powers. Nor need these be perceived as mere assertion, but an act of some intellectual subtlety, and it appears to be the prime token of animism, as distinct from poly-
theism, just that the animist has failed of achiev-
ing this subtlety; but that animism is in the nature of religion, and its placations and reverences in the nature of true worship, few would care to deny. Again, magic: magical ends are usually clearest when the procedures are directed invari-
ablely rest upon an implied recognition of unseen or unfelt forces; and it is at least significant that, when gods come to be formulated in thought, their powers are of a piece with all magic potency; the Great Medicine is another name for the Great Mystery. Wherever men placate unseen foes or make offerings to hidden friends—and there are no human tribes so low in mind that these customs are not found among them—there worship is present and divinity recognized.

Above such formless minima the objects of wor-
ship build themselves up hierarchically. The de-
dinition of divinity at the foundation of 'power,' and the treatment of the power—if the thing be of any importance—becomes the symptom of a cult. Fetishes, 'medicine,' talismans, belong here; they are cherished, they are tended, they are directed in the name of grace; there is no psychological gulf between the fetish and the idol, between the 'medicine' and the sacrament, be-
tween the talisman and the holy relic, or even the holy word. Worship is present even in gross superstition—perverted, no doubt, as to its object, but clear in the mode of its regard. As intelligence grows, the proliferation of human sentiments is accompanied by the elevation of the objects of regard: the near and trivial objects which attract the feebler animist or fetishist give place to the more inspiring or more august forces of nature, which become the spirits that move the wind and wave, that rise as luminous heavenly orbs, or circle through the year on the swift feet of the seasons. Nature-worship, is even to the last, the great fount of the imagery by which we represent to ourselves the anguish and nobility of divinity, and if, in the end, we feast our imagina-
tion of things spiritual with celestial rather than terrestrial phenomena, this is surely but the natural progression of that recognition of the bene-
dicence of light which makes us also liken our most intimate spiritual inward gift to an 'illumination'; the metaphor of light is equally inevitable when applied to wisdom and to grace.

There are, of course, other images which define the objects of adoration. Foremost among them are kinship terms, which, even among the least tutored of men, are the natural titles of gods. 'Father Heaven' and 'Mother Earth' have each a double title to reverence, for the kinship ex-
pressed adds to the sublimity and beauty of nature the whole context of humanity in its most winning character, and this is also that prophecy of life which parenthesis and the whole mystery of pro-
creation have made central in all religious veneration. Indeed, these two factors (natural sublimity and human kinship) are so powerful in appeal that the remaining imaginal mode, which utilizes the likenesses of human society to picture divinity, has never more than passingly and accessi-
borily sided the picture: gods have been likened to warriors, judges, lords, kings, but in their supremacies the light of heaven and the love of the parent have always been their final attributes.

At the foundation, in the mind of the most be-
cadged savage, the object of worship is a power

in strength transcending his own. Whether in his rite-making he goes forward, timidly, to active adoration and a sense of conissurehship with his di-

vinity, or, panie-stricken, strives to exorcize the presence and to escape the threat of it is often surmised from the colour of his personal fortunes: the Power will be good or evil according to its effects. But, if good, what more inevitable than that very address be by a kinship term with which so often supplanted in mythe teachings: the Power may work for the good or evil. The third step is that natural association of wisdom with the Power which is the solemn plasure of Providences and imagined by the idea of illumination. Thus the gods, even of dark-minded men, are conceived as more or less strong and good and wise; and it is only a metaphysical theology which universalizes these attributes into omni-
potence, omnibenevolence, omniscience. The pres-
ence of all three attributes is, of course, not neces-
sary for the existence of worship, though all three are present where the deity is truly adored. But in many cases strength and knowledge are not known or thought to be accompanied by goodness, and out of the terror of evil appetites, inmeasur-
able in power, the Power is conceived as a being of horrors of superstitious worship. If one may so put it, where there is deformity in cult, there will be found deformity in the conception of God.

4. Psychical factors.—Before the conception of worship can be fully developed, to its expressions and its objects must be added the consideration of the distinctive psychical values associated with rites and cult. Here again the problem of the primitive is not easily disengaged. More than any other objects of thought psychical values are dependent upon the associations of words for their designation; and consequently more than any other objects they are subject to the ambiguities and tricks of transference which verbal meanings further. Especially must this be true where the differences in linguistic level are great: words which, in 'conscience,' as 'adoration, spirit,' 'communion,' the 'fountain of wisdom,' have no equivalents in untutored tongues, and it is difficult to make certain the presence of analogous experiences. The first problem, therefore, which presents itself to the psychologist is to endeavour to infer from the ritual forms and the imagery involved what modes of experience prompt them, and in particular to separate the symbolical from the literal interpreta-
tion.

For it should be borne in mind (and it is too often forgotten) that religious ideas are images or they are nothing. The great elementary psychical fact which makes ritualism ritual is that the act of worship is never realistic: it moves and lives in an atmosphere of double meaning; the feather, the pebble, the geometrical sign, the chanted word, the sacramental bread, and the sacrificial flesh are never what in the half reality of the senses they appear to be; their sanctities are derived from supersensible modes of experience. That such modes of experience should for their expression resort to every type of imagery is both natural and inevitable. Experience is in the order of nature. That the most intimate of these images should be those most deeply founded in our own organic life, such as physical human beings, and in our conscious rela-
tions, as social human beings, is equally intelli-
gible. And it is not, therefore, unintelligible that religious meanings should be peculiarly easy to pervert; the very difficulties which make their communion to be symbolical call for a subtlety of response that frequently fails. Thus it is that many rites, conceived in spiritual purity, if their symbolism is lost, become gross because the images in which they are conveyed are bound to be gross.

In particular this is the peril of images of sex: the procreation of life is the most inevitable of human experiences, because of the social as well as the emotional significance, and religious emblem, and nearly all the noblest modes of religious expression rely upon it for their source (the fatherhood of God, divine love, eternal life); but in the course of religious change no imagery has been exempt from disparagement.

Possibly this very fact of ready perversion—'spiritual blindness,' as it is called—may have something to do with the second great source of worship: the sense of a need of salvation. Literal fear and literal desire, sensible ends coupled with sensible means, are the emotions most dealt with as explanations of ritual acts. Biochemically, they are no explanations at all, for the phenomena of worshipping show little or nothing that can be interpreted as furthering a physical salvation; the irreligious is as healthy and as safe as the religious.

It is here once more that the images are full of deceptions; for men, a pattern are imprinted in the pigments of sensation, whereas the thing meant is supersonal. The fact that calls for a real accounting is just the fact that men (of high culture) do not see that salvation which is as a matter of fact inexpressible, just as they see reverence for a divinity which is indefinable. The quest of this salvation is bound up, on the emotional side, with the group of words ('awe,' 'adoration,' 'communion') whose contextual meaning harks back to the very roots of human life.

One may say, then, that, on the intellectual side, the great factor that is fundamental in the experience of worship is the sense of double-meaning, and therefore of the duality of nature. On the emotional side the key is the feeling of need for salvation (which might be negatively described as a conviction of sin). These two come as near to defining the religious 'instinct' as any broad partition is likely to come. In any case, they give the major forms under which the experiences defining worship are to be subsumed.

The psychology of worship, however, must advance a step beyond this, even to lay its foundations. The human mind, the human being, moves as a unit, as a person; and the act of worship is in some sense so complete an act that it characteristically creates the reciprocal figure in the worshiper of the image of his salvation. Religion in the long run tends to define man, not as an individual, but in his type and form. Animism, in ancestor form, under the influence of anthropological armament, is the first step towards anthropomorphism, which in itself is but the sensible rendering of a psycho-ellism that is both more elemental and more significant. It is more significant because it defines for us, inwardly, the traits which we regard as ideal, and therefore as divine; and it is thus that the whole psychic play of religious experience takes final form as the depiction of an ideal man, an ideal god, who becomes a saviour, if only through the fact of his recognition. Whether the pattern man be given an incarnation and a story as a human individual, or whether he be read as a man-like God, or whether, in the third place, he be composed through the union of all active ideals, as an anima mundi, is accident of tradition. The psychical fundamental is that all forms of worship figure him forth, as in a true theophany.

5. Philosophical implications.—Portrayal and analysis of the facts of worship constitute the science of comparative religion. But, when all its labours are completed, there still remains for consideration the thinker's most profound problem, viz., that of the truth upon which it rests, the demand of nature that it call its self-justification.

Possibly this very fact of ready perversion—'spiritual blindness,' as it is called—may have something to do with the second great source of worship: the sense of a need of salvation. Literal fear and literal desire, sensible ends coupled with sensible means, are the emotions most dealt with as explanations of ritual acts. Biochemically, they are no explanations at all, for the phenomena of worshipping show little or nothing that can be interpreted as furthering a physical salvation; the irreligious is as healthy and as safe as the religious. It is here once more that the images are full of deceptions; for men, a pattern are imprinted in the pigments of sensation, whereas the thing meant is supersonal. The fact that calls for a real accounting is just the fact that men (of high culture) do not see that salvation which is as a matter of fact inexpressible, just as they see reverence for a divinity which is indefinable. The quest of this salvation is bound up, on the emotional side, with the group of words ('awe,' 'adoration,' 'communion') whose contextual meaning harks back to the very roots of human life.

One may say, then, that, on the intellectual side, the great factor that is fundamental in the experience of worship is the sense of double-meaning, and therefore of the duality of nature. On the emotional side the key is the feeling of need for salvation (which might be negatively described as a conviction of sin). These two come as near to defining the religious 'instinct' as any broad partition is likely to come. In any case, they give the major forms under which the experiences defining worship are to be subsumed.

The psychology of worship, however, must advance a step beyond this, even to lay its foundations. The human mind, the human being, moves as a unit, as a person; and the act of worship is in some sense so complete an act that it characteristically creates the reciprocal figure in the worshiper of the image of his salvation. Religion in the long run tends to define man, not as an individual, but in his type and form. Animism, in ancestor form, under the influence of anthropological armament, is the first step towards anthropomorphism, which in itself is but the sensible rendering of a psycho-ellism that is both more elemental and more significant. It is more significant because it defines for us, inwardly, the traits which we regard as ideal, and therefore as divine; and it is thus that the whole psychic play of religious experience takes final form as the depiction of an ideal man, an ideal god, who becomes a saviour, if only through the fact of his recognition. Whether the pattern man be given an incarnation and a story as a human individual, or whether he be read as a man-like God, or whether, in the third place, he be composed through the union of all active ideals, as an anima mundi, is accident of tradition. The psychical fundamental is that all forms of worship figure him forth, as in a true theophany.

LITERATURE.—Landmarks in the comparative and sociological study of religious forms, indicating both the spirit of the investigation and the content of the science, are: David Hume, The Natural History of Religion, London, 1757; B. T. Taylor, PC, do, 1888; and Herbert Spencer, Principles of Sociology, 8 vol., do, 1875-90. The Golden Bough, 2 vol., do, 1886, of which the third edition (1907-13) has been expanded into a valuable encyclopedia of religious rites, is doubtless the most important, as it is the most massive, collection of information. With it should be reckoned the numerous writings of Andrew Lang in this field, first in significance, Myths, Rituals, and Religions, London, 1899; Salomon Reinach, Cultes, Mystères, et Rituels des Villes de Marché, Paris, 1905; as well as his works on Croyances, Rites, Institutions, 3 vol., do, 1911; A. van Gennep, Rituels, Monuments, et Legendes, 4 vol., do, 1909-14; and Fikret Pasha, Slavic Religion, 2 vol., do, 1922. Of special significance is the work of the late Professor A. MacCulloch, Slavonic Studies; vi; A. Berriedale Keith, Indian: A. J. Carney, IRISH; and P. D. Chantepie de la Saussaye, Lehrbuch der Religionsgeschichte, 3 vol., Tübingen, 1906; H. Bois, La Valeur de 1 Orythme, p. 4.
WORSHIP (Babylonian).—Form and content of Babylonian worship are almost entirely borrowed from the Sumerians. This is particularly true of the principles of formal worship or the gestures employed for devotional purposes. The content of worship or the words spoken therein, the Babylonian public service or daily liturgies are without exception Sumerian. But the prayers of private devotion and all the individual rituals of the magic cults are largely of Semitic Babylonian origin. The Assyrian religion and worship were thoroughly Babylonian, but here a distinct tendency towards a distinct form of gesture in private devotion is everywhere noticeable. The Assyrian religion likewise owed much to the Sumerians, and their liturgical offices were borrowed entirely from the old canonical Babylonian books of the Babylonian period.

I. GESTURE IN SUMERIAN PRAYER.—1. Pre-historic period.—Very early Sumerian seals which belong to the pre-historic period (c. 3500 B.C.) reveal the attitudes and gestures in the devotion. One sees the adorant's hands folded in an attitude which was later perpetuated in all periods. It can be seen that this gesture imposed a fixed custom of clasping the hands. The right hand is clasped by the left hand in an extradosing manner around the body and the fingers of the right hand lie almost horizontally. The position of the base of the thumb is central to the natural position of the natural cast seen in bas-reliefs of Assyria. The gesture seems to belong to the religion of pre-historical Sumer and is as ancient as the oldest known works of art in the ancient Mesopotamian civilizations.

Such were the three positions assumed under various circumstances in private devotion by the Sumerians from pre-historic times down to the period of Agade, when the great Semitic dynasty of Sargon the Ancestral seized the hezmonarchy of all southern Mesopotamia for 197 years. Sargon may be dated about 2350.

2. Sargonic period.—The Sumerite of this period as well as those who had lived in close contact with and among the Sumerians in the pre-Sargonic age adopted the Sumerian principles of gesture. A seal dedicated to Nanní-Sin, fifth king of the Sargonic dynasty, represents the worshipper in the kissing hand position. Although the Sumerians recognized this attitude as consisting in throwing a kiss to a deity by the pictogram for a kiss, the exact meaning of this gesture is still a matter of doubt. In any case, the expression 'lifting of the hand' is employed, the attitude of the kiss hand is always implied. Archaelogical evidence for religious gestures in this period is meagre, but a few seals seem to indicate that the folded hands position was also common. The old processional scene with inter-employers of this attitude is entirely new in this age.

3. Period of Gudea and Ur dynasty (2560-2358).—In the age of the great Sumerian revival which terminated in the powerful dynasty of Ur we have first of all a return to the ancient processional scene. But now the disengaged arm, henceforth always the right arm, is held in the attitude of saluting with a kiss. In the time of the Ur dynasty the folded hand gesture becomes extremely common. In the Sumerian processional scene the principal motif is praise of the deities.

The ancient independent kiss hand gesture, i.e., without an interfering figure who leads the supplicant by the hand, appears rarely in this age. In other words, the prayers of the lifting of the hand in the last great age of Sumerian civilization always imply a processional scene and a priest.

4. Period of Isin, Larsa, and Babylonian (1st) dynasty (2357-1926).—Archaelogical evidence furnished by a great number of seals in this period leads to the inference that the processional scene with kiss hand gesture was abandoned for the independent attitude. The supplicant now stands with right hand raised and fingers touching the lips, the left arm folded at the waist. On the older seals of the period the priest still performs the act of intercession, but he stands before the seated deity in the folded hand pose. The inference from the evidence of seals alone that the ancient custom of approaching a deity through
the offices of a priest was abandoned after the Ur dynasty is clearly misleading; for two clear examples of this custom are illustrated on monuments of the Assyrian period and on the stone tablet of Nebuchadnezzar. Moreover, prayers of private devotion frequent reference is made to the priest who recites portions of the prayer. 2 But from this period onward until the rise of the Neo-Babylonian empire at the end of the 7th cent. the pose of the kiss hand with left arm folded at the waist is the ordinary gesture in Babylonia.

II. GESTURE IN SUMERIAN RELIGION. The Assyrians retained the old open hand Semitic pose in prayer, although the kiss hand was also adopted by them from the Sumerians. Since they also borrowed all the prayers and liturgies of the official cults from Sumer and Akkad, the retention of the Semitic gesture emphasizes the tenacity with which they adhered to racial customs. The open hand gesture, which was also the principal one used by the Hebrews, is made by extending both hands upward towards heaven, palm inwards. In art the suppliant is always represented standing as in Sumer and Babylonia. 2 But the pose in taking up the gesture of the kiss hand in Assyro-Babylonia was reversed. In Babylonia, the right arm is now thrown forward and the hand turned outward, the index finger pointing at the god or sacred object. The thumb is closed over the three remaining fingers. This attitude is similar to one seen on Greek monuments and represents the adorant in the later stages of the act of throwing a kiss. But under influence of the Assyrians and Aramaeans the old Semitic gesture reassumed itself in Babylonia; scenes of the Neo-Babylonian, Persian, Seleucid, and Parthian periods almost invariably represent the worshipper in the open hand pose.

Kneeling and prostration do not appear to have been admitted in the orthodox forms of Sumerian religion, but there is evidence for their use among the Babylonians and the Assyrians. Prostration and kneeling were certainly acts of worship at certain points in the recitation of prayers and penitential psalms among the Semites, and on the whole it seems probable that they are of Semitic origin. In Sumerian literature almost no prayers of a penitential or cultic kind have been preserved. We possess extensive catalogues of the titles of such prayers, and the seals show that they approached their deities in private devotion from the very earliest times.

But the spirit of their religion asserted itself rather in communal or public worship, and the liturgies of their various cults are extensive. In the Ur and Isin periods liturgies became canonical and extremely intricate. They were accompanied by music, and in fact the names of instruments were employed as technical terms to describe kinds of songs; e.g., the recessional or final song of a liturgy was sung to the double flute and called the flute song. The canonical liturgies of the Sumerians were borrowed by the Babylonians and the Assyrians and were always said in Sumerian. The greater portion of each liturgy was provided with an interlinear Semitic translation for laymen. No changes in the liturgies of the Sumerian liturgies were ever permitted, and even in Assyria the national god Ashur is excluded from the deities mentioned in the litanies because his cult arose after the canon of sacred prayer books was closed.

The Babylonians usually employed Semitic prayers in the private rituals of purification, and these were known as the ‘prayers of the lifting of the hand.’ 3 They were of course modelled on the Sumerian prayers of the kiss hand ceremonies, and a very greater number of prayers that have survived in Sumer. They form almost invariably part of the magic ceremonies of purification. 4 A considerable number of the prayers said by the priests in these services of healing and atonement have been recovered, and these were written and recited in Sumerian, and were known by the rubric (kidub). Prayers of penance which are purely religious prayers of great spiritual power and unconnected with magic rituals were not popular, and of these comparatively few have survived. They are all composed in Sumerian and probably represented the prayers said in the old Sumerian processional scene. 5 Obviously they did not employ the ordinary layman, who knew no Sumerian. They represent the exclusive and aristocratic side of Sumerian and Babylonian religion. In Babylonia, the priest was leading part, and they are usually provided with a Semitic translation.

Prayers of the lifting of the hand and penitential psalms are discussed and full literature given under Prayer (Babylonian). In addition to the literature there see Erich Ebeling, Quellen zur Kenntniss der babylonienschen Religionsliturgien, Berlin, 1919. What is known concerning the great New Year festival at the spring equinox (e.g., celebrated by the ancient Hebrews in H. Zimmern’s Sumerian New Yearfesival, Leipzig, 1908, 1918; S. Langdon, ‘Kultische Liturgien,’ Zeitschrift der Deutschen Morgenländischen Gesellschaft, 1909, 143—158, ‘Komm. Bande oder eine neue, ungenutzte Quelle für die Bibel und die Antike,’ by C. B. B. A. A., 1919, 109—121. Among the authors who have described the liturgies in Babylonia we should mention H. Zimmern, Sumerian Liturgies and Psalms; and among the authors who have described the liturgies in Babylonia we should mention H. Zimmern, Sumerian Liturgies and Psalms.

WORSHIP (Buddhist).—1. Worship (pūja, vandana, mudra, etc.) is no part of the Path (sādga). Path is insight into and meditation on the four truths (the four nīvedha, bhāg, satyajār, satyābhabhāvā); but worship is an important part of what is styled mokṣa, bhāgu (‘acts connected with or leading to deliverance’). But no man can enter this higher life (the Path, if he has not, in a previous existence, ‘planted’ some ‘root of merit’ (karma). Among the ‘roots of merit’ worship is the best.

2. Worship, the bhūta, dana, or giving. A man gives material gifts (ārāmā, dukkha) or security (āhārya) to his fellow-men, to animals, to protasis, for their benefit and also for his own benefit. He makes offerings to the Buddha, to the

3. See above, p. 757, note 5.

4 So, e.g., in the erākhatryā prayer, iv. Rawlinson, no. 2; see also, ‘Erākhatriyā,’ Sumerische Texte, Leipzig, 1918, no. 41. And a number of prayers of the lifting of the hand’ and with the phrase ‘I will sing thy praise and I the priest of magic thy servant, I will sing thy praise’ (see E. Ebeling, Religionsliturgie aus Assur, Leipzig, 1919, no. 25, rev. iv. 10; C. D. Gray, Sumerian Magic and Theory, no. 75; L. W. King, Babylonian Magic and Sorcery, London, 1895, no. 12, 94.)

Dharma, to the Church, for his own advantage, because they are "fields of merit" (punyakṣetra) but not, in any sense, the better of the fruit. Now the meritoriness of giving is either tyāgānya or paribhāgānya; i.e., a merit accrues to the giver either because lies given away (tyāga) something or because the recipient enjoys (paribhāga) the thing that has been given away. Buddha does not enjoy the flowers, etc., that are offered to chaityās. The merit is not weaker for that. The point is discussed in Pali and Sanskrit sources.

L. DE LA VALLEE POUSSIN.

WORSHIP (Chinese).—I. INTRODUCTORY.—It is not easy to find any Chinese word or phrase which conveys identically the same idea as that which the word 'worship' conveys to one who has been brought up in a Christian environment. Probably the first word which would occur to most students of Chinese is chi. It consists of three parts—the symbols for 'spiritual beings,' 'flesh,' and 'the right hand,' giving the meaning, 'to hold a piece of flesh in the right hand and offer it to the spirit.' One of the pioneer Anglo-Chinese liexicographers, Morrison, gives as one of the meanings of the character chi 'to offer flesh in the rites of worship, to worship with sacrifice.' J. Legge criticizes this interpretation by pointing out that it is not sanctioned by the compilers of the standard native dictionary, K’ang Hsi. He adds, 'The general idea symbolised by the character chi is—an offering whereby communication is made with spiritual beings and their aid is effected.' The importance of this criticism will be manifest when we remember that the symbol chi is the one which is commonly used to denote the idea of the spirit or souls. If chi does not mean 'worship,' a doubt at once suggests itself as to whether we are technically correct in describing that cult as the 'worship' of ancestors. This doubt is fully justified by the fact that this word 'worship' in this phrase we attribute a meaning identical or nearly identical with that which it bears in Christianity. If we assume that 'worship' can only be offered to a god or gods (real or translated into the mind of the Chinese), then the meaning of the Chinese ancestral cult as the 'worship' of ancestors, it follows that the ancestors so 'worshipped' are regarded as gods. And this is precisely the position which the uses of the character in question has been attacked by Christian missionaries. Obviously the process of translation from one language into another can give rise to a great deal of misunderstanding and question begging; particularly if the person who is describing the Chinese ancestral cult as the 'worship' of ancestors, has been attacked by Christian missionaries. Obviously the process of translation from one language into another can give rise to a great deal of misunderstanding and question begging; particularly if the person who is describing the Chinese words and phrases which correspond, more or less roughly, to the word 'worship'; but no one of them can be regarded as strictly equivalent. 'Pai means merely 'to bow' or 'to salute'; when Ching prefixed, the term acquires a religious meaning and may be translated 'to salute with reverence.' Li-pai, much more a Confucianism, is not necessarily more than to salute in accordance with the appropriate rites. Chi-yang means 'to respect and look up to.' There are several other terms which give the idea of ritual sacrifice. It may be that these, and similar Chinese terms are, after all, just as satisfactory as the English term, which can hardly be said to contain within itself an adequate indication of what it has come to mean in Christian thought and ritual. If we are careful to remember that there are some not readily definable differences in spiritual content between the European and Chinese terms, not much harm will be done by regarding the two sets of terms as roughly equivalent.

In this article it is unnecessary to attempt to make any such subdivisions or differentiations as are used by the Church of Rome to distinguish the varieties of Christian worship. Such differences as those between lατρεία, προσκύνησις, and δεοσθεία do not exist in China—simply because they have never been pulled into existence by the exigencies of religious controversy.

II. CONFUCUISM.—1. Introductory.—The clearest expression of the Confucian notions of worship is to be found in the passages which remark that on the occasion of certain religious treatises which goes under the name of the Li Chi (Record of Rites). More may be learned,' says Legge, 'about the religion of the ancient Chinese from this classic than from any of the others together.' And it should be added, that as the Record of Rites forms one of the Five Classics of the orthodox Confucian learning, it still remains what it has been for many centuries—the principal source of Chinese ideas regarding not only the ritual but also the inner significance of religious observances.

The reader must be warned, however, that, when we give the name of Confucianism to the religious beliefs and rites described in the Li Chi and other 'Confucian' classics, we are using the term in a somewhat vague sense as including all that Confucius and his school sanctioned, cultologized, or tacitly accepted. Confucius insisted that "there was only 'a transmitter and not a maker,' and in any case he never posed as a religious prophet on as an inspired teacher of religious truth. Much that has come down in China is pure Confucian in origin; and this we find to be specially true when we enter upon the sphere of religious thought. In the sections that follow it must be understood that 'Confucianism' is used in the looser sense here indicated.

2. Nature of true worship as understood in Confucianism.—(a) Reverence. —The Record of Rites opens with the striking words 'Always and in everything let there be reverence.' In many parts of this classic (which came from many different hands and belongs to many different dates) the supreme necessity of reverence is emphasized, especially in connexion with all ceremonies which regulate the intercourse between the seen and the unseen worlds. Commenting on one of its subdivisions, Legge remarks:

"Throughout the Book it is most religious rites that are spoken of; especially as culminating in the worship of God. And nothing has been fully brought out than that all rites are valueless without truth and reverence." The Record quotes Confucius as saying that in the ceremonial rites of mourning the most important thing is respecting the dead. As the passage he is

3 or rather compiled up to 1191. The whole Confucian system has been more or less on the defensive since that date.
4 SBE xxvii. 61. Cf. Legge's comment on p. 12.
5 Ib. p. 22.
6 Ib. xxvii. 143.
The idea that *intelligence* and *sincerity* are prerequisites to *sacrifice* indicates an advanced stage of religious culture on the part of the writer.1

The testimony of the other classical books is to the same effect.

1 *God has no partialities,* the Shu Ching tells us, *only to those who are reverent does He show favour. The people are not constant in their professions, except the one who have charity of heart. The spirits do not necessarily enjoy sacrifices; what they enjoy is the sincerity.*2

(c) *Simplicity and dignity.*—Next to reverence and sincerity in prayers and sacrifices nothing is more earnestly insisted upon than simplicity and dignified restraint—something very near to the Greek *σωφροσύνη.* Ostenation and a lavish display of costly temple furniture is strongly discouraged; plain water is better than wine, coarse cloth is to be preferred to gorgeous embroideries, expensive mats of fine rushes and bamboo are no better than mats of coarse reeds and straw. The soup which formed part of the sacrificial offerings should be unseasoned, to denote simplicity; the grand symbols of jade should be left plain instead of being carved. The king, when about to take part in sacrificial rites, should not ride in a carved and lacquered state-carriage but in a plain one.

In all these things it is simply the idea of the simplicity that is the occasion of the preference and honour. The *informal* offerings should be chosen not from rare and expensive products, but from what is seasonable and abundant.4 *Self-restraint*—a moral quality which manifests itself outwardly in simplicity—is one of the principal Confucian virtues. Without self-restraint there is necessarily a lack of dignity; and without dignity the rites of worship cannot be properly performed. It was not only the actual sacrificial rites that had to be conducted with quiet dignity and solemnity; the temple-dances, too, *displayed the gravity of the performers, but did not awaken* the emotion of delight.5 Similarly, *the ancestral temple produced the impression of majesty, but did not dispose one to rest in it.*6 This is because the *idea which leads to intercourse with spiritual beings is not interchangeable with that which finds its realisation in rest and pleasure.*7

3. *Godward and manward aspects of Confucian worship.*—There is another feature of Chinese religion which is perhaps more characteristically Chinese than any of those yet mentioned—a moral attitude which has been enshrined as a principle in one of the books of the *Record of Rites* we are told that the *superior man* is not only extremely reverential in all ceremonial matters but is also absolutely sincere.

Sacrifices (formally synonymous with religion) is not a thing coming to a man from without; it issues from within him, and has its birth in his heart. When the heart is deeply moved, expression is given to it by ceremonies; and hence, only men of ability and virtue can give complete exhibition to the idea of sacrifice. The sacrifices of such men have their own blessing:—not indeed what the world calls blessing. Blessing here means perfection;—it is the name given to the complete and natural discharge of all duties. When nothing is left, incomplete or improperly discharged:—this is what we call perfection, implying the doing everything that should be done in one's internal self, and externally the performance of everything according to the proper method.8

In the Tso Chuen we are told that, when *intellig- ence and sincerity* are present, almost any offerings, however common and easily obtained, may be *presented to the spirits and set before kings and dukes.*9 An English writer has commented on this in the following words:

1 SBE xxvii. 256.
2 Ib. p. 524.

7 SBE iii. 131 f., 1777, p. 187.
9 SBE xxvii. 404.
10 IJb. xxviii. 296.

*Doubtless this view, or something like it, is one to which all evolving religions tend to approximate; what is remarkable is the very early date at which it was reached by the Chinese and the consistency of which it has been maintained.*

It may have hampered Chinese religion in its attempts to soar heavenward, but it has undoubtedly had the excellent result of enhancing the honour and prestige of moral values. Nor are these moral values confined to earth. Chinese religious speculation extends them to the spiritual world as well, and this is why we have no capricious or despotistic 'God' in Confucianism. There are no acts or utterances ascribed to divine beings which are incompatible with the highest moral ideals known to Chinese humanity. In this we have a striking instance of the principle that considerable fact has often extorted the admiration of European students: the high moral tone of the whole body of the classical and sacred literature of China condeéts the ourselves of all the expressions suggestive of licentious thought.

A modern writer on Eastern religions remarks that in his opinion Confucius laid 'unnecessary emphasis upon social and political duties, and that he advocated the honour to be paid to Shang-Ti or God. He practically ignored the Godward side of men's duties.' More just are H. A. Giles's observations on Confucianism:

1. In regard to the relative importance of serving God and serving men Confucius has often been blamed for setting men before God. He would not be remembered in this interpretation of true service to God was embodied in right and proper performance of duty to one's neighbour. The idea of personal service to God himself, as understood by the Jewish patriarchs, is entirely foreign to the Chinese conception of a Supreme Being.

In one of the books of the Historical Classic we are told of the eight branches of administration which ought to engage the attention of good rulers. The first is agriculture—the most important of all, because it provides the people with the means of subsistence; the second, commerce, which regulates the distribution of commodities; the third, religious ceremonies. With the fourth, fifth, and sixth we need not concern ourselves; the seventh and last is preparation for war. It is characteristic of China that the rites of religious worship should occupy only the third place; for religion, the Chinese would say, has small practical importance for men who have nothing to eat; and spiritual beings, if they desire human homage at all, are not likely to demand sacrificial offerings from men who cannot find the wherewithal to feed themselves. The theory which is implied in this ancient passage from the Shu Ching reappears in an explicit form in the teachings of Mencius: 'The most important element in the State is the people; next come the means of subsistence; in importance comes the king'; and is repeated in the utterances of the first emperor of the Ming dynasty:

'God puts the sovereign in charge of his people, and the sovereign who wishes to serve God properly must first show that he loves the people. To show love for the people—that is the way to serve God... He who would be a true sovereign should regard Heaven as his father, Earth as his mother, and the people as his children, and must carry out his duties to each with the utmost devotion. He does not perform the sacrifice to Heaven and Earth in order to bring prosperity upon himself, he does it to promote the welfare of the whole realm.'

4. The motives of worship.—What, then, is the principal motive of religious worship, according to Chinese theory? Confucius and the majority of thinking Chinese since his day would have assumed that the object of religious rites is a double one—

1 W. E. Griffis, A Religion of Japan, New York, 1901, p. 104. For observations on this statement see the present writer's Life of Bruce, London, 1910, p. 322.
2 Giles, p. 73 f.

This passage occurs in the official history of the Ming dynasty, under the date of the 50th year of Hsing Wu (3157).
sooner, that the good and the divine are twin peaks joined by a level pathway over which men and gods may conduct their way. Thus, while, in ordinary life, they pass with the friendly recognition of spiritual kinship.

III. Taoism.—It is unnecessary to deal at length with the chief notions of Taoism, because, regarded as a religion, Taoism is almost wholly initiatory. Primitive Taoism was not a religion, and, though the mysterious Tao was regarded as inexhaustible, wonderful, omnipotent, immanent in all the universe, infinitely great and at the same time small, it cannot be said to have been an object of worship. After the introduction of Buddhism, Taoism found it necessary to go through a process of reinterpretation and reconstitution in order to maintain its position in an environment that was becoming increasingly Confucian on its ethical, increasingly Buddhist on its religious, side; it therefore adapted to its own use some of the religious formulations and rituals of the Indian rival, borrowed moral teachings from both Confucianism and Buddhism, and turned itself into an institutional religion by adopting monasticism and erecting temples for the worship of the numerous and ever-multiplying deities who began to throng its pantheon. It apotheosized its legendary founder, Lao-tse, and made him one of a divine college of sages, which would certainly never have come into existence had a model not existed in the San Pao, the 'Three Precious Ones,' of Buddhism. As time went on, it also drew into its own system some of the other deities of the pre-Confucian state religion of China; and so the Shang-Ti, or Supreme God, became (in comparatively recent years) the Yu Huang Shang-Ti, the 'Jade Imperial God,' who is one of the most prominent objects of worship. This ancient Taoism of to-day, in spite of all its bare-facedborrowings, its crudely artificial methods of turning dead men and women and shadowy abstractions into gods and goddesses, and its haphazard delation of animals, real and mythical, there is no doubt that even in these degenerate days the deities of Taoism are capable of inspiring religious devotion, and that some of them at least are objects of real worship.

IV. Buddhism.—It is often said that Buddhism is atheistic and therefore offers the believer no object of worship. However true this may be of Buddhism as a metaphysical system, and of the Hinayana, at least in its primitive form, it is certainly not true of the Mahayana (q.v.), which claims the allegiance of practically all Chinese Buddhists. For all but a small minority of Buddhist scholars and mystics the Buddha and bodhisattvas cannot be fitly described as other than objects of worship. The cult of these beings has reached its greatest development in one subdivision of the Mahayana, which is known to Chinese as the 'Pure Land,' and its adherents in the Siu-ma school of Chinese Buddhism. In the figure of Amitabha has practically taken the place of Sakyamuni, the historical Buddha; and the worship of which he is the object can hardly be described as anything less than laezflu. For ordinary believers as well, the sublime deity who rules over Sukhavati, the Western Paradise, and who, with the assistance of the great bodhisattva Avalokitesvara (Kuan-yin) and Mahasattva (Tao-chi, the Mahist), is capable of salvation all those who invoke his name with sincerity. That Amitabha evokes feelings of deep and sincere devotion is often doubted or thought impossible by doubters. Those familiar with the phenomenon of a non-existing being (for Amitabha is entirely a product of the religious imagination) can give rise to a truly devotional attitude. Yet a close observation of the religions beliefs and practices of Amithists will certainly dispel any such doubts. Perpetual prayers and the constant remembrance of this subject can be obtained than that of L. Wiener, whose evidence is all the more important and valuable from the fact that, as a loyal Catholic missionary, he may be regarded as incapable of unduly encouraging the spiritual fervour that a pagan cult is capable of inspiring. The Amithist temples in China and Japan are the only ones in which the people pray—pray truly and from the bottom of their hearts, where they repent and implore, with attitudes so natural and so touching that no asceticism of make-believe is admissible. As long as I live I shall never forget the feelings that I experienced when I saw a young Amithist mother making her devotions before the lighted and empty throne. She began by closing her eyes and concentrating her thoughts, her lips murmuring the words of repentance and petition. Then she brought two little children before the throne. The second could scarcely walk, but both did exactly as their mother had done, correctly and most gravely. Finally she took from her breast a third child, newly-born, and pressing his head very delicately between her thumb and forefinger, made him bow towards the throne. 2

In recent years some rather crude attempts have been made by a small school of English writers to prove that the beliefs and rites of Amithism, or some of their most striking features, were borrowed from or inspired by Christianity. Wiener, whose learning, conscientiousness, and comparative freedom from bias make him almost unique among Western missionaries who have studied Chinese religion, unreservedly rejects the theory. He believes, on the contrary, that all the characteristic features of the Mahayana,—including the 'altruism of the bodhisattva,' or the 'devotion with the activities of the bodhisattvas,—are a local development of primitive Buddhist theory. He sees nothing mysterious in the gradual expansion of the so-called egoism of the Hinayana into the altruism of the Mahayana. He regards it as necessary and inevitable. He traces Mahayanic origin to the centuries immediately succeeding the death of Gautama Buddha. The Mahayana "seems done anterior de pluries siecles a Christianisme." These views appear to the present writer to be entirely just. The worship of Buddha, or of Amitha, or of Kuan-yin is, at its best, at true and sincere as the worship of God, of Christ, or of the Virgin in Christendom; and its roots are planted very deep in Buddhist soil.

LITERATURE. —This has been indicated in the footnotes.

WORSHIP (Christian).—Worship is the expression of that sense of worth, or title to honour, which man feels due to the Divine nature, its idea and forms will vary with the notion of God entertained by man and of his mutual relations. Christian worship, moreover, as distinct from the other historic types, has a definite character due to the teaching and example of the Church's Founder Himself. This remains regulative for the whole history of Christian worship, deciding between true and false developments, and forming the standard by which reform or progress is to be judged.

The gospel of Christ itself emerged out of the religion of Israel, and accordingly its genius or distinctive nature defined itself largely in relation to Judaism, both as faith and as worship. In both Jesus claimed to fulfill the religious expectations of the prophets, whose emphasis was on the heart or inward attitude, as determinative of real devotion to God and His will; 'obedience' of 'life was the truest 'sacrifice,' and moral relations, rather than a true bond which is sometimes purposely left empty, to indicate that the real Jesus is nothing more than the religious expression of man and of the universe (cf. B. F. Johnston, Buddhism, London, 1915, pp. 111, 953). 3

1. Cf. art. TAOISM. 2. Cf. art. CHINA, CHINA (Buddhism in).
WORSHIP (Christian) 763

ritual or formal acts of worship, were the primary form and means of communion with God. Love to God as Father, and to all men as brethren in virtue of the inward divine life, was the essence of all worship; to it all forms of specific worship are subordinate, and have value only as expressive of this and all it implies, according to Christ's idea of God's character. Where known moral purifications are carried out, worship may be said to be the 'gift' of homage to be left unoffered until it can be offered with a good conscience (Mt 5:5).

Spirituality, then, in this sense, is the touchstone of Christian worship; and those forms of worship are most entitled to the term 'Christian' which conform most to the simplicity and naturalness which marked Jesus' own devotional practice, or are most analogous to these. This does not fix beforehand how far other modes of expressing the same ideas and emotions, under other conditions of culture and particularly of art, may or may not be allowable. But it does fix where the emphasis which determines the spirit of worship must lie, if worship is to be true to 'the mind of Christ.'

Worship has two senses, a wider and a stricter. The wider, expressing a man's devoutness in all his living, is equivalent to prayer. The narrower, denoting specific forms of devotion, personal or social, is nearly synonymous with cultus. It is with the latter that this article has chiefly to do. You will find a correlation between the two senses of worship, the inward or inclusive and the external and particular, is so intimate in Christianity, it is needful constantly to bear in mind the context of 'holy' or devout life in which worship is set, in so far as it is Christian at all. This we shall find to be very manifest in primitive Christianity, when 'holy' was the epithet of the Church, and when participation in its worship, as pure and loving— with the Kiss of Peace as its seal—was conditioned by serious moral Church discipline.

1. The NT idea of worship.—(a) Religion, according to Jesus, consists in literal trust and love towards God, and loyalty to His will for His Kingdom 'on earth as it is in heaven.' Thus the Christian norm of worship is the Lord's Prayer. In keeping with this, the effect of Jesus' whole teaching, alike by its emphasis and by its silence, is to change the relative importance attaching to heart religion and to outward expression in worship. He never treated ritual or cultus as determinative of man's real relation to God, as did others; and his teaching is at home in the history of ancient religion. Nor did He, while creating a new religious bond between His disciples and constituting them a new Israel within Israel spiritually, make them a new community for purposes of worship or prescribe new forms of worship.1

1Pray without ceasing: in every kind of prayer give thanks. (1 Th 5:17; cf. Eph 6:7), rightly became a watchword of the Christian life. Worship thus becomes relatively independent of any given forms of expression, so far as these are not bound up with normal human life, the fulfilment of all relations 'as unto God and not (merely) unto men.'

This can come about directly in this attitude to spiritual seasons. Ro 14. 'One man esteemeth one day above another: another esteemeth every day alike.' (v. 5). 'He that regardeth the day, regardeth it unto the Lord; and he that esteemeth it not, to the Lord he esteemeth it not: and whether one fasteth, or eateth, whatsoever he doeth, doeth it unto the Lord.' Here we have a principle of all-embracing range, since it turns on the very nature of faith, as Paul is using the term, viz., personal conviction before God. 'Whatever is not of faith is sin' to him who does or abstains.2

'For the kingdom of God is not eating or drinking (as religious observance), but righteousness, and peace, and joy in the Holy Spirit. For he that serveth Christ is well pleasing to God. The works of the flesh are manifest.' (Gal 5:21-23). This principle of righteousness being the distinctive advance of Christian worship—because of the Christian idea of God—upon that of all other religions, including Judaism. The prayer...now is, when the true worshippers shall worship the Father in spirit and truth [full reality]: for such the Father seeks to worship him in spirit and truth. God is Spirit: and they that worship him must worship in spirit and truth.' (Jn 4:23, 24).}

'The Kingdom of Christ...has no sacred days or seasons, no special sanctuaries, because every time and every place alike are holy. Absence has no place in a sacrificial system. There is no sacrificial tribe or class between God and man, by whose intervention alone God is reconciled and man forgiven. Each individual member holds personal communion with the Divine Head.' The conception is indeed, as he adds, 'strictly an ideal,' which cannot be applied rigorously in the practical life either of individuals or of the Christian society, the Church. But it remains the regulative principle behind all Christian institutions of worship, as of organisation generally, giving them only a conventional value, as experiments tested by much experience, yet as such, be treated reverently, especially for the sake of others, i.e. in love as well as faith.

(b) Forms of worship in the NT.—Here the main fact is the community's own example and teaching are associated with the synagogal type of worship rather than with the Temple, the seat of the sacrificial and priestly system of worship. For to Him the Temple was primarily 'a house of prayer,' and that priestly term (θυσιαστήριον) rather than curia. Indeed the latter hardly seems to be alluded to by Jesus at all (not even in Mt 18). His teaching on worship is mainly on genuine prayer, as opposed to formal prayer, and to repetition as a mere form (cf. Lk 18:13); and even 'the Lord's Prayer' is given as an example of prayer of the right sort rather than as a form for regular repetition. Such a valuation of its role in worship, in proportion as they express simply and directly the spirit of worship, is not only continuous with that of the prophets, as of parts of the Psalter and the Jewish Apocrypha; it appears also in some Rabbinic utterances, as was that of R. Menahem of Galilee (about the Christian era):

One day all sacrifices will cease, only the Thanksgiving will not cease; all prayers will cease, only the Thanksgiving prayers will not cease. Compare the spirit of Eccles 6:13.

This Rabbinic saying seems relative to the Messianic era of perfected worship, when sacrifices for sin should no longer be needful; and that is just the position in which the first followers of Jesus felt themselves to be, as spiritually united to Messiah. Thus their relation to God was now conditioned solely by the representative self-offering of Jesus which was at first the lines of 'the Suffering Servant' of Is 53, but was later worked out, as in the Epistle to Hebrews, in terms of the Mosaic sacrificial system, regarded as 'the shadow' of the perfected spiritual reality of purely personal relations, those of the devoted will (He 13:10). Thus the Christ, as God's sinless Son, is the abiding objective basis of His people's holiness (2Co 3:10). All Christians, then, are in fact made priests to God, as united in spirit with the 'Great Priest,' and as such have access for communion with God of the most intimately spiritual kind (10:19-25).

This conception conditions the whole of primitive Christian worship. Its normal character is thanksgiving, at once praise and prayer, which, as Menahem said, remains after other kinds of 'prayers' have ceased. Christians carry up through Jesus' sacrifice of praise to God continually, that is, the fruit of lips which make confession to His Name' (He 13:15; cf. 1 P 2:9, Rev 5:8-9). As for outward sacrifices, only the thankoffering remains, which is given for 'the purchase of the blood' (He 9:14) or 'for such sacrifices God is well pleased' (He 13:10).
WORSHIP (Christian)

13*). Here the word ‘continually’ shows that the abiding spirit of a worshipful spirit is what is chiefly in view, as in Paul’s ‘praying always,’ and this on the part of Christians severally. And in fact the bulk of NT references to worship have this personal rather than corporate reference.

Such, e.g., is the nature of another passage which affords striking evidence of the new conception of spirituality of life as itself worship. ‘Pure religion and undefiled before God and Father is this, to visit the fatherless and widows in their affliction, and to keep himself unspotted from the world’ (1Jn 3:19), where the word rendered ‘religion’ (theophoria) means ‘devotion expressed in devotional acts.

Once we enter upon the history of Christian worship through the centuries, we shall have to confine ourselves in the main to the corporate or common worship of the Church, with only occasional glimpses at the forms of private devotion, though this all along exists in the background. But here we may note that in the NT itself the relation between personal and corporate worship is peculiarly intimate, the former overlying into the latter and constituting much of its contents, under the lead of individual members of the Spirit-filled Body of Christ’s saints. This meets us particularly in Paul’s Gentile church, e.g., in his advice to the Church at Corinth (1 Co 11-14), ‘What is it, then, brethren? When ye come together, each one hath a psalm, hath a teaching, hath a revelation, hath a tongue, hath an interpretation; let all things be done edifying, (14*), also 15-17, where praying, singing, blessing of God or ‘eucharist,’ all ‘by the Spirit’ on the part of individuals in Church worship, are specified; cf. Col 3:16, Eph 5:19. Evidently the forms of worship in the Apostolic Age were not fixed or uniform. The new Christian spirit brought a fresh element of spontaneity (2 Co 3:17) into the forms of common worship which otherwise followed in the main synagogal usage. To this the earliest converts, both Jews and proselytes, were accustomed; and it would naturally be adhered to, save for any feature distinctive of the new Messianic form of their faith, such as ‘the breaking of bread’ with thanksgiving to God for the Messianic redemption in Christ and in His Name. This note of adorning gratitude to God for His redemption, creation and communication, which explains the term ‘eucharist’ as used for the central act of Christian worship, remains through all changes its abiding characteristic.

So that the old and new worship is similar to the use of the Sabbath along the Lord’s Day, as both special days of worship, though in different modes. But, as time went on and conditions changed (and the need was felt for ‘Carminas’ and Ignatius) to distinguish sharply between the two, as relative to different ‘economies’ in God’s relations to man; and for the most part the Sabbath ceased, especially in the West, to have positive religious significance for Christians.

2. Worship, particularly eucharistic, in the ancient Church.—(a) Worship in the sub-Apostolic Church. The forms of Sunday worship were still determined mainly by those of the Synagogue, as modified by the ‘prophetical’ spirit in the primitive Church. Synagogal worship included the recitation of psalms, set prayers, Scripture lessons, address, benediction. Our first glimpse of Christian worship, as reported by Pliny c. AD. 112, shows us, at the Christian assembly before dawn on a stated day (Sunday), ‘a hymn (carmen) to Christ as to a God’ (cf. 1 Ti 3:16, Eph 5:22, 2 Ti 2:15 for snatches of such hymns), sung responsively, and a pledging of each and all in solemn form (ascratontai) against their future apostasy and all irreverence and evil words. With the former we may compare the Odes of Solomon, and with the latter 2 Ti 2:22, for moral law (i.e. justification of offerings...and that give them a share in the blessing also from thenceforth, To depart from wickedness is a thing pleasing to the Lord; and to depart from unrighteousness is a precious thing. See Christian sections of acts. PRAYER, FASTING, FESTIVALS AND FEASTS.
WORSHIP (Christian)

(as of that of Judaism, which it modifies), and the supposed liturgy of the Eucharist. It is very difficult to meet, right and our bounden duty, that we should at all times and in all places give thanks unto God (ancient opening of the Eucharistic Prayer, adopted in the Anglican Prayer Book). But such worship attained especial expression in all corporate meetings for Christian fellowship, of which "the Eucharist" of the whole local church was the climax. To these principles striking witness is added by sympathy, in the corporate meeting of the church of a more familiar and informal nature than the Liturgical eucharist (now the climax of a Sunday morning service). Such the liturgy still appears not only in the N. Africa of Tertullian's day but in that of Cyprian's, as also in the Ancient Church Order commonly known as Hippolytian, though in this part it may rather reflect Syrian usage c. 800. There 'at the Supper of the congregation,' at the "bringing in of lamps," the bishop gives the Salutation usual before eucharistic prayer, ending, "Let us give thanks to the Lord." The people reply, 'Blessed be the Anaphora proper; but it is added, 'And he shall not say, Lift up your hearts' (the sursum corda formula), because that shall be said at the Absolution alone. Otherwise, the prayer of eucharist which follows is obviously regarded as a solemn one, and the fragments from the bread thus consecrated by prayer are taken up of the hands of the eucharist (i.e. bread), though 'not eucharist, as they body of our Lord.'

As regards the Eucharist, what has just been said prepares us for changes due to its separation from the associations of a social meal, and its incursion into the eucharistic liturgical type, as its central element. Thus it took on a more liturgical and ore long (under the influence of current sacramental ideas other than Jewish), a mysteriously realistic character, alien to the original Jewish notion of a meal of religious fellowship with blessing or eucharist of God. The former of these developments, the liturgical, was fostered by the ancient notion of worship, our offering material offering was essential to worship. Hence the self-oblation of the loyal heart came in time to appear to most Gentile Christians to fall short of personal worship; and this gave to a new meaning being attached to the eucharistic prayer over the bread and wine used for the purposes of Communion (originally as a meal of Christian fellowship), viz., as offering the elements to God, in worship of the Incarnation, as a gift to the Sinful of all (a sanction in Scripture being seen in Mal 11, 14). To this there was insensibly added, by a natural reaction of old associations as to such worship—partaking of communion with the mysteries (the superficial likeness of which to the Christian Eucharist Justin feels and apologizes for)—the notion that God met the earthly gift with a divine gift in return, by filling it with a new and mysterious quality. The way in which this came about was probably in the first instance purely religious, arising out of the very intensity of the soul's experience of a special quickening in the act of corporate worship, while contemplating and partaking of the symbols of Christ's dying love. This is strongly suggested by the experimental atmosphere and language of the devotional utterances, including eucharistic prayers, in the earliest Apocryphal Acts, the basis of which, if semi-nostic in type, yet probably reflects the general Christian devotional feeling at Holy Communion both before and after the middle of the 2nd century.

In the Acts of Thomas we have what seems a sample of the more enthusiastic and popularised eucharistic prayer. 'And the Apostle, standing by it ('the bread of blessing'), said: Jesus, who has revealed us worthy and a vessel to represent the Eucharist of Thy holy body and blood, so, we make bold with the eucharistic and invocation of Thy holy name. Come now and converse with us. And he that partaketh of perfect compassion; come, Communion of the male (=Christ); come, that feminine, like 'communion,' the substantive proceeding knowest the mysteries of the Chosen one; come, that ban communion in all the contest of the noble Athlete against the powers of darkness. Amen.' Here the Church is made to manifest that it manifests her activities and affords joy and rest to those united to her; come and have communion with us in this Eucharist which we perform in [on the basis of] Thy name and in the love wherein we are assembled in [on the basis of] Thy calling."

Here what is specially noteworthy is the experimental nature of the grace of Christ's eucharistic presence thus invoked. Added to this, however, we find, first in Justin and then in Irenaeus, the belief that the words of institution, cited in the Church's eucharistic prayer, were formula of Divine power, producing in the elements themselves the presence of the body and blood of Christ, the Incarnate Logos; and therewith was laid the foundation of what came to be the specifically 'Catholic' doctrine of the Eucharist, and of the corresponding devotional attitude towards the elements themselves. In Justin it appears only as the belief that the worshippers' bodies are prepared for resurrection by participation in Christ's resurrection body and blood. That such presence of Christ's body and blood was of benefit to the soul there is no suggestion. Such a realistic conception (present already in some sense in Irenaeus's mystic view of the Eucharist as mediation of immortality) first developed the habit of taking portions home for private use (already in Tertullian), and then devotional anxiety as to what became of all parts of the consecrated elements. Adoration of Christ as present in the elements, and the notion that he in them was being offered as the Christian sacrifice and that with propitiatory intent and effect—represent forms of devout thought and feeling of which we have no trace until after Cyprian's day, or indeed until the 4th century.

(b) Justin Martyr's witness.—At this point we must quote from the famous passages of Justin's Apology 2 which afford our one connected picture of Christian corporate Sunday worship in the 2nd century.

On Sundays 'there is a gathering together of the local church,' and 'there fore, the Apostles of old, the writers of the gospels are read, as long as time allows. Then the priest gives way by discourse admonition and exhortation to copy these noble lessons. Next we all rise together and send up prayers,' 'making common prayers for ourselves . . . and for all others everywhere, earnestly and fervent praying be deemed worthy . . . by our deeds also to be found good lovers and keepers of the commandments, that so we may be saved with the eternal salvation. When we cease from the prayers, we salute each other with a kiss. 'Next, bread is brought and wine and water, and the president, taking them, sends up (ἀναρρήτως)as best he can prayers in like manner and thanksgivings, 'sends up praise and glory to the Father of the Universe through the Name of the Son and the Holy Spirit, and makes thanksgiving (eucharist) at length for our having been deemed worthy of these (blessings) at his hands . . . . . . . . Thus the people chimers with the Amen. Then takes place the distribution to each, and the partaking from the elements for which thanks were given; and to the absent portions are sent by the hand of the deacon.'

One or two aspects of the eucharistic prayer of the Church, through the lips of its inspired leaders, are made clear by the more general language already cited from ch. xiii. in describing the reasonable nature of Christian worship. But the main point is that in both connections its essence lay in 'sending up (ἐναρρήτως) such memorable word, 'to the Creator of this Universe,' 'processions of homage (εἰρήνης) and hymns (as if on their way to the divine pres-
ence), in acknowledgment of being and all the means of well-being,’ as well as in ‘sending requests to be once more in incorruption, on the ground of faith in Him’; or, as expressed in the later passages, ‘sending up (ἀναστρέφονται) prayers and thanksgivings.’

If we have not here the very origin of the term ‘mass’ (missis = missio = Gr. diakonos = διακονη) which was not used in a special religious sense, and its original meaning, namely the oblation of worship to God on high (cf. the Liturgy of St. Mark, just before offering of incense and a prayer of oblation, τοὶς βίησιν καὶ τοὺς εὐφροσύνας ἀναστρέφοντας), at any rate this, and nothing else, was the primitive conception of the Christian sacrifice.

It is one continuous with the later Jewish notion of prayer, in the Dispersion in particular, and is quite distinct from any notion of the body and blood of Christ as ‘the sacrifice of the altar’—a notion which had not yet arisen, even where realistic theories existed of the relation of the Incarnate Logos to the elements, as the Christian bread of life or ‘food of immortality.’ Another and closely connected aspect of the same contrast is the fact that eucharistic worship in Justin, as in Irenæus and during the 3rd cent., for the most part, has no relation to sin in the worshippers. Christians as such are consecrated by union with Christ, and as such are ‘counted worthy of the high function of offering as priests their prayers

thither be truful, and so God 'may render to us the recom-

mended. His benediction on the principles of 2.6. As the

the Word enjoined on the People (of the OT) the making of

ought. The present time, indeed, is given to the Church; and

for that reason He wills us also to offer a gift at the altar

often, without intermission. There is, then, an altar in heaven,

for the present prayers and oblations are accepted; and

and, as John in the Apocalypse says, And the temple of

God is open.'' 3

(c) Irenaeus and certain 'Catholic' developments.

—Here we have several ideas characteristic of the

Christian 'sacrifice' in worship towards the end

of the 2nd century. Some are wholly primitive and

certain, e.g., that the elements do not sanctify a

man, but the worshipper's pure conscience the

sacred victuals; God's acceptance of a sacrificial

gift 'as from a friend' honours the giver; the

real, i.e., the spiritual, gift is the thanksgiving

of the heart, and is offered at the heavenly altar,

to which 'prayers and oblations are directed.'

The last is implied in the call 'Hearts on high' 
(suavum corde), which prefaces ancient eucharistic

prayers generally. But in time the idea lost its

pure spirituality, as the notion arose that the

material gifts themselves were received by God on

His altar on high by the hands of His angels. This

is the essence of the eucharistic prayer of the 4th century. North Italian of Sacra-

mentis, in several Eastern liturgies, and in

the traditional Roman Canon of the Mass. The

card of these, however, preserve in the main

Irenaeus's notion of an oblation of bread and wine

which Christians were privileged to offer—with

clear reference to Ro 12—'as expressing their self-

oblation, in sacramental commemoration of the self-oblation of their Lord. But the Roman Canon

by substituting for 'as is figura of the body

and blood of our Lord' 'that it may become to us

the body and blood of . . . our Lord,' and by a

good deal else in the context, brings in another

train of thought altogether, that of Christ's body

being present on the Church's altar' on earth

and partaken of by the communicants. This is

the full realistic form assumed by the secondary

and non-primitive element in Irenaeus's principles

set forth above, viz, that God gives in this way,

in recompense for the Church's thanksgiving, a

certain unique benefit in return. This, in extant

liturgies generally, is conceived as communicated

first to the consecrated elements themselves and

through them to the communicants. In some

early Eastern liturgies the Word or Spirit is

taken to be present in the elements; so making them, in a metaphorical sense, His sacra-

mental 'body and blood'; but in Irenaeus's discus-

sion of this aspect of the Eucharist, as in the

Roman Canon and some later Eastern Anaphoras, the above realistic conception appears of Christ's human body as present in the elements. And with this added notion a fresh phase of worship begins to enter into the eucharistic service, viz, the adoration of the Incarnate Saviour in the elements of the oblation, conceived now as effect-

ing ares, in some sense (that of re presentare, 'really presenting'), the offering of His body, once

for all offered on the Cross but perpetually

presented in heaven with atoning efficacy.

(f) Cyprian transitional.—Cyprian is here, as

generally, transitional between the second century

and the fourth. His eucharistic theory is in the main

tertullian's, as regards the sacramental rather than the proper body of Christ being present in the elements after consecration. But

as regards the prior offering of the elements in

eucharistic worship, Cyprian insists that 'the

priest' performs his office in Christ's place (i.e.,

with His authority for the sacramental efficacy of

his act) when he 'imitates that which Christ did,'

And, though he has in mind what Christ did at

the Last Supper 'on the Cross, yet his broad

language elsewhere gave a footing to a less

experimental sense being read into his words.

So he says, 'The Lord's passion is the sacrifice

which we offer,' sacramentally or commensura-

tively, as we 'offer the sacrifice of bread and

wine,' the blood of Christ in 'the sacrifice of the Lord,'

as commemoratively observed by use of the sacred

words in imitation of His performance by us:

'Thus in time 'the blood of Christ' and His body

were thought of as actually present and

offered in the wine and bread, and that not only as the

propitiatory sacrifice 'for the sins of living

and dead.'

(g) 'Catholic' eucharistic worship and survivals

in it. —Proclus Cyprian's day the whole nature of

eucharistic worship—expression of this homoeo-

octrinal alteration in the Church's thought and in

the growingly elaborate ritual which expressed it,

in the course of the 4th cent., it attained in most localities the form which is

now called 'Catholic.' Yet down to the 5th cent. there

remained clear traces of the older order in certain

phrases not really of a piece with the conceptions then prevalent. Thus, in addition to those already alluded to, in the Anaphora of Serapion in Egypt, c. 350, before the words of institution we read:

'Full is heaven, full also is earth of thy excellent glory, Lord of

Powers: Fill also this sacrifice (sacramentum) with the

sacred participation: for to Thee have we offered this 'living sacri-

ifice' (sacramen, Ro 12), this bloodless oblation (Eph 5:2) to Thee

we have offered this bread, the likeness (omologon) of the body of

the Only-begotten.' Then comes the reference to Christ's example in the institution, followed by: 'Wherefore also we, making the likeness of His death, have offered the bread, and beseech Thee through this sacrifice, be reconciled to all of us and be propitious, O God of Truth.' Only after this do we get the invocation which is conceived to make the bread 'body of the Word' and the cup 'blood of the Truth,' and so 'medicine of life' for body and soul to those partaking.

Here there seems to be a blending of primitive and later concepts.

(h) Retrospect of eucharistic worship to the end of the 4th century. —In idea it first corresponded simply to its name, 'thanksgiving' to God for His benefits in nature and grace, as rooted in His adorable being alone. As far as 4 puts it, 'Seeing, then, that we have all these things from Him, we ought in all things to render thanks (Eucharist to Him, to whom the glory for ever and ever. Amen.) Of such a life of thanksgiving the solemn corporate worship in full

Church gathering is the climax, being the earthly imitation of the worship in heaven, where (as pictured in Dn 7) 'the whole company of His angels standing near Him do sacred service (ser-

vaplyes) to Him,' the adoration attributed to the Seraphim in Is 6, 'Holy, holy, holy in the Lord of hosts: the whole earth is full of His glory.' As visible, concrete expression of thanksgiving, the Church's 'offerings or gifts' in kind from the Creator's own gifts were presented in sacred service or liturgy, in the prayer

1 Eplid. 63, 4.

2 For his real meaning cf. ch. 11, where he dwells on wine as by natural and scriptural symbolism, or sacramental value, able to 'expiate (atone for) the blood of Christ,' as water could not, and so to produce the sense of newness and joy suggested by the expression of full communion of Christ, which the wine 'shows forth' (extendit) (ch. 4).

6 Clem. ii. xxiv.
of uplifting (ἀφόρος), directed to God's spiritual altar on high (implying the Apocalypse), which Christ, the High-priest, presented in the Church 'sacrifice' of praise—if pure from defilement by sin, such as enmity between any of its members. This prayer was led up to by 'common prayers of the fathers and of the people, of intercession, of adoration, and for all other men everywhere,' in urgent petition (εὐρύτατον) 'that we may be counted worthy, after having learned the Truth, by our deeds also to present ourselves in concert and keep going the commandments, that we may be saved with the eternal salvation.' After these intercessions the kiss of peace sealed the spirit of unity which was specially asked for, and was the condition of the 'purity' and acceptability of the coming eucharistic prayer, the Church's 'sacrifice' of praise to God's Name or revealed nature. Of such intercessions as offered in Rome c. A.D. 305 we probably have the substance, and largely the very words, in the Epistle of Clement (lxx.-lxxi.); and we find them strikingly continuous with those of the OT and of contemporary Jewish public worship (e.g. the Big Inter. of prayers in a fact also common in the earliest extant Christian hymns. The changes which passed over Christian worship, especially the eucharistic part, show a steady decrease in this Biblical or Hebraic spirit (as distinguished from Origen's development—Gnosis is now forgotten), and a corresponding infusion of a non-Biblical or Hellenistic element of thought in the interpretation of the Eucharist as worship and means of grace, together with a transposition of traditional elements in the service generally, in keeping with the new ideas (e.g., the place of the intercessions). This is the most momentous fact in the development of ancient Catholic worship out of primitive Christian forms, and has its parallels in other aspects of Catholic Christianity.

The change is associated, too, with a growing sense of sin in 'the saints' or 'the holy Church,' especially from the 4th cent., when Christian wholeheartedness on the average rapidly declined, owing largely to the new relations of State and Church tempting worldly people to join the latter. The eucharistic 'sacrifice' is more and more conceived in a prophetic significance, which had its roots in the newer view of the elements, as literally made by consecration 'the body and blood' of Christ's passion, though as existing now in resurrection glory. A constant effort to make the most of those ingredients of form. The eucharistic prayer became more stereotyped, not only as the habitual usage of a given bishop but also as the fixed tradition from bishop to bishop: and what had once been a single prayer was broken up into specialized moments or phases, marking stages in the sacred drama of the Liturgy. This gave the service 'a hieratic' or formally sacred effect, alien to the genius of primitive Christian worship, but quite congenial to the non-Christian cults around it. To these innovations was now added yet another characteristic of later Catholic worship generally, viz. the notion that the offering of the elements is 'immemorial, and that to the non-Christian cults around it. To these innovations was now added yet another characteristic of later Catholic worship generally, viz. the notion that the offering of the elements is 'immemorial, and that the eucharistic day, (b. 379) onwards. Hence it seems probable that the advent of Gnosticism and of paganism exercised some vague influence upon Christian feeling, especially in the case of the ruler populace. The strongly marked desire to be buried near the martyrs is no doubt to be attributed to a similar hope of protection. It was a matter not so much of logic as of a deep and primitive instinct—the same which in pagan times had led to the development of hero-worship. These frank words of a modern Roman Catholic deserve attention as pointing to a principle of wide possibilities of application in the history of 'Christian' worship, especially in view of his later statement that 'the core of the old in 'sacramental' and that of p aggression include many identical elements—e.g., the use of ablutions, lights, incense, prostrations,unctions, linen vestures, ox vota, etc. Few can doubt that they represent a kind of development which the NT Fathers, in keeping with their Christian spirit, do not to name Paul's Master—would have found foreign, to say the least, to the genius of 'the Gospel,' as

1 Cyril of Jerusalem, Myst. Catt. v. 9.
3 There was a corresponding change in the form and appointments of the Office of worship.
4 See art. SAINTS and MARTYRS (Christian).
6 See art. SAINTS and MARTYRS (Christian).

'worship in spirit.' And, when one reads the words of St. Melania, in 438, at a shrine of the martyrs, 'O ye, who have always free speech with God through the apostles (sacer... fereare) with Him that He may receive my soul in peace'—along with the comment, 'It is just this παραπανία, or free speech, ' attributed to the martyrs, that is put forward again and again in patristic writers as the one thing to which recourse to their help—'one cannot but feel the distance, not so much of time but of spirit, between such worship and that of the NT.' For there the same 'free speech,' and the same place of child world, is claimed as the glory of all sons of God in Jesus Christ, and particularly right of entry in this spirit into the Holy Place in heaven, as of priests in union with the 'Great Priest over the family of God' (He 10:19). As by a lightning-flash, such a comparison reveals the enormous change of attitude which has come about, by insensible stages, in the worship of Christians.

The cult of the relics of saints, as aids to devotion, especially in connexion with the celebration of the anniversary of martyrdom or spiritual birth (natulœcias), goes back in its simplest form to a relatively early period; cf. the Acts of Polycaur (c. 155). But its developments, both in the Catacombs, where martyrs' remains were abounded, and elsewhere, later assumed extra- ordinary proportions and were finally in the 4th century, and onwards, calling forth the scorn of Julian and many other cultured pagans.

(b) Artistic aids to devotion. The place of art in the expression of Christian thought and feeling, and the function of images (zikas) or representations of sacred persons to the eye, usually in paint or mosaic work, are dealt with in special articles. There was at first great shyness of such things, on account both of the Jewish and other feeling against all that could be construed as idolatry and of the tainted nature of so much pagan art. Hence the earliest use of art (e.g., in the Catacombs) was probably stimulated in part by the preoccupation of Christian thought in the 4th and 5th centuries with the idea of the Incarnation.

(c) The Christian Year. As the central service of Church worship, the offering of the eucharistic sacrifice came to represent dramatically, or in a series of sacred actions and words, the Christian redemption wrought by the Incarnate Son of God, so the Gospel story of the Incarnate Saviour was set forth ever more fully in the yearly festivals and holy seasons commemorative of the same. Naturally the first week first felt the impact of Christ. The Lord's Day, the Christian day of resurrection joy, took the place of the Sabbath, the Jewish day of grateful gladness. To this were soon added the weekly and yearly days, in remembrance of the sin that occasioned the Saving Cross. But what the Lord's Day was to the week, that the anniversary of the central act of redemption was to the year. Thus Easter, with its associated Friday, became the first season in the Christian Church, early we cannot say. Then followed Pentecost, and gradually the other great 'moments' of the Redeemer's life, until each year became a time-sacrament of the divine drama of human salvation. The fact that the birthday of Christ was relatively late in the calendar points to the practical rather than theoretic nature of the Church's apprehension of its own salvation, in which the Cross, the final act of Redemption, is more central for Christian experience than His birth. Into the calendar of the Christian salvation, in terms of Christ's history and its sequel in the gift of His Spirit, the Church's birthday, were fitted the 'birthdays' of martyrs into the heavenly realm of life eternal. Such, then, was the Christian Year in idea and as an aid to worship. The festivals in honour of the Virgin Mother of Jesus appeared only late in the calendar.

(d) Devotional 'hours,' in private and corporate worship. From the Church Year we turn to the day as a unit of devotion. Hours of worship, other than the Sunday Church hour, were the eucharist, to be of two chief types: (a) those for special classes within the Church, particularly ascetics ('virgins' of both sexes), later known as monks and nuns; (b) the popular hour. The former type grew out of an earlier kind, namely individual devotions continuous with the three hours of prayer in later Judaism (Ps 53, 69, etc.), which from apostolic precedents in Acts 3:10: 'But if,' etc. (cf. Deut. 31) came to be called the apostolic hours. Clement of Alexandria refers to Christians who set apart certain hours, viz., the third, sixth, and ninth. Already in Cyriacus' day piety had found mystical reasons for the use of the apostolic hours, connecting them generally with the Trinity, and severally with two stages of Christ's Passion and the descent of the Spirit at Pentecost (the third hour). So far, however, such day-time hours were purely private devotions. The earliest Church service other than the Sunday one was the vigil, a night service suggested by the NT calls for vigilance. But it was never of daily occurrence, only on the eve of a holy day or first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly first Easter, then the Lord's Day, the weekly...

Here we find an hour of early morning prayer on rising, before the first of the 'apostolic hours,' ere putting hand to work, and also a vespertine hour. These five hours mostly appear in the East in the 'Hippocratic' Church Order, a part of which reflects some circle of piety in Syria about A.D. 300—each with its mystical reference, though a different one from Cyriacus's; but there is no vespertine hour in the old Eastern Order, possibly

VOL. XII. — 49
because it was already set apart for more social worship. On the other hand, there are not in Cyprian any night hours, only prayer in the night service, the Antiphonale (De virgo), a Thanksgiving for the lighting of the lamps either in the home or at an Agape,2 passing later into use among ascetics, like the table-prayers of the Didache into de Virg., xii. 3. In this last the Gloria is part of the Virgin's praise, 'towards dawn.'4 Closely connected in feeling and ideas with the Gloria, and perhaps with its first vespers hymn (To doct lowa), is the best known Latin hymn, the Vesperae solennes (De toto theus), now traced to Nicetas of Remesiana, who as living on the road between the East and West would naturally feel the influence of Greek models. Nicetas in his works 'On Vigils' and 'On the good of Psalmody' illustrates further the similarity of ideals of private and corporate devotional hours in East and West c. A.D. 400, and he was one of the pioneers of the newer feeling which allowed hymns other than those in Scripture, the Psalter above all, to form part of corporate Christian worship, though the prejudice against this died hard.5 The authority of St. Ambrose, who himself wrote hymns for public worship, had no doubt great influence. The menace that hymns, and to their more general use was a real one. It was in monastic circles, then, that hymns proper took root, and from their daily offices passed in the later Middle Ages into the Breviary of the ordinary curial clergy. The popular Church was active in the use and production of hymns; and from the 12th cent. onwards we can trace the periods of fresh revival in monastic religion by the development of this spontaneous form of devotional expression, e.g., in 'Jesus, the very thought of Thee,' Dies Irae (by the Franciscan, Thomas of Celano), and the eucharistic hymns of St. Thomas Aquinas.6 The Church of Rome did not adopt daily services so early as the N. Italian and Gallican Churches, under the influence of Eastern monastic practice, carried thither by a number of pilgrims and others from those regions, such as Hilary in the middle of the 4th cent., and Cassian of South Gaul towards its end. Rome was always conservative in usages, as appears most clearly in its manner of reciting the Psalms, which were the staple of worship other than prayer. The Eastern form was antiphonal singing between two choirs, a method which took definite shape at Antioch about 350, and spread westwards rapidly—through Cappadocia, Constantinople, Milan. In Rome, as also in Africa, the old 'plenary'—as the old Cockcrow to dawn kept by 'all monks and virgins,' and by some lay-folk also. Of course the devotions at the central holy place of Christendom were more generally attended than elsewhere and more elaborate in form, including already four daily services at least. But the account gives us clear insight into the way in which worship became more specialized and developed. And by a good deal of evidence from the last quarter of the century we can fix the period A.D. 350-375 as that of the introduction of daily public evening and morning prayers into the Eastern Church, followed a few years later by Gaul (perhaps under Pope Hormisdas, 514-523); and Vespers was made an obligation still later.7 In Gaul and Spain matins and vespers had taken general root rather earlier; while a civil law of Justinian also decreed that all clergy attached to

a church should sing Vespers, Matins, and Lauds themselves, and not leave the duty to others. A careful study of the text of the issue of the famous Rule of St. Benedict (c. A.D. 528), which prescribed the use of the "complete circle of eight 'hours'" for monks is the foundation of the Breviary. These hours were much the same as the services in the Church in the 4th cent., completed in its close in Jerome's Bethlehem monastery by a supplemental matins, between matins and the third hour (to which public service in St. Vespasian, together with compline (completorium) before retiring to rest. The last was added by Benedict himself, who dropped the midnight hour, so as to give his monks a longer period of unbroken sleep, and placed matins about 2 a.m.

4. Mediaval worship.—In the main mediaval worship, alike as piety and as cultus, shows simply the working out and adaptation of the traditional cultus to new conditions, created by the break-up of the Roman Empire and its civilization. This meant the flooding out of the Church with crude fresh types of humanity, each with its religious bias and customs, largely superstitions, and so fostered these elements in the Church of the Empire which were farthest from primitive piety and cultus, as fundamentally Hebraic. Hence it is the element which the Church had to combat besides those in the Biblical—as already described or alluded to—that increasingly distinguishes its mediaval phase, both in the East and in the West.

In the East the hieratic and mystic tendencies, the latter parallel to and influenced by the rise and spread of Neo-Platonism, as a religion as well as a philosophy, are most marked. Particularly was this so in what we may call 'Byzantine' piety, as distinguished from the occasional types of Oriental Christianity, comparatively unaffected by Greek influence. But in all the eucharistic service was essentially a divine drama or 'mystery,' appealing to the emotions through the senses, with the idea of the mystic sacrifice at its heart. The notion of the parallelism between the worship of heaven and of earth, of the celestial hierarchy and the terrestrial, was worked out elaborately and with surprising literalism. It finds its typical expression in the pseudo-Dionysius, through whom it also exercised a deep influence on the more practical and ethical genius of Western, particularly Latin, writers. In the East, too, the ritual, so expressed in cultus, becomes more vicarious and sacramental, less congregational, in character. The connexion between priest and people, especially in the East—where the cultus went on in the sanctuary or altar-area, largely out of the people's sight—becomes a more formal one; worship is less corporeal, less an active participation of all, with mind and voice, in common acts of spiritual and moral communion with the Christ of the Gospels, and through Him with the God unto whom and with whom all life is to be lived in harmony of will.

A special note of mediaval worship, inherited from this later patristic age, was the sense of sins calling for the constant 'propitiation' of God. This was to be achieved partly through special good works (such as alms of all sorts, and various mortifying exercises of penance), often prescribed by the priest through whom absolution was looked for, and partly by private eucharistic oblations or 'votive masses' offered in the donor's name in special service-books. Parallel with this went a development of purely clerical masses, without lay participants, which in the 7th cent. produced that contradiction in terms, according to primitive ideas of eucharistic worship, 'private masses.' In these the priest administered communion to himself alone and these were termed 'private masses' since 'the whole Church, in its name and as pleasing for its welfare. But one result at least of such purely vicarious masses, together with the celebration of several masses by the same priest on the same day (10th cent., onwards), was natural; viz. a concomitant decrease in lay participation. The Church, however, at this time introduced two free communions a year on the part of ordinary Christians; and many communicated once only in the year.

As regards 'hours' services, the new impulse given by Benedict led to the 'erection of monastic communities in connexion with the parishes (tituli) of Rome,' which 'supplied the parish churches with clergy at liberty to conduct the daily offices, and qualified by their training in music to do so.' Thus, soon, terce, sext, and none were sung in the Roman churches, and before 800 prime and vespers also. These early Roman offices became, through the able scribes and compilers of the English mediaval breviaries. Attempts were made, too, as time went on, to extend the 'hours' services to parish churches and get the laity to attend the same. These 'hours' services, however, for the most part the 'hours' proper remained a monastic or at least clerical form of service throughout the Middle Ages; and in England, owing to historical conditions which effaced the older type of non-Roman Christianity, they were virtually Roman 'offices' or dutiful acts of divine worship. Yet they contained some Gallican elements, especially before the Norman Conquest; and after the Norman Conquest survivals in the so-called Uses of the great dioceses, of which that of Salisbury (Sarum) was the chief. Through its influence, in particular, there set in also in the latter part of the Middle Ages a tendency towards a uniform English Use.

Rise of the 'Breviary.'—Ever since the 'hours' services had been adopted, the mass of fixed forms of devotion—psalms, prayer, lessons (not only Biblical, but also Legenda from patristic service-books, and expositions and from the Acts of the Saints)—had grown to ever greater dimensions. The process of its simplification and unification in one service-book (service-books for the service-books) in England about the 11th cent., in the Breviary (Breviare Sive Ordo Officiorum or Portiforium, i.e. the book 'carried' by the priest when he went abroad—the latter being a smaller and more portable form of the former. It was the Breviary, then, that formed the basis of the first efforts of those who early in the Protestant reformation of worship, as of Christian religion generally, tried to bring back its public forms to primitive and purer models. But an experiment in the way of a reformed Breviary on Catholic lines was also made in 1535 by Cardinal Quirini, general of the Franciscan Order in Spain. Much was omitted as superfluous, and a simplification all round, amounting to a revolution in effect, was carried out. It and its preface greatly influenced Cranmer's first Book of Common Prayer. But Cranmer's purpose was far more radical, viz. 'to produce not merely a good manual of devotion for the clergy, but a Book of Common Prayer' for all Christians, learned and unlearned, if only they could read their mother tongue. 

Transition to the new order.—The old service-books were for the use of the clergy and the 'religious': the layman had only the 'little Office,'
WORSHIP (Christian)

whether the Latin 

Horae or the English Psalter

based on it in the late Middle Ages. But the English Psalter from the Church of England as well as the clergy's, alike in church and in private use. Cranmer compiled it on the basis of the Sarum Breviary in particular, but in the light of principles of religion and worship drawn direct from the Bible itself. Not only had this act of spiritual precedent. Thus 'Whitsunday, June 9, 1549, witnessed the beginning of a new era in the public worship of the English Church, a new era already in augurated. By the time Cranmer himself, which had gained a new sense of what the Christian gospel was, and what sort of worship best fitted its nature. In all of these the vital change took place that forms of worship were in a language 'understood of the people.' This meant an enormous gain in spiritual reality, especially as their Biblical language and allusions could now be interpreted by and fitted into the regular reading of Scripture. The poverty of Scriptural background, and indeed the scarcity of 'the Word' of God in piety and worship, even in the later Middle Ages, when a certain amount of preaching existed in parts of the Church, is the heresy of which the whole cultus was, that is, it was the result of the ecclesiastical liturgy, as well as having the spirituality of the clergy and the laity not always as it should be, as a part of the NT type of worship, because 'Christianity, even the Church, after the parousia of the second and of the third generation of men. Men were 'fed' in religious, or in respect of a feast day—or a fast day or a saint's day—which are a shadow of things to come. Of course the mass alike of clergy and laymen were not fit, as things were, for a NT type of worship, because the Church had rejected the Faith had not the ability to which that belonged. This fact had historic causes, some of which have been indicated. But none the less such cultus, and such spiritualized worship, represented no normal advance, nor even the salvation of aesthetic and emotional sensibility to the divine, as majestic and mysterious in its nature and ways, with which it affected certain souls. Nor on these lines, from which the official Church through the papacy refused to depart, was there any promise of return to truer continuity with principles and methods of spiritual worship at the first.

It was small wonder, then, if, worshipping with but little direct aid from the NT and its distinctive spirit, medieval piety was full of the spirit of byzantine age unto fear, and sadly disfigured of the spirit of adoption whereby we cry Abba, Father. This appears most vividly from many examples of the religious art which was used as an aid to worship. But it was implied also in the elaborate services of the Church, both within the invisible world—fathers and the saints at large, with the Mother of Jesus at their head—whose aid was felt needful to supplement the too exalted or remote help, or even to pacate the too severe judgment, not only of God the Father but also of Jesus, the 'one mediator of God and man, himself man.' Nor was the element of fear—the fear of mystified minds, and the sense of consequences not fully appeased by the Church's rites of penance and absolution that were a large part of the mediaval sacramental system—absent from the sense of mystery with which the central sacrament of worship, Christ's very body and blood, presented in an inconceivably real sense in the transubstantiated bread offered to God anew as 'the Host,' and eaten for the benefit of body and soul, was regarded by a doctrine of purgation.

Finally, participation in the Church's cultus was largely viewed as the result of prayer, like sacraments on the opus operum theory, and as a meritorious work before God, rather than a specially direct and effective mode of attaining spiritual fellowship with God, as the soul's supreme good. A radical revival of the original Christian spirit of faith was vitally needful to a new birth of worship, on lines which could lead to the development of a culture more suited to the growing spiritual maturity of humanity at large. This needed a system of worship which could first stimulate and educate it in certain directions, and then by gradual modification of the traditional forms make available (for the adherents both of the old and of the new types of Christian piety) the elements of positive value latent in the historical forms of continuous Catholicism.

5. Protestant worship.—(1.) In General.—The intimate connexion between the kind of religious faith and the worship which expresses it is nowhere clearer than in the Church of England, where, as a result of the Protestant Reformation. The new experience of saving faith, with its correlative doctrine of grace (q.v.), summed up in the twin ideas, justification by faith and the priesthood of all believers, was applied to the sphere of religious feeling to which worship belongs. The sense of assured access to God on the part of Christians, as children reconciled and accepted in Him by faith in the Name of Jesus Christ, brought into worship a fresh note of glad thanksgiving. This ran through all, at first even the confession of sins (as of children in a family, rather than of debtors or law-breakers before their judge), and the act of worship being a act of worship being a 'bare sign' of the spiritual relations which its forms suggested, those of vital communion with God in Christ, and with fellow-members of His mystical Body, the Church. But there was a definite setting aside of the notions attached to the viaticum in the Mass (as mediaeval Catholicism was often called). These were (1) that consecration effected change in the elements themselves (transubstantiation); and (2) that the changed elements were 'offered' as a 'propitiatory sacrifice for living and dead' by the action of the celebrant, viewed as having a supernatural power as 'priest' in virtue of the sacrament of 'orders.' Thus the ritual of the Mass was generally felt by Protestants of all types to involve non-Scriptural, and therefore un-evangelic, ideas of the nature and means of the Christian salvation.

 Accordingly, after attempts to retain some of the forms and formulas still dear to many by use, the Reformation sought to simplify and sentiment, both in Lutheranism and in ANGLICANISM (here the contrast between the First and Second Prayer Books of Edward VI. is most significant), the ritual effects of the new conscience about making NT teaching and precedent sovereign at any cost were accepted in all Protestant communions. The Holy Communion of the Lord's Table was displaced the Mass and its distinctive worship.

The retention of old forms for the expression of the new type of faith was pushed to the farthest point of compromise in the Elizabethan Prayer Book, particularly in its juxtaposition of the formulas of administration characteristic of each of the two
the active participation of the whole congregation, with a faith fully conscious of its proper objects of adoration, is vernacular singing, whether of psalms or of other forms of devotion. Here a mode of worship which in medieval Catholicism had been confined to the upper classes, and in which these and other forms were to be taken. See Article xxiii, in particular.

Here the experimental cast of the new Anglican form of administration, framed in 1552, is noteworthy, as well as the declaratory form of the words of absolution. Further the preaching of the Word now held a central place, if not the central one, in the whole scheme of Protestant worship. This brings us to the chief difference between Catholic and Protestant worship, viz. their respective emphasis on Word and Sacrament. For Catholicism, with its notion of grace as secretly infused participation in the divine nature, particularly as embodied in Christ's flesh and blood, emphasis falls on the sacrament of the Mass. For Protestantism, which conceives grace as the working of the Holy Spirit mediated primarily through the Word or uttered mind and will of God—the proper object of faith—it falls rather on preaching (q.v.); it is the means of grace which conditions the efficacy of all others, and prompts the worshiper that faith is helped by them to render to God. Even as regards the sacrament of the Lord's Supper, its Protestant form places the rite in a setting of the Word, partly by appropriate Scripture reading, partly by the communion address usual in non-Episcopal communions. Through the latter it is brought in idea within the scope of the 'prophetic' ministry of the Word, to which belongs also the prayer of thanksgiving where there is no fixed liturgy but it is left, as at the beginning, to the prophet 'to give thanks as much as he will.'

The Holy Communion being in fact, like other sacraments, 'a visible word' (to use Augustine's phrase), it speaks to the heart by the inward working of the Holy Spirit—the real agent in all grace, and especially in that faith of which other forms of grace are modes, whether mystically, by direct personal appeal through its symbolization, or by reflective unfolding of its meaning by ministry of the Word.

Protestantism, besides its emphasis on Word rather than Sacrament as means of communion with God, and in keeping with its idea of salvation by faith and not by deeds of 'merit' (rendered possible by sacramental grace), regards worship not as a sacrifice to a voluntary God, but rather in the light of realized fellowship with God through Christ, as of children with a father.

In worship God's perfections, especially His goodness, are simply answered by the homage of the heart, in prayer, and by the direct reverence, and increasing conformity of man's will and personality to the divine character is sought after. The genius of Protestant religion, then, being to emphasize the filial consciousness, as making 'all things new' in man's outlook on life, all life becomes in idea a prolonged act of worship, because of filial trust and loyalty. Hence the line between such general worship 'in spirit and in truth,' and special acts of worship or cultus, whether private or corporate, is less marked than on the Catholic view—in virtue largely of the latter's sacerdotal and sacramental conception of the Church and its authoritative rites. Docile performance of the divinely appointed forms of cultus, in implicit reliance on Church authority, apart from personal consciousness of their effects in edification, is on the latter view 'ritualisms' and will have its reward in divine blessing.

Another feature characteristic of the Protestant form of worship, one expressive of its concern for

---

1 Cf. Didsche, s. 81.
2 The home of the 'Lollards' was personal rather than in public worship, but illustrates the tendency of fresh personal religion to break into song.
(b) 'Reformed' or Calvinist worship.—The germ of this type is seen already in Zwingli (see), who made the Protestant emphasis on the Word of the gospel rather than its Sacraments determine the order and forms of public worship; such worship, too, was to him only a special mode of the worship of the whole Christian life, and here 'obedience is better than sacrifice' or any formal act of worship. Simplicity, then, in cultus was his practical rule and the essential features of the spiritual ministry, conceived as a 'prophetic' and expository ministry for adapting and applying, through personal appeal to the conscience and reason, the gospel in all its range to the worshippers. The service, failing at the point to which the protestant, as he was called, was closest in principle, was only by no means or convention in changing times and places.

In keeping with these principles, Calvin insisted on the value of congregational singing, as helping the soul to rise into the atmosphere of worship; but he limited the contents of sacred song to the inspired Scriptural models, the Psalter in particular, adapted only verbally to musical melody. Prayer, by the same means, in order to be real and close to personal life as possible, both for the minister and for the people, should include prophetic or unprescribed prayer (analogous to the preaching of the Word), as in the primitive Church, and thereby make possible to all the exalting and expressing their co-operation in both by the Amen. The preaching of the Word became a central part of public worship on the Lord's Day, while once a month, also, it seemed to the intention of Calvin of its sacredness and preparation of soul by self-examination (1 Co 11[3]) the sacrament of the Lord's Supper was added. Before it a confession of faith was made, in the Apocalypse, Creed, at first sung by the people (in 1545 ed. of La Forme des prières, etc.), later as recited by the minister. The simplicity and ceremonial barrenness of Calvin's order of worship, deliberately based as it was on Scripture, and with its Hebraic forms was at last made up for by the new realism of the vernacular as used in worship and the new warmth of congregational singing.

In the sphere of private devotion—which dispensed in the main with fixed forms of prayer (save over food)—fasting, for chastening of soul but not as a 'meritorious' work, was practised both by Calvinists and especially by those denominations of unformed religion) and at times chosen for personal reasons. The Church Year was set aside, as lacking Scriptural warrant and as having superstitious associations (here Luther's different attitude determined the more conservative practice of Lutheranism as to Church festivals, also as to the crucifix, images, and pictures as devotional aids). The Calvinistic type, with minor variations, came to prevail not only in Switzerland and France but also in parts of Germany, in Holland, in Scotland, and in England among the Church of England's Non-conformist bodies, both Presbyterians and Congregational (including Baptists), while it contributed not a little to the ethos and forms of the Church of England as established by law. Before, however,币a complete break with English Christianity, as a specially rich in varieties of Church life and worship, reference must be made to the non-established or minority type of worship as represented on the Continent.

(c) Independent or 'Anabaptist' worship.—From the nature of the case, the worship of these proscribed groups of radical reformers is hard to describe save in general terms. As based on Scripture, read with strong emphasis on the illumination of the individual believer, it was very simple in form and spontaneous in method, having affinity with and aiming at reproducing the Spiritualism promulgated in the public worship of the Pauline Epistles, at which official religion everywhere looked askance. Free prayer, personal witnessing to God's working in religious experience, 'prophetic' exposition of the Bible,—in fact the features which marked the early 'Quakers' in England—were its chief characteristics. But, unlike the Quakers, the Continental Anabaptists practised both sacraments, in their own simple way and sense, and (so far as persecution allowed) the singing of praise to God in hymns expressive of their new-found and often deep religious feeling. Among them Luther's principle of the freedom of the Christian man, along with the love of the brethren, led to a thoroughgoing exercise of 'the priesthood of all believers', on the lines of the autonomy of the local group or church—to the great scandal of all legally regulated types of State Church in the various lands—much as was the case later with the 'Separatists' under Elizabeth's system of uniformity in worship in England.

(d) Anglicanism.—While the Elizabethan settlement, no less than Lutheranism, banished medieval forms savouring of Roman doctrine, especially as to the Mass (not only transubstantiation but also consubstantiation was set aside), there was not the same well-grounded reason for the older associations of the ritual retained by the conservative and comprehensive policy of the Crown and its advisers that there was in Luther's own influence in Lutheranism. There was besides the extra influence in the same direction of the retention in the one case, and not in the other, of the Catholic order of the episcopate, and that in its medieval form. Accordingly, although the type and forms of worship in the Elizabethan Prayer Book were fundamentally Protestant rather than Catholic (in the opinion of a 'central' Churchman like Jewel, as of Calvin and other 'Reformed' rather than Lutheran Protestants), yet there were in it, as in Luther's Church order of worship, features proper to the standpoint and tone of 'Catholic' rather than 'Evangelical' religion, which were dropped by the types of Protestantism most careful to conform everything to the NT model and ethos.

Among such features was the Breviary, which, though it marks a great advance on the medieval and 'Reformist' (even perhaps Cranmer's greatest liturgical triumph,) yet falls decidedly below the full life type of consciousness. This was partly due to its origin, and partly to its long association with the Prayer Book at all, but in 1544 for use in a special season of

public cults (like the earliest Western litaneis), was the communion of obedience for the religious service. But the Western cultus of the 15th century. 1

On the whole, the Puritans were the most objectionable of the Prayer Book sects. The idea of communion was one of the Puritan peculiarities which remains to this day. The Puritans meant by communion. In such worship a definite Congregational basis, whether their baptismal practice was the practice of infant baptism, not of Anabaptism (q.v.), two highlly primitive features were recovered, namely, the intimate union in idea of Christ's worship and Christian walk, and the practice assigned to the personal graces of the Spirit, in sitting each particular church for corporate fellowship in both spheres of its life of union with God in Christ. These were connected with the Separatist, but also with the Church of England, and the Puritanism by a godly discipline meant to ensure a reasonable loyalty in life and worship. When Congregational ideals and forms of worship had lost something of their original reality, they were more than revived in the Society of Friends (q.v.), with its characteristic emphasis on 'the inner light' and its reliance on the promptings of the Spirit of God, alike in life and in corporate worship. Here new traits were fellowship in silent adoration and meditation, waiting for the 'moving of the Spirit,' and complete spontaneity of utterance for mutual edification, whether in the reading or quoting of Scripture, or in the speaking of a more direct message of the Spirit or 'inner light.' Negatively Quakerism dispensed with sacraments and even singing in worship. But the latter received an important extension among Nonconformists at large (with whom adherence to the psalms in one form or another had been stricter than among Anglicans) early in the next century, through the hymns of Isaac Watts, written specially for public worship.

of the Spirit, and a third defence of the worship of the Puritans (q.v.) went further even than their foreign friends, who themselves lived under the Presbyterian system, thought necessary. When repressed by the Crown, using the bishops as its agents, many of the Puritans, like Cartwright and Travers, worked for a Presbyterian church polity, and issued in 1572 an 'Admonition to Parliament' to this effect. Their objections to the rigid and exclusive use of fixed forms of prayer in public worship, their emphasis on 'preaching' of the Word, as distinct from mere fixed Scripture lectures (with or without printed homilies), and their rejection of the traditional fasts and festivals of the Church Year, called forth from Richard Hooker (q.v.), a 'central' Anglican of the end of Elizabeth's reign, as Jewell had been in its earlier half, a classic defence of the worship of the Established Church. Hooker's views, however, on the basis of essential agreement between the Reformed Churches, including the Anglican, as 'Sacramentarian,' not papal or Lutheranism, in their view of the Lord's Supper. This stand in contrast to that of the Protestants in the next century who went to the other extreme from the Puritan tendency in their views of Prayer Book worship, Laud and the High Church or Catholicizing divines often styled 'Caroline.'

Congregationalism.—But, while the Puritans as a body remained inside the National Church, until after the Act of Uniformity in 1662, a minority among them gave up, under Elizabeth's cloyve, of Todd's in its shape of the Puritan and offices in the Head of the Church, which is Christ,' (2) 'communion of the grace and offices in the Body, which is the Church of Christ,' and (3) 'using the Sacrament of the Lord's Supper, the seal of this sacrament.' 1

1 See art. BROWNISM, CONGREGATIONALISM.

2 In the Prayer Book by confirmation also, though it fell into wide disuse, Hooker, 'Facts and Fall. Pat. vol. iv. ch. 2.) The Reformed Church treated this 'rite or ceremony' (Hocker) as a sacrament, and the worship of Christ's own authority. Not all Churchmen allowed it even as a 'profitable ceremony.' Lutheranism, after a period of disuse, like that in England, restored it in a simpler form as a result of Pietism (see art. SACRAMENTS [Lutheran]).
WORSHIP (Ecclesiastical).—I. The Daily Temple Liturgy. —I. Its Helopolitan Origin.—A striking feature of Egyptian temple worship was the fact that the same daily liturgy was celebrated on behalf of every god and goddess throughout the length and breadth of the land.

The reason for this uniformity, which seems to have prevailed as far back as the Old Kingdom, is as follows. The daily temple liturgy, as we know it, seems to be derived from that celebrated on behalf of the sun-god at Heliopolis, which city exercised in early times a very powerful religious and political influence. To enhance their prestige, therefore, a number of local gods were identified by their priests with the sun-god, of whom the king was regarded as the son. The king was regarded as the son of the gods identified with the sun-god. As pointed out in the art. PRIEST, PRIESTHOOD (Egyptian), II, 2, this idea of sonship would have strengthened the ruler of Egypt or the king and king with all divinities, whether male or female. The king was likewise high-priest of the sun-god, and he became high-priest of all the local divinities of Egypt by the same process as that by which he came to be regarded as the son. The local high-

1 Printed Epistle of the Society of Friends in 1855.
WORSHIP (Egyptian)

priesthoods also, of course, developed upon the Pharaoh as representative of the centralized government. In the Egyptian religious functions, which once belonged to the local chiefs, being united in him. Accordingly, as their son and high-priest, the Pharaoh, or his priestly deputy, celebrated the same liturgy on behalf of the local deity, granting the Hebrews an additional religious experience; furthermore, in the temple structures themselves and the views which the Egyptians entertained about them.

(c) Egyptian temples, certainly in early times and often later, looked east, so that the rising sun might light up their dark interiors. Thus in an inscription on the shrine found by Griffith at El-Arish we read that 'the face of this temple (i.e. of the god) is towards the east wherein Re' rises'. The Egyptians, indeed, pictured to themselves the sun-god, before all other divinities, as dwelling in every temple, which they accordingly regarded as a miniature heaven. In texts of the Ptolemaic age, though the idea is probably far older, the two pyro-temple towers are equated with the two sisters Isis and Nephtys, who, according to one conception, lifted up the sun-god into the sky every morning. The sanctuary or nais, in which the cultus-image was kept, was not infrequently designated 'heaven' or 'the horizon', and a title often borne by the high-priest of the temple of Thoth at Sais. ('Griffith, doors of heaven in Eteoc-Places (Karnak.)')

In historical times, especially, when the Egyptian sun-temple, to have possessed its House of the Morning (prae-duct), in which the Pharaoh underwent lustration before celebrating the daily Liturgy.

(d) The sacred pool for purification, a feature of all temples, was associated with the presiding deity of the temple but with the sun-god.

(e) The obelisk which generally stood in front of the pyzon was invested with the power of the sun-god.

(f) The boat-shrine was also probably in the first instance a feature of the sacred pool.

(g) The practice of offering to a divinity the figure of Me'tet, righteousness personified, in the daily temple liturgy must have grown up at Helopolis; the formula recited at the presentation of the figure is clearly of solar origin.

(h) The historical priesthood also displays marks of Heliopolitan influence. The four watches (choo), or phylae, of priests bear the names of the four quarters of a ship, which names were also assigned to the four watches into which the crew of the sun-god's heavenly ship were divided, and it was evidently the sun-god's priests who were first divided into four watches bearing these names, the sun-god being supposed to traverse the sky in a ship and his priests being therefore regarded as his crew. Even the general term for a priest, sekh, may be, for Heliopolis, weberb 'mean, pure person', and purity is a very important element in the priesthood.

(i) In many temples the high-priestess was identified with Hathor, the wife of the Heliopolitan sun-god, and in this capacity, in front of the god of the temple in which she was high-priestess was dedicated.

(j) In the temple of Serapis-Tambaksheh: musician-priest 15 who were attached to every Egyptian temple, and the human concubines, who were assigned to several divinities, seem also originally to have been Heliopolitan institutions.

Pharaoh, to undergo purification before entering the temple to officiate.

The symbolism of the daily temple liturgy to the Pharaoh's ceremonial toilet.—A large part of the daily temple liturgy consists of a series of toilet episodes and closely resembles the ceremonial toilet of the Pharaoh in the House of the Morning. The episode is based on the fact that both are

based upon the same performance, the supposed daily matutinal lustration of the sun-god—the cultus-image of the sun-god undergoing lustration every day in the temple of sun-temples. The toilet, as the god himself was conceived of as doing in the horizon. That the other toilet episodes of the rite of the House of the Morning, viz., robing, anointing, crowning, etc., had their equivalents in the daily temple liturgy is due to the sun-god being regarded as a king.

5. The three divisions of the daily temple liturgy.—There are three main divisions of the daily temple liturgy: (1) a series of episodes preliminary to the performance of the divinity's toilet, (2) the actual toilet, and (3) the presentation of food- and drink-offerings.

The liturgy of the toilet is the first two divisions of the liturgy. The one, an illustrated edition, is carved on the walls of the chapels of Horâsēb, Isis, Osiris-Onnophris, Anubis, Anum, and Ptah, in the temple of Sethos I. at Abidos. It consists of a series of reliefs representing the liturgy being performed, each relief being accompanied by text inscribed by the priest while the particular episode depicted was being enacted. The other edition, written for the temple of Anuinre of Karnak, is from a manuscript in the Egyptian Museum no. 3025 of the British Museum and dates from the XXllth dynasty.

The Abyssinian and Karnak liturgies are merely different editions of the same portions of the service-book. The form in which the toilet episodes are practically identical in both cases, and, when the corresponding episodes of one are quoted as those of the other edition, the accompanying formula are often either the same or very similar in common.

Both these editions are incomplete, but combined they do supply us with a very adequate representation of the pre-toilet and toilet episodes of the daily liturgy in an Egyptian temple (originally the sun-temple), when the ceremonial was carried out.

The third division of the liturgy can be fairly satisfactorily reconstructed from numerous representations and formula occurring among the relics which decorate the walls of the various temples.

There are numerous indications that the temple service-book assumed the form in which we possess it, a very early date, probably not later than the Old Kingdom.

(1) The pre-toilet episodes.—Having undergone purification in the water of the sacred pool or tank, the priest entered the temple, receiving a robe as did the Pharaoh. His first act after entering was to lay it upon a brazier or altar (of bronze, and in the form of an outstretched arm with the hand open palm upwards). Taking hold of the rest of the censer, the little brazier in which the incense was burned, he fixed it in its place, namely in the open hand at the end of the arm. Having filled the brazier with burning charcoal from the fire he had previously kindled, he set incense thereon, and, holding the smoking censer in one hand, proceeded to the sanctuary, the double doors of which were bolted and the bolts secured with a clay seal. The bolts seem often to have been tied with a strip of papyrus to which the clay seal was attached. The priest broke the seal, drew back the bolts, and opened the doors of the sanctuary, whereupon the sacred boat was disclosed with the cultus-image contained therein.

After the unfastening of the seal, and presumably the opening of the doors, the priest sometimes burned incense in honour of the uraeus goddess. On holding the image, the priest made a profound obeisance, kissing the ground prone, as it was said, or placing himself upon the belly stretched out flat. Then, standing or kneeling, he chanted first a hymn in honour of the divinity—lifting up in his hands as far as he could the attitude of worship, or else burning incense—and after that a second hymn in honour of Re, the female counterpart of the sun-god and identified with Hathor. The priest next offered the image sweetened honey, or a figure of the goddess Mâet, and then burned more incense. Having swept the floor of the sanctuary with a cloth, he was now ready to 'lay his hands upon the god,' i.e. take the image out of the boat or naos in order to perform its toilet.

(2) The toilet.—The priest's first act after 'laying hands upon the god was apparently to divest himself of the cult robe and crown and other garments. Having thus freed the image from the robe, the priest proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, he proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense, then proceeded to sprinkle it with water, first from four ointment-vessels, or else from water from one so-called 'serpent'-vessel. He then ceased the image again, cleansed it with incense.

(3) The presentation of food- and drink-offerings.—The procedure observed at the presentation of food- and drink-offerings in the temple liturgy seems to have been practically identical with that observed at the corresponding toilet-ceremony of the daily liturgy. This is indicated among other things by the fact that in the temple reliefs depicting a divinity being fed there is sometimes inserted above the altar or offering-table, and between the divinity and the chief officiant, a so-called list of offerings identical to all intents and purposes with the lists occurring in the tomb reliefs and paintings. This is only to be expected, since every divinity was regarded for cult-purposes as an Osiris.

Before the offerings could be laid upon it, the altar or altar had to be purified. The act of placing the offerings on the altar or table, or else pouring them down on mats spread upon the ground, was variously
termed ‘setting out the repast upon the altar,’ ‘setting down the divine offering,’ ‘setting down the repast.’ While thus engaged the officiant either stood or knelt.

In the god’s hand being laid before him, two closely connected ceremonies were performed, apparently in immediate succession, the one being variously designated ‘presenting the repast,’ ‘presenting the divine offering,’ ‘presenting the performance of the incense’ (or ‘the incense’), ‘the libation,’ ‘the libation in the presence of the divinity,’ ‘the libation offered to the divinity,’ and ‘performing the presentation to, causing to be produced a great obligation for, NK,’ and the other being termed ‘bringing the god to his repast.’

At the former ceremony the officiant extended his right arm and bent the hand upwards in the prescribed manner and pronounced the formula beginning with the words ‘an offering which the king gives.’ When the king is depicted performing this ceremony, he is often shown holding a mace and staff in his left hand. The recitation of the formula ‘An offering which the king gives, etc.’ was associated with, and often, on the analogy of the funerary liturgy, was doubtless preceded by, the burning of incense and the pouring out of a libation of water. At the ceremony of bringing the god to his repast rested a formula calling (elōt) upon the god to come to his bread, beer, roast flesh, etc.

Various attitudes might be adopted by the officiant, whether king or priest, while he pronounced the summons. He might stand with right arm and hand extended in the prescribed manner, with left hand hanging at his side, or he might kneel with both hands, palms downwards, held above or beside the knees. Again he might kneel with left hand held in the attitude just mentioned or holding a censer, while with his right hand and arm he made the ritual gesture.

The act of consecration, by which each item of food and drink was finally made over to the god, was termed ‘stretching out the arm four times.’ According to the temple reliefs, it was performed in the following manner. The king, standing before what was to be offered, stretched out over or towards it four times the so-called ἑραπτων, which he grasped in his right hand; in his left hand he held staff and mace, or else this hand hung at his side holding the symbol of life.

In the series of temple reliefs depicting the god being fed is one representing the king in the act of ‘elevating’ (f) a tray of offerings ‘before the face of the divinity.’ Does this scene represent one species of the mode in which the sacred rites were conducted? i.e., after the pronouncement of ‘An offering which the king gives, etc.’ was a specimen of the offering elevated in the presence of the cultus-image? Moreover the series of the scene is a summarization of a series of elevations; for doubtless, as in the funerary liturgy, each particular item of food mentioned in the list of food- and drink-offerings was elevated at its presentation to the accompaniment of a special formula. In the funerary liturgy, according to Utterances 108-171 of the Pyramid Texts, each item was elevated four times.

In addition to the meal laid out before the image of the principal divinity in the sanctuary and before other deities in their temples, offerings were also laid, of course, upon the great altar in the forecourt. If the procedure in the temple of the Atón at El-Ämarra prevailed also in other Egyptian temples, it was upon this altar that the Pharaoh mostly laid his oblations.

(4) The removal of the footprints.—The final act of the chief officiant before leaving the sanctuary, shutting the doors, and affixing the clay seal to the bolts, was to obliterate all traces of his own and his assistant’s footprints. This he did by sweeping the floor with a cloth or with a besom made of twigs. In the pyramid temple, the last ceremony in the daily temple liturgy. Inscriptions and a few quite exceptionally detailed reliefs, however, show that in addition to the celebrant a number of other officiants participated in all these ceremonies of the ritual. The Pharaoh was no doubt particularly elaborate when the Pharaoh himself was celebrant.

(1) A scene in the temple of Luxor depicts in some detail the presentation of the cloths used for Amun’s ceremonial toles. After the burning of incense, the episode immediately preceding the arraying of the image in the royal head-cloth (amout), there enters the sanctuary a long procession of priests bearing chests containing the cloths in question, with members of the higher class of the priesthood, the fathers of the god, walking at their head. Some of the latter carry smoking censers and libations or lustration-vessels, while others clap their hands and sing, one of them rattling a sistrom. Bringing up the rear of the procession is the king, with ‘the god’s adorer, the god’s hand’ (the hieroglyphics for ‘Amun’) walking beside him. The king holds out the ἑραπτων and is said to be extending the arm four times, as in consecrating the offering, and this bears upon the libation at the scene also forms part of the procession, for between him and the high-priestess are the words ‘bringing clothing.’ We have here, pictorially conceived in stone, what were probably actual actions, namely the procession of priests, accompanied by the king and high-priestess, conveying the cloths to the sanctu- ary, and the consecration of that clothing by the king assisted by the high-priestess, who either sang a hymn or chanted some formula.

(2) A number of jars of unguent, which another Luxor altar represents the king as consecrating, have been solemnly brought in procession by ten priests.

(3) Another relief in the same temple shows a procession of twenty-eight priests bearing a number of ewers of water, to be used for such purposes as the washing of the altar, the pouring out of the libation before the bringing of the food-offerings, and for various drink-offerings.

At the end of the procession walks the king. The theory of the ritual demanded that the king should wash the water himself, come next 1 with it into the sanctuary, as he is depicted doing in the adjacent temple of Luxor.

2 See below, IV. (5).
II. PRIVATE WORSHIP.—We know very little about private worship. The individual citizen, we are told, refrained from what his local god hated, avoided his wrath by joining in the celebration of his festivals, and cured for the local sacred animals. In some houses, Mery's贝壳ite's account of the excavations at Abydos is to be trusted, the innermost room served as a private chapel, in which was kept the image of a divinity, offering being made to it on a stone offering-table placed before it. Here, Erman supposes, the householder made his daily adoration. A man would erect a shrine to Ernetet, the harvest-goddess, in the yard of his granary, or near his wine-press, or he might, it would seem, set aside for his god a portion of his meal, placing it on an offering-stone prepared for that purpose. To prosper his work the scribe, before he began to write, poured out from his water-bowl a libation to Imhotep, the patron-divinity of scribes. The ordinary citizen might be seen praying outside the great pylon of a temple, after having, perhaps, placed a gift for the god on an offering-table set up there to receive the contributions of humble folk. The middle Kingdom citizens of Asyut offered the first-fruits of the harvest to their local god Upwawet. Theban landowners, or officials responsible for the harvest on temple or crown property, and doubtless the ordinary people as well, made offering to Aman and the harvest-goddess Ernetet on the twenty-seventh day of the fourth month of Pruya, i.e. the first day of the harvest festival. Also on the last day of that festival, the first day of the first month of Shomn, the day the corn was winnowed, offering was made to Ernetet. On the last day of the winnowers, ere they began their work, set up on the edge of the threshing-floor a rude figure of a harvest-divinity, apparently made out of a bundle of corn furnished with mud hands which grasp ears of corn. Before it they laid an offering consisting of dishes of food and a pot of water or beer. On the analogy of harvest practices in other lands, we may not suppose that this 'divinity' is the first or last shed, the embodiment of the corn-spirit.

III. UNUSUAL POPULAR CONCEPTIONS OF WORSHIP.—Remarkable ideas about worship and man's relation to the gods were current among the middle and lower classes during the latter part of the New Kingdom; ideas which do not seem to have existed hitherto among the Egyptians and are not met with again till Christian times.

"To the sanctuary of God," we are told, "clamour is absent. Pray to him with a loving heart whose words are all hidden; so will be granted thy request, bear what thou sayest, and accept thine offering." Similarly a hymn to Thoth of this date likens that god to a well in the desert which is "closed for those who

Budge, Development of Religion and Thought in Ancient Egypt, New York and London, 1912, pp. 257-580.
IV. THE ATON-CULT OF KING AMENOPHIS IV. (ÓKHNAÔNÒN).—The liturgy celebrated in the temple or temples 2 erected by the heretic king ÔKhnaôn at Êl-Êmarna differs in so many ways from the temple liturgy of the opening and succeeding periods that it must receive separate treatment. For the beliefs responsible for these differences see Erman, Handbook, p. 61 ff.; Breasted, Development of Religion and Thought, pp. 319-345.

1. The daily liturgy in the temple of the Aton.—There was no cultus-image of the Aton, and so all the toilet and pre-toilet ceremonies of the old temple liturgy were done away with. The worship of the Aton consisted mainly in the singing of hymns and presentation of food- and drink-offerings, of perfumes and flowers. The ritual acts, however, accompanying the presentation of these offerings were those of the old worship, the only difference visible in the representations of the various ceremonies being that the queen is shown acting in exactly the same capacity as the king.

As in the case of the old temple liturgy, the presentation of food- and drink-offerings was closely associated with the burning of incense and the pouring out of libations, and the offerings were consequently depicted by the getting outside of the hŋh-baton. 3 The practice of elevating trays of offerings was also continued. 4 As there was no cultus-image to anoint, unguent was held up to the Aton in alabaster jars and then placed on the altar. 5 The offering of unguent was evidently preceded by the burning of incense. 6

It is possible that the offering of flowers was a more important feature in the Aton cult than in the worship of the old Egyptian divinities, though they are constantly depicted as receiving a bouquet from the Pharaoh, while their heaped-up food-offerings were regularly surmounted by a bunch of flowers. 7

The Êl-Êmarna relics permit us to reconstruct to some extent the sequence of episodes in the liturgy celebrated in the larger or outer temple.

(i.) When the king and queen came to this temple, their first act, according to a scene in the tomb-chapel of the high-priest Merîrë, 8 was to make each an offering at offering-stands set up in front of their images, the burning of incense and the pouring out of a libation—the attendant high-priest is depicted bowing low and holding the censer and vase that have just been used for that purpose—the king and queen consecrated their gifts by extending over them the hŋh-baton. During this performance the royal daughters rattled their sistra, and the attendant courtiers stood at a respectful distance bowing low with hands on knees.

(ii.) Having passed through the pylon, the king and queen, as we learn from a relief in the tomb-chapel of Panehesi, 9 proceeded to mount the steps to the high altar in the first court. At this altar a great oblation of joints of meat, poultry, vege-

WORSHIP (Egyptian) 781

isateur. The relief in question depicts the royal officiants in the act of scattering incense into these pans. One of their daughters stood in the rear and holds out two bowels of incense to her parents, and the other two daughters rattle sistra. In front of the altar, facing the king and making profound bows to the Aton, is the high-priest and the 'chiefservitor of Aton.' The former, and probably the latter also, holds a bouquet of flowers—perhaps for the king to present after he has burned incense. Behind these two priests are four other priests in the same respectful attitude, each holding a round vessel containing liquid of some kind. Beside these again are four chanters, also bowing low and accompanying their singing with hand-clapping. The rest of the royal retinue remains in the entrance or outer court, or else altogether outside the temple precincts.

(iii.) While the king and queen were thus officiating at the high altar, priests placed offerings upon the altars in the outer court. 1 A relief in the tomb-chapel of Ahmûsë 2 also shows priests attending to the offering-tables, in this case in the outer court of the smaller temple, just before the arrival of the royal party.

(iv.) A visit of ÔKhnaôn to the temple was the occasion for the sacrifice of numerous oxen. The victims, bejeweled and garlanded, were led straight to the slaughter-house, 3 or else to the most outlying cortège as it drew up at the temple-entrance. 4

2. The functions of musicians in the Aton-cult.

(a) Sistrum-players.—While the king and queen burned incense, poured out libation, presented unguent, flowers, food- and drink-offerings, raised their hands in adoration before the altar, or performed the ceremony of consecration with outer vessels, the two sistra of the royal girls rattled their sistra. 5

(b) Temple choir.—A body of blind vocalists accompanied by a blind harpist and sometimes by a lute-player, also blind, performed in the outer court or enclosure of the smaller temple. 6 An inscription in the tomb-chapel of Merîrë 7 speaks of 'the singers and musicians . . . in the court of the House of the Benben . . . in Ikhtaton.' The choir evidently sang and played off and on during the whole day, for they are depicted thus engaged both during and outside of the performance of the liturgy. 8

(c) Male chanters.—Four chanters also figured in the Aton-worship. They are twice depicted singing and clapping their hands while the king and queen burn incense in the pans placed on the top of the food-offerings, in the one case in the great court of the larger temple, and in the other apparently in the outer court of the smaller temple, where they are seen in close proximity to the blind vocalists and harpist who simultaneously make music. 9 They also ran in front of the royal procession to the temple, 10 thus, perhaps, performing the same functions as the lector of the old religion, who walked in front of the Pharaoh, when he went to the temple, and dispelled inimical powers by his recitations. 12

(d) Female musicians.—According to the relief in the tomb-chapel of Panehesi discussed above, among those of the royal retinue who remained outside the entrance to the enclosure or outer court of the larger temple, while the king and queen officiated at the high altar, were a number

of female musicians. These are depicted singing to the accompaniment of hand-clapping, waving of palm-branches, and the beating of their hairresses, or else clapping their hands in worship. These female musicians likewise greeted the king on his arrival at the temple. It was apparently also the same women who participated in the rejoicings at the decoration of the temple. It is to be noted that the female musicians are never shown performing inside the temple precincts.

3. Private worshippers in the temple of the Aton. The temple appears to have been customary for a subject, after he had been decorated by Okhnaton, to make a food- and drink-offering outside the pylons of the temple and to pray at the same time for the king’s life, prosperity, and health, and that the Aton would vouchsafe him for ever.

In the top register of a scene in Merir’s tomb-chapel depicting Okhnaton’s visit to the temple, two men wearing wigs, and carrying each a bouquet, lead along a bejewelled and garlanded cow and a calf. Accompanying them, and also carrying bouquets, is a man with a shaven head, i.e., a priest. Possibly the two laymen are offering these victims themselves on behalf of a royal victim, the priest being required in order that he might superintend the slaughter of the victims and make certain that they were pure. In the same scene, bottom register, lay-folk are carrying partridges, ducks, and geese, while four priests follow, two leading oxen and two carrying bouquets. Both victims and duck are quite possibly private offerings. Davies suggests, indeed, that the offerings placed on the altars in the outer or enclosing court of either temple were those of private worshippers. This would account for priests serving these altars before the arrival of the king, or while the royal party and chief priests were officiating at the high altar.

LITERATURE.—See the works cited in the text and footnotes.

WORSHIP (Greek).—I. DEFINITION, ETC.—Worship, in the widest sense, may be defined as the acknowledgment by man of his dependence on a power or powers beyond himself. And these powers, in whatever form they may be conceived, are believed by the worshipper to be more potent than himself; and, in whatever visible semblance or sign they are worshipped, they are imagined to be normally invisible.

At the outset of our study of Greek worship we assume it to be conceded that it is important to realize. The central meaning of worship as we conceive it is the endeavour after a higher and better life. Whether as individuals or on stated occasions with our fellow-men we perform an act of worship, while we do indeed render thanks for blessings received and pray for blessings to come, yet the paramount intention of our worship is that we may be reminded, amid the clash and din of things temporal and fleeting, of the things unseen and eternal, to attune our hearts and minds to higher ideals of life. And, while we consider it right and seemly to bring to God offerings of a temporal kind, to satisfy His sanctuary, to lay before Him tithes and firstfruits, and in His name to give our goods to feed the poor, yet we count it a better thing to bring the sacrifice of a contrite heart, which He will not despise.

Now, if we leave out of account some rare and sporadic utterances of the more advanced and enlightened thinkers and confine ourselves to the typical Greek conception of worship, we find that the motive and intention is of a wholly different kind. Man worships his god or gods not because he has any lively feeling of gratitude for blessings experienced, still less because he desires to live a better life, but because he has an overwhelming conviction of his dependence on his god or gods for all temporal blessings. H. Usener perhaps rather overstates this point of view, but in general it is true.

If our definition of worship is open to the objection that it would include magic, the defence must be that it is impossible to frame a definition of worship which would be at once sufficiently wide and yet exclude magic. The acts of worship and the acts of magic are in origin at least inseparable. If we so define worship as to distinguish it from magic, it will be done by a definition which makes the prime distinction between religion and magic to be that religion is social and promotes the good of the community, while magic is anti-social and tends to exalt the individual to the detriment of the community.

II. THE RELATION OF RITUAL TO RELIGION.—It used to be the fashion to regard the practices of religious practice as of later than the religious ideas of which they were the expression. The religious theory was regarded as primitive and essential; the religious ritual was regarded as the reasoned form in which the theory found expression. But modern investigation suggests that the reverse is the case. A festival which in historical times is definitely religious in character and is accompanied by a theory which professes to account for the various practices of the ritual, has in its turn been the source of an entirely secular character. The wide-spread practice of seasonal festivals, particularly those of mid-winter and of spring, can hardly be accounted for on any supposition that they were originally religious in character. Their origin is much more reasonably explained and their universality is much more easily understood if we regard them as having been at first purely secular, the natural reaction to the character of the season. The tribe meet at mid-winter and in spring to hold their festival with song and story. The character of the season will naturally influence the character of the festival. But, saved in so far as mere custom is religious in character, there is nothing religious in the celebration until a theory is evolved. When at mid-winter all nature is asleep—Erinnerungen can hardly mean anything else than the sleeping season—the true festival may be explained as intended to celebrate the passing of a god who is asleep or is slain. When in spring all nature awakes to life, the festival may be explained as the awakening of the resurrection of Zeus.
WORSHIP (Greek)

The god. But the ritual in its main outlines precedes the theory. Indeed it is only with the utmost difficulty that the theory will produce any improvement on the ritual. Many of the ritual usages are probably in their origin purely accidental. When on a memorable occasion something happens to be done in a particular way, the ritualist will find it in the same way again. The usage becomes stereotyped, and the theory will try to account for it; thenceforth it is held to be the only way that is valid and effective. Even if no convincing explanation is found in the theory, the ritual custom will be sufficient to perpetuate it. This ancestral custom is what the Greeks call ἥτατος νόμος. This νόμος (or νόμοι) is believed to be of immemorial antiquity, with all the superior sanction that attaches to the unwritten as opposed to the written law, and is held to regulate all the fundamental sanctities of life. The point of view is beautifully expressed in the words of Antigone: οἶδε ἄνθρωπον τούτον οἶμαι τὰ εἰκάτω τοῖς ἑαυτῷ ἱεροῖς ἔχωμεν δεῖ τὰ ἑαυτῷ ἱερά τὰς ὁμοίας ἐμοῖς τὰς ὁμοίας ἱεράς. But we have seen that the unwritten custom absolutely required with sanctity τὰ συνομπάτα καὶ ἁμάτον πάσα τὰς ἀρχαῖας λεγόμενοι. So the solemn supplication of Himilkas is carried out κατὰ τὸ πάταρον θεόν. 

II. OBJECTS OF WORSHIP.—We may conveniently divide the objects of worship into primitive or non-anthropomorphic and later or anthro- morphic.

A. NON-ANTHROPMORPHIC. The evidence for non-anthropomorphic worship cannot occupy much space in a brief sketch like the present, and there is less need to discuss it in detail because in general the lower strata of Greek religious ideas resemble those found in the earlier stages of development of other peoples or among primitive peoples of the present day. As among these, so among the Greeks we find traces of the worship of inanimate things and of animals. But before we glance at the evidence it is desirable that we should represent clearly to ourselves what exactly such worship means.

The ultimate root of religion is to be found in the instinctive sense of the mysterious, the uncanny. This sense is not equally strong in all men any more than all men are equally religious, and the things by which it is excited vary indefinitely with the individuality of the worshipper. In the street and under the garish sun all experience is immediate and commonplace. But if, for instance, one makes his way to some lonely glen high among the hills—‘per loca pastorum deserta atque otia dies’—then only the moor-fowl call and only the whaups are crying, then even the most commonplace feels an instinctive awe, a sense of mystery which he cannot express even to himself. This is what the Romans call 'religio loci.' The origin of the word religio is a matter of dispute to-day as it was among the Roman antiquaries themselves. But even through the perplexities of the Roman discussions there shines some perception of what we believe to be the right idea of the word, which corresponds very closely to ‘reflexion,’ अन्वेषण, the sense of something far more deeply interlaced, the ‘musing of a creature moving about in worlds not realized’—in a word, the sense of the uncanny. This sense may be awakened merely by the loathly, as, e.g., the toad, to which the rustic mind ascribes all manner of strange powers, or by the merely curious—e.g., the tree of fantastic shape. Objects which in whatever form have power to excite such emotions are regarded with awe. They must be approached with circumspection. They are not to be plucked from their context, they are taboo. Then when we find it said that a certain Greek tribe worship a particular animal or a particular object, often no more is meant than this. Their worship is predominantly fear. But there are higher mysteries than these; the mystery of death and birth, of growth and adolescence, of the regular recurrence of the seasons, of mother-love and self-sacrifice, of instincts which ‘aspire to a higher swifter realm beyond the transgression, yet they do not will that any should perish. They are givers of good things, if they are also givers of evil. Even if they ‘deal to men two evils for one good,’ only the foolish murmur. Good men loyally accept the conditions of mortality, turning the bright side out.

1. Holy places. Among non-anthropomorphic things to which sanctity, in the sense we have described, attaches we have first of all holy places. The Muckelstone Moor was felt by Hobbe Elliott to be ‘an unco bogilie bit.’ The same sort of feeling was perfectly familiar to the Greeks. A bush-clad hill in Arcadia was fabled to be the place where Rhea gave birth to Zeus:

'In Parnassus (Arcadia) it was that Rhea bare thee, where a hill sheltered with thickened brush. Hence is the place holy and no four-footed thing that hath need of Edith sprout in any woman approacheth thereto, but the Apidanians call it the primal childbed of Rhea.'

As a typical case we have the cave sanctuaries all over Crete, particularly those on Mount Ida and Mount Dictaeum associated with the worship of the Cretan Zeus.

2. Holy animals. The same kind of sanctity attached to various animals in different localities: storks and ants in Thessaly; vespas in Thebes; especially the snake—e.g., in connexion with Asklepios, Sopilos, Cychreus. The same is the story on the aeropoli at Athens which every month received honey-cakes. Other familiar cases are the mice in the temple of Apollo Smintheus, the owl of Athene, etc.

3. Holy trees. Among products of the cult of living trees we have the familiar idea of the tree-nymphs under their various names—Dryads, Hamadryads, Melia, etc.—who live in the life and die with the death of the holy tree. Where myth gives an etiological legend to explain just why a tree is sacred, we may quite confidently neglect the legend and infer that the holiness attached to the tree before myth gave the alleged reason. Thus the Delian palm was sacred. Myth gave the reason that this was the palm which supported Leto at the birth of Apollo. So the very custom of the rule of Tempe, from which crowns were made for the victor at the Pythian games, derived its sanctity, according to myth, from the purification of Apollo at Tempe after the birth of Apollo. Similarly the story of all the wild strawberry-tree at Tanagra was held sacred for the alleged reason that Hermes had been reared under it.
In these and in numberless other cases we must recognize now that the holiness is a much earlier thing than the myth—which merely attempts to explain an existent fact.

4. Holy stones.—Stones to which a special sanctity attaches form one of the most common features of early legend everywhere. Greece is no exception.

Thus Phœnicians, king of the Ainianes, fought a duel with Hyperocheus, king of the Iphacinians, for their land and guilefully slew him by hurling to the ground a stone, which was thenceforward regarded as the Ainianes as holy.

There are a number of references in Pausanias to undressed stones, ἱλικια, stones, which were the object of veneration.

Thus in vii. 22. 3 he tells us that at Pharos in Achaea certain square stones (τετράγωνα λίθοι), about thirty in number, were worshipped by the people of Pharos, who applied to each of them the name of a god: and he adds an important remark: τά δέ τί πιστεύεται καὶ τις φαίνεται. "Επειδή, τοις θεοΐς ὦντι ἐξεµπλήρωσεν ἱλικια λίθοι. In ix. 24. 3 Pausanias mentions Ἰππείων in Maceda a shrine of Heracles where the image was "not artistic but an undressed stone in the ancient fashion on which the acropolis of Athens Pausanias, i. 23, 5, mentions τοὺς λίθους ἱλικια τοὺς δὲ ἐκείνους λίθους ἵνα ἔρωτικος ἔχων εἰκώνας κατασκεύασαν, καὶ κἀκεῖνος ἑκάστῳ ἒκαστῳ ἔρχετο ἐπιστήμη τὰ ἀργα· ἐν γὰρ καὶ δόξα ἡ εἰκών, ἰδοὺρη κρύον τῶν λίθων ἄνευ τοῦ παῦλου, καὶ ἀδιάκριτον ἐπικατοίκησαν τινὸς ἢ Ἀφροδίτης.

The typical case of the holy stone is the βασιλεῖον, which could be claimed to be the origin of which is claimed for the Rock that gave to Croesus in place of the infant Zeus.2 Pausanias, x. 24. 5, speaking of Delphi, says: ταύτα δὲ ἐκ τοῦ κυματος (ὁ Νεολυσίας), λίθος ἀτομον ἢν ἔστω τελειώσας λίθους ἐπεξεργάζεσθαι κατασκεύασας, καὶ κατά τοῦτο ἐκείνῳ ἑκάστῳ ἔρχετο ἐπιστημή τὰ ἀργά· ἐν γὰρ καὶ δόξαι ἦς αὐτῶν, ἐκείνην δὲ κρύον τῶν λίθων ἄνευ τοῦ παῦλου, καὶ ἀδιάκριτον ἐπικατοίκησαν τινὸς ἢ Ἀφροδίτης.

This brings us to the question of worship in the religious pillar. Every one 'is familiar with the passage in Gn 2828 where Jacob枕在磐石磐石 upon the angel. And the morning and took the stone that he had put under his head and set it up for a pillar (στήλη), and poured oil upon the top of it (as the Delphians did with the βασιλεῖον in Pausanias, loc. cit.). And he called the name of that place Bethel [House of God]. . . .

But in any case, the important thing to realize is that there are two kinds of sanctity attaching to such things as we have been discussing: natural sanctity and derivative sanctity. There is what may be called the inherent sanctity of an object due to its association with the uncanny. To this class belongs the λίθος κατασκευάζων which is mentioned by Pausanias, iii. 22. 1:

Γροῦθος δελικής γεγενηκέναι ζυγία λίθους ἀνάλογον κατασκευάσας ζυγία λίθους ἀνάλογον κατασκευάσας εἴη αὐτοὶ πίστευσας τῇ μανίας διά ναοῦ λίθου συσκευαστές εἰς τὸν κατασκευασμόν γα εἰς τὸν λαοῦ της Λαρίδας.

That is to say, there was something which seemed uncanny about this stone, and so an astrological legend arose to explain it. But in the case of Jacob there is no hint that the stone which he selected for his pillow possessed in itself any unusual virtue, and, familiar as we are with the potency of, say, a bit of wedding-cake as a provoker of auspicious dreams, we seem to have no right to read any such meaning into Jacob's use of the stone. Indeed in Gn 2828 it is rather emphasized that he allowed it to be used partly because it was the particular morning dream there to fulfill the voluntary act of Jacob and not from any natural quality.

We hold, then, that the holy pillar in worship is not volitionally or artificially. That this is the case and that we have here to do with no original sanctity is already obvious when we consider that the pillar is rather an artificial than a natural form.

That it is generally assumed that the λίθος κατασκευάσων of Pausanias is merely an 'undressed stone,' of no particular shape. We think there is better reason to suppose that it was a stone dressed to a more regular shape than this, and this led into a definite anthropomorphic type. The quadrangular block seems quite well established as a half-way stage to the fully developed image. There is a very significant passage in Pausanias, viii. 48. 6, where, speaking of Τειχαρίδας in Arcadia, the natural home of τειχαρίδας, he says:

'Τειχαρίδας is a peculiarly fine type of pillar which is the typical example of the Dioscuri. The shape of the Apollo pillars is perhaps not quite so clearly established by the ancient authorities. But it is quite as if they had floated a pinacle, and there, and therefore an artificial, and not a natural, sanctity.

But it is to be clearly understood that this is a question of origins only. Derivative sanctity may be quite as real and quite as natural as a natural sanctity. The landmark of my neighbour or the coffin in which he obtains his last landmenary may be made of common wood, but just because the timber is employed for this solemn purpose it acquires extraordinary virtues. And in the same way the symbolic pillar may easily acquire supernatural virtues, and may indeed, as seems well attested, be regarded as the abode, at least temporarily, of the godhead: and the pillar may, of course, survive as a symbol even in a fully developed anthropomorphic worship—e.g., the obelisk as the βασιλεῖον of Apollo Agyiens on coins of Abamacia.2 B. ANTHROPOMORPHIC CULTS.—It is characteristic of the objects of anthropomorphic cults that they are all, in greater or less degree, worshipped in the higher sense: that is to say, they are invoked with prayer and offerings. A rigid classification is difficult, because there is a continual transference of the members of one class into another, from higher to lower, not less than from lower to higher. But the classes of cults may be conveniently arranged as follows:

i. The dead.—We find in Homer that the funeral of a great prince is accompanied by funereal games. Thus in II. xviii. we have the δίκη τῶν Παρθένων, in which "the Shades and Days, 654, the δίκη τῶν Αργαύδων. In the case of a private individual doubtless the ceremonies were less elaborate, consisting of the offerings at the grave and the funerai feast, for which we used to be familiar in Scotland, and which might be of decent proportions or might rise to the extravagance of Lord Ravenswood's funeral, when, according to Caleb Balderson, 'there was as much wine drunk in this house as was consumed by the whole nation of France.' But in any case the funeral feast did not terminate the duties of the dead (γίρθη θρωτοῦ) in historical

2 Raetz. loc. cit. 22.
3 Cf. Hesych. και. βασιλεῖον τοῦ Ἰερουσαλήμ καὶ θάλασσας τῆς Κρήτης ἀνέθη Λίσα.
times we hear of a further celebration on the third, ninth, and thirtieth days after the funer.

The character of these celebrations, attended by the friends and relatives of the dead, is sufficiently well known. The ceremony on the thirtieth day, which apparently marked the end of the normal period of mourning, was noteworthy for the fact that the corpse or the coffin was brought together in honour of the deceased (ἐν τῇ ἀνασκόπουσι) did not recline but sat, in accordance with ancient custom; hence the ceremony was called καθήσασθαι.

Still further there was the annual festival called τερσίῳ, disputed whether this celebration was held on the anniversary of the birthday of the deceased or on the anniversary of the day of his death.

The generic term for offerings to the dead is ἔναγμα, which is precisely the Latin sepulcrum and implies that the offerings were 'consecrated' to the dead: that the living did not partake of them. The corresponding verb is ἐναγμέω. These offerings (called also γειτ., because normally they were 'poured' into the grave) consisted of milk, honey, water, wine, oil. The scholar on Eur. Herc. 527 adds ἀλέβρον (wheat-flour). Eustath. Hom. Od. 519, says the μελαψαρίαν, as the offering was called, was made by the sons of the Hesiodic oracle times; but honey and water in historical times. Stengel holds that milk was always an ingredient.

The libation was poured upon the grave and was accompanied by a prayer. The tomb was sometimes so constructed that the liquid could easily reach to the bones or ashes below.

Besides the libation there were other offerings-connected, the ἀνασκόπουσιν of the dead. Naturally, the constitution of this would be fairly constant, but would vary to some extent with individual taste or with the locality of the offerer.

The meal presented to the dead was not one which the living could share and was therefore wholly burnt. The lexographers define ἐναγμέω as ἀνασκόπωμαι. In other words, they belong to that class of offerings which were called θεία δεήσις. It is sometimes said that these offerings to the dead were made at night, but there is no evidence of this; and, since funerals took place by day, there seems no reason why offerings to the dead should be made by day. In classical times they certainly did so, i.e. Hom. Il. xxi. 217 if. certainly does not prove the contrary for Homeric times.

2 Eus. Schol. in Apol. iii. 255: τελευταίους διὰ ἔλθος εἰς τὴν τάφου μετάφρασιν τοῖς οἰκεῖοις; Dem. xviii. 242: ἐνεμένης δὲ τελευταίοις τα καινά κατάναξαν τὴν παλαιάν, ἀκολούθως ἐπελευσέναι τούτοις γίνεται.
3 Ἑρμ. l. 14: ἐνοχὸς δέ με, ἀλλὰ, τὸ πρόσωπον ἐμφυλώθη, τὸ χέρι τούτον τοῖς ἐνεμενοῖς άγαλμάτων.
4 Cf. Phot.: ἐπέκειτο δέ αὐτὸν πεπείθεθαι καὶ τοιαύτῃ παρασκευᾷ λεγεῖν. This question is fully discussed by W. Schmidt, Geburtsttag in Atticenum, Gissum, 1906, p. 37 ff. who reaches the conclusion that, while ἐναγμέω denotes the celebration of the birthday of the living, σναγμέω is the anniversary celebration of the death of the dead: cf. Herod. iv. 26. The σναγμέω thus correspond precisely to the Roman parentalia.
5 Poll. xvi. 146.
6 Eus. Schol. in Apol. iii. 209 ff.; Soph. El. 84; Eur. Or. 114, Iph. in Taur. 125, El. 511.
7 Cf. Eus. Ch. 01, τελευταίοις (for discussion of the meaning of this term see Stendel, Hermes, xxxii. [1896] 520; Herber, ch. iii. 625, Stengel, Hermes, xxxi. [1896] 477); Ovid, Fast. ii. 538: ἐναγμίας τινὰν μοι παρέχειν. The offering was thus burnt.
8 Over. Att. fr., ed. T. Kock, i. 571; Aristoph. n. 488, 12: καὶ ἀνήθουσαν τὸν ἐναγμέων ἵππον τῷ θεῷ καὶ γειτονίᾳ νεκρῆς ἀνθρώπου ἐκ τοῦ ἀνασκόπουσι καὶ τοῦ δενειοῦτος, ἐν τῷ δρόμῳ ἡμῶν οὐ μὴν ἐπιθύμησιν ἐναγμενίον τοις ἑνεμενοῖς.
9 In τοῖς δεκατάκτησις (Aristotel. Onom. 1. 4.): διὸτ οἴκουσιν... γειτονίᾳ (Exch. 483 f.).
10 Ἐσχ. Pf. 349. Ἐσχ. Ἐρ. 345, σκοτείνωσιν; Ἐσχ. Ph. 127, ἔρχοντας ἵππον τῷ τοῖς παρεξήγησιν ἀνήθουσαν τοῖς ἑνεμενοῖς. The testimony is very important for the solemn process of hero-worship was performed by night. In the case of the hero the place of the tomb was taken by the Heroum (Ὑρευνόν).
11 The essential features of hero-worship are thus: (1) the offerings belong to the class of θεία δεήσις: they are ἐπίθεται, burnt, and the offerer does not partake; (2) the place of offering is a trench (βίβλος) or at any rate an ἔσχατον (hearth). In these three essentially formal features are performed at night (this statement can be taken only as a simple summary).
The chthonian gods.—The term 'chthonian' as used in Greek is ambiguous. A god may be associated with earth as Mother of all and be in this sense chthonian. Or a god may be associated with that which is in this sense chthonian. Lastly, a god may be associated with the underworld, i.e. chthonian in the strictest sense. But here again a god may be chthonian in one aspect, as in all others Olympian. Hence 'chthonian' really denotes rather an aspect of this or that god than a permanent attribute. Perhaps the only purely chthonian deity is Hades—and that only if we neglect his non-chthonian representative. Hecate also would seem to be a purely chthonian deity; but we are immediately confronted by her confusion or amalgamation with Artemis. The fact is that any god may assume a chthonian character. When, then, we speak here of 'chthonian' gods, we mean either specifically chthonian gods, if there be such, or gods in their chthonian character.

The context is, naturally, precisely parallel to that of the dead and the heroes. The offerings are θυσίας ὑγείας; they are made, or are supposed to be made, at night; and so on.

But, as we shall see, this is only when the 'chthonian' as such preserve their full authority. In numerous cases, where the ultimate sanction lies with the chthonians, the sacrifices take place in name of the Olympians, and so take place by day.

4. The Olympian or Oranian gods.—We come now to the highest rank of gods, who are most usually denoted as Olympian, sometimes as Oranian. The two terms are to all intents identical since even in Homer the Olympians, the abode of the gods, sometimes loses its geographical meaning of a mountain in Thessaly and is really identified with Heaven (οὐρανός)—e.g., II. viii. 25, where Zeus threatens to suspend earth and sea by a chain attached to a 'peak of Olympus.' They are conceived as dwelling somewhere 'on high'; and so the Homeric worshippers when he prays 'looks onto the wide Heaven.' These are gods of mercy rather than justice, of healing rather than of lane. They keep the cities of men, and hence their worship comes first.

We propose now to sketch the main features of Olympian worship. It will be easily understood that there must have been innumerable divergences in detail, according to date, place, and circumstance, which cannot be noticed here. All that we can endeavour to do is to give a reasonably complete and intelligible account of the fundamental principles.

The apparatus of worship.—(a) The image

(φώνας) of the god.—The image is a characteristic feature of Greek worship, and Herodotus, i. 131, notes it in the archaic form as the temple. Greeks have neither image nor temple nor altar, which he attributes to their non-anthropomorphic conception of the gods. It is, of course, to be remembered that the absence of images characterizes both the earliest and the highest stages of religion. But in historical times at least the absence of an image was so exceptional as to call for special remark. That the image, and that too in a fully anthropomorphic form, was used in religious worship.

Homer is clear on any reasonable interpretation of II. vi. 92 = 273 = 303, where the Trojans lay a role (προσκύνησις) on the knees of fair-tressed Athene, i.e. on the knees of the image in her temple on the acropolis of Illos.

The motive of the φώνας is well put by Dio Ptrs. Or. xii. 60-61:

1 Not would one say that it were better that no statue or image of the gods had been shown among men, it being meet that one should look only to the heavenly things. For all those things the wise are found deifying, as do the Thebans at Thebes in which there was no image (εἰς Μεστακόν ὡς ἐν ὑπό τοῦ φώνα); cf. x. 13, 11.

2 Cf. Callim. frzg. 3 Μιντις-τος οὑς τῆς Σελήνου ἔργον τόμον ἐλευθερίας ἡμῖν χρήσιμον ἡ ἔκκλεισις τῶν ἄνθρωπον καὶ ἔργον Μοῦσας ἐν οὐδέποτε λατρευθέν θεῷ. [EX 30].

3 In the strict sense the βασίλειος is a 'high place,' an erection on which offerings are made, whereas to the Olympians, and gods in the low φώνας or hearth, on which offerings are made to the chthonians, the heroes, and the dead.

The altar was, of course an essential part of the equipment of a temple. The chief altar stood

1 Pom. frzg. 25, 4 mentions a temple of the Meirai at Thebes in which there was no image (εἰς Μεστακόν ὡς ἐν ὑπό τοῦ φώνα); cf. x. 13, 11.

2 Cf. Callim. frzg. 3 Μιντις-τος οὑς τῆς Σελήνου ἔργον τόμον ἐλευθερίας ἡμῖν χρήσιμον ἡ ἔκκλεισις τῶν ἄνθρωπον καὶ ἔργον Μοῦσας ἐν οὐδέποτε λατρευθέν θεῷ. [EX 30].

3 For Perip. Πρ. 1074: χρήσις τοῦ βασίλειον τόμων. Χειρ. Απ. Πρ. 11. 12. 12: καὶ τοῦ βασίλειου τοῦ ἱεροῦ γενήθη ἡ ἑτερ οἰκονόμου, καὶ τοῦ ἱεροῦ τοῦ τῆς ἴος τοῦ ἱεροῦ τῆς ἴος τῆς τάφρων. [EX 27].

4 Cf. Paus. viii. 29. 7, 20, 5, 40. 22, where he describes among other works of Daidalos & βασίλειον of Aphrodite at Delos which κατείχεν ἡμῖν τῶν ἐν τοῖς τὴν ὁμοίων οἰκονομίαν—a good parallel to the Heracle at Athens (τῆς τετραγώνου ἱεροῦ, Thuc. vi. 27).
inside the temple proper. But outside the temple there stood in the περίβολος, or temple-court, other altars—βωμοὶ πύρας. To the number of these there was no limit. Even the dedication of an altar being much like any other offering and corresponding very much to our custom of putting a stained-glass window in a church, Stengel was of opinion that usually with a temple would be used only for unburied offerings, but he admits there were exceptions to this. He maintains, however, even in the face of Paus. ii. 35. 5, that sacrifices were made there at these inner altars. We think it impossible to reconcile Stengel’s view with Pausanias.

As for altars unconnected with a temple, these were to be found anywhere and everywhere, in town and country, in street and in market-place, in the house and in public places, in the workshops and in the gymnasium.

The size, shape, and material varied indefinitely. Some of the most curious were the ἐσπαρτήν or βωμὸς κεραυνοῦ of Apollo at Delos which was made entirely of horns, and was reckoned among the Seven Wonders of the World; altars at Olympia, Pergamos, and Samos made from the ashes of victims; and an altar at Miletus made from the blood of victims.

Where no altar was at hand it could be improvised. If it was not to be permanent with leaves or flowers.

(c) The temple.—The earliest ‘holy place,’ as we have seen above, is simply a place which in one way or another suggested the presence of something more than human. Such a place was felt to be ἱερός, sacred, something with which man must deal circumspectly: it was a ‘God’s sacred place,’ to be set apart from secular use. Now, when in Homer, ii. vi. 194, the Argonauts give Bellerophon a ‘choice portion’ of land, the phrase is τέμενος τοῦ ἴδουν ἅλλον. Precisely the same word τέμενος is used of the portion of ground set apart for a god. The I. c. cognate temple τάφειν (from which we get ‘temple’) had the same original meaning of a marked-out space. That old sense is still familiar in the celtic curial temple of Ennism and the celtic lucula temple of Lucetius, i. 1014. The extent of this τέμενος might vary indefinitely. Thus Hom. ii. 306 speaks of Πέρας as ἄφετος τέμενος, and Pindar, Pyth. ii. 2, of Syracuse as the τέμενος Ἀργεών. These are, of course, poetic expressions. More strictly the τέμενος includes only the immediate environs of the temple proper, and normally it was marked off by a fence (περίβολος). If we may take a modern analogue and suppose that a country church, the churchyard and other ground round the church, the manse and the manse garden, the stabling accommodation for worshippers from a distance, are all enclosed within a fence, which might even include the glebe, we have a good parallel to the Greek τέμενος.

It is natural to suppose that many of the places to which sanctity was felt to attach would be groves of trees. Again, even when trees were cut down elsewhere to enable the land to be made arable, 1 the trees of the holy τέμενος would be spared. Hence ἰδίως, or grove, is in Greek almost a synonym of τέμενος. At the present day in an otherwise unwooded landscape you may pick out the church by the clump of trees. When Herakles consecrated a τέμενος to Zeus at Olympia, Pindar tells us that suddenly Herakles was struck by the absence of trees and he cut down a wild olive which he had once seen by the shadowy springs of the Ister (Dannebe), and so he went and brought the wild olive to Olympia to be at once a new temple and an olive grove for the victor and a hospitable shade for the visitor.

Within this τέμενος is the temple proper denoted by ναός (Ἀττικὸς ναός) or by τὸ λειψαν. When a distinction is made between these two words, ναὸς is rather the inner sanctuary, while τὸ λειψαν is wider. Again ναὸς may have practically the same sense as ἱερόν, the Holy of Holies, or may mean the temple generally.

Historically the temple is doubtless later than the τέμενος and the βωμός. Thus Homer, II. viii. 48, mentions τέμενος and βωμός, but does not refer to any temple. Pindar, Pyth. iv. 204 ff., tells how the Argonauts brought the Argonautes (Ἀργόναυτα) and Zeus, ἀνέργον Παντελώδα τέμενος, φανέρων ἄρ’ ὄρηξισι ἄγλια τάφρων ὕπάρχειν καὶ νεκτημόνων ἱερών βωμῶν θεάν. What motive of the temple (ναός) was it not to determine. It is suggested that it was meant to protect the image of the god and the dedicated offerings. Whether this be so or not, a motive which must have come quite early into force was the feeling that the god must have his house even as men; only it must be more splendid and more beautiful. But perhaps the most potent motive of all was to create a definite centre for the worship of the god.

The sanctity attaching to the temple proper was extended, though doubtless in less degree, to the whole space enclosed by the porticula. Ritual purity—the details are infinitely various—was demanded of all who came within it, and παραπάτημα, or vessels of holy water, were provided for purposes of lustration. We may quote as a single example of the sort of prohibition practised an inscription from the temple at Jerusalem: μὴ βλέπῃ ἄλλης ἐκείς ἡμεῖς τὴν τειχισμὴν (= ἐγκαταστάσει) καὶ περίβολου ὑπὲρ οὗ εἰς ἱερόν ἀναλυεῖ τοῦ θεοῦ λατρείαν. (d) The priest.—See art. PRIEST, PRIESTHOOD (Greek).

(ii.) The ritual of worship.—The two most essential elements of ritual are prayer and sacrifice. We frequently of course find prayer without sacrifice; but sacrifice without prayer occurs only when an offering is made by way of expiation. Perhaps it is hardly worthy of the name of sacrifice, but, when the soilure of purification is cast into the sea or into running water, or when the fifth (πήθους) of the house is deposited at the No Man’s Land of the cross ways, no words are spoken: ἢ σὺ ἄλως... τὸν ἑκάστον, γατοσν χύον... στέψεν καθόραν... ἐς τε ἐκκέφαλοι αἱμαρα... ἔκεις τετραγωνίας ἱεραίας. (e) Prayer.—There is no more characteristic expression of man’s dependence on a higher power than prayer. The self-sufficient man—οὐδεὶς— in δεινοῖς τοῖς ἐπιπάθεις ἐπιμένει... the special characteristics of Greek prayer the reader will find referred to the art. PRAYER (Greek).

WORSHIP (Hebrew).—1. Introductory.—(a) Terms and underlying conceptions.—The fundamental idea of worship, as conceived by the Hebrews, was essentially a 'service' (ʼabodah), the corresponding Greek term being λατρεία ('servitus religionis quam λατρεῖα Graeci vocant'), i.e. to perform the service of God (or the Lord) means, in the Pentateuch, to carry out the worship prescribed by the Levitical regulations of the Pentateuch (Nu 8, Ex 22, etc.). While such 'service' is on its external side, elaborated in a series of ceremonial and liturgical acts, involved in a spiritual side is also emphasized; it is essentially a 'service' of heart and soul (Dt 11:2). And it shall come to pass, if ye shall hearken diligently unto my commandments which I command you this day, to do the Lord your God all that he commandeth thee; and ye shall servethim with all your heart and with all your soul,' etc.).

From the time when worship at one central shrine was established (i.e. the 18th year of Josiah, 621 B.C.), down to the destruction of the Temple at a.d. 70, the worship of God was regarded as finding its only complete and adequate expression in the Temple service, with its elaborate cultus of priesthood and sacrifice (cf. Jn 49).

The immense and manifold religious activities that concentrated themselves in the Temple worship, can only be adequately narrated in the present essay. We have at the position occupied (for nearly seven centuries) by Judah's central shrine. It was absolutely the one and only sanctuary where the non-Jewish religious activities of the whole people could be offered. Judaism possessed one sanctuary, and that was in Jerusalem.

Jehovah was for a long period visited by pilgrims from all over the ancient world, who appeared in the Holy City laden with gifts for the Temple. They came to Jerusalem 'for to worship' (Ac 9:41; cf. 25:16), and it was a pious duty for every faithful Jew, in visiting the way the sanctuary at least once in a lifetime. This happened more particularly at the great feast days.

The term ʼabodah, while it primarily had reference to the worship of the Temple, and more particularly to the ministry of the officiating priesthood therein, received further an extended application, and is used in the sense of any worship generally, and especially prayer. A famous dictum ascribed to the high-priest Simeon the Just (c. 200 B.C.) run: 'On three things does the Lord stand: On the Torah, on the ʾAbodah (i.e. the Temple-service, and on acts of love. This was after the destruction of the Temple that the term was applied specifically to prayer: cf. Talmud, 2a (with ref. to Dt 11:19); what is meant by 'the service of the heart'? Prayer; and with ref. to Dt 25:4 and Nu 47) 'Temple-service': (Acts 3:13) 'It comes from the mouth of the king, to endow with divine power and to sanctify all at the same time, to serve the Lord (cf. 2K 20:18; 3:5; 2 Chron. 17:13; 5:13; 31:27; 32:28). This, or similar expressions, very likely represent an old proverb. The word in its original signification would have been 'the sanctuary of the Levites, was probably destroyed by the Vilna Gaon, and is referred to as the 'Temple of Jerusalem the pros- trophe to which Jeremiah, apparently, alludes (Jer 71). The sanctuary of the Eph, which was established at Noh, but which became a sanctuary.

1 Augustine, de Cite, Dei, v. 16.
2 F. H. Box, in Biblical Quarterly, 1915 (a. 'Temple-Service').
3 P. Deferens, L'Israelisation de Jerusalem, which pass, possibly have never existed, are not more than a million.
What became, however, the most important of all the Israelite sanctuaries was that of Jerusalem, which was held by the Jebusites till the time of David (cf. 2 K. 8 10 11, 2 S. 5 6 9). Here the sacred rock and cave, which have played so conspicuous a part in the political and, unhappily, warriorish history, have already been the seat of an earlier Jebusite shrine. When Solomon transferred his capital to the Temple on the royal palace, the former (as in the case of Shiloh) was sanctified by the presence of the ark.

An interesting survival of the earlier Israelite shrines is probably to be seen in the institution of Levitical cities. This is a feature of the late priestly legislation, and is probably to be accounted for by the fact that the Levites, who in the post-Exilic period occupied a position subordinate to the priestly poisoning, retained behind them ancient traditions, which ministered at the local sanctuaries or high places. The Levites possessed large estates in such pt. sacred places as Shechem, Geder, Hebron, Beth-shemesh, Kedesh, ‘Annach Asharoth, Ramoth-Gilead, Deter, Gibon (cf. Jos. 21 42). These priestly estates existed in the various localities where there had been a 'high place.' Could the complete history of these Levitical cities be traced, it is probable that the first shrines were, in fact, the temple of Shiloh and, therefore, that the Levites had been in a sense the custodians of the ancient worship. Unfortunately it is impossible for us to reconstruct fully and adequately the ceremonies that accompanied the ancient worship. All we are sure of is that the centre of the sanctuary was the local altar—in some cases the local shrine being of more local importance (Shiloh, later Dan, Bethel, and Jerusalem). The altar had as its practical instrument indispensable the sacred pillar (mish‘epheth) and leshahor (a sacred pole, which was the symbol, apparently, of a goddess. Another adjunct was the sacred hall or room (Heb. ‘ishaḥah) where the sacrificial feast was held.

The local sanctuaries were served by a local priesthood, though it is improbable that, as a rule, more than one family exercised the priestly office at any smaller particular locality. The story of Micaiah given in the appendix to the book of Judges (ch. 17 1) shows how a shrine could be set up by the head of a household, who could appoint one of his sons (an Ephrashite) to act as his priest. It is only later that a wandering Levite is appointed in his place, who subsequently was withdrawn from off by the Danites and became the founder of the long line of priests who ministered at the famous sanctuary of Dan in the far north. Similarly the nation was blessed through the principal priest at the time was Abiahan, a descendant of Eli. It is natural, therefore, that the priests who were regarded as the more important shrines should themselves increase in importance and wealth, in course of time. 'The wealth thus acquired was in many cases transferred into the city in which the priests officiated. In course of time, therefore, there were large priestly estates in and about the cities where temples or high places were situated.' According to Ezek. 44 5, in the pre-Exilic period the usual labour connected with the shrines and sacrifices had (doubtless only after wealth had increased) been performed by foreign slaves, who were kept by the more wealthy priests.

The character of the old simple worship of Jehovah was fundamentally transformed when the Israelites passed from the nomadic stage and became a settled agricultural community. Jehovah, who to the old war-god, who led His chosen people to victory against enemies—though this was not the only aspect of His character—now became the God (Baal) of the land, and as such the head of all agricultural law. The body of agricultural laws which gradually grew up under these conditions came to be looked upon as an essential part of the original covenant by which Jehovah became the God of the Israelite farmers. The chief result was that the great festivals were placed upon an agricultural basis.

'To the simple Passover feast, which commemorated the deliverance from Egyptian slavery, the annual sacrifices were added. The early harvest and the corn was the chief of these—a marked contrast to the custom of the harvest season in which the nomadic pastoral folk feasted. Seven weeks later a new agricultural festival, commemorative of the completion of the harvest, was added, while the annual festival of the date harvest became the festival of the grape-gathering.1

1 The local sanctuaries were the centres at which this worship was carried out, and it was at these shrines that for several centuries Jehovah was worshipped with the full sanction of the religious leaders (cf. 1 S. 7 1f, 1 K. 3 18f, etc.). Such local worship is alone contemplated in the oldest Hebrew legislation ("in every place where I record my name I will come unto thee and I will bless thee") [Ex 20 24]. But by this very fact it was exposed to serious dangers. The admixture of heathen Canaanitish elements threatened seriously to imperil the purity of the old simple tribal religion, and it was against this, the mixed cultus, that the 8th cent. prophets, especially Hosea, raised their powerful opposition. The political development marked the conflict of Israel in worship with its own pagan origin. It is clear from the language of the prophets that in the 8th cent. B.C. during the prosperous reigns of Jereoboam II. and Uzziah the worship in the great central shrines of the Northern Kingdom went on, while in the Southern Kingdom, was carried out, especially at the great central shrines (Bethel, Jerusalem), with great zeal, elaboration, and pomp. The ceremonial was splendid, the altars were large and imperial, and these and these were thronged with zealous worshippers. And all this, it must be remembered, was ostensibly worship of Jehovah. What Amos inveighs against is not that worship of the national God, but a wrong conception of the kind of service acceptable to Him. The worship is Jehovah-worship, but inspired by heathenish ideas. Doubtless this worship was, on the whole, purer in Judaism than in N. Israel. But in Jewish heathen trends, though submerged, were powerful, and asserted themselves in violent reactions, such as occurred in the 7th cent., in the reign of Manasseh.

Perhaps the general character of the old worship at the local shrines, or šabbedi, may be illustrated from similar festivals that take place in Syria and the neighboring lands to-day. S. L. Currie has pointed out this aspect of Syrian primitive religion, and his Primitive Syrian Religion Today, where the results of considerable and exacting research are published, shows that many sacred spots, probably in some cases the very sites of ancient 'high places,' are still venerated and revered to by the peasants. And in many of these the priests claim that 'there is virtually a priesthood in existence. . . They do not have the designation of priest; they are known rather as sheikhs of certain shrines, or as servants of certain saints. But their duties and emoluments correspond in some degree to those about which we read in the Old Testament. Usually one priest or priestly family is connected with such a shrine, though cases occur where several priestly families live together at one shrine, as at Nebi Daud (outside the wall of Jerusalem). Sacrifices are still, apparently, offered at some of these shrines, especially in connection with vows, and thus in the shape of the hide of the animal, and one of the quarters, are paid to the minister of the shrine, who in ordinary life is an orthodox Muslim.

Wows at such spots play a considerable part in modern popular religion in Syria. During the year, at a popular makan [sacrificed spot or shrine], many sheep and goats, and sometimes larger animals, are killed in public, and offered up as vows. Besides there are vows of grain, which are promised on condition of good harvests. These vows are collected by a servant of a shrine. According to a native authority, the sheik, that is, the minister of the shrine, is present, he kills the victim, otherwise the priest (who can read the Koran) does this. He uses the formula, "This is from thee and for thee." The dhabah service is slaughtered by the owner, and after it is cooked, the sheik, however, holds the head of a woman, she tears his hand on that of the man who kills it," The minister of the shrine is not
only its guardian, but also the repository of the legends connected with the life of the people whose names and deeds are commemorated. Not all the modern shrines have annual festivals. Where such a festival occurs it is in some instances attended by thousands of pilgrims.

The festivals referred to by Amos (35:24) must have borne a significant relationship to the pentecost week cerebrations which are probably their literal descendants. Reference may also be made in this connection to the annual feast of Jahweh at Shiloh, where, according to Judges (21:19), the locality was a feature (cf. also Ex 23:15).

For the use of images by the early Hebrews, and the prevalence of idolatrous tendencies among them, see art. IMAGES AND TEMPLES (Hebrew and Canaanites), vol. vii. pp. 138-142. It was by the use of images that Josiah (2 K. 23:5) was enabled to cry to the Lord, 'The statutes which thy servant Joshua commanded us to observe and do them;' and Isaiah (36:6) that the first effective protest was made, apparently, against the use of idolatrous emblems in Jahweh-worship. It was probably at Isaiah's instigation that Hezekiah was moved to destroy the brazen serpent (síshúan) which had long been an object of worship (2 K. 18:4). Such serpent-worship was widespread in antiquity, and appears to have prevailed, as a popular superstition, among the Hebrews, if we may judge from the results of the迦南 excavations.1

(c) The effects of Josiah's reformation.—The remarkable and far-reaching movement of reform which expressed itself in the Deuteronomic legislation and was inaugurated in practice by the drastic action of King Josiah in 621 B.C. was the outcome of an alliance between the prophetic party and the priesthood. We have already noted that the possibilities of such an alliance had always been greater in Judah than in the Northern Kingdom. It now became an accomplished fact, and the results were momentous. The two great elements in the religious life of the community were united in sustained and sincere effort to translate the lessons of the teaching of the great 8th cent. prophets into practice, by fundamental reforms in the religious institutions of the nation. The aim was to make public worship a more fitting and adequate instrument for expressing the prophetic religion. It was essential that the rites of worship should be purified, and divorced from the heathen accompaniments and associations in which they were involved. To effect this end the reformers insisted on two things, the nationalization of the worship and its centralization in Jerusalem. The old time-honoured, local sacrifices of clan and family were to be suppressed, and all the worship (including the private sacrifices) was to be concentrated in one central sanctuary in Jerusalem. It was only by such a drastic reform that the necessary break with age-long traditions and associations could be effected. We are expressly told that the Passover celebrated as a result of the reform movement was unprecedented (2 K 23:24). The kingdom, to begin with, occasioned not as in the past by the people in their own homes, but by the united nation in Jerusalem.

The suppression of the local shrines and the centralization of the worship mark a revolution. With the publication and national acceptance of the Deuteronomic code the beginnings of the Canon were formed which was to grow into the Hebrew Bible; and with the centralization of the worship the first stone of the edifice was laid which was later to develop into the post-Exilic Jewish Church. The foundations of Judaism were laid.

The aim of the reformers was to gather up the lost sacrifices into a truly national worship. Deuteronomy "cuts at the roots of the family and tribal sacrifices when it forbids the offering of sacrifice elsewhere than at the central sanctuary (23:14-15). But it does more than merely forbid. It provides the great festival on which had their close association with the spring sowing and the harvest, and which, being common to all men, brought the people into contact with their heathen neighbours, with motives taken from the history of Yahweh's dealings with His people. The people, when they came together to worship there, had no reason to come to a shrine which has associations with their national life and with that ancient life of the people of Yahweh. Such a shrine was offensive to the private man, made no appeal to his personal recognition of Jahweh's bounty to him, owing it to God through a ritual in which he recouls how he belongs to a nation with which it is great because it is full of God's grace (xxvi. 1-11)."2

This national impulse upon the character of the worship was never lost. The old agricultural festivals, though their primitive features were eliminated, acquired a new significance. The Passover became the festival of national redemption; Pentecost (the 'festival of weeks') was transformed into a commemoration of the giving of the Law. The Feast of Tabernacles, which was the festival of Jahweh-worship. It was probably at Isaiah's instigation that Hezekiah was moved to destroy the brazen serpent (síshúan) which had long been an object of worship (2 K. 18:4). Such serpent-worship was widespread in antiquity, and appears to have prevailed, as a popular superstition, among the Hebrews, if we may judge from the results of the迦南 excavations.1

Another momentous result was the disestablishment of the local priesthood. The legislation of Deuteronomy provides no complete law of the priesthood. It merely deals with the practical consequences of the centralization of the worship as these affected the old order of priests. The members of this order, who are referred to as 'Levites,' are still priests de jure. They are all 'levitical priests,' and are so styled in the Code ('the priests the Levites') (Dt 18:8 etc.). But in consequence of the new legislation the exercise of priestly functions can only be carried out legitimately in the central sanctuary. The rural priest ('the Levite within thy gates') can only secure the name and rights of a priest when he removes to Jerusalem (Dt 18:8).

It was only in the later legislation of P that the distinction between priests and Levites grew up. The Levites, who were the descendants of the old order of priests, were degraded to an inferior rank, and the priesthood proper was confined to the family of Aaron.

The immediate results of the Deuteronomic reform seem to have been disappointing. So drastic a break with age-long tradition could not at once be absolutely successful. In the dark days that preceded the final extinction of the old priestly order by the people in their own homes, but by the united nation in Jerusalem. The suppression of the local shrines and the centralization of the worship mark a revolution. With the publication and national acceptance of the Deuteronomic code the beginnings of the Canon were formed which was to grow into the Hebrew Bible; and with the centralization of the worship the first stone of the edifice was laid which was later to develop into the post-Exilic Jewish Church. The foundations of Judaism were laid.

The aim of the reformers was to gather up the lost sacrifices into a truly national worship. Deuteronomy "cuts at the roots of the family and tribal sacrifices when it forbids the offering of sacrifice elsewhere than at the central sanctuary (23:14-15). But it does more than merely forbid. It provides the great festival on which had their close association with the spring sowing and the harvest, and which, being common to all men, brought the people into contact with their heathen neighbours, with motives taken from the history of Yahweh's dealings with His people. The people, when they came together to worship there, had no reason to come to a shrine which has associations with their national life and with that ancient life of the people of Yahweh. Such a shrine was offensive to the private man, made no appeal to his personal recognition of Jahweh's bounty to him, owing it to God through a

WORSHIP (Hebrew) 791

priesthood is still essentially that of Deuteronomy; it belongs to the House of Levi (Mal 2:6). It is true that the text between these verses and Levites had been recognized already at the time of the Return, if we may judge by the list of those who came up with Zerubbabel ( Neh 7). But the relatively small number of Levites there given may be explained, perhaps, by supposing that most of those tabulated as priests were originally Levites whose claim to the priesthood had been recognized. Ezekiel's influence was obviously at work. A clear indication of this appears in Ezek 2:3, where one of the principal functions of the high-priest is to keep God's courts.

Here we have an undatable indication," says Robertson Smith, "that Ezekiel's conception of holiness, and his jealousy of profane contact with holy things, had been taken up by the spiritual leaders of the new Jerusalem. There is, therefore, a strong presumption that from the first the arrangements and ritual of the second Temple were more closely conformed to the principle of concentric circles of holiness than those of the first Temple had been.1

The ideas of Ezekiel were potent—in particular the conception of the service offered as a stated and regular ceremonial; but the emphasis had not yet attained the elaborateness of the Priestly Code. That was only realized later, when Ezra promulgated his edict of the Torah.

The date for this event usually given (441 B.C.) is by no means certain. A later date is the assumption of the second Artaxerxes, in which case some date between 400-300 B.C. is more probable.

That the stated services of the first ninety years of the new Jerusalem were much less elaborate and costly than the Priests Code prescribes seems to follow from Ezra 9, where we learn that at that time when Ezra arrived in Jerusalem the event was much less elaborate still a weekly or annual offering. The same thing follows still more clearly from Neh 10.7, where we see that a new voluntary tax became necessary when the full Pentecostal ritual was introduced. Evidently that time the stated service appears to have been maintained, with much grumbling and in an imperfect way, at the expense of the priests (Mal 1:4).2

With the promulgation and public acceptance of the full priestly law in Jerusalem by Ezra the services in the Temple became more elaborate and the priesthood more fully organized. This process, perhaps, did not begin till after 400 B.C. Unfortunately the history of the period 400-200 B.C. is very obscure. That Ezra encountered much opposition from the old conservative party in Jerusalem is clear; and this ultimately culminated in the Samaritan schism and the erection of a rival Temple on Mount Gerizim (probably about 320 B.C.). After this event the strict hierarchic party within the Jewish community held undisputed sway. The elaboration of the Temple worship proceeded, it would seem, without a check; and its effects are visible in the work of the chronicler (c. 300-250 B.C.). The elaborate organization of the Levitical arrangements in the Temple described in 1 Ch 23 ff. no doubt reflects the realities of the writer's own time. Here the duties of priests and Levites (now two completely distinct orders), with those of the subordinate classes of doorkeepers and singers, are fully set forth. The teaching of the Law to the people had much more elaboration than is apparent. In this respect the priest was also a teacher (2 Ch 19). Possibly a system of schools for such teaching had been established (cf. Ezra 7:6). The priestly influence was also in control of the courts of justice (2 Ch 19:4-5), and this function descended from them later to the Rabbinical doctors of the Law (scholars). The care for public worship and its elaborate organization was now in the hands of the kings, as David, Solomon, Hezekiah, and Josiah illustrate the actual state of affairs as he knew them.

In these acts prayer, supplication, and thanksgiving are a prominent feature. The old abuses of worship in Chronicles and elsewhere have passed away. We are confronted with a pious community that finds in the great services of the Temple its highest satisfaction and constant care. The annual old sacrifices were still celebrated with pomp and impressive ceremonial. But it was no mere empty formality, devoid of spiritual significance and appeal. It was hallowed by true spiritual fervour, by the sense of sin forgiven and by the transcending recognition of the goodness of the Giver of all good things. Especially significant in this connexion is the large place given to prayer. It is hardly possible to read the prayers of the great kings in Chronicles and not feel that they echo a liturgy of prayer—for the individual and for the nation.1 It is indeed highly probable that some of the older liturgical prayers, embodied in the Prayer Book of the synagogue, were already, in an earlier form, in existence at the time of the chronicler. The service of music and prayer was especially rich, and is dwelt upon with loving minuteness by the chronicler, who was himself, perhaps, a member of one of the Levitical choirs (cf., e.g., 2 Ch 5:12). The Psalter was the book of prayer (cf. 1 Ch 16:40).

That the service of prayer and praise was liturgical in character is evident from the fact that the people were expected to respond: 'And all the people said, Amen, and praised the Lord' (1 Ch 16:40). It is probable also that the Law was read in public assemblies an occurrence typical of the Scribes (Hear, O Israel) is almost certainly as old as this period, as can be shown by the antiquity of the present (synagogue) Benedictions that accompany it.

As Elmslie remarks: 'Even if it be thought that this picture represents rather the ideals of the Levites than the actual attainments of the community, it is still important that such a standard of reverence and devotion should be conceived by the people as a test of the old and new before the people. One recalls the words of the great prophet of exile or post-exilic times who wrote: '...for mine house shall be called of house of prayer for all peoples' (Is 56:7). He was a vision of the Temple as the centre of the whole world's worship. To the Chronicler it had at least become a true "house of prayer" for Israel.'2

How deep and real the devotional spirit could be that underlay the imposing ceremonial of the Temple worship we can see from Neh 8 (for details, which may be regarded as the hymn-book (and, also, to some extent, as the prayer-book) of the second Temple.

Here the worshipful spirit, which finger so lovingly on the services and worship of the House of God (cf. Ps 37:24, 47:2, 100, 122, 123), which finds in that House the focus of its devotion (Ps 37:27-28; 89:17), which delights to celebrate the pomp (the beauty of holiness' holy adoration or vestments: Ps 99:3; cf. 1 Ch 16:40), and the stateliness proceedings (Ps 50:6; 54:6) of the Temple, has yet no narrow conception of worship. To the Psalmists the God of Israel is also the God of nature, and is celebrated as such in the spangled nature-psalms (8, 9, 104, 105, 106, 148), and the transition from the one aspect to the other is easy (Ps 24:3-4). Thus in the composition Ps 19 the psalmist passes from contemplating the wonders of nature (the light of nature) to praise of the Law (the light of revelation). But in truth the range of the Psalter is as wide as the experience and knowledge of man; the Psalmists touch the height and depth of the human spirit; and the universality of their appeal reveals how advancement in particularism had deepened and when it is founded upon a genuine and profound spiritual experience.

The feeling excited in the breast of a pious Jew by the splendid ceremonial of the Temple worship is witnessed at the conclusion of the century (c. 200 B.C.) during which the Chronicler flourished, in ferrety expressed by Ben Sira in his striking tribute to the high priest Simon (11), summoned 'the Just.' He is pictured as he appeared in the Temple of God, 'in the midst of his Levites, with their glorious robes' and surrounded by 'all the sons of Aaron in their glory' be 'went up to the altar of majesty and made glorious the court of the sanctuary.' The crowded court and

The worship of the people who receive the high-priestly blessing are vividly described. "Then the sons of Aaron sounded With their sound-bowls the consecration, which was also sounded and the consequent consecration. Yes, they sounded and caused a mighty blast to be heard For a remembrance before the Most High."

Before the Holy One of Israel, etc. 1

The upheaval produced by the attempted suppression of Judaism at the hands of Antiochus Epiphanes and the consequent Maccabean revolt, was fruitful in momentous consequences. Judaism was rooted more firmly than ever in the hearts of true believers by the persecution. Afection for the Law was deepened, and the study and knowledge of its ordinances was more widely diffused and more actively pursued among laymen. When the fury of the storm had spent itself, Judaism emerged profoundly modified in many important ways. New parties—the Pharisees and Sadducees—came into existence; a new literature, which found its classical example in the book of Daniel, emerged. A new native dynasty ruled, and was soon far more than a sacred constitution; A new Temple-feast, commemorating the rededication of the sanctuary (164 B.C.) after its defilement by the Syrian tyrant, was added to the sacred calendar, as the Feast of Dedication (cf. Jn 10:22), or Chanukkah, and is celebrated in the winter for eight days. It was inaugurated in the circumstances described in 1 Mac 4:46:

"After the Temple had been purified, a new altar of burnt-offering built, and new holy vessels made, the fire was kindled on the altar, the lamps of the candelstick lit, and the rededication of the altar celebrated for eight days."

According to Josephus, its popular name was the Festival of Lights. 2 But during the period that followed the establishment of the new Jewish state a profound change in the whole character of Jewish piety manifested itself in the rise of the Pharisaic party and wide extension of the synagogue as a religious institution. The monopoly of religious leadership, which had hitherto been enjoyed by the priests, was now, perforce, shared by the popular party of the Pharisees, who represented the plain laity, the old priestly party, which was still all-powerful in the Temple, being represented by the Sadducees. 3

The synagogues were under the control of the Pharisees. The origin of the synagogue as a religious institution is en

2 On these commemoration of the festival in the synagogues, see Acts 15:16 and Rom 15:16.

3 For a summary of the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; and (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; (2) to summarize briefly the ceremonial of the daily service, outside the three great national festivals of Passover, Pentecost, and Tabernacles.
of the firstfruits of thy ground thou shalt bring into the house of the Lord thy God.

These gifts formed part of the revenue of the priesthood, and were destined to be stored in the Temple. Great importance was attached to this offering, which alone among the offerings that were given in the Tabernacle was to be brought by them directly to the Temple. It was of great antiquity and naturally lapsed with the destruction of the sanctuary. The description of the scene by R. Delitzsch 1 is well known and need not be repeated.

(2) The daily routine of the Temple-worship, including the weekly Sabbath celebrations, was interrupted only by the great festivals, the most important of which were kept with special ceremonial, for several days. The characteristic features of the worship, however, are well illustrated by the ceremonial of the morning and evening sacrifice (Ttmd≤'a). Delitzsch as before gives a good reconstruction. 2

In the Temple itself the opening of the sanctuary gates was the signal for the actual slaughter of the sacrifice, the sprinkling of its blood upon the altar and the flaying of the victim. The pieces into which the sacrifice was divided were carried by the six allotted priests (each taking one piece) to the altar, while the offering of flour an eighth the baked meal-offering (of the high-priest), and a ninth the wine of the drink-offering. These were all laid at the foot of the altar-ascent and salted; and then all the priests assembled once more in the Hall of Polished Stones, there to celebrate, first of all, a service of prayer. It is highly significant that the sacrificial service should have been interrupted at this point and temporarily suspended. This can only have grown up as a concession to the overwhelming popular feeling in favour of the recital of the prescribed sections of the Law, with the appropriate accompaniment of prayer. The priests retired for this purpose to the Hall of Polished Stones, which was sufficiently near the court to allow of their quick withdrawal to it and rapid return to the sanctuary. It will be remembered that they had already assembled at early dawn in this chamber to cast the first lots for determining the distribution of certain priestly duties. The passage in the Mishnah 3 which speaks of this meeting and its purpose runs as follows:

(1) The Assembly congregated and entered the Hall of Polished Stones to read the Shema.

(2) The president said to them: Give one blessing; and they blessed.

(3) And recited the Ten Commandments and the Shema (in its three sections).

(4) And they blessed the people with three blessings; viz., (the blessing) True and firm (בנין בר相声), that of service (יהוה יבש ורים), and the blessing of the priests (בנין יהוה כבוד).

This brief account is extraordinarily interesting, but not free from difficulty. The purpose for which the priests for-gathered is described as to read (or recite) the Shema.' This is a summary way of describing the reading of certain portions of Scripture the most important of which was the Shema (Dt 6:4-9), and certain accompanying liturgical Blessings. The leader or 'president' is to be regarded, not as the minister who recites the prayers on behalf of the congregation, but as the leader whoso reads in the recitation of the assembled priests all joining in. Possibly 'Bless' here means merely 'Begin the liturgical service.'

It is explicitly stated in line three that the Deuteronomic formula for the conclusion of the service with the Shema. This was the ancient practice, later discontinued by the Decalogue. While it is evident that the moral law, summed up in the Decalogue, was more important than all the rest. 4 Possibly the first two sections only of the Shema were recited in the ancient liturgy, and the addition of the third may be due to the gloss, reflecting the later practice. The recital of the Shema was preceded by a Benediction; but the Mishnah here gives no clue as to what it was, though, according to the Babylonian Talmud, 5 this part was disputed by the Rabbinical schools. Probably the form used was that known as Ahabah rabbah ('with abounding love'), which is still chanted in the synagogue service. 6

In the fourth line of the Mishnah passage the present text runs: And they blessed the people with three blessings.' As L. Efberg has pointed out, 7 the words the people are probably an incorrect gloss. The priests were engaged in a service of prayer within a semi-private room, outside the Temple proper. There could be no question of blessing the people, which would naturally form part of the public service within the sanctuary. The three blessings that followed coincide partly with well-known liturgical forms: True and firm is the name still given to the first of the Blessing recited after the Temple sacrifice. In the Temple its form was doubtless much shorter than the recension now current in the Prayer Books.

'Service' (יהוה יבש וריך) was probably an earlier form of the 17th paragraph of the Shemoneh 'Esreh, 8 and expressed gratitude for the splendid Temple-worship. The last 'Blessing of the Priests' was probably a petition uttered for the priests.

This liturgical service of prayer for the priests is noteworthy. It shows how high a place prayer and community life had in the sacrificial worship. The high place accorded to the liturgical recitation of the Scriptures is also a remarkable feature, and serves, perhaps, to show how far-reaching the influence of Pharisaic and synagogal piety really was.

After the conclusion of this priestly liturgy the assembled priests again drew lots—the third and fourth—to determine who should offer the incense in the sanctuary, and who should lay the various parts of the victim upon the altar. Those on whom no lot had fallen were now free to go away, after divesting themselves of the priestly dress. Then followed the sacrifice proper—the offering of incense and of sacrifice, accompanied by prayer.

At the solemn moment when the high priest, alone within the sanctuary, offered the incense, which became visible in clouds of smoke, the people withdrew from the inner court and prostrated themselves, spreading their hands in silent prayer (cf Rev 4:8). The incensing priest, after prostrating himself for worship, also withdrew from the sanctuary. A period of silent prayer followed, and the people were then blessed by the priests, the five priests who had been engaged in the offering of the incense standing on the steps in front of the Temple proper, and, led by the principal officiant, pronouncing the blessing on the people with uplifted hands.

The offering of the burnt-offering now went forward, together with the appropriate accompaniments (meal-offerings and drink-offering), and then followed the musical part of the service. The Levitical choir, to the accompaniment of instrumental music, sang the psalm of the day. The psalm was sung in three sections, the end of each

being marked by three blasts on silver trumpets (blown by a body of priests), at the sound of which the people withdrew from the sanctuary for the service of the day. This terminated the morning service, and private sacrifices were then proceeded with. The evening service (about 3 o'clock in the afternoon) was practically a repetition of the morning, the same priests officiating—except in the case of the incensing priest, for whom a fresh lot was taken. On the Sabbaths and great festivals the essential features of the services were the same. The high priest, the large number of sacrifices were offered, but the character of the worship was substantially identical.

There are, of course, to be noted special ceremonies in connection with the festivals and the forms of worship, which found expression in the synagogue, as well as for the rivalry between synagogue and Temple, the momentous consequences of the destruction of the Temple, and the character of the synagogue prayers, reference may be made to the articles 'PRAYER (Jewish).' Here it must suffice to make a few general observations on the characteristic features of the synagogue worship.

(1) In harmony with its origin the synagogue worship is essentially of a popular and democratic type. It has no organic connexion with the priesthood; its ministers are essentially laymen—at first it had no professional ministers at all. The Rabbis were not singular out for special honour by being simply learned laymen; its services, though liturgical in character, and provided with (in many cases) interesting and dignified ceremonial, are essentially simple in character. Synagogue worship has retained the element of instruction and edification (the reading and exposition of Scripture), with which is combined the service of praise and prayer.

(2) Temple worship has been pointed out, the synagogue, as a religious institution, had already come into existence long before the destruction of the Temple and the consequent cessation of the sacrificial worship. It met a widespread religious need, owing to the centralization of the sacrificial worship in Jerusalem. While only a limited number of Jews could be present at any one time in the central sanctuary, and assist in the offering of the sacrifice, the whole body of the people was daily called upon to partake in the services of the synagogue. To a certain, though limited, extent the synagogue was affiliated to the Temple worship. It will be remembered that, for purposes of the daily sacrificial worship, not only the priests and Levites, but the Israelites generally were divided into twenty-four courses of service, each of which had to take its turn in coming before God (in the Temple) every day for a whole week by way of representing the whole body of the people, while the daily sacrifice was being offered to Jehovah. But it appears that

not the whole division of Israelites on duty but only a deputation from it was actually present at the Temple on any given day, and the majority, who had been left behind, assembled in the local synagogues (at the time when the sacrifice was actually offered in the Temple) and engaged in prayer and the reading of Scripture. But in all of this affiliation the synagogue was essentially free from the limitations applying to a centralized worship and a sacerial system. 'Hence, when the latter disappeared in the great catastrophe of 70 A.D., the former continued to exist, exactly fitted to be the instrument for the reconstruction of Judaism.'

(3) At the same time it is important to remember that the Temple-worship has profoundly influenced not only the structure of the synagogue liturgy, but also the form and substance of its prayers.

The disappearance of the old sacrificial cult was felt by pious Jews at the time as a real catastrophe. But they had already been prepared by Rabbinical teaching (not to speak of that of the great prophets and some of the scribes) for a spiritualizing of the sacrificial idea, and this tendency was further strengthened by the exigencies of the situation which left the synagogue as the sole religious institution in which the Jewish religious consciousness could express itself. A real satisfaction of the instincts and cravings which had been, to some extent, met by the splendid Temple-worship was provided by the traditional liturgy of the synagogue, which could be regarded as a sort of parabolic and metaphorical fulfillment of sacrifices in the following ways.

(a) It furnished forms of prayer for daily worship which corresponded to the original daily sacrifice. In accordance with this principle those days for which additional sacrifices had been appointed (Sabbaths, new moons and Festivals) were provided with additional forms of prayer, called musef ("additional").

(b) In the synagogue Liturgy special sections from the Law and the Mishnah, which contain the original enactments about the daily and Sabbath offerings, occupy a place at the beginning of the service; and on high days and festivals it is the rule to supplement the Pentateuch lesson by the parashah from the Law which prescribes the sacrifices appropriate to the day. For instance, during the Feast of Tabernacles the paragraph No 283-292 is read in addition from a second scroll.

The principle underlying all this is stated in a homiletic passage in the Talmud. Abraham is represented to have anxiously asked R. Judah ha-Nasi: "What is the full equivalent of these words 'the Lord forgive them' which you pronounced after the Temple was destroyed, and they should have no place to bring their sacrifices, and he was told that to read the duty of these sacrifices from the Tora would make our offering the full equivalent." (M. B. 54a).

Further, various petitions have been introduced into the prayers for the restoration of the Temple services and sacrifices. In some cases an older prayer has been amplified in this sense.

In these various ways the sacrificial idea has been largely spiritualized. 'The daily offering of prayer, praise, and thanksgiving morning and afternoon in the Synagogue is a spiritual counterpart and fulfillment of the old daily sacrifice in the Temple. In this way the words of the prophet Hoses are in spirit fulfilled: 'We shall render as bullocks the offering of our lips' (Hos 14:2).'

(4) The language employed in the synagogue liturgy is Hebrew, with a slight admixture of Aramaic. As has already been pointed out, the older elements in the prayers go back to a considerable antiquity (long before the Christian era)—possibly, in some cases, to the late Persian period. In such cases the prayers very probably passed over into the synagogue, and thence into the public reading of the Law, and were there committed to memory. The leading form of expression in the synagogue was the same as in the older writings, with some changes in the rendering of some words, to adapt the language to the circumstances. In the modern synagogue the position is exactly reversed, the ark being placed in the east end, and the reader, while on the bema, facing east.

1 See W. O. E. Oesterley and G. H. Box, The Religion and Worship of the Synagogue, p. 401.
2 ibid. 3 ff.
3 During the latter years of the Temple's existence there was, apparently, a synagogue within the Temple precincts.
5 Oesterley and Box, The Religion and Worship of the Synagogue, p. 362.
grow up in connexion with the Temple liturgy and were afterwards transferred to the liturgy of the synagogue.

The language in the fixed parts of the liturgy is not only Hebrew, but largely Biblical Hebrew—in fact a Scriptural character is deeply impressed upon the prayers generally. Whole passages of the Old Testament are taken from the Bible, and Biblical language is interwoven into the texture of the prayers.

Outside Palestine among the Jews of the Dispersion in Greek-speaking lands the language was different. There Greek was largely, if not exclusively, used. It seems that not only the Scriptures, but also the most important parts (if not all) of the liturgy—such as the Shema and Shemoneh Ech'ur—were regularly recited in the Hebrew language in Greek, and not in Greek at all. This is seen in the accounts where the Jews who attended the services were ranged according to their trades, this was the case. We are told that the signal for the vast audience to join in the Amen response was given by the reader waving a cloth from the bima. Even in the Mishnah section is given to the use of any language whatever in repeating the Shema; the Shemoneh Ech'ur ('Eighteen Blessings'), and the grace at meals. In later practice, however, Hebrew has been the only language recognized as legitimate for prayer and worship in the orthodox synagogue.

(5) In studying the synagogue liturgy it is important to realize the central position of the Law. The recitation of the Shema (which may be regarded as a summary of the Law) is invested with great sanctity, and is performed by special Benedictions, as we have seen. But the Sabbath morning service—which is the principal one—culminates in the chanting of the lesson from the Law. The recitation of the Law at the services is the occasion of much ceremony—the carrying of the scrolls to and from the ‘ark’ is invested with great solemnity, not to speak of the scrolls themselves, which are treated with the most elaborate care, according to minute rules, and are treasured in gorgeous and valuable vestments. The Law itself, i.e., the Pentateuch, is regarded as the supreme and final revelation of God. It stands at the head of the canonic books, and the solemnities of it, the other two divisions of the Hebrew Scriptures, the Prophets and the ‘writings’ (Hagiographa), occupy quite a subordinate place. They but serve to illustrate and enforce its precepts, and are interpreted accordingly. All this is but the expression of a profound conviction that God has chosen to make a supreme revelation of Himself and His regulations in the divine Law, and that man is sanctified by the divine Law, which is the very principle of his perfection.

Jewish piety is thus exhusted and expresses itself in the minute and punctilious performance of the divine Law, and in the veneration of the Rabbinists. The performance of these duties is regarded as exercising a sanctifying influence on the worshipper; he feels that he is, by so doing, obeying the divine voice, and in this utter obedience he finds a real spiritual satisfaction; the practice of it evokes in the breast of a pious Jew a genuine devotional spirit which finds expression in constant and regular acts of praise and thanksgiving. A characteristic feature deeply impressed upon the liturgy is the regular recurrence of the formulas of blessing and benediction (Heb. berakâh); something like a hundred are extant in Rabbinical literature. In general, the Hebrew prayer is constructed on the model of the Western litany: 'Every manifestation of divine protection and help became an opportunity for the pious Israelite to offer up thanksgiving in the usual form of a benediction.'

In the majority of cases, the set Prayer Book has played an important part. One of the most famous of its constituents is the so-called ‘Eighteen Blessings’ (Shemoneh Ech'ur: ‘Eighteen’)—consists of a number of Benedictions constructed in regular form, which are strung together, and invariable expressed in the formula: 'Bless our God, O Lord our God, King of the Universe, Who, etc.' Here remarkably the element of petition is mingled with that of blessing. The Shemoneh Ech'ur is one of the principal formulas in the synagogue service; it recurs in various forms in all the services, and, moreover, is recited in double form, first silently and then audibly, by the congregation. It is the Psalms (or Tefillah; yor each of its sections is one of its designations), and is recited by the congregation standing (‘Amidah as ‘standing’) is another designation), the most solemn attitude for worship required in the synagogue service.

Special benedictions are also recited before and after the recitation of the Law, being introduced by the formula 'Bless ye.' This is in accordance with Biblical precedent (Neh 9). The element of praise is maintained in the recitation of certain psalms, especially the Hallel (Pss 113–118). Another element of great importance is represented by various forms of confession of sin (Heb. wadath), etc. The two great formulas in this are the Abinah malkenu, ‘Our Father, our King,’ and the ‘Al Het,’ for the sin.' The latter is appended to the ‘Amidah prayer for each service of the Day of Atonement.

LITERATURE.—For the ancient cultus: much new light has been thrown on this department of knowledge by excavation and discovery. For a good summary of these results see S. R. Driver, Manual of the O.T. (2nd ed.; as illustrated by Excavations and Researches), London, 1870; or, also, H. Vincent, Canaan d'apres l'exploration recents, Paris, 1907. For the discoveries at Gezer and elsewhere, the PEREST of recent years, and R. A. S. Macalister's full summary in his Excavation of Gezer, 2 vo. London, 1913. Of special interest, too, are special volumes of the J. W. Robertson Smith, Religion of the Semites, London, 1894; W. W. Basselinus, Miscellen zu der Universität, Leipzig, 1876–78; and the researches of S. Ives Curtis, Primitive Semitic Religion Today, London, 1902. See also the Hebrew, Jewish, and Semitic sections of the Encyclopaedia Biblica, Moses, Houben. PLACE, IMAGES AND IDEOLS, PRAYER, PRAYER, PROFITATION, SACRI- FICE (with the literature cited), and the corresponding articles in the Bible Dictionaries; and the art. 'Kultus (gottdienst)," in Hamburger, i. 658 E.

The following works of a general character deal with the worship both of the Temple and of the synagogue: Schöber, GVT., i. 24; W. Boussen, Die Religion des Judentums im sechszehnten Jahrhundert, Berlin, 1908; W. O. E. Oesterley and G. H. Box, The Religion and Worship of the Synagogue, London, 1911. Other works have been cited in the body of the article. G. H. Box.

WORSHIP (Hindu).—Worship springs from the inward feeling of dependence upon other powers, from the idea of two extremes in man's mind by the perception of supernatural agents which influence his or others' welfare. The desire to gain their favour or propitiate them, to call forth their sympathy, to make them resources, or to induce them to men to invent that instrument of rite and spell which is thought to ensure and even to enforce

1 It can be read in full in Singer, pp. 44–54.
2 Singer, pp. 58–57.
4 See, further, art. "PEELER (Jewish)."
their assistance. Rite and spell form the centre of primitive belief and of institutions of religious or magical character, and none of them is more widely known than the doctrine of the ‘sacrificial fire’, the hypothesis advanced by R. Karsten1 that strange and dangerous objects and phenomena as well as fatal events of every kind have suggested to primitive man the idea of a fire in the midst of or connected with the universe,2 that at first only the cruel and destructive aspect attracted man’s attention, whereas the fruitful and beneficial one almost entirely escaped him,3 is, though well founded otherwise, not in agreement with the textless and the Sanskrit words, and must be reconsidered in that respect, or the Indian sacrifice must be assumed to have already passed this supposed stage of primitive belief.

Hindu writers divide the various kinds of sacrifice into two principal classes: nitya (‘regular’) and naimittika (‘accidental’) karman, one following the course of the year or the duties imposed upon man during life, the other comprising incidental offerings occasioned by special wishes of the sacrificer. This is, of course, a distinction more of practice than of principle, but it seems better than the modern distinction into thanksgiving, suppliant, and expiatory sacrifices, which to the student of Indian rituals will not appear sufficient; e.g., the series of regular periodical offerings cannot be divided into three classes. On the other hand, some scholars (e.g., Wunti)2 seem to overestimate the importance of expiatory ceremonies. The prayaschitta, though often mentioned, is more an accessory than a constructive element and mostly intended to rectify blunders committed against the ritual. We do meet with expiatory rites in Indian ritual,3 but on the whole the idea of expiation, as far as it is found, plays no prominent part; it is more a juridical than a ritual subject and is elaborately discussed in the lawbooks. We do not hear of thanksgiving sacrifice; even the term ‘suppliant sacrifice’ we cannot accept without reservation. Gods are invoked to come and take their share in offering, but there is no deep emotion, no uplifting of the heart or stirring of the soul; there always lingers the old idea that the god is ensnared by sacrifice and bound to render his assistance.

India thus testifies to the results arrived at by ethnographical writers ‘that primitive worship, being prompted merely by the preponderation of instinct and emotion on the will of interested motives, has no ethical character.’1 It must, however, be added that in the puruṣāsṛṣṭa and the sarvamedha we find examples of the ‘self-denying sacrifice’; for they enjoin abandonment of all property and renunciation of the world;5 but it is to be remembered that the general tendency of these sacrifices has grown on Indian soil and seems to be somehow connected with the later idea of the pūrvatādhyāka, or ‘religious mendicant.’ Of the three purposes of sacrifice distinguished by La Grasserie6 only the first can, in fact, be said to hold true of the Vedic sacrifice.

The sacrifice forms an intrinsic unity, the special character of which throughout is dictated by the particular wishes for the fulfilment of which the sacrificer sets in motion the ritualistic apparatus. If the sacrificer aims at the life of an adversary, the priests offering the ṛṣeyu-sacrifice must wear a red frontlet, sacrificial butter is made from the milk of a sick cow, and the skin necessary for soma-pressing is taken from a cow used as anuśataraṇī during the burial ceremonies, and only those who wish to prosper their king offer the gossa-sacrifice, in which he is anointed on a levelled piece of ground (sthāndita) and addressed as ‘ṣatapat.'5 and still more as purohita6 and mahārātra, or solstice-sacrifice, where drums are beaten to encourage the demons and assist the sun, and obscene rites symbolize the desired fertility. Similis similibus sacrificatur is the principle which permeates the whole cult.

The sacrifices of the domestic ritual, which are described in the gṛhya-sāstras, are very simple; they are as a rule performed by the householder and his wife, but they often call in a brāhmaṇa or pūjāri to function in their stead or to assist. Persons of high rank, especially kings, had their spiritual adviser, the purohita; for the gods, it is said: do not eat the food of a king, who is a purhohita.2 The sacrifices of the śrauta ritual, the complicated system of which is taught with the utmost care, all need priestly help, and the number of Brahmical functionaries increases up to sixteen in the soma-sacrifice, and to twenty in the domestic, and to several hundred in the ceremonial, its many hymns and chants. Nearly all functions are left to this band of scholarly priests, with whom rests the power even to destroy the life of him who has enkindled these sacrifices.

The vajamāna had to select the priests from the families of the Brahmical caste, and particular care had to be taken that they should be without blemish and well instructed; for any blunder in the strict observance of rules, in the proper wording or pronunciation of the sacred mantras, might annihilate the result of the sacrifice and even endanger the health and life of the sacrificer and vajamāna. It is comparatively little that the sacrificer and his wife can do themselves. Their part gradually became restricted to personal preparation or points of minor consequence.7 An exception is found only in great satras, or sacrificial sessions, where none but Brahmans are admitted and the priestly duties devolve on the partakers. In India, therefore, more than elsewhere sacrifice has lost its social aspect, and, except in a few cases like the vajamāna, the avāsamāna, the aṃśa-sacrifices, and a few traces of sacra publica in the Rgveda,8 it can be regarded only as a private institution.

Particular care was bestowed on selecting the day fit for sacrifices and the place where the tantra, the sacrificial ‘tissue,’ was to be woven; there were no temples as in later times, but the special character of the sacrifice and priestly knowledge determined the spot where the holy grass had to be strewn as carpet for the gods and the fires had to be made. All śrauta sacrifices require three fires: the bhanāyika, the daksāṇa, and the gauryāyana fire, corresponding to heaven, antariksa, and earth, and dedicated to the world of gods, ancestors, and men.9 No doubt, this way of selecting and preparing the sacred ground had its origin in the custom of pastoral tribes10 pitching their tents anywhere, and had been retained by the conservative mechanism of sacrificial rules. Between the three fires (of which the daksāṇa serves also for conjuring purposes and is probably the successor of the old Barbara) which are traced, a place of special sanctity, where the gods

are supposed to sit down and take their meal, and every precaution is taken by word and action to ward off the demons and destroy their evil influences.

In the objects of sacrifice there is little variety. Different kinds of milk, cakes made of rice or barley, flour, etc., form the materials for the oblations of the ordinary sacrifice and its almost endless modifications; the cakes are offered on potters or tablets, the number of which depends upon the character of the god to whom they are offered. The ordinary sacrifice, or pārubādra, or animal-sacrifice, requires goats, rams, bulls, which are offered almost indiscriminately to all gods, the difference generally being expressed by the shape, colour, and other bodily characteristics of the animal. Horse-sacrifices (ārxurūdha [g. ṛu], ṛu), which are regarded as an act of state and are of great importance, are of course an exception. There were in ancient India even human sacrifices, celebrated with the same pomp and following nearly the same ritual as the horse-sacrifice, till they were gradually replaced by the milder practice of an ordinary pārubāda. Of other materials we find wood to be an interesting drink, sometimes in the Rgveda honey; the liquor the gods like best is the juice of the soma-plant, pressed and offered in the āgnīṣṭoma (a spring festival), and its numerous varieties. More than other sacrifices the soma-sacrifice is an imitation and representation of heavenly proceedings. As Soma, the moon, contains the heavenly ambrosia, so the yellow shoot of an unknown (and probably often changed) plant is supposed to yield that costly drink enjoyed by devas and pitaras. If an analogy to the 'sacrifice of the God,' so well treated by J. G. Frazer, ever existed in India, it cannot be located, for nowhere else than in the sacrifice of the plant representing a ray of the lunar god.

The norm of all sacrifices belonging to the śrāvita ritual is given by the dārā-pāurnādsāta (the new and full moon sacrifice), the pārubāda (animal-sacrifice), and the āgnīṣṭoma (the soma-offering); all other sacrifices follow these, with variations required by the special case. The whole series of ceremonies forms a tantra, 'tisane, the framework, into which the āśvāpa is inserted. The tantra remains the same for almost every sacrifice; the āśvāpa consists of the chief offerings and invocations (verses, etc.) and varies according to circumstances. All ceremonies, prayers, libations, spells, etc., converge to the one point, to bring about that religious power, 'the magical soul of the sacrifice,' as it may be called, which forms the spiritual instrument that ensures success. Hubert and Mauss have well illustrated the metamorphosis which takes place in the persons as well as in the implements needed for sacrifice. All that concerns gods must be of divine character; the yajamāna must be prepared by certain rites in order to be worthy to approach the precincts of the supernatural. This is done by various penances, by shaving, bathing, abstaining from food and sexual intercourse, etc. Different substances are used to impart their mystic power, are poured over him, inhaled by him, etc. The implements are consecrated with mantra or yantra; e.g., the rice is thrown into the winnowing basket with the words: 'You take at the impulse of God Sāvitr, with the arms of the Asvins,' etc. If they bring an animal-sacrifice, the sacrificial post erected on the yevi is sanctified by unctions and mantras and located in a spiritus of supersensuousness. The oblations are consecrated by various ceremonies, among which the pāryagaṁkaraṇa deserves special mention.

The priest takes a firebrand and carries it three times round the oblation in the animal, describing thus a magic circle in order to keep off the demons and make the victim appropriate to the gods. The oblations precede the animal-sacrifice, the latter being the climax. The sacrificial animal (the āśvāpa) is offered as an animal-sacrifice the divine essence, which permeates the animal when it is on the point of being immolated and by secret formulas vanishes itself to the pāurnādsā, who4 louches it on its way to the slaughtering place by means of the repeated words: 'swa' (two spits upon which the animal (the āśvāpa, or the oblation) is later to be roasted). After the recitation of expiatory mantras, the animal is thrown for the crime to the fire, where the animal is 'quieted' by strangulation. Those performers who are not immediately concerned in this act step back and sit down, turning their face towards the diṣpit; in order to avoid being eye-witnesses of the act. The religious drama has then reached its climax. Among the parts of the animal assigned to the gods theombat is most conspicuous; the blood is poured out for the demons, who later receive also the husks of the grain. Special parts of the principal oblations form the āśvāpa, which is the portion of the priests and the sacrificer and is regarded as a mystic duty who is invoked with great solemnity to come together with other mystic powers of the universe and bestow prosperity on the pāurnādsā. The ceremony then gradually relaxes; the 'tisane' has been woven, it must be dissolved again. As the drama after the peripetia, so the sacrifice of the gods descend from the summit which it has reached and dismiss the performer from its magic circle to his worldly atmosphere. Various illusions follow the āśvāpa. The batter or false fire is the last act of the ceremony; the taboo is discarded, some of the implements, while others, especially those penetrated by some magic substance imparted to the implement for the purpose which they served, are concealed in the ground. The sacrificer finishes his vow by repeating the same mantras which he was said at the beginning, or in other modifications, or at the request required by the different situation: he 'loosens' the sacrifice (consolatorio) and returns home.

A good many accessory practices serve to enforce the general purpose of the sacrifice: the heads of certain animals, immersed in the āgnīṣṭoma, give the altar strength and solidity; an emerald plant laid in the holes dug for the pillars or posts of the house prevents the house from breaking into a blaze. These accretions are like small rivulets which feed the main stream of sacrificial effectiveness. But the present writer fails to discover the line in the face of facts. Magic is the lowest stratum in the development of religion. The limits between magic and sacrifice are constantly shifting, in consequence of change of times, of inward dissimilarity, but of intellectual progress and growing enlightenment.

The operator of the magical act, says R. R. Marett, is generally a projection of imperative will, and specifically one that moves on a supernormal plane. If that will has become less imperative, a little more subtle, the feeling of being sublimated by supernatural powers independent of itself, magical art has changed into religion. As the genius of Greek art lies concealed under the awkward attempts of antecedent times and awaits its release by the profusion of religious ideas, so is the root of superstition, the germ of religious ideas in order to be freed from the entangling net of magical superstition awaits the progress of civilization. If to a symbolic action the performer refers a true religion, the instrument is some-

WORSHIP (Jain).—1. Śvetāmbara. 2—(a) Morning worship.—The hour of the morning and more elaborate worship in a Śvetāmbara temple is 7:30 a.m. Leelāchār, the doorway that guards the temple courtyard, the worshipers come to a room where the more devout and more leisureed exchange their secular dress for the two freshly-washed clothst; a loin-cloth and a shoulder-scarf) in which alone they may enter the inner shrine. They also leave in this room any money they have brought and desire to keep, for the tirthankara must have everything on which his eye 'lights,' and these two cloths admit of no pockets for concealment. The worshipers now ascend the steps to the temple proper, at the doorway of which are two carved beasts supporting the throne-hand to represent Yakṣa and Yakṣāṇa, the servants of the tirthankara, to whom the temple is dedicated. It is left to the temple-servants to worship these beasts, the ordinary devotees having, so they say, no time to meditate on them. The ritual acts of the lay-worshiper are our best guide in investigating this worship, for the temple-officiant, usually a Brāhman, or even a gardener by caste, can give no reliable instruction. 4

In the open porch (mandapa) outside the temple-door the devotee marks his own forehead with the auspicious saffron-mark (or orhanta), using, of course, his third finger mark. and then circumambulates the temple outside three times in the auspicious way, i.e. with his right hand nearest to the building. Still standing outside the temple, the worshipper joins his hands together in the attitude of prayer immortalized in Dürer's 'Praying Hands,' and says for the first time 'Nimāthi.' An instructed devout worshipper uses this expression not once (as is the common wont), but three times: 2 (1) he says it outside, in the temple-porch, asking that he may be cut off and freed from all worldly cares; (2) crossing the threshold and standing just inside, he again says it, asking that he may be set apart from all thought of the temple-servants or his fellow-worshipers; (3) when he comes to the great spiritual point of his worship, he repeats the word once more, asking that he may be cut off from all thought of the worship he himself has offered, and enabled to concentrate all his thoughts on the qualities of the tirthankara.

As the worshipper crosses the raised threshold, it is interesting to see that he does not hesitate to put his foot on the plain boss of it—a thing no Brāhman would do, believing it to be the seat of Ganesa. 4 The worshipper is now in the Hall of Assembly, or salla naṅgaṇa, a hall supported by a circle of pillars and at the present day generally disfigured with various temple trappings, such as dark reds and greens and golden yellow mingled together on a plaster background; but in the older temples on Mount Abu (Rajputāna) or Satnājaya Hill (State of Patāliputra) the delicate tracery in silver or marble of the struts between the pillars in this hall and the carved work surrounding the doorway leading to the inner shrine make the whole resemble a veritable temple building.

The worshipper proceeds at once to cross the threshold and enter the inner shrine (gobhāra). Visitors, however, must advance only up to the doorway; but, standing there, they can gain a view not only of the big image of the principal tirthankara (vaṭa nāyaka) of that particular shrine, 5 perhaps Mahāvtara, to whom the whole temple is dedicated, and the two servants (Yakṣa and Yakṣāṇa) that flank the big image, but also of the rows of twenty-four smaller tirthankaras that, arranged on a long altar-shelf, stretch on either side of the main image for the whole length of the inner shrine. There are very often two smaller doors leading from the Hall of Assembly to this inner shrine, and opposite each of these on the altar-shelf are arranged large images of some other tirthankaras (perhaps Adinātha or Bhāsbhavadeva respectively. All the tirthankaras in this shrine are, like the temple, represented with staring glass eyes, and with carved stone loin-cloths. They are nearly always, too, seated figures, the larger images being adorned with jewels and flowers. Below the big central statue of Mahāvtara (let us say) may be seen a gleaming image of some tirthankara (perhaps Parśvanātha) fashioned out of five metals.

On a low altar-shelf there may or may not be a folding brass lotus-flower with some tirthankara in the centre and twenty-three smaller images of tirthankara in bas-relief on the petals; or a little tray with the eight good omen that always precede a tirthankara; or a copper plate (the mentra of Vijaya) covered with mystic symbols; or twenty-four two-inch brass plates, each bearing outline pictures of the tirthankara. All of these may or may not be present, but there must be at least one Siddha chakra, for no temple is complete unless it contains this crystallized creed of Jainism. The Siddha chakra resembles a little tray; in the centre is a good figure of an Avas, and around it the figures of Sādhim, Upākhāyā, Achāraya, and Siddha, and between the encircling figures are written the names of the Three Jewels of the Jain faith: Right Knowledge, Right Faith, and Right Conduct, and Laxmi (auspiciety), the key-word to the Jain system. 6

In a Śvetāmbara temple the worshipper bids for the right to win merit by performing the worship under the form of 'anointing the gīt.' Any number of worshipers may purchase the right for prices varying from five annas to one rupee or more, and each successful bidder starts the morning worship again from the very beginning as soon as his predecessor has finished. The first worshipper enters the inner shrine and, after the worshiper in the first position has been anointed with liquid saffron (chavada naṅgaṇa) in fourteen different places in the following order: 1

1 Recognizable at once by the differing symbols at the base of the idol.
2 See the present writer's Heart of Jainism, p. 362.
3 This berasī is so expensive that it can only be applied to the chief image. A very rich worshipper might also cause the image to be covered with gold-foil leaves.
4 See the present writer's Rites of the Two-Born, p. 573.
right toe, left toe, right knee, left knee, right wrist, left wrist, right shoulder, left shoulder, top of skull, forehead, throat, heart, navel, and centre of right palm; and, as he marks it, he sings ten separate verses in its praise.

If the worshipper is a very rich man, he may offer any fifteen rupees by which he or (if he be indolent as well as rich) the temple-officiant will put on the idol its very best jewellery—crown, necklace, ear-rings, bracelets, armlets, girdle, sandals, all of gold—and give it a gold or silver coco-nut to hold in its hands. (The best jewellery may also include ropes of pearls.) If the worshipper cannot afford more than twenty-five rupees, the second-best jewellery only will be brought out. Except when a wealthy client is present or on great festivals, the ordinary worshipper proceeds at once to decorate the statue with flowers and garlands (pushpa pājā). He then steps outside: the inner shrine to perform the remaining ritual acts: he waves a stick of incense (dāhīya pājā) and a lamp (dīpa pājā) at the threshold of the shrine, and places on the table in the Hall of Assembly before the doorway of the inner shrine rice (akṣata), the only grain which (unlike Hindu ritual) can ever be offered in a Jain temple, sugar (naivedya pājā), and fruit (phala pājā), such as coco-nut, plantains, mangoes, or almonds. 2 It is important to notice how the last three offerings are made.

The worshipper arranges the rice in the following form:

1. The centre of (d), if it be a rich man, he places a coin of varying value, and beside it or on it he places the sugar and the fruit.
2. The swastika sign symbolizes the gate in which a man may be born according to his accumulated deeds of past karmas, either as a dweller in heaven or in hell, as a man or a beast. The three little heaps (e) represent the Three Jewels of the Jain faith: dharma (a), nāma (b), symbolized by the sign of one dot in the segment of a circle.

In studying the worship in a Jain or a Hindu temple special attention must always be paid to four points:

(1) Who is allowed to go into the inner shrine. It was surprising to be told that in a Svetāmbara temple any devout Jain lady of position who had bathed and come wearing clean clothes might enter the inner shrine. He said such persons enter every ritual act that a layman is allowed to do. 4

(2) What change the offering undergoes by being offered to a god. In a Jain temple the deeply interesting change from naivedya to prasāda 5 is unknown, and the word prasāda is never used, but in a Svetāmbara or Digambara temple, once food has been offered to the tirthankara, it is called deva drayaca, or very often by the ignorant, nirmanīya. 6

(3) What change and may not be offered. In a Digambara temple no fresh fruit may be offered, and in a Svetāmbara temple no over-ripe fruit may be given.

(4) Perhaps most illuminating of all, who eats the offering. In a temple of Vīṣṇu all can take communion with his god and eat the food, which is known as prasāda; 7 in a temple of Siva only a fallen and despised set of pājāris known as bhadra 8 can eat the food, which, once it has been offered, is called nirmanīya; but in some Svetāmbara temples, as a mark of special honour, Bbātās are given the fruit and the sugar, the rice being sold to 'menial' unless bhācā pājā is performed. 9 The position of soul would knowingly buy and eat deva drayaca.

To account for the honour paid to the Bbātās, the legend is told of how, when Muhammad Ghauri was in power, two Bbātās laid their living bodies on the burning pyre at Pāliānā day after day and were burnt to death, to ransom the images on the sacred Hill of Sāturājaya from desecration. In commemoration of their heroism, the whole offering, fruit, sugar, and rice is given to Bbātās in the State of Pāliānā; elsewhere they are sometimes given the fruit and sugar only.

If there be no Bbātā, the head-clerk of the temple distributes the fruit and sugar among the temple-servants and his children.

As a rule, cooked food is not offered in a Svetāmbara temple, but on the occasion of a marriage in his family some wealthy client might send down a specially dainty dish. It would be put on the open table in the Hall of Assembly, and not offered behind a curtain, as in a temple of Vīṣṇu, 10 and would afterwards be eaten by a Bbātā or, failing him, by a temple-servant.

When the offerings have been duly made and arranged, all is ready for the great act of spiritual worship. 'As bread is flavourless without salt,' runs the proverb, 'so worship is without savour and useless, unless bhācā pājā is performed.' The worshipper first prostrates himself three times (chaitiyavandana pājā) before the main idol (the mūla nāyaka), which gazes out from its shelf in the inner shrine into the Hall of Assembly, and then says the nāma, sūtra, asking to be cut off from all remembrance of his own acts of worship and offerings. He proceeds to perform bhācā pājā; but neither then nor at any other time does he offer prayers for worldly or material boon; rather he encourages himself by remembering the virtues of the tirthankara, 'like a soldier before the tomb of Napoleon,' and devotes himself to singing the saint's praises. Finally he walks backwards, as though in the presence of royalty, to the main door, towards which the chief image is looking ('only a "fool-man" walks out by a side door'), and, arrived at the threshold, repeats the word nivētaka, thereby asking to be allowed to follow his necessary avocations every day. As he says it, he bows with joined hands to the idol. A devout Jain will say this word again as he leaves the porch of the temple, and a third time before he passes out into the street from the gateway of the temple courtyard; but the uninstructed generally content themselves with saying it once.

"It is "compulsory" on us to do part of this worship in the early morning, and part of it at noon," said a leading Jain official to the writer, "but, as we are in Government offices at midday, we do not engage in the morning worship." On the great festivals, and at places of pilgrimage like Sāturājaya, Abu, and Girnār, the writer has witnessed more elaborate worship. Sometimes royal worship is offered, when a brush of Tibetan cow's hair (chāmār pājā) is waved in front of the main image, and three silver umbrellas are placed

1. Note that, unlike a Vishvajiva idol, the images of the male tirthankara are never draped in actual clothes.
2. A worshipper in ordinary dress can perform the remaining acts, as they are done outside the inner shrine.
3. If a child, e.g., comes into a temple accidentally bringing with it a plantain, or some sugar, or a copper coin in its hand, these must be added to the offering, for the eye of the god has lighted on them.
4. The present writer, however, has never actually seen a woman enter the inner shrine.
5. For the change the offering undergoes in a Hindu temple see the present writer's Rites of the Twice-Born, p. 326.
6. See Rites of the Twice-Born, p. 320.
7. Ibid., p. 402.
over it. At other times a silver image of some tirthanākara is placed on a silver throne in the Hall of Assembly. The men all sit on one side and the women on the other and offer naṭra pājā, by singing songs in its honour. Or a pilgrim may purchase the privilege of sitting in a silver chariot, holding a little silver image in his lap, and being thus dragged three times round outside the temple—a sort of circumambulation de iure. On Satrūfijaya a special pilgrim lamp (see note 7) is performed, known as the Ninety-nine, when daily for over three months the pilgrim must toll up the stone stairway to the top of the hill, circumambulate the mountain temple, and tramp down again in honour of the ninety-nine thousand times that a tirthanākara visited Satrūfijaya. 

But, as life is short, we only do it ninety-nine times, and leave out the thousands! On the last day of the ninety-nine the pilgrim offers the eightfold worship with more than the usual harmony-harmony, as an English-speaking Jain once called it.

In a big Svetāmbar temple there is often a map of Mount Alu, a plan of Sametākiśhara (in Bengal), or a model of the great temple of Satrūfijaya. On the special days when merit is gained by going to these pilgrim resorts a man who has spent many years has to take the long journey may yet gain merit by offering to the map or plan or model the fourfold pājā of lamp, incense, rice, and fruit. In the same way, if a man is too ill to get out of bed and come to the temple, he may offer worship to a picture of the twenty-four tirthanākara at home, for the Indian proverb runs prettily: ‘If you cannot offer a flower, offer a petal.’

All through the day worshippers can come and do bhāva pājā, for the god is never put down for a siesta as among the Hindus in a temple of Viṣṇu, though the wired doors of the inner shrine are often locked to keep off thieves.

(b) Evening worship.—In the evening, as a rule, only the paid temple-officiant enters the inner shrine, for no layman wants the trouble of bathing and donning the special dress so late in the day. At sunset the hanging lamps in the Hall of Assembly are lighted, as are also two or more lamps of clarified butter in the inner shrine; and, before beginning the evening service, the officiant lighted them and placed them in front of the chief idol of the temple. Then the right to perform the evening worship is auctioned (it can be sold to five successive worshippers), and the officiant light the lamps from hand to hand, higher bidding is the little ārati lamp. This consists of two tiers of lamps; in the upper tier is only one lamp, and in the lower there are five; in each of these six lamps a little wick is floating in clarified butter. Five times the worshippers wave this from left to right, singing, as he does so, the special ārati hymn, whilst all the other worshippers bang gongs, beat drums, and make as much noise as possible. Each successful bidder follows suit.

When the ārati pājā is complete, the waving of the maṅgala-dipāka is performed. A maṅgala lamp consists of a lamp in a saucer; it burns camphor in the saucer and ghātī in the lamp itself; it has only one wick and can be auctioned to only one worshipper. As the worshipper waves it from left to right three times, he sings the maṅgala-dipāka hymn, and again all the instruments, musical and otherwise, are used. The object of the ārati-waving is said to be to protect the worshippers themselves from all molestation by evil powers of darkness during the night. The maṅgala-dipāka is waved for the welfare of the whole world. The incense is allowed to burn itself out, which it does by about 8.30 p.m., when all the shrine doors are locked by the officiant and (since the jewels are removed from the idol all night) inspected by the temple watchman before the final shutting up of the temple about 9 o’clock. It is noticeable that (unlike the evening ritual in a Viṣṇu temple) there is no stretching out of the hands by the worshippers to either ārati or maṅgala-dipāka.

2. Digambara.—(a) Morning worship.—It is easier to obtain information in a Digambara temple, since the officiant there is himself a Jain. The main lines of the worship are the same as in the Svetāmbar temple (washing, drying, offering rice, dry fruit, incense, and lamp); but between the worship in a Svetāmbar temple which belongs to the Terāpanthi, and that in one belonging to the Visapanti there are many minor differences. In any Digambara temple the idols on the long shelf in the inner shrine have no eyes, no carved hands, with neither jewels nor flowers. Fresh fruit cannot be offered to them, and no woman on any consideration is allowed to enter the inner shrine of a Digambara temple. The idol is washed with plain water (not water mixed with milk or nectars), and it has seemed to the writer, as she watched, that even greater care is shown by Digambara that not one drop of water should fall to the ground. Among the Visapanti the idol is marked with chandana on both toes; but the Terāpanthi does not mark the idol itself when performing chandana pājā, but mix the saffron with the rice on the table.

One main difference that strikes every visitor is that, whereas in a Svetāmbar temple the whole Hall of Assembly is dotted with worshippers, who (having done at any time they chose as many of the ritual acts of washing, drying, marking, and offering as they had leisure for) are now seated each before a separate little stool, arranging the rice in the mystic way and offering coin and fruit, whilst telling their beads and the lines of the japa, the idol pājā, in a Digambara temple there is one united act of worship. The rice and dried fruit are all arranged in separate little heaps on one tray on one table, and each prayers by the priests from that tray to form a large mound on another tray. In front of the main idol on a table in the Hall of Assembly the officiant arranges a tall vase like an upturned chalice, two brass tumblers of water, a full tray containing rice, almonds, and sugar arranged in separate heaps, and an empty tray marked with a swastika. He then stands behind the table on a little stool and to the accompaniment of elaborately embellished verses and incantations transfers the contents of the full tray to the empty one and the upturned chalice. The food thus ceremoniously transferred in the presence of the idol changes from naivedya to dāna-dhvāya. But here again the most important part of the worship is the mental bhāva pājā, when the officiant stands silent, then bows, and finally kneels, touching the floor with his head, mentally repeating mantras all the time. The officiant in an officiant in a Digambara temple is said to the writer: ‘If any one spent a lakh of rupees on performing the eight-fold worship, it would all be nothing in comparison with bhāva pājā.’
Worship

(b) Evening worship.—All sects of the Švetāmbara that the writer has met perform ārati; but, though among the Digambara it is performed by the Visāpāṭha, the Terāpāṭhi perform neither ārati nor meṇḍaka-dīpika, contenting themselves with lighting a lamp, carefully protected by glass, in the inner shrine and burning incense there. But, though Terāpāṭhi have no lamps, they sing songs and read some of their scriptures aloud in the temple room while lighting incense, and it is interesting to notice that (unlike the ritual in a Viṣṇu temple) neither among the Švetāmbara nor among any sect of the Digambara is food ever offered to the gods at night.

'Ve accounts it a sin to eat after the lamps are lit, for indvertently we might eat some insect; how could we then offer food in the temples in sunset and so force our Thrissurakkara to sin?'

LITERATURE.—The writer has confined herself to temple worship, as other forms of worship have been dealt with under DRAYERS (Jain), FESTIVALS AND FASTS (Jain). The researcher should notice local differences; e.g., temple worship on Mt. Abu is described in the present writer's Notes on Modern Jainism, Oxford, 1916, while for temple worship in Rajāṭ and Iṣe places reference may be made to The Iṣe and the Iṣe Temple, Oxford, 1915. In addition to these, new material for the present article has been derived mainly from the worship in the temple room at the Panjavan Jain pilgrim resort.

Margaret Stevenson

worship (Japanese).—I. Shintō cult described in the eclipse-myth.—The various component parts of Shintō worship have already been treated in separate articles. The best way to gather them into a complete whole, and to picture the actual worship, will be to give the old account of the eclipse-myth, and by simple references connect with it the details already examined. For this story is not only the nucleus of Japanese myth, but it is the best primitive and most authentic description of Shintō worship, since it was written expressly for the purpose of giving the legendary origin of the chief ceremonies of this worship, as officially practised at the court of the mikado in the most ancient times, and of explaining the ascendency of the great priestly families who officiated in them. We therefore have in this text, which is more than 1200 years old, a brief account of worship, an account that is often in the rites of Shintō worship and its priests.1

First of all, let us recall how, by reason of certain offences committed by the terrible god Sunogumo-goddess, the sun-goddess, who herself up in the rocky cavern of heaven, and left the world in darkness (toko-yo, 'eternal night'); how the eight hundred myriad gods in dismay then assembled in the dried-up bed of the Tranquil River of Heaven (the Milky Way), to take counsel as to how they might induce the goddess to come forth from her retreat; and how for this purpose their meaty councillor, the god of artifice, Onohikane, conceived a plan, which was nothing else than the transference to the sky of the terrestrial rites of Shintō, but which, naturally, is given us as having been, on the contrary, their prototype. The plan was as follows:

1. Assembling the long-singing birds of eternal night and making them sing; taking the hard rocks of heaven from the river-bed of the Tranquil river of Heaven, and taking the iron from the heavenly Metal-Mountain; calling in the smith Amo-

1 The original text in Chinese characters, with reading in kanji and transcription, is published in M. Revon, Le Shintosme, pt. I, Paris, 1907, pp. 411-426. An English tr. will be found in Mr. Revon's Shintoism and Its Philosophy, Tokyo, 1906, p. 56 ff., and a French tr. in M. Revon, Antologie du Culte Shintō, Paris, 1919, pp. 23 ff.

2 See the enumeration of shinten-tsun-tsun (‘heavenly sins’) in art. Sin (Japanese), f. 2.

2 The words not translated are explained below, p. 8269.

3 Kojiki, tr. Chamberlain, loc. cit., into which, however, the present writer has introduced some modifications; cf. his Anthologie, loc. cit.

4 Kojiki, p. 66.

5 Or, perhaps, here, 'eternal land,' the continent of Asia, from which those animals were said to have been imported.

6 Part, ‘bird-cry’.

8 It has been observed that tori-i is the name of a bird with a somewhat particular and pleasing voice.

9 Niho, 'Chronicles of Japan...to A.D. 507,' tr. W. G. Aston, London, 1896, f. 44.

Thereupon, as the Kōki says, ‘the Plain of High Heaven shook and the eight hundred myriad Deities laughed together.’ Amazed at this Homeric laughter, the sun-goddess slightly opens the door of the heavenly cavern. To entice her further, the artful Uzume explains to her that the gods are rejoicing ‘because there is a Deity more illustrious than Thine Augustness,’ and at the same time Amo-no-Koyane and Pata-dama push the mirror towards her, which induces her to come out still farther from the door. At this moment Amo-no-Tajikara-wo: heaven, then the Upper heaven, is given to her. The Pata-

Theorizing, Native Philologists connect the origin of tori-i, the well-known gateway of Shintō temples, although it seems rather a cosmogonic origin, it is in the same spirit that, in another version of this myth, it is stated that the goddess Uzume, in the midst of her dance, ‘kindled a fire,’ the aim of which was likewise to evoke the solar light by imitative magic, and which represents the legendary prototype of the nihō-bi (‘court-yard fire’), practised in certain ceremonies of Shintō worship, especially in the nocturnal rite of the nïhî-no-mune (‘new tainting’). But, besides these rites which belong more specially to eclipse-ceremonial, this episode also describes rites of a more general character.

II. Analysis of the various elements of cult embodied in this myth.—In this famous episode we observe certain rites which are more especially connected with the special object of the story, i.e., with the magical means to be employed to cause light to reappear when, for some reason or another (often typifying a certain stage in the development of the nature of deities), besides the knowledge of the universe such that primitive man becomes afraid. These means are the long-singing birds of eternal night, i.e., cocks, which were made to utter their long cry in the cavern, and which are found symbolically represented in the old temple of the sun-goddess at Ise by dancers called toka-ko (‘bird-cry’); with the roofs of those sacred birds kept (kept for the ordinary purpose of heralding the dawn), but also, while for evoking daylight by magical means) native philologists connect the origin of tori-i, the well-known gateway of Shintō temples, although it seems rather a cosmogonic origin, it is in the same spirit that, in another version of this myth, it is stated that the goddess Uzume, in the midst of her dance, ‘kindled a fire,’ the aim of which was likewise to evoke the solar light by imitative magic, and which represents the legendary prototype of the nihō-bi (‘court-yard fire’), practised in certain ceremonies of Shintō worship, especially in the nocturnal rite of the nïhî-no-mune (‘new tainting’). But, besides these rites which belong more specially to eclipse-ceremonial, this episode also describes rites of a more general character.

The solar mirror, central point of the national worship.—First of all, we see the celestial gods
WORSHIP (Japanese)

taking rocks from the River of Heaven and iron from the Metal Mountains, i.e., the iron mines of primitive Japan, for the purpose of manufacturing a mirror under the superintendence of the gods Ama-tsumi-no-kami, the Cyclops of Japanese mythology, also with a single eye, whose name, meaning "cyclops penis," is evidently connected with the old phallic cult) and Iki-kori-dome (the mythical ancestor of the manufacturers of mirrors, whose body, it is said, was made of a single long and consequently call up the idea of stone moulds in which certain metal objects were cast). This 'mirror of eight feet' (yu-ta-kogami) is still a magical means of recalling the star whose form the mirror's reflection imitates, in the same way as other 'mirrors of the sun' (ki-kogami) which are discussed elsewhere. But, besides the special function which it is called upon to perform in this episode, the solar mirror fills a much larger rôle in Shinto worship in general, in which, in the temple of Ise, it represents the sun-goddess herself, and therefore forms the very centre of the national worship.

The fact that the present mirror at Ise is, in the imagination of the Japanese, the same as was forged at the time of the eclipse is due both to the Kojiki and to the Nihon-gi. The latter says that the sun-goddess, after the eclipse, shot a mirror which was worshipped at Ise; and, as this sacred object shows a slight flaw, it is explained quite naturally by the hypothesis of a blow which it received against the door of the temple.4 It is therefore a case of a primitive talisman which afterwards became the greatest national fetish. For before long the sun-goddess herself bestowed it upon her grandson, Ninigi-no-mikoto, in terms which clearly show that the soul is united with it, by the application of a conception, wide-spread among primitive races, of the mysterious relations that may exist between a mirror and a soul.

Regard it, she said, as my august spirit, and worship it as if thou wert worshipping in my presence.5 And again: Let it be with thee in thy home, on thy mat; let it be sacred to thee! And, when she departs, two other gods come to accompany her grandson on the earth, viz. Ame-no-Koyane and Futo-dama, who are precisely the ancestors of the great national sorcerers. 'Watch over me,' she commands them: 'take care, both of you, of this mirror and guard it well.'6

From that time the solar mirror becomes the most important and precious of the three regalia (mirror, sword, and jewel) of sovereign house. Later, however, a timid emperor, worried with his responsibilities in a time of public disorders, was uncomfortable at the thought that he was kept a prisoner on Mount Ise, and he broke the tradition which had been observed up to this time and entrusted the mirror to an imperial priestess, who kept it in a neighbouring village; she, in her turn, transferred it to the princess of Yamato, the famous vestal who, after various religious travels, stopped finally at Ise according to the instructions of the goddess. Then, in the bosom of the 'inner shrine' (nariko), the mirror will henceforward rest, invisible in its precious tabernacle.

This supreme object of Shinto worship is, as a matter of fact, enclosed in a brocade bag, which is never opened; and when the old model has signs of giving way, the whole is put into a new bag: so that to-day the mirror is enclosed in several layers of silk. Thus protected, it is added in enclosure in a box of hi-ku-ko, or palm, with notched handles, placed on a slightly raised stand, and covered with a piece of white silk. Lastly, above all these there is a sort of case of white wood, with ornaments of pure gold, itself enveloped in a room painted on canvas, which reaches to the ground on every side. Those coverings of the box are all that the people are allowed to see on the festivals on which the sanctuary is opened.

Viscount Mori, the Minister of Public Instruction, who dared to raise a corner of an outer curtain of the sanctuary at Ise, was soon after, on the very day on which the new constitution of Japan was promulgated in this place, a fanatic Shintōist, whose tomb became a place of pilgrimage.

Although the sun-goddess was the only one in the mythology who assumed the particular form of a mirror, other deities are represented by the same object: e.g., it is said that in the other great temple of Ise, the 'outer temple' (geku), the mi-tama-shiro (substitute for the august spirit) of the goddess of food is likewise a mirror, as well as the fetishes of the ahi-dono no kami (deities of a joint shrine), which are also worshipped in those two great temples. This is simply a natural generalization of the material side of the cult. The mirror of the sun has gradually become multiplied, and, under Buddhist influence, it has ended in being exhibited in all the temples, though the sacred fetish of Ise remains hidden from human eyes.

2. The sacred jewel—It is further said that the Tama-no-ya ('jewel-ancestor'), from whom the hereditary corporation of jewellers claims to be descended, makes a necklace of numerous jewels. The name of this necklace is very difficult to interpret,1 and its history throughout the centuries is no less uncertain.2 The imperial jewel, at first identified with the necklace of the eclipse, was gradually reduced to the single sacred stone, two or three inches in diameter, which is carefully preserved to this day in the palace of Tokyo. But, in spite of the religious character of the mikados, this jewel is evidently of little cult importance compared with the sacred mirror.

3. Priests.—Later in the text there appear two gods who are important from the point of view of worship—Ame-no-Koyane (etymology uncertain), the ancestor of the nobatomi, the high priest, 'mediators' between the gods and the mikado, who recited the ritual in name of the latter, and the ari-kono-dama (perhaps 'great jewel,' but more probably 'great gift'), the ancestor of the inadhe, those 'abstaining' priests who were specially charged with preparing the offerings.

4. Divination.—Those two gods call out the shoulder of wood from Mount Kaga (mountain of heaven, which quite naturally has its homonym in Yamato), and take from the same mountain the bark of a certain tree (bahe-ki (cherry? or birch?) in order to light a fire to roast the shoulder-blade, the cracks in which they will then examine for divinatory signs. The ancient Japanese, as a matter of fact, always practised divination when they found themselves in presence of any unusual phenomenon, and their gods naturally did the same, for they were by no means conceived as omniscient.3 Ono-photography was the favourite form of divination—the official one in modern times.

5. Sacred tree of Shintō.—The gods then uproot a nobakki with five hundred (i.e. countless) branches. This tree, which is evergreen, is the sacred tree of Shintō, and is usually found planted in the precincts of the temples; it furnishes wands.

6 Bed. p. 592<sup>6</sup>.
7 Oepera japonica: a fairly good idea of this tree may be got from the fact that the family of Terenotranscenc, to which it belongs, includes also the canaica and the tea-plant.
for the owonawa and the tawara-gushi; and its branches, which are always carried in funeral processions, make it possible to distinguish at a glance a Shintō funeral from a Buddhist one. The use of evergreen trees, especially cypress, in ancient times in the West and also in China is analogous.

6. Offerings.—The gods now hang the necklace on the higher branches, the mirror midway, and the offerings of soft materials on the lower branches. The natives of Banks Islands have a similar rite to obtain sunlight; they employ a circular stone, called 'the stone of the sun,' which they decorate with ribbons and fix in a high tree. The offerings of white and blue materials made on this occasion are the general type of Shintō offerings which play the chief part in the worship, and which have already been exhaustively treated.

7. Recitation of the ritual.—While Futo-dama presents these offerings, Ame-no-Koyane fervently pronounces a ritual whose powerful words (futo-nitori-goto) are to force the will of the goddess. This, it has already been seen,5 is to be noted, besides the magical effect of the recited formula, those old Shinto prayers had also the intention of charming the gods by their literary beauty, as a sort of offering. The formal gestures accompanying them have also been described.7

8. Sacred dance of priestesses and divine possession.—Lastly there appears upon the scene Ame-no-uzume ('heaven's dread female'), the legendary anarcs of the Sarume-no-kimi ('princesses of Saru,' from saru, 'monkey,' and me 'woman'), a priestly corporation of court dancers, so called by the Onon myth.8 With some hikone she makes an arm-support (tsunabi, 'hand-helper'), i.e., a kind of cord like that which the imperial stewards, referred to in this connexion in the Ritual of the Great Purification (Oho-horoki), had round their necks; the ends were fastened to their wrists to enable them to carry heavy things more easily; she makes a garland for her head (kazura) with nazeki-no-kazura,9 and a bouquet (tu-gusa) with leaves of sasa10 (generic name of various small bamboo). Then she places in front of the cavern the sounding-board on which she is to perform her dance, the prototype of the sacred panuline (lyrarium) which is still one of the regular furnishings of Shinto shrines. This is a sort of offering to the gods—and which may be seen danced at the present day by young priestesses wearing masks and damask draperies, on the platform of a special building in the precincts of certain temples, like those of Isé and Nara.11

Uzume soon reaches a state of ecstasy (kamayakari or kawakari-shite),‘doing divine possession,’ the real or simulated character of which may be disputed,26 but which in any case corresponds exactly with what we know of the important rôle of nervous phenomena in the ancient practices of Shintō, as they may be observed even at the present day.12

As regards the indecent gesture with which this scene ends, and which the Nikkō, which appeared only eight years after the Kojiki, thought right to omit in the corresponding account, but whose reproduction even the Nikkō mentions in another connexion,13 it gives a good idea of the nuselvly bold character of this goddess, whose sportive naturalness the mythology associates with that of the monkey-god Saruta—an interesting point for the study of phallic worship.

9. Magic cords.—All these rites having been performed, the sun-goddess is gradually attracted outside, first by the clamorous mirth of the gods, then by the mirror which, in the Kojiki account, seems mainly to have a psychological action, exciting the curiosity of the goddess, but which, in the original form of the myth, must have been regarded as having rather the action of imitative magic. The god Ame-no-Tajikarawo ('hand-strength-male'), who is hiding near the door, seizes this moment to drag the sun-goddess forcibly outside, and Futo-dama immediately prevents her from stepping back by means of a magic cord, just as, in the Fiji Islands, they tie grasses to stop the sun.4 This cord is the prototype of the shime-naha (‘close-rope’); the cords of rice-straw which are usually to be found in front of Shinto shrines. At a huge shime-naha the units two rocks between which one gets an admirable view of Fuji-yama, and which are regarded as the best point of view in the archipelago for admiring and worshiping the rising sun. A more popular form of the cult these cords are hung in front of the houses at the New Year to ward off evil influences—a custom whose origin local legend of smaller importance attributes to the gods of the sun.26

10. Other cult-forms.—Thus the eclipse-myth is the central point towards which all the paths of Shintō converge, and it is only necessary to start from this centre to see radiating in all directions, not only the essential rites of this worship, but also branches which end in secondary practices. The only cult-forms of any importance which are not found here are those which naturally could not figure in a story of this kind, such as the custom of pilgrimages to distant sacred places—e.g., to the ancient temples of Ise or to the top of Fuji-yama, to which thousands of worshippers flock every year—or, as a substitute for such pilgrimages, the custom of offering from a distant mountain by going to some neighbouring temple easier of access. But, although these customs are highly developed in Japan, they are found in other religions also, and there is nothing specially Shintō about them.

Literature.—This is cited in the foot-notes.

WORSHIP (Jewish).—The Hebrew term for 'worship' is n'sh'n and in the famous saying of Simon the Just (c. 300 B.C.) with which the Tractate Ethics of the Fathers opens29 abdādah is the second of the 'foundations of the world.'30 At that period, no doubt, the word abdādah primarily implied the sacrificial system of the Temple, though this system was also accompanied by prayers, but the meaning was not necessarily restricted to the altar.31 This term has developed, but the saying

Nikkō, f. 45.

Michel Revov.
of Simon remains none the less characteristic of Jewish theology, which lays more stress on 'abbahôsh (works) than on 'emûnâh (faith).\footnote{8} Thus, the emphasis of Jewish worship naturally concentrated on the synagogue.\footnote{9} Had the altar system been the exclusive means of divine access available to the Israelite, the cessation of sacrifices would have involved a greater liturgical disturbance than actually took place. As a fact, continuity was preserved; the keynote of the transition was Hos 1:2 (Heb. 14, RV), 'Let over the burnt-offering the bull of our sacrifices.'\footnote{10} Even to-day the services, in particular those relating to atonement, re-echo this sentiment,\footnote{11} and, in almost every rite, the portion from the Pentateuch which ordains the morning, afternoon, or additional sacrifice is recited, at the appropriate occasion. This is done to show the correspondence between the particular service and the sacrifice instead of which it is offered. Nor must this feature be regarded as, de ipso, a prayer for the restoration of sacrifices in their old form. It has often been shown that a belief in the restoration of the Temple, as a Messianic event, to which the universal worship, may not necessarily be linked with the re-institution of the altar, and it cannot be demonstrated beyond doubt that this re-institution is an axiom of Jewish belief, for it has been repudiated by some orthodox Jewish authorities (as well as upheld by others): and thus it is not included in the Thirteen Articles of Creed and Mainmidades.\footnote{12} In the synagogue worship subsequent to the Destruction of the Temple more service was developed into three lines: (1) prayers of repentance and penitence; (2) thanksgiving and praise; (3) petitions. Study and the recital of didactic passages of post-Biblical literature were a later institution.\footnote{13}

In (1), i.e. penitential worship, asceticism and fasting naturally find a place. But the limits of this asceticism were strictly defined. Fasting ('ômai'h, which really means 'affliction') was, generally speaking, restricted to prescribed occasions and rites. This element should be studied in connexion with FEASTING (Hebrew and Jewish). Indiscriminate and exaggerated asceticism was rare. It is in the matter of the observance of weeks, Wedlock, Zadokites, or certain Qabblâists; but it was not general. Confession, expiation, and atonement constituted acts of worship in connexion with penance.\footnote{14}

(2) Thanksgiving in worship centred in the festivals, with the ceremonial appropriate to each, Levy's Edition, n. 43.) In the daily 'Ainidâh the term is applied to the 16-17th benediction of the 'Abod, in which the restoration of the 'Ainidâh is the subject of prayer (see Singer, p. 50, par. 2). In the Misnaf service for the Day of Atonement, the 'Abbahôsh is the recital of the expiation ritual of the high priest in the Temple on that day, in the Holy of Holies (see M. Gaster, Book of Prayer, London, 1904, ill. 187 f., or H. M. Adler and H. Davis, Service of the Synagogue Festivals, etc., 'Atoneinent, pt. II, p. 193 f., London, 1904-05). Finally, see also the opening words of the concluding blessing after the reading of the prophetic lessons (Singer, p. 149, last line).

3 See J.B.I. 149.

4 See art. Judaism, vol. vii. p. 596 foot; see, however, art. Prayerv (Jewish), vol. x. p. 1297 foot, for another view.

5 See J.B.II. 1324, x. 1069, 1029, 514.

6 See ib. 510.

7 Singer, p. 59; see art. Sacrifice (Jewish), but see also J.B. x. 629.

8 After such passages a special Qiddush was pronounced (see Singer, p. 89). Such passages may be found in Singer, p. 1071. Yet it was not thus common to break a passage, but insert in their daily service a portion of the book they happen to be reading in the Synagogue in a greater place to study as an act of worship than do others. Not only are the first night-prayers and the morning prayer of the Babylonian Talmud kept as vigil and devoted to study, as in Europe, but the custom called Niggah ('Sealing') on account of Haushatun Rabbiya according to the usual Rabbincal authorities at Jerusalem.

9 See arts. Asceticism (Jewish), Fastings, FEASTING (Hebrew and Jewish), Confession (Hebrew), EXPIATION AND ATONEMENT (Jewish).

WORSHIP (Jewish)
thanksgiving for the deliverance from Egypt to the recital of the 'Amidah.'

Practically every item of Jewish ritual, synagogal or act of worship, for in Judaism the secular sphere has very little independent existence, and thus many acts, not in themselves religious, are associated with blessings and become acts of worship. As a result, all acts should not be forgotten, or to give opportunity to an individual who might have omitted to say them, or to enable the congregation to respond 'Amen,' some of these blessings have been incorporated in the liturgy itself. Others that have not been thus incorporated, because they were not likely to be needed every day, may be seen in Singer, p. 287f. The ideal of the pious Jew was to pronounce a blessing on the name of God one hundred times a day; 2 'in all thy ways know Him.'

2 For every enjoyment and in every enjoyment he is to render thanks to God the Giver. He is to screw the rose out of its perfume. And he is to say and to feel: 'Blessed art Thou, 3Thou Who hast given me, their organic planes not neglected.'

The Sabbath, with all its domestic ceremonies, has become practically a day of acts of worship; the three meals are preceded by sanctification and followed by hymns and carols. But such a day, far from being a labor to the orthodox Jew, is to him a day of spiritual happiness, for the highest bliss in the world to come is poetically described as a period 'wholly a Sabbath,' which 'will bring rest in life everlasting.'

The term 'worship,' therefore, logically includes many more operations, besides prayer, by which the Jew seeks to serve God, in addition to numerous acts of his daily life and his public and private devotions, of which the most important are prayer, which is an adjunct of worship, if not worship itself. Thus, in the East, Jews sometimes make use of tezdeqah (charity) boxes containing eighteen apertures, each devoted to a different philanthropic institution. As each of the eighteen blessings of the 'Amidah is recited, a coin is placed in one of the slots.

The scheme of synagogal worship may thus be analyzed. The normal daily services, associated with the statutory Temple offerings, and also ascribed by tradition to patriarchal institution, are three—morning, afternoon, and evening. On Sabbaths, festivals, and new moons, and on the Day of Atonement, but not on the other fasts, there is an 'additional service,' called Musaf. 10 There is no Musaf on Hanuca (the Maccabean Feast of Dedication, Enconia), or on Purim, the Feast of the Purification of the world, when the means of salvation is reconciled and the days are post-Biblical and no special offering was brought. Every service includes an 'Amidah as its essential element, other features being thanksgiving Psalms, Shir'at, Hallel, reading of the Law and Prophets. Praparatory prayers, hymns (piyyutim), 12 study, and sermons are not original statutory components, though antiquity and popularity have often endowed them with an imperتسجيل in the history of the Decalogue warrant. The recital of the Ten Commandments in public worship was discontinued, and the doxology was altered, 13 on account of the Mimin, but this bears the title both of the Decalogue

1 See Singer, p. 44; and Abraham, note on p. lv.

2 See Singer, pp. 46-6; Abraham, p. xviii.

3 See Maimonides, p. 256, who speaks of the "Amidah," or Amidah, as the daily prayer, instead of the "Siddur," the whole of the tractate Berakhot.

5 See R. Kohn's comment in loc. given in Berlin ed. of 1833; see also JE, viii. 1338.

6 Mishnah Ber. iv. 5.

and of the Maimonidean Creeds is regarded as desirable after the morning service. The essential features of Jewish worship may thus be summarized:

At every morning service throughout the year.—(1) Psalms de Zib'am, or introductory Psalms and versicles of thanksgiving; (2) Sh'rem, and reading of the Law from the Prophets; (3) Amidah, or 'additional service,' on new moon, festivals, and Hanuca; (4) reading of the Law on Mondays and Thursdays, Sabbaths, fasts, festivals, New Year, Day of Atonement, and new moon, Hanuca; (5) reading from the Prophets on Sabbaths, festivals, New Year, and Atonement, ninth of Ab; (7) Musaf, or 'additional service,' on Sabbaths, festivals, new moon, New Year, and Atonement; additional items where appropriate, such as Selichot, blowing of Shofar, public Delivery of the Law, etc., and of course there are other items not mentioned.

At every afternoon service throughout the year.—Passages reminiscent of sacrifices and incense, Ps. 146, 'Amidah; reading of the Law on Sabbaths and Day of Atonement and on certain fasts; haftarah on Atonement and certain fasts; Canticles, Ruth, Ecclesiastes on the Three Festivals.

At every evening service throughout the year.—Sh'rem, with blessings, 'Amidah, introductory Psalms on Friday night, special Psalms or poems for festivals in some rites; Lamentations on ninth of Ab, Esther on Purim, etc.

The two main divisions into which the present liturgy may be divided are the Ashkenazic and Sephardic rites. These correspond, to some extent, with the early Palestinian and Babylonian uses, 2 but there are other uses—e.g., Italian, N. African, Turkish, Musotamian and Indian, Coehini, Persian, etc., and even the Ashkenazic is not uniform. There are different forms of Sephardic use, and certain HASSIDIC, QABBALISTIC, and other rites in Russia and E. Europe, which are Ashkenazic variants. Among extinct rites may be mentioned the Seder Amenon (use of Asuram Gaon, 870 C.E.), Malzor Vitry, Maimonides, Isaac Lurya, and C. Vital, Castle, etc. Little is known of the ritual of the Falasah or of that current among the Chinese Jews. Qaraites and Samaritans have their own worship, which has been printed. 7 Modern Reform rites, generally speaking, contain vernacular translations and sometimes additions, and modify certain references to the restoration of sacrifices. The psalms, or hymns, are of two main types, Kaliran and Spanish; 8 they do not form a statutory constituent and are often shortened or omitted. The divergences of rites are due to the circumstances that the liturgy was originally not stereotyped. Those who write down blessings 'were considered as reprehensible. 9 The reader was told the subjects to be mentioned by him and his order; hence the variety of prayers arose. The whole of the tractate Berakhot is an indication of this method. The reader was 'free.'

The underlying theory of the Jewish conception of worship must be based on the intellect, which emanates from God unto us is the link that joins us to Him.' The chapters should be carefully studied.

Pilgrimage as an act of worship occurs only sporadically.

WORSHIP (Parsi) — 1. Pre-Zarathushtrian period. — That the attitude of the early Iranians towards those whom they conceived as the Supreme Powers was one of devotion and worship is practically certain. In what precise outward form that devotion expressed itself during the earlier period is a question which can be only partially answered. We may safely assume, however, that Herodotus's description of Persian habits and modes of worship was, in its essential features, applicable to the Iranians generally centuries before his own time, and probably more generally and truly applicable to the Persians of that period than it was to those who were his contemporaries. In the Greek historian's account of Persian worship the whole ceremony centres in an act of animal sacrifice. It was accompanied by prayer on the part of the offerer and the intoning of some form of prayer. When this 'theogony' ceased to be a mere form of incantation or magic formula, which originally and for a long period it undoubtedly was, we have no means of knowing what the sacrifice was like in individual cases. In its presentation — there is no hint of a united offering — the sacrifice was expected to imbue with a sense of solidarity; for, in its main character and content, his prayer must needs be intercessory — enfranchising the welfare of the king and the whole Persian people. It is to do violence to the text of Herodotus, however, to make him say that the bringer of the sacrifice could ask nothing for himself or his hearth. The normal inference from Herodotus's narrative is that, so far as the outward and visible forms of Persian worship were concerned, they consisted of merely an occasional act of animal sacrifice performed on a mountain top or beside a stream of water. We can scarcely imagine that all their religious impulses and beliefs found their full and only expression in such forms. Still, the small value the Persians placed upon architectural aids to outward worship prepares us to find among them a very simple ritual and perhaps a very multiformal mode of religious expression. Regard must also be had for the early period symbolizing — perhaps more than a millennium before our era. 2. Zarathushtra's time. — Like the founder of Christianity, Zarathushtra, so far as the records enable us to judge, made no provision whatever for ceremonial or outward forms of worship. The Gathas, which are the truest reflexion of his teaching and spirit, contain not the remotest hint of such matters. There we have an intensely earnest soul seeking to learn the truth and to get into the right inward relationship to its God. The outward expression and symbolization of that relationship receives no consideration at all. Spirit and conduct are the all-absorbing subjects of the Gathas. Vohu mano, best thought; Asha, right; and Aramaiti, piety, are the ever-recurring objects of the prophet's desire. It is hardly too much to say that Zarathushtra's ideal of worship is best expressed in Christ's great and final saying that 'they that worship him must worship in spirit and truth.' How far this high ideal was appreciated and accepted by his contemporaries, and to what extent his influence availed to ensure its persistence after his death cannot be ascertained. It is only certain that he taught some of his disciples, and they in turn taught others, to invoke and praise in the Yasna haghatpariti, which, on linguistic grounds, cannot be assigned to a very much later date than the Gathas, clearly indicate that at an early time there was a direct descent from Zarathushtra's high spiritual conception of worship. 3. Late Avestan period. — By the time the Later Avesta was compiled there had developed an elaborate system of ceremonial worship. Animal sacrifices on the largest scale prevailed. Homa had regained more than its pristine veneration in the new order; and henceforth the preparation of its juice (parehazna) becomes the central point of the Mazdean ritual — a position from which, to this day, it has never receded. The return of the old Iranian gods as angels (varunae, beings meet to be worshipped) in the new pantheon increased enormously the ritual of Mazdeanism and the acts of worship devolving upon the followers of the faith. Every day of every month was devoted to some special divinity, viz., the first of the special Yvasa, in which it was sacrificed to in addition to the regular worship of that day. Thus the 1st, 5th, 15th, and 23rd of each month were consecrated to Ahuramazda; the 3rd and 5th to the invocations of the sun; the 7th and 12th to Ahura Mazda; the 9th and 21st to other genii. Over and above these were the special feasts, such as New Year in honour of Mazda. Prayers, hymns, and liturgies befiting all these occasions were utilized. Each day was divided into five parts, and at each division a special prayer, one of the so-called Gathas, was uttered. For the elaborate ritual associated with the rites of initiation and the dispensation of the under those headings. What worship gained in extent and elaborateness during this period it seems to have largely lost in inwardness and spirituality. The value of the prayers came to be regarded as consisting mainly in the words and their correct utterance. We get the impression that they came to be employed as mere charms and magic formulæ. 4. Present time. — If animal sacrifices are excepted, Parsi worship to-day, outwardly, practically what it has been from late Avestan days. Before the sacred fire of their temples the same Avestan liturgy is recited, accompanied by the priestly incantation and the disposition of the same divinities are invoked and praised by the orthodox Parsi to-day in the same prayers and hymns as were used two millennia earlier. But it should be noted that a strong reform movement has set in among many educated Parsees, the tendency of which seems to be not so much to work radical changes in the outward form of their worship, as to change the whole emphasis from outward forms to the moral and spiritual ideas symbolized in the ceremonies. In one or two instances lately, it is true, the priest has gone to the length of introducing a sermon or address into the service. But this is exceptional. 5. Collective and individual worship. — Although devout Parsees often frequent the fire-temples, as we gather from Visparad, III., their ancestors did even, especially on sacred days, such as those consecrated to Ahur (3rd, 9th, 17th, and 29th), yet the Parsi does not consider attendance at the temple

1 For a detailed account of that ceremony and of the successive steps by which ritual and liturgy alternated in the preparation of the Amano juice see M. Hart, "Künat an der, the ritual of worship obtained among the Indo-European.

2 See art. SACRIFICE (Iranian).

3 See art. YAZATA (Iranian).

4 The occurrence of the word 'yazata,' 'priest,' in one passage in the Avesta (XVIII. 38) cannot be held to require the modification of the above statement. See J. H. Moulton, Early Zoroastrianism, London, 1907, p. 116.
indispensable to worship, and places far less store upon it than the faithful Christian does upon church-going. 1 It is clear that much of the priestly worship at the temple is without special reference to any laity that may be present—the long Yâsna ceremony is a conspicuous example. But, even when assembled in large numbers at the temple, the worship seems to be almost if not quite entirely individual and separate, not collective and united. These two facts are surely very significant. We noted them in Hero- dolotus's earlier Persian Worship—slight regard for religious edifices as aids to worship, and absence of united action in public worship. But they are in perfect keeping with the highly individual and independent character of which Zarathushtrianism imbushe its adherents. Moreover, the private and individual devotions of a faithful Farsi are as numerous as those of the devotees of most religions. We give the following quotation to substantiate this fact:

1 For the modern Parsees the precise forms of prayer are strictly laid down; a brief survey of them will be sufficient. On ritual, washing, and dressing, especially on tying the sacred string, a series of prayers are to be repeated. Next follows the special prayer for the deceased, for instance. Before and after, and likewise, prayers are said; and in the evening, before the Parsee goes to sleep, he has, further, to reflect upon and examine what he has done in the day and the course he will pursue. At certain ceremonies, at certain prayers, he retires to rest. To the prayers which form part of the ceremonies of the day are addressed words of others which must be said on certain occasions, viz., after smoking, after connoil intercourses, after satisfying natural purposes, after pollutions due to sleep, after the cutting of nails and hair, as well as after the lighting of candles. 2

E. EDWARDS.

WORSHIP (Roman)—I. General principles.—The term 'worship' may be treated as comprising all modes of giving expression to the various feelings entertained towards the divine powers—feelings of awe, reverence, obligation, depreciation, gratitude, hope, and others. The forms given to the expression varied, first, according to the conceptions which were entertained about the nature, function, and power of the beings who swayed the destinies of men and women, next, with the development of civilization among the people. The limitations of certain kinds of worship to certain classes of people, public and private, also, fall to be considered.

2. Worship as related to conceptions of divinity.—In the earliest known forms of Roman religion men's conceptions were vague, and the divine influences were not supposed to pertain to definite personal gods, being described by the shadowy phrase numina. Observances of worship were therefore naturally far more simple than they afterwards became. The early Romans indeed regard divine power as perceptible in every portion of the world, and in every department of life. In a sense he may be said to have entertained the opinion of the Greek philosopher, Heraclitus, who said that 'all things are full of gods.' 3 Every stage in human life was passed in contact with superhuman powers. The Roman nursery was haunted by a host of divinities, whom the faithful of the early Church regarded even with ridicule. The earliest religious observances reflect the life, mainly, of an agricultural commun-

WORSHIP (Roman)

4. Changes in worship due to external influences.—The Roman pantheon and Roman worship had doubtless gone through a number of changes before the time of the literature of the Latin writers, and the changes in historical practice of religion. Many attempts have been made by modern scholars to pierce the dense pre-historic darkness in which the state of early Roman worship can barely be material, however, and which has come down to us from ancient days is so completely untrustworthy that the efforts of scholars have chiefly testified to their power of imagination. This material indeed, if it deserves the name, is a complete unbridled imagination of poets, genealogists, annalists, grammarians, and antiquaries of the late Republic and early Empire. To correlate even the results of modern archaeological research with this heterogeneous mass of statements, so as to produce any solid results, is a hopeless task. The earliest safe source of information about Roman cults is to be found in the inscriptions which have preserved the remains of the ancient Roman calendar. When ancient Roman scholars, like Varro and Varrius Flaccus, drew from the actual records of the cults illustrated of the ceremonies mentioned in the calendar, they covered actual religious history. And religious usage was so tenacious in Rome that the light thus obtained carries us back a long way.

Corresponding early Roman State was with regard to religion, the recurring desire for novelties in cults was from a very early time satisfied in a remarkable way. When the demand became clamorous, in times marked by great public disasters, such as severe defeats at the hands of enemies or sore famines or pestilences, the Senate would order the mysterious Sibylwine Books to be consulted, so that the proper mode of meeting the religious emergency might be discovered. It was felt that conjectures occurred when the aid to be drawn from the gods who ordinarily protected the country was insufficient. It dawned upon the consciousness of the citizens that perhaps divinities who presided over foreign communities might be able to come to the rescue. At a very early time the Greeks were recognized as masters of divine lore, and the Sibylwine Books were long believed to contain precious results of their experience. An inquiry therefore into the proper mode of expiating disasters, which were naturally supposed to indicate divine wrath, almost invariably resulted in a consultation of the Sibylwine Books, thus enshrined in the State religion some rite derived from Greece. The Sibylwine Books therefore constituted a sort of open door through which entered such a mass of new religious usage that the Roman religion was extensivelv Hellenized. Sometimes the new usage was connected with a divinity not previously worshipped by Romans, at other times the new practice was grafted on the cult of an old Roman divinity. For one great feature of the movement was the identification of Roman divinities with Greek, the divine beings concerned being supposed to differ only in name.

This process of Hellenization began very early, and the legend which attributed the introduction of these books to the period of the monarchy enshrined a particle of historic truth. But the religious revolution was much accelerated by the advance of Rome to world power, when important crises, giving rise oftentimes to superstitious fears, were multiplied. Some of the most archaic forms of this process of Hellenization, exemplified in the Republican era, were so continued in the monarchical and imperial eras as popular festivals with disorderly accompaniments. Such were the Saturnalia and the Festum geniale of Anna Perenna,1 the Floralia in April,2 the festival of Fortuna in June,3 the

Auxiliarum forie in July (mentioned in later literature), and others. Many, however, of the most venerable survivals in Roman religious practice are connected with the mythical age of the Republic, when the emperors merely from a conservative sense, and were forms that excited little interest except among scholars and antiquarians. Such ceremonies were the shrines on the wall of the temple of Fortuna, the Forcicida,1 and many others. The influence of Augustus led to an archaistic religious revival, which re-established many primitive rites that were all but forgotten and prevented many others from sinking into complete oblivion, under the weight of indifference induced by many influences, especially the sceptical tendencies stimulated by the Hellenization of culture, and the manifold new impressions produced by contact with various peoples during the process of world conquest.

The Oriental religions came more and more to attract the Italian and Western populations after the establishment of the Empire. During the Republican age, the government had opposed barriers to the advancing tide of Orientalism in religion. The first Emperor cult to be tolerated in the official calendar, it was believed in the so-called 'Bacchic conspiracy' was ruthlessly suppressed by the Senate, with whom rested the final authority in such matters. In the later days of the Republic many private attempts to establish at Rome Egyptian forms of worship, especially those of Isis and Serapis, were frustrated. These cults naturally tended to find a refuge in the seaports to which fleets from Egypt came, especially the Campanian maritime towns. At Puteoli, for instance, there was a temple of Serapis as early as 105 B.C., and near the coast, at Poseidippe, a shrine of Isis existed even before the Roman conquest of the town. Three times in the ten years between 58 and 48 B.C. shrines of Isis were destroyed in Rome. Under Augustus the pressure produced by the popularity among the masses of Egyptian rites became very great, but naturally the rulers did not approve of the indiscriminate adoption of foreign cults, and allied themselves with his enemy Mark Antony. In 19 B.C. Tiberius, in consequence of a gross scandal, destroyed a shrine of Isis, and caused her image to be cast into the Tiber. Nevertheless private dedications of temples continued to be increasingly common. The government did attempt to prevent them from being erected within the pomarium, but in vain; for in A.D. 69, when the army of Vitellius beset the city, Domitian assumed the garb of a devotee of Isis and sought safety among the servants of her temple. The full tolerance of this divinity at Rome took place before the death of Lucan in A.D. 65, as we see from a scornful reference in his poem. The actual formal inclusion of Egyptian deities in the Roman pantheon, whereby they were thoroughly naturalized and no longer restricted by authority to the space outside the pomarium, came in the time of Caracalla. This emperor built a sumptuous temple of Serapis on the Quirinal. The attraction of Rome by the worship of the gods of the barbarian world was largely due to the mysteries which were connected with them. Brotherhoods and initiations, whereby these 'saviour' gods (sacrophus) rescued the

1qvid. Festi, iv. 631 ff.
2ib. v. 331 ff.
3ib. vi. 723 ff.
devote from evil, exercised a powerful fascination. The Roman soldiers who had served in the East brought with them on their return, from the time of Sulla onwards, many Oriental cults, which tended to become naturalized gradually in the time of the Severi, whose origin was in the East. Some of these divinities assumed Roman names, such as Jupiter Dolichenus, Inivictus Sol Elagabalus (from whom the emperor Elagabalus took his name). The worship of Mithras reached its height in the West in the 3rd and 4th centuries A.D.

The divinization of the Roman emperors changed in many respects the whole face of Roman religion. Their cult became the strongest bond of union between the different populations of the Empire, and it became, from another point of view, an important element in the scheme of provincial government.

5. Important public rituals. — The different rituals under which the gods were officially venerated may be distinguished. At Rome the State protected the cults of the gods. The title of 

ius sacrum all the principles and practices of Roman religion, just as the secular law was comprised under the 

ius publicum. The severance of the two systems was not completed until a comparatively late date. Survivals in late Rome indicate that in early days a kind of religious sanctity attached to the formule of the civil law, and the great ex-

ponents of the two systems were often the same.

The pontifices maximi were in primitive times generally distinguished lawyers also. And Roman religion was at all times under the final control of secular authorities, the magistrates and the Senate. When a colony was founded, the fundamental charter always required the first magistrates to consult their Senate, as to the divinities whom the colonists were to serve, and the modes of their service. These divinities were naturally, as a rule, taken from the Roman pantheon, because, according to a common saying, a Roman colony was ‘quasi effigies paras simulacrumque populi Romanus;’ but, like the parent city, the new community had full autonomy in the arrangement of its public worship.

Whenever the State undertook a new duty to-

wards the divine power, it was expressed in the

form first of a 

votum. The pontifices maximi, who constituted the validity of the 

votum of the magistrate were well understood; but in important cases the magistrate would be careful to obtain a public record of the binding with which they were recorded in cases in which a question was raised whether the 

votum was binding on the community they are few in number. The contents of the 

votum might be of many descriptions, as its objects might vary from the perfectly general 

votum pro rei publicae salute which the principal magis-

trates pronounced each New Year’s Day to some specific thing. Sometimes the 

votum pro salute mentioned a particular number of years; the 

decennalia vota of the emperors asked for the safety of the empire during a period of ten years. There were also quindecennalia and vicennalia. The fulfillment of the 

votum was carried out by the secular magistrates, though the precise forms which had to be employed (concerning which usage was extremely conservative) were prescribed and supervised by the experts in the 

ius sacrum, the pontifices.

The fulfillment of the 

votum would generally issue in the dedication to sacred uses of some material thing—often a templum. This thing became technically 

rex sacra, and was protected against secular encroachments by the 

ius sacrum. On the whole, the Roman government watched rather

jealously the transference of rights in property from the secular to the sacred sphere, but when the transference was accomplished, it was rigidly maintained by law.

In the case of the 

votum the community, through its magistrates, approaches the divinity and practically enters into a legal compact with the god. Not only the community, but the god also is bound, and the procedure had a distinctly legal aspect.

There were other ways in which the community might be bound. Certain occurrences showed that in some way the gods were offended, and it was the duty of the public officers to find a way of averting the divine wrath. Thus 

prodigia, por-
tents which seemed to interrupt the order of nature, called for 

piacula, offerings or services intended to secure appeasement of the offended deity.

Thus Livy says: '1 C. Servilius pontifex maximus piacula irae Deum conquirere iussus.' In times of stress and public peril, 

prodigia (or ostenta) would be reported to the public authorities, and recognized (procurate). As example which we may take, the veteres (which may be rendered 'loci ma-

locu' or 'in loco peregrino' were not admitted. The 

harmapogos had a great part in these expia-

tions.

It was also occasionally, apart from such special indications, the community would continually contract pollution from the imperfect or erroneous performance of religious duties, so that provision was made for a general clearance of offences at regular intervals. The 

lustrum (literally 'washing') with which the proceedings of the census concluded was a clearance of this kind. The annual perambulation of the city (amburbiuam) was another. An ancient body of priests, the 

Fretres Arnules, annually performed a 

septenarius lustratio at Rome. Similar, though not regular, was the 

lustratio of the army, when it was overcome by some superstitious dread. Seipio had to pause before crossing into Asia, in order to free his force from the sense of pollution. Similar was in part the purpose of the 

supplicatio which after a victory was held in honour of the whole body of divinities, in order to get rid of the taint of blood-shedding. The procession took place round all shrines ('circum

omnia pulvinaria') and provided the population with an enjoyable holiday. The ancient temple was not freely open to be seen; there were no recurring services such as those of Rome. In most instances there was but one festival in a year at a temple. Therefore, as many contained wonderful monuments and precious treasures dedicated by Roman heroes of former times, there was great encouragement to survey them. The 

supplicatio took place in early times on one day only. Later, generals pressed to have the importance of a victory emphasized by repeating the 

supplicatio on succeeding days, and in the age of Caesar the number of days might extend to forty or fifty. The triumphal procession also doubtless belonged to the same class. Both it and the 

supplicatio were probably of Hellenic origin. Similar was the procession of twenty-seven virgins, round the city, singing a sacred hymn, which was sometimes ordained. All 

ludi were in one aspect religious performances offered to some divinity. The 

gladiatorial ludi came from Etruria, and were intended to appease the partly divine spirits of the dead, which were reinvigorated by the blood which was shed. Even at the end of the Republic, these 

ludi were always, as a matter of course, held to be held in honour of some deceased person con-

1 Livy, xvi. xii. 9.

2 Livy, xvi. xxiii. 7.

3 Tull. viii. 23, 25.
connected with the exhibitor. It is in communion with the **ludi** in general that we hear most of the practice called **instauratio**, the repetition of a ceremony because of the discovery of some flaw which vitiated it. In the beginning of the Lateran Republic, when men ambitious to obtain high office paved their way to it by vast expenditure on **ludi**, these flaws were artificially created in order to justify additional lavishness.

Rules relating to sacrifice were elaborate. Particular deities called for particular offerings, and the accompaniments of sacrifice were very various. Thus the domestic divinity of the underworld and the upper world was in this respect specially important. Thus to Varro is attributed the view that **altaria** were appropriate to the **di** **superi**, **ara** to the **di terrae**, and **foei** to the **di inferi**.1

Public and private cults to some extent were parallel. For example, the worship of **Vesta** was as important for the family circle as for the State, which, like the family, had its own **fames** and **patres**. Many cults were indeed adopted from patrician families by the community. Rites in honor of the dead were extensively rendered by public means by the **lares** and **penates** of the community. Almost every regularly constituted group within the State had its own special cults. Thus every ** collegium**, whatever might be the principal bond of union between its members, had its own special form of worship. Some groups within the city of Rome, which had survived from very primitive times, such as those called **pagani** and **montani**, maintained down to a late date their special religious usages. The **sarcra** attached to families occupied an important place in the **ius sacrarum**, the policy of the religious lawyers having been to prevent, so far as possible, the extinction of these **sacra** by the dying out of the families. To the **gens** as well as to the **familia** also appertained its own **sacra**.2

Among important public ceremonies to which reference has not been made above may be mentioned the **laticlavium**, certainly borrowed from the Greeks, and the **ludi sacrae**, which originated from the **ludi terentiani**, a ceremony connected with departed spirits, celebrated at an altar of **Dis pater**. These **ludi** and the **ludi successales** which succeeded them were supposed to occur at the end of a **secularium**, which was first assumed to comprise a hundred years, but in later times the period was fixed at thirty years. The ceremonial is best known from the records of the celebration ordered by Augustus in 17 B.C., for which Horace wrote his **Carmen Seculare**. This series of celebrations went on until A.D. 214, and another series, theoretically to celebrate the end of each century from the foundation of Rome, ran parallel with it.

The observances due annually to the gods were prescribed at settled dates on the calendar, published yearly under the supervision of the college of **pontifices**.

### 6. Ritual proper to groups—Among celebrations (feriae) connected with groups of men may be noted the **Quinquatrus**, observed by the **arbitii** in honor of their patron divinity **Minerva**, and the **Quinquatrus minuciae**, held by the flute-players (**tibiae**). There were many similar festivals. One was carried out by the **mercatores**, on the foundation-day of the temple of **Mercurius** by the **Circus**, another by the workmen where trade depended on the use of water (**opuscura**). The date of this was 11th Jan., a day sacred to **Inturna**, a goddess of springs and fountains, fabled by **Virgil** to have been sister of **Turnus**, king of the **Rutuli**. Not all persons were qualified to be present at all services; some women were excluded, and men from others.

### 7. Religious officers—Along with the **pontifices**, as the augurs and the **lares** of the Sibylline oracles (**Quindecimviri sacris facundii**) were the great priestly colleges; membership of these was a great object of ambition to men engaged in public life. The **lares** had not the same distinction; they did not really constitute a college, like the other bodies. Until a late date they were **Etruscan**, summoned by the Senate from time to time as occasion required, to expound on the Etruscan lore of means of expiation, chiefly for the evil sign of the thunderbolt. Later, **haruspices** trained in Etruria were settled in Rome and employed publicly and privately.

### 8. Minor collegia—Real standing collegia of minor importance, but great antiquity, were those of the **fetiales**, the **Sali**, the **Luperci**. In order to assure itself that a war was correct in the eyes of heaven, the early State employed the **fetiales** to make a demand on the opposing power, according to a certain fixed form, and if the demand was not conceded, instructed the same priests to present a suit to the court of the opposing power that peace had been replaced by war. On the conclusion of the war, the same **fetiales** supervised ceremonially the conclusion of a treaty (**fudus**). No compact was a **fudus** unless its conclusion had been so carried out by the **fetiales**. The **ius fetiale** has often erroneously been regarded as a sort of international law. But the **fetiales** were not concerned with policy, or with questions of right and wrong. A **suum piusque bellum** was not one which was morally correct, but one which was ceremonially flawless, having been opened with some forms on which the gods had looked with favour from immemorial time. The **Sali** were priests who specially served Mars. Priests bearing that name existed in a number of ancient Italian cities besides Rome. At Rome itself these priests were, even in late time, patricians. There were really two **collegia** which bore the name, one with a sanctuary on the Palatine hill, the other on the **Quirinal**. Each of the colleges must have originally represented a separate independent community, and both survived after the two had coalesced. The ceremonies, supposed to have been instituted by King **Numa**, were of the most archaic description. They were sung by the **lares** as war-god, and danced in armour, in procession round the city, twice in the year, in March and October. They bore lances and the sacred **aneida** (shields), preserved in shrines, from which they were taken on these occasions with great solemnity. The purification of the holy weapons (**armilatrum**) was performed with minute ceremony. **Virgil** speaks with reverence of the ceremonial, but **Seneca** allows himself to deal lightly with the **sacra salitrae**. The **Luperci** also had two distinct forms, like the **Sali**. One was connected with the **Palatine** hill, the other with the **Quirinal**. As in many other instances, it is clear that the State at an early time took the services out of the hands of particular families, for the two bore the names respectively of **Luperci Quinctiales** (from the **Quinctii**) and **Luperci Fabiani** (from the **Fabii**). In 44 B.C. **Ciceron** memory was honoured by the creation of a third **collegium**, the **Luperci Iulii**, but its duration was brief. The ritual of the **Luperci** (evidently connected with a primitive pastoral cult) was directed to purification and reconciliation with the divinity honoured (**Pannus** or Silvanus). The **Luperci** ran round the foot of the **Palatine** hill, on

4 **Ep. xvi. 4.**
the north-west side of which lay the sacred cave called Lupercal. The priests sacrificed goats, and ran their ceremonial course with the skins of the sacrificed animals round their hips, their bodies being gashed with thongs as they bounded in their hands, made of strips of goatskin; with these they struck women who ran in their way, desirous to escape from the reproof of barrenness. The thongs bore the name of fulerus, a word connected (as in the name mensa Fuleronia) with purificatory ritual. It is no wonder that, as Plutarch says, the Luperci themselves were constrained to laugh at portions of the ceremony.1 The Lupercalia continued to be performed down to A.D. 494, when Pope Gelasius I. appointed the day for the ritual of the Purification of the Virgin. The worship of Fauns, the deity with whom the festival was concerned, was a cult almost peculiar to Rome and the country immediately round it.

Although the Fratres Arvaliae are only once mentioned in extant Latin literature4 they are well known to us from inscriptions discovered on the site of the shrine of the brotherhood, a few miles from Rome on the right bank of the Tiber, in the direction of its mouth. The first discovery was made in 1570; in fragments which had been removed from the site came to light, and then in the years 1867–71 excavations on the site greatly increased the number of fragments. The whole were carefully studied by a succession of scholars, especially by W. Henzen, who published the whole with a commentary (Rome, 1868, and Berlin, 1874); also (without commentary) in CIL vi. (1876). The inscriptions proved to be an important source for the earlier imperial history. They embody minutes of proceedings of the brotherhood from A.D. 14, when it was refounded by Augustus, to A.D. 238. The fact of the connexion of Augustus with the shrine seems to have given the brotherhood a special interest in events and anniversaries connected with the emperors and their families; on the suitable days offerings were made and recorded in the minutes. The inscriptions have preserved (in an entry relating to A.D. 218) a bynum in Saturnian metre which is the most ancient monument of the Latin language.5

One college of importance, that of the Vestal Virgins, was composed of women. The early Romans were conscious of a parallelism between the religion of the family, whose centre was the family hearth, and that of the great State family, for which the hearth itself was the temple of Vesta. There, as in the separate families, the unmarried daughters had a great share in the family cults. The rex sacrorum stood in the same relation to the Vestals as the paterfamilias held with the munificence of his family; and this rex succeeded to some of the duties which had belonged to the old reges before the institution of the Republic. Other brotherhoods subsisted, some from primitive days, like the sodales Titii, who traced their origin to King Titus Tatius, and were supposed to maintain a ritual borrowed from the old Sabines.4 Others were of later creation, such as the sodales teutonici, dedicated, according to the inscriptions, to the divi imperatores, the divini emperors. The brotherhood consisted of twenty-one ordinary members, chosen (Tacitus says) from the very highest rank of the family of the rex sacrorum. The first of these representatives were Tiberius, Germanicus, Drusus, and Claudius. Similar brotherhoods were established in honour of later emperors, Claudius, Vespasian, Titus, Hadrian, Antoninus Pius, and others; but these never attained to the same importance.

Many separate priesthoods, to which the name flamen was attached, also existed; some, like the flamen of Jupiter (flamus Divi), of Mars (Martialis), Quirinus (Quirinalis), from time immemorial, others of later creation and less consequence. The three just mentioned were flamines par excellence, sometimes called maiores in contrast to all others. The flamines maiores were attached to the service of a great many divinities, and in later time were all of plebeian quality. The real ancient offices were concerned with ritual of a remarkably archaic type. The rigorous restrictions under which the flamen Dialis lived are well known. He and his wife (the flaminices) must be married by the very ancient form of consacratio. If the flaminicus died, the flamen ipso facto lost his office; he could originally undertake no civil duties, though he wore the distinctive robe of civil office, the toga praetexta, and sat on the chair of office (the silla curulis); could look on no military array; could not absent himself from his house (the regia, attached to the temple of Vesta) without leave from the pontifex maximus. He was hemmed in by many minute rules of the nature of "tabou"; for example, it was not permissible for him to have a knot anywhere in his clothing. The office of flamen, generally speaking, involved personal participation in certain definite sacrifices.

Literature.—The course run by Roman religion during the time of the empire is brilliantly sketched by G. Boissier, Religion romaine d'Auguste aux Antonins, Paris, 1892, and La Fin du paganisme, do. 1894. For all the subjects mentioned in this article, the best work in English is W. Warde Fowler, Roman Religion, London, 1894. In German the most useful are J. Marquardt, Römische Staatsverwaltung, vol. v. "Das Sacralwesen," Leipzig, 1876, and G. Wissowa, Religion und Kultus der Römer, Munich, 1902 (vol. v. pt. 4 of Handbuch der klassischen Altertumswissenschaft, by W. Müller). Many valuable articles on separate topics are in Pauly-Wissowa, and also in Roscher. J. S. Reid.

WYCLIF. — I. LIFE. — 1. Early years and parentage.—John Wyclif, or Wylye, drew his origin from the village of that name in Yorkshire on the right bank of the Tees. The name of this village, the first syllable of which is wy, water, determines the spelling; the German form ‘Wicli’ should be avoided. The name of Wyllif was in the honour of Richmondshire, and the Wylyf family were under tenants of the Earl of Richmond. We first hear of the Wylyf family in 1253, when a certain Robert de Wylyf was granted a messuage in the manor; in 1263 he obtained the advowson of the church, and in 1275 held of the mesne lord, William de Kirkton, twelve carucates of land in Wylyf, Girtlington, and half of Thorpe. In 1316 a Robert de Wylyf was lord of the manor; he was son or nephew of a Robert married in 1319 Katherine, the Reformer’s mother. At that time Roger’s father or uncle, Robert, the lord of the manor, was still alive, and this may account for the uncertainty as to the birthplace of their descendants.

son. According to Leland, he was born at 'Ipreswell, a poor village, a good mile from Richmond.' But Hipswell is at a considerable distance from Wycliffe's parsonage at Langham, nor is it likely that the Wyballs owned land there. On his marriage Roger Wycliffe would be assigned one of the smaller houses on the estate, possibly Thorpe, close to Wylliffe, for which he paid the relief in 1319 of 25s. 4d. for three carucates of land that he held. At what date Robert Wycliffe died is unknown, but the Reformer's father Roger paid the subsidy for the whole estate in 1332-33 and was still alive in 1332, the year of his death is also unknown, except that it was before 1362, for unfortunately the black letter inscription in the church at Wylliffe over the tomb of Roger and Katherine gives no date.

The date of birth of the son of Roger and Katherine is unknown. He is usually assumed to have been the eldest son, born shortly after the marriage. But it is probable that there was an elder brother William, who was admitted to the college at which John Wycliffe took his doctorate, in or about 1372, points to a later date of birth, nearer 1330 than 1320. Before 1362 Wycliffe's father Roger died, and the Reformer became the lord of the manor. His mother was still alive in Oct. 1369, when John associated her with himself in a presentation to the living.

The only other connexion of Wycliffe estates and his nomination on 17th May 1367 on a commission issued to seven Yorkshire gentlemen to see to the keeping of the statute recently passed prohibiting the taking of salmon in certain seasons in the Tees and other rivers. After Wycliffe's death the estate passed to a Robert Wycliffe, probably his brother, an energetic ecclesiastic who from 1390 to 1465 acted as chancellor to Walter Skirlaw, bishop of Durham. As such he took a prominent part in the trial at Bishop Auckland of the famous Lollard, Richard Wych. In 1412 Robert settled the estates on a John de Ellerton, who assumed the name of Wyclif and from whom the later lords of the manor were descended. They were noted for their intense fidelity to Rome after the Reformation.

2. Early Oxford career.—At what date Wycliffe went to Oxford is unknown. If he was born in 1330, it would be in or about 1345. Three colleges claim him. The claim of Queen's 12 may be dismissed as due to a confusion with a John Wylliffe, probably a pupil of his, and a grammarian in the grammarian's school for whom in 1371 we find the college buying Latin grammars, etc. 14 The claim of Merton rests upon a catalogue of Fellows made in 1335 by Thomas Robert, still in the possession of Merton. 15 This John Wyclif, a steward or seneschal, 16 may be John Whitfield of Mayfield († Nov. 1383). 17 Possibly John Wyclif was the rare exception, a northerner in a southern college, and a recent writer claims that he had been "worked up by the northern university" 18 and was thus the seneschal of the week expelled in 1356, as the result of a college struggle.

Wyclif's connexion with Balliol is certain. That he was Master of Balliol in the spring of 1360 (and therefore in 1363), as appears from a document citing his taking possession as such of a property in Gresham St. E. 19 His predecessor Robert Derby 20 still acted in 1358. This gives the only possible date of Wylliffe's mastership. On 9th April 1361 Wycliffe was still Master and took possession for the college of the living of Abbotseley. 21 But on 14th May 1361 he was instituted to the college living of Fillingham, near Lincoln, value 'thirty marks,' and by the then statutes was forced to resign his Mastership. Some delay, however, occurred, for in the following July he still signed himself 'Master' in a legal document connected with the transfer to the college of Abbotseley. 22 The restriction of the fellowships at Balliol founded in 1340 by Sir Philip Somervile for those proceeding to a degree in clerical theology to six in all will account for Wyclif leaving.

After his presentation to Fillingham Wylliffe vanishes for a while from clear vision. But on 29th August 1367 John Wyclif, son of John Wyclif of Lincoln, a licenc for non-residence at Fillingham 'that he might devote himself to the study of letters in the university.' 23 In consequence he paid a short visit to Oxford in Oct. 1369, living in rooms in Queen's, and a longer visit between 21st March 1365 and 26th Sept. 1366, paying 40s. 'for the rent of his room for two years.' 24 Meanwhile on 24th Nov. 1362 the University in presenting its annual 'roll of Masters' had petitioned Urban v. to provide Wylliffe with 'a canony and prebend in York, notwithstanding that he holds the church of Fillingham.' Urban granted instead the prebend of Ayst in the ancient collegiate church of Westbury-on-Trim, near Bristol, worth £ 6. 13s. 4d. p.a. 25 Wyclife accepted the prebend 26 but did not reside. He was, as we have seen, reading for his doctorate at Oxford. In the spring of 1369 William Witlessle, bishop of Worcester, 27 visited Westbury. He found that all the five canons were non-resident, and that only one had provided a vicar to discharge the duties of the prebend. (The bishop spells the name) is expressly mentioned among the delequents; and on 28th June 1360 Wycliffe was cited to appear before the bishop on 18th July. Meanwhile his 'fruits' were sequestrated. Of any further action by Witlessle there is no record. Wycliffe continued to hold the prebend to the day of his death, 28
but of any discharge of duty there is no evidence.

One other matter in connexion with Austin should be mentioned. By the constitution Horribilis of Urban VIII, 10 March 1355, all of the monks in the college were disfranchised, and their title to the income was demoted to that of appanage. In 1361 Wyclif intended it to be a joint college of eight seculars and of four regulars from Christ Church, Canterbury. The college was started on 13th March 1365, Islip selecting as head Henry Wodehull, a monk of Abingdon. On 9th Dec. 1365 Islip dismissed Wodehull and substituted 'John de Wylye.' The regulars were driven out and three seculars from Merton introduced. Not content with this, Islip furthermore changed the statutes and altered the whole character of the college. While accepting the position, Wyclif did not choose to give up the rooms at Queen's, and his tenure of the office was brief. On 10 May 1367, he was dismissed from his three secular colleges. Wyclif thereupon appealed to Urban V., but meanwhile for two years, if his opponents may be trusted, still lived on at Canterbury, spending from the college goods. Wyclif's executor, Richard Benger, one of his associates at Canterbury, failed to put in an appearance when summoned at Viterbo, and on 23rd July 1369 Cardinal Andronio da La Roche, to whom Urban had referred the case, gave his decision at Monte Fiascone, though, owing to his death, it was not published until 15th May 1370. The action of Langham was upheld in every detail and Wyclif's appeal dismissed. The costs, however, were thrown upon the estate. There is no doubt that this decision was right. Islip had acted illegally in altering the trusts, upon which the royal licence in mortuam had been secured, and for the condonation of this offence the monks of Canterbury were ordered on 28th April 1372 to pay a fine of 300 marks. Urban evidently had some sympathy for Wyclif, for in 1369 he reserved for him a prebend in Lincoln, which, however, belief that the prebend was vacant (see H. J. Wilkins, Was John Wyclif a Negligent Pluralist?, i, 1916, p. 37; Cal. Pat. Rolls Ed. III., xvi. 161, 190).

5 Cal. Pat. Rolls Ed. III., xii. 130.

6 The identification of the warden of Canterbury with the Reformer in the diocese of Canterbury has been a matter of much controversy. It was accepted by N. Harpsfield in his Historia Wycliffiana, printed in his Historia Anglicana extensa, London, 1622, p. 668; and by A. Wood, Lewis, Vaughan, Lechler, Poole (Med. Thoresby), the Ambrose, and others. These arguments in defence are by Canon Wilkinson in Church Quaterly Rev. x. (1897-98), 119-121; and Cronin, pp. 55-70. The main documents have been collected and transcribed in the Calendar of State Papers, Domestic, 1357, ii. App. 292 ff. (hereafter cited as C.S.P.D., App. xxvi.) Doubts were expressed in the same year by Wyclif himself (see C.S.P.D., App. xxvi. 154, 155, followed by Shirley, P.Z., 515-528; H. Rasindall (DNB xiii. 351), Universitatis Europae in the Middle Age, London, 1895, ii. 439; 3rd May 1355, a return was demanded from the universities, 1370, ii. App. 292 ff. (hereafter cited as C.S.P.D., App. xxvi.) Doubts were expressed in the same year by Wyclif himself (see C.S.P.D., App. xxvi. 154, 155, followed by Shirley, P.Z., 515-528; H. Rasindall (DNB xiii. 351), Universitatis Europae in the Middle Age, London, 1895, i. 314). This identification should be rejected, for the scanty arguments in his favour cannot outweigh the evidence of contemporaries—e.g., William Woodford in his Stephanus Gregorii, pp. 108, 110-111, and the Chronicle Angliae (Rolls Ser., 1874), p. 115. The present writer is of the opinion that Wyclif as archdeacon of Poole (see E. E. Rice, Archdeaconry of Poole, ed. F. L. Biancotti, Venice, 1757, 1765, 463. In his De Ecclesia, p. 371, Wyclif makes a singularly impassioned reference to the matter.

Wyclif never obtained or, if he obtained it, soon resigned.

While the controversy over Canterbury College was still unsettled, Wyclif's licence for five years for absence from his cure was renewed on 12th April 1368 he obtained an extension 'for two years.' In the following autumn he exchanged Fillingham for Ludgershall in Buckinghamshire, where he was in residence on 12th March 1369 on account of his nearness to Oxford would compensate for loss of income (10 marks instead of 30). In Nov. 1371 Wyclif was one of the executors of the will of William de Asby, archdeacon of Northampton, who in 1369 had been appointed chancellor of the exchequer. Towards the close of 1372 Wyclif completed the long course of nine years and a term after Mastership necessary for taking his doctorate and shortly afterwards entered the king's service.

3. In the king's service.—We date Wyclif's entrance into the civil service as about 1372. Possibly it may have been a little earlier, for Wyclif gives us a report of a speech which he himself 'heard' in the parliament which met in Westminster on 24th Feb. 1371. At once he seems to have allied himself with John of Gaunt and his faction, altogether unconscious of the unscrupulous ambition and the spiritual panic which later produced the great adhesion to the House of Lancaster in politics. But Wyclif's first appearance as a publicist was as the representative of the nation in resistance to papal exactions. On 6th June 1357 the lords of the manor of Urban V. had granted to John Wyclif the right on the occasion of John's annual tribute of 1000 marks together with arrears since the last payment made on 7th July 1353. Edward laid the matter before the parliament of May 1374. Until recently it was believed that 'this solemn declaration set the question at rest for ever,' and the older historians have all dated Wyclif's public life from 1356. But there is evidence that the question of tribute was reopened by Gregory XI. in 1374, and it is in connexion with this later event that we would date Wyclif's first political tract. To consider this and other demands of Gregory a council was held at Westminster on 21st May 1374, at which a prominent part in defence of papal claims was taken by a monk, John Ughtred of Boldon, assisted later by William Binham, a monk of St. Albans. The debate and consequent controversy is not treated in the publication by Wyclif.
though possibly not until two years later, of his Determinatio controversiae monachum (i.e. Bingham). Special reference is made in the tract to the question of ‘lordship’. Wyclif replies to Bingham by giving the answer ‘which I heard recently was given by secular lords in a secular council’, and reports seven so-called speeches. On analysis the speeches fall into various ‘conclusions’ of Wyclif condemned by Gregory XI. in 1377, while the sixth lord gives us a brief outline of Wyclif’s views of ‘lordship’. To suppose that we can find in even the earliest instalment of a report of a parliamentary debate 1 is absurd. They are all reflections of Wyclif’s own views, written, probably, eighteen months after the council.

Wyclif’s services had already been rewarded by his presentation by the Crown to the rectory of Lutterworth (7th April 1374). On 29th July 1374 he was appointed a member of a small commission, with John Gilbert, bishop of Bangor, as the head, to meet at Bruges a commission from Gregory. For his travelling expenses Wyclif received 42s. 3d., and for his other expenses 20s. a day. On the day before his departure Wyclif took some legal steps in behalf of his former prosecutor Richard Bergen. Along with Ralph Strode, the Common Sergeant of London, he went bail for him that Bergen would not at Avignon attempt to obtain any papal provisions, etc. 2

Wyclif was received at Bruges effecting nothing, and by the middle of September Wyclif was back in Oxford, living in rooms at Queen’s, which needed much repair, in that month. In Aug. 1375 another deputation was appointed to go to Bruges to confer with Gregory’s nuncio. In this deputation, though most of his former associates were retained, Wyclif was left out. 3 This omission (usually overlooked by historians, who have in consequence exaggerated his influence at Bruges) probably shows that he was too unbending for Edward’s purpose. As a result on 1st Sept. 1375 a concordat between Gregory and Edward was struck. 4 Wyclif had thus no complicity in a great shame, in its main provisions a victory for the papacy.

As a result of the conference several of the actions of Wyclif’s opponents were, after years, Wyclif’s enemies invented the story that he expected to obtain the bishopric of Worcester. 5 The story is worthless. Months before Wyclif sailed to Bruges he had learned to the vacant see by Edward III. 6 That Wyclif, however, expected to receive the prebend of Caistor in Lincoln has more basis. 7 Wyclif returned from Bruges a disillusioned man. He formed the idea of writing a Summa of his doctrines, the introduction to which should deal with the philosophical positions which would underlay the recent dispute. For the two years, Sept. 1374–Sept. 1376, he probably resided at Lutterworth, but with frequent visits to Oxford (Queen’s). During those two years he developed his theory of ‘lordship’, expanding his tracts against Ughtred and Bingham into the two great political tracts that are among his greatest, the De Civili Dominio. He was probably engaged upon these writings during the meeting of the ‘Good Parliament’ (25th April 1376–6th July 1376). It is not very difficult to imagine Wyclif in the days of 1376. John of Gaunt packed a parliament, which met on 27th Jan. 1377, with his followers, who at once proceeded to annul all the acts of the ‘Good Parliament’. He summoned the church to church’ in London, denounced the episcopate, who under the lead of Courtenay and Wykeham were the duke’s chief opponents, 9 Wyclif’s protest against the wealth, luxury, and worldliness of the clergy fell on willing ears; but nevertheless he unconsciously played the duke’s reactionary game. The parliament of Jan. 1377, with its iniquitous poll-tax, 10 its restoration of Alice Perrers, and the aggrandisement of the duke by the creation of Lancashire into a county palatine, 11 is one of the worst on record.

The bishops, powerless in parliament, struck at the duke through Wyclif, and summoned him to appear before Convocation in St. Paul’s on Thursday, 18th Feb. 1377. 12 The duke took up the challenge and, together with Earl Percy, the king’s marshal, accompanied Wyclif to the trial. The proceedings ended in a riot. Wyclif was carried off by his supporters, while the London mob, on the following day, burned the duke’s palace of Savoy.

Meanwhile some of Wyclif’s old opponents at Oxford had accused him at the papal court. On 22nd May 1377 13 in S. Maria Maggiore in Rome Gregory issued a series of bulls directed against the Reformer. 14 With these bulls Gregory forwarded a schedule of nineteen erroneous propositions and conclusions, culled from Wyclif’s political and politico-ecclesiastical writings. These Gregory identified with the ‘opinions and ignorant doctrine of Marsiglio of Padua and John of Jandun’ condemned by John XXII. 15 An examination of the pope’s schedule shows that the theses concern the status or polity rather than the doctrines of the Church.

Before Edward could receive the bulls, he had passed away at Sheen (21st June 1377). His death caused delay, and the bulls were kept back until the 31st Dec. 1377. This was the end of the ‘Good Parliament’. This parliament was in no mood to truckle to Rome. By a writ dated 12th Dec. 1377 the bishops were ordered to make a return of all aliens, including cardinals, who held benefices. To stop the drain the Council asked Wyclif for his advice ‘whether the kingdom of England may lawfully keep back the treasure of the kingdom,’ Wyclif replied in a state-paper, 16 in which he advocated not only the stopping of all the drain to Rome but the ‘prudent distribution to the glory

4 Not 30th May, as FE, p. xxviii.
5 For their proceedings ended in Waltham, Hist. Ang. i. 345-359; Wilkins, Conc. iii. 116-118, who omits those to Oxford and to Edward III; also, in W. iv. 38-49, 104-105, or Foxe, A.M III ii. 50-
6 From a study of Wyclif’s works the present writer is of opinion that the text of a Latin copy of this treatise is more accurate than the English one. The text itself is based on Wyclif’s Protestatio (see below), or on another work of 1375 or 1376. These two writings are taken almost verbatim from Wyclif’s De Civ. Dom.
8 For this see FE, pp. 256-257; partly translated in Foxe, A.M III ii. 54-55.
of God' of the goods of the Church. At this point 'silence was imposed upon him by the king,' Wylyef had probably been consulted by the Crown before he made his visit to the chapel and published by him on the question of the oath sworn by the papal nuncio, Arnald Garnier, on 13th Feb. 1372 that he would do nothing to the hurt of the kingdom. Wylyef printed the oath and asked whether there was not contradiction to the terms, and the permission to collect monies for Rome. 7

No steps had yet been taken to publish the bulls, though Thomas Bruton, bishop of Rochester, 8 told Wylyef in the hearing of many members of the parliament that he had been condemned. 4 About this time Wylyef entered into controversy with a 'notley doctor' of Oxford, probably his accuser at Rome. This tract is remarkably bold in tone. Wylyef calls upon 'the soldiers of Christ, especially the professors of evangelical poverty,' to rouse themselves against the claims of the papacy. On 28th Nov. parliament was dismissed, 5 and probably Wyclif himself in Nov. Dec. a mandate was issued to the chancellor of Oxford enclosing one of Gregory's bulls. The mandate ordered the chancellor to ascertain whether Wylyef had published the bull, and to cite him to appear within thirty days at St. Paul's. 6 As the pope's bull demanded that Wylyef should be arrested, the Oxford authorities were in a dilemma, for to obey 'would seem to give the pope lordship and regal authority in England.' So the vice-chancellor contented himself with ordering Wylyef 'to stay in Blackhall and not to go out.' Wylyef's theses were sent to the masters regent in Oxford, who 'all handed to the chancellor their conclusions.' They 'declared publicly in the schools that Wylyef's theses were true, though they sounded badly to the ear.' Wylyef replied that Catholic truth should not be condemned because of its sound. 8 A few months later, on the occasion of a student-row, the vice-chancellor, who was a monk, was thrown into prison on the pretext that he had imprisoned John Wylyef at the command of the pope. 9 About this time Wylyef published an edition of his Procatostio in a shortened, popular form. 10 The tract is really an appeal to the educated public against the pope's decisions. He also published an appeal to the nobility, in defence of disendowment, entitled Speculum Seculariter Dominorum. 12

The imprisonment of the Crown by the vice-chancellor of Oxford seems to have been intended as a test to ascertain whether the Crown would not recognize papal juridical jurisdiction. About the same time Wylyef appeared at Lambeth. The date is fixed by a statement of Walsingham 14 that it was shortly before the death of Gregory XI., i.e. before 27th March 1378, probably at the end of February, which would fit in with the summons given to Wylyef at Oxford to appear at St. Paul's. The queen-mother, Joan of Kent, sent a message to the bishops ordering them to abstain from pronouncing any final judgment. But the trial proceeded, and Wylyef put in a paper

that he called a Procatostio in which he expanded more fully the meaning of his theses. At the same time the citizens broke into the archbishop's chapel and became seized with understanding, and the bishops contented themselves with prohibiting Wylyef 'from canvassing such theses in schools or sermons because of the scandal thereby given to the laity.' Wylyef replied by publishing Conclusiones Triginta tres de Procatostio etehris, dealing with his idea of poverty and disendowment. 15

In the autumn of 1378 Wylyef was seen, for the last time, in alliance with the Crown. On 11th Aug. 1378 by the order of the Government the sanctuary of Westminster was violated in order to capture two English knights between whom and the Government there had been a struggle over a Spanish captive, the count of Denia, and his ransom. One knight, Shakhyl, was arrested—he had been enticed outside; the other, Haulay, was chased twice round the chancell and killed beside St. Edward's shrine. Excommunications followed; and, as the courts were beyond the jurisdiction of the hated John of Gaunt, London seethed with excitement. On 20th Oct. 1378 parliament met at Gloucester, and Archbishop Sudbury at once called in Wylyef to repeat the sanction and claim the right of arrest. The privilege of the Church was not denied, but the matter, it was pleaded, was one of debt, for which there were no rights of sanctuary. 'And on this there came into parliament doctors of theology and civil law who made argument against the prelates by many colourable and strong reasons.' Among the doctors was John Wylyef, who interrupted the proceedings by writing of his de Ecclesia to lay before parliament a defence of the Crown's action. 5 He claimed for the Crown a right to absolute obedience in all matters not contrary to God's law and, while admitting sanctuary for accidental homicide, subjects of the papacy in general and of Westminster Abbey in particular to severe criticism. Shortly after this incident Wylyef finished his great treatise de Ecclesia. This was followed by a companion work, de Officio Regii, the two forming a complete exposition of his views on the relations of Church and State.

4. Break with the Medieval Church—The Great Schism in the autumn of 1378 flung Wylyef into complete antagonism to the papacy. Hitherto Wylyef had not disputed the spiritual primacy of the popes, though ready enough to attack papal pretensions and to speak of individual popes. 9 His position had been that the pope was the vicar of Christ, but the vicar of Christ, who could have no temporal sovereignty, must be the holiest, the most God-enlightened man in Christendom. Moreover, 'no pope is to be believed unless he is teaching by the inspiration of God, or founding his utterances on Scripture.' 17 The whole authority of the office was thus determined by the pope's character as one of the elect, and, inasmuch as this knowledge was beyond human ken, could only be judged from his deeds. Obedience to the papacy was thus a matter of convenience and church order—a position in which Wylyef unhesitatingly closely followed Marsiglio in his Difensor Pacis.

The schism drew Wylyef from this standpoint. He had hailed the election of Urban VI. (8th April

Wyclif was followed at Oxford by a series of determinations against him, three of which have come down to us.1

After the publication of his Confutatio Wyclif left Oxford for ever, and retired to Lutterworth. To those last months at Oxford must be assigned the familiar tale of his illness and of his declaration to certain friars who came to counsel him: 'I shall not die, but I shall live and declare the works of the Lord.'2 To this period also we assign the commencement by Wyclif of his crusade, his attacks on the translation of the Bible, and the full organization of his Poor Priests, who, however, had already been at work for some years.3 The Poor Priests were not laymen, as is so often assumed, but 'unauthorised preachers,' i.e., without a bishop's licence, who moved from place to place, carrying Wyclif's tracts and sermons with them. Claud in russet robes of undressed wool, without sandals, purse, or scrip, for a few years they became a power in the land until crushed out by the legislation of Archbishop Arundel and Henry V.

Meanwhile at Oxford on 30th May 1381 Berton was turned out of the chancellorship, and Robert Rigg took his place. Rigg allowed full liberty to teach the condemned doctrines, and during the winter of 1381-82 feeling ran high. The flames of anti-papalism which were fanned in the Wenlock Register by the summer of 1381. Both parties sought to fasten upon the other the opprobrium of this revolt. The regulars accused Wyclif and brought forward alleged confessions of John Ball.4 Nicholas of Hereford5 and the Lollards retorted by accusing the friars. On 18th Feb. 1382 the friars appealed to John of Gaunt through Stephen Patrington.6 As the duke returned no answer, the friars appealed to Courtenay.7 On 24th March Parliament assembled,8 Wyclif laid before it a memorial. He claimed that England should obey no prelate unless such obeyed agreed with Christ's law, that money should not be sent to Rome until it could be proved from Scripture to be due, that the Common wealth should not be burdened with new tithes until the endowments of the clergy be exhausted, that the king should employ neither 'bishop nor curate' in secular business, that the temporalities of any bishop 'living notoriously in contempt of God' should be confiscated, and that no one should be excommunicated until it is proved that the sentence of excommunication is actually in effect.9

Along with this formal petition Wyclif prepared an English Complaint, which has come down to us in an incomplete form.10 In this Complaint he deals with four only of the seven matters of his petition, but includes the request that 'Christ's (hereafter quoted as SEW), iii. 500, which Knighton, Chron. ii. 167, avers was by Wyclif, put in by him as a disavowal at the Blackfriars Synod (see below).

2. DNB iv. 416.
5. Polens, Works, ii. 574, 593.
7. DNB xii. 73.
8. Jb. i. 311.
9. The data of Wyclif's attack is usually placed later (Matthew, Hist. Reg. v. 299-304, in the summer of 1380, and most writers still), following FZ, p. 104. The date will depend upon that of the Council of Twelve, usually placed (e.g., DNB xiv. 253-329), and the date of the trial (see DNB iv. 411). Berton was chancellor from 1379 to 1381 (Eng. Hist. Reg. v. 329), and the council must have been held within these limits and before the publication of Wyclif's Confutatio. According to a note on the MS of FZ, p. 115, this was published on 10th May 1381.
13. Wilkins, Conc. iii. 171; FZ, p. 114.
teaching concerning the Eucharist, that this sacramental belief is surely based on Christ's body, may be taught only in churches. To these attacks the new archbishop, William Courtenay, replied by summoning a committee to meet with the bishops, sixteen doctors of theology, eleven doctors of laws, seven bishops of theology, and two bishops of laws were selected by Courtenay. Of the sixteen doctors of theology all but one, and he a monk, were friars, several of them noted opponents of Wyclif. Wyclif himself was not summoned to appear, nor was his name mentioned. Twenty-four conclusions from his writings were produced which were deemed 'heretical' or 'erroneous.'

On Wednesday 21st May the Committee met again. Between two and three in the afternoon a terrific earthquake shook the city. Courtenay pointed out that it was the effort of the earth to purge itself, 'though not without violence,' of heresy. Courtenay's happy interpretation saved the Committee, and Wyclif found it necessary to pull an appeal into the Realm of Rome. In an opposite conclusion, 'the earth-din,' he maintained, was the outcry of the world against the heretic prelates and friars. Henceforth Wyclif always called it in contempt the Earthquake of Truth. Wyclif also made it clear that Nutter complained that Wyclif treated the earthquake as a miracle wrought for his benefit.

On the day after the Earthquake Synod Courtenay persuaded Richard to admit into the final statute of parliament a chapter ordering sheriffs, upon certification from the bishops, to arrest and imprison all itinerant preachers. The ordinance had never received the consent of the Commons. This was followed on 20th June by letters patent from Richard directed against the itinerant preachers. When parliament reassembled on 6th Oct., protest was at once made against the pretended statute, but to no avail, for in after years it was treated as still valid. Action more constitutional was taken by Courtenay when on 30th May, a week after the Blackfriars Synod, he forwarded a mandate to the bishops bidding them publish Wyclif's condemnation 'with all possible speed.'

5. Last years.—After the Blackfriars Synod Wyclif took no further public part in controversy at Oxford till the autumn of 1381. His followers, Nicholas of Hereford and Repingdon, were excommunicated, but Wyclif's name was not inserted. Possibly he owed his immunity to John of Gaunt. The idea that Wyclif, when summoned in Nov. 1381 to appear a Synod at Oxford, made a recantation may be dismissed. In the minutes of the Synod there is no such record. The whole story rests upon a blunder of Knighton, who has confused an uncompromising defence by Wyclif of his views with a recantation.

Nothing in fact more emphatically marks the hold that Wyclif still had upon the nation than the reluctance of the prelates to the extreme. Wyclif was left to close his days in peace at Lutterworth. In the autumn of 1382 he was stricken with paralysis 8 and thereafter was largely dependent on his curates, John Horn and Purvey. But his pen was never more prolific than in these latter days. He published polemic after polemic, as well as finishing the Sumana of his doctrines in thirteen volumes. With tireless energy he repeated all his old attacks, dwelling especially on the need of disendowment—this he carried to the extreme of demanding even the confiscation of the revenues of Oxford colleges—holding up to ridicule the misdeeds of the friars and the unapostolic character of the papacy, and defending at length his views of the Eucharist, to the need of which sacrament he attached less importance than formerly. In matters of Church organization he was never more a democratic and destructive. He seems to have been occupied with many works at once, dictating the main lines of thought and leaving to his disciples the necessary copying of his rough manuscript. A method which led to repetition and frequent inconsistency. In two of his Sermons on the same Gospel we have a totally different translation. Several of his works, including the important Trialogus and his Opus Expositum, were still unfinished when the end came.

Wyclif's English writings form one of the special features of these last years. Abandoning Oxford and the appeal to the Schoolmen, he became a popular pamphleteer, trusting to his Poor Preachers to scatter the tracts broadcast. To this period also we must ascribe the publication of his English Sermons. Wyclif's last works are also marked by an extreme lassitude of tone, especially in his attacks against the friars. To this he was aroused by the part they had taken in 1383 in Bishop Despenser's blundering crusade in Flanders, and by their attacks upon his Poor Preachers. Despenser's crusade also completed the break between Wyclif and the papacy. No words became too strong with which to express his detestation of the whole institution. 130th June by letters patent from Richard directed against the itinerant preachers. When parliament reassembled on 6th Oct., protest was at once made against the pretended statute, but to no avail, for in after years it was treated as still valid. Action more constitutional was taken by Courtenay when on 30th May, a week after the Blackfriars Synod, he forwarded a mandate to the bishops bidding them publish Wyclif's condemnation 'with all possible speed.'

There are grounds for believing that the friars in their anger appealed to Rome and that Urban replied by citing Wyclif to appear before his court. All we know, however, is deduction from a reply letter of letters which Wyclif addressed to Urban, in reality a keenly ironical statement of his attitude towards the papacy. He excuses himself from obeying 'this unskilful summoning' because of his physical infirmities, for the 'king of kings has willed it that he should not go.' The reference is to a stroke of paralysis from which he suffered 'for two years before his death.' The account of Wyclif's death has been handed down by John Horn, his curate at Lutterworth after his stroke. In 1441 Horn gave his evidence to Dr. Thomas Gascoigne. He stated on oath that on 25th Dec. 1384 'as Wyclif was hearing mass

in his church at the time of the elevation of the host he fell down, smitten by a severe paralysis occasioned by the act of reading in the stall, after which neither then nor afterwards could he speak to the moment of his death. 1 Three days later, Saturday, 31st Dec. 1384, he passed away. 2

On 4th May he was the Council of Concanse, acting on the request of an English Synod under Arundel held in the early spring of 1414, condemned 260 propositions in Wyclif's writings and ordered his books to be burnt and cast out. In the consecrated ground, provided they could be identified from those of Christians buried near. 3 After some years of delay the decree was carried out by the ex-Lollard Richard Fleming, bishop of Lincoln, acting on the peremptory orders of Martin V. (9th Dec. 1427). 4 On 16th Dec. letters were sent by Martin V. to various mayors to assist. 5 So shortly after 25th March 1428 'his vile corpse they consigned to hell and the river (Swift) absorbed his ashes. 6

II. Teaching and Writing.—I. Philosophical.—Wyclif's philosophical writings were written after his Oxford career ended when he was the 'flower of Oxford' Scholasticism. At a later date they were collected into a Summa. Some of the works have come down to us—e.g., de Composito, his favorite, as notes for lectures, or theological treatises than as mature treatises. All his works abound in quotations, often vague and incautious, from the accepted authorities of his day, including the great Arabians. Judged as a Schoolman, Wyclif belonged to the moderate realists. He had learned much from the criticisms of Ockham, 7 of whom he speaks with respect. But the Platonism to which he leaned he had derived, as Augustine, though in his method he bowed, as did all Schoolmen, to the authority of Aristotle. To Wyclif nominalism in any form was an impossible creed. He held that names stand for realities. He therefore held, as his many writings on the subject show, that the most important question in metaphysics was that of universals. 8 As with all realists, Wyclif was at times in danger of pantheism. When he states that body and soul are united eternally, it is because he considers man as mater prior, 'in consequence created in the beginning of the world,' whose individuality therefore as distinct from the communio of all and in essence both unreal and phenomenal, or at any rate hard to explain. 9

2. Political and Social.—(a) His theory of 'dominion.'—Shortly after his return from Bruges Wyclif commenced the expansion of his Deter-

mination into two large treatises, the de Divino Dominio—work which was intended to serve as an introduction to the Summa—and the de Civili Dominio. In both we note the influence upon Wyclif of Richard Fitzwalter, archbishop of Arnuagh. 10 Wyclif 'has added no essential element

1 Leland, Collect. II. 409. In Lewis, J.P., p. 596, there is a slightly different version from Cotton MSS A. 14, said to be in Gascogne's own handwriting.

2 The date is given in Welbaleham, ii. 116, and in Gascogne, Loçt e libro veritatis (ed. J. F. T. Rogers, Oxford, 1883), p. 116, as also in the official statement in the Latin Register recording his succession, F. de Marnay, on 23th Jan. 1380 (H. J. Wilkins, Chorists in the Ecclesiastical History of Westminster, Oxford, 1900, p. 81).

to the doctrine which he read in the work of his predecessor. 1 Wyclif commences his de Domino Dominio with a discussion of the meaning of the word 'use,' in which he followed, through Fitzwalter, the views of William Ockham, and the Spiritual Franciscans to whom the distinction had been fundamental in their struggle with John XXII. 'Lordsip' is the prerogative of God and is never separated from possession. The possession of the creature is always held subject to due service to the lord in place of it. It is the free gift of God to a steward. Thus Wyclif works out by use of feudal ideas the same belief in the duties of property which modern reformers attempt to reach by other means. From this fundamental position it is an easy transition to the corollary that condition is founded on grace and that mortal sin is a breach of tenure and so 'incurs forfeiture.' 2

Wyclif's doctrine would have led to anarchical consequences, as indeed was pointed out to Hus at Constance, 3 had it not been for Wyclif's careful distinction between 'dominion,' which belongs to the righteous man alone, and power, which the wicked may have by God's permission. From this main thesis 'that every righteous man is lord over the whole sensible world,' it was an easy step to Wyclif's doctrine of communism. 4 But Wyclif, always insistent on the rights of man, attempted to acquire their inalienable rights by force. He had yet to learn, through the Peasants' Revolt, that a smouldering fire and a powder magazine are dangerous neighbours. When the blaze came, he was, in consequence, charged with being responsible. The charge was unjust; the two movements were coincident. 5 The confessions of John Ball were fictitious; nevertheless the Peasants' Revolt (1381) was but the rude translation into the world of practice of a theory of 'dominion' that destroyed the 'lordsip' of the wicked. 'It is to Wyclif's credit that, when the Peasants were defeated, he displayed his own sympathy with their wrongs and to put in a plea for mercy. 6 But sorrow for the woes of the poor runs through all his English writings like a wall of love and redeems his most horrent denunciations, his most impossible dreams. 'Poor men,' he cries, 'have naked sides, and dead walls have great plenty of waste gold.' 7

(b) Church and State.—His theory of 'dominion' drew Wyclif on the subject of the functions of obedience 8 and of the prerogatives and duties of the kingly office in his de Officio Regis, in reality his most complete treatise on the relations of Church and State. The dignity of the king, he held, was derived immediately from God. The king represents the glorified and therefore ruling Christ, the priest the suffering and submissive Christ; the king represents the will, the priest the love of God. 9 As God's vicar the king has supremacy over the clergy. 10 Episcopal jurisdiction is derived from the king, 11 and the king may inquire into all sins 12 and must withstand temporalities from those in sin—a duty which Wyclif soon widens into that of general disendowment. By His obedience to Pilate Christ has shown that even tyrants must be obeyed. 12 Henry VIII might have asked for a more thoroughgoing defence of Erastianism or of the divine right of kings against

Church and pope than this treatise, with its claim that it is lawful to pull down a church to build a (Greek) town, or to melt challies to pay for soldiers. 3. Theological.—(a) Doctrine of the Church.—
Wyclif's realism lay at the root of all his views of the Church, but the phrase 'the Church' never led him to warn his hearers against the nominalist heresy that there was no Church before the incarnation of Christ. 2 It drew him into an extreme determinism. Above all it brought him into collision with the prevailing opinions concerning the Sacrament. For the nominalist, who held that the universal name was but a mere flatus vocis, found it easy to believe in the Scotist doctrine of the annihilation of the substance of the elements. To Wyclif such an idea was an absurdity: his whole philosophical system fell to the ground with its mere possibility. If in one case accidents can exist without substance, why postulate substance at all? Hence his realism is a protest against any doctrine of illusion. So, in the interpretation of his ideas, we must remember that, when Wyclif speaks, as he sometimes does, of the host as a "sign", 3 he would use it in the Zwingleian sense. With him every figure is a reality, with its own real though ideal existence, while every real is also of necessity universal. To this philosophy of mysticism is Wyclif's complete repudiation of the nihilism as to the humanity of Jesus which through Peter Lombard's Sentences had infected the medieval Church. He identifies Christ, especially in his early scholastic tractate, de Benedictis incarnatione, with the commonis homo, or universal man, who is identical with all His brethren.

Wyclif's views on the Church are best studied in his de Ecclesia, written about Easter 1378. 4 The key to the whole is his rigid predestinarinism, in which he shows the influence upon himself of Archbishop Thomas Bradwardine's de Causa Dei. 5 Like Bradwardine, he bases everything upon the all-conditioning absolute will of God. The Church Militant he defines as the whole number of the elect, containing 'only men that shall be saved,' and who cannot as predestinate cease to be such even by mortal sin, for theirs is the grace of final perseverance. 6 He adds that no man, not even a pope, 'wots whether he be of the church or whether he be a limb of the fiend,' 7 nor will he allow that the sun ever be called the whole body (universitas) of faithful travellers. 8 In this narrower view Wyclif shows a marked contrast to Marsiglio. He refuses therefore to allow that 'Christ is the head of all men, both of the faithful and unfaithful,' but claims that this is restricted to the predestinate. 9 Nevertheless he guards his doctrine from some of its dangers by his warning that, 'as each man shall hope that he is safe in bliss, so he should suppose that he be a limb of holy Church.' 10

From this basis of the Church certain conclusions followed. The pope is not necessarily the head of the Church, for it is not certain that he is a member of it. His position is therefore deter-

2 De Eccles. ch. 17, 18, also p. 1251.

beyond question that Christ lies hidden in the elements, that we can ‘see’ Him there by faith, and receive Him in the host as the sun’s fire is received through a sphere of crystal, and that Christ is present in the whole Bible. When you break a glass and in every part ‘thou mayest see thy face, and thy face not parted’ or as a man may light many candles at one candle. But the words must be taken with the reservation of corruptions of copy and occasion, of Christ’s presence, who is there not identically according to substance, but really and truly according to His whole humanity. On the logical side Wiclif’s position of the idea of ‘accidents without subject’ such a doctrine seemed to him to strike at the root of all being, including that of the saints, and by throwing a doubt on the testimony of our senses to discard all science.1 Unfortunately in his abhorrence of all Scotist annihilations he used language that easily became twisted, especially by his more ignorant followers. That which is not or which is mere phantasm is necessarily less perfect than that which is, especially that which has life. Hence the unfortunate comparisons of the host to ‘rat’s bread,’ ‘spiders,’ and the like, especially by the later Lollards—e.g., John Badly.

Along with this main position Wyclif advocated other doctrines that seemed to him corollaries. In his earlier years he insisted on the sacramental function of the priest,2 though regarding it as inferior to the duty of preaching, in Wyclif’s view the highest duty of all clerics.3 In his later developments he allowed that under certain circumstances the Eucharist might be consecrated even by a layman.4 Nor did he always make clear even to himself the relation of sacramental grace to character and to foreknowledge. At one time he maintained that the foreknown even in when in actual sin can administer the sacrament with profit to the faithful, though to his own damnation, Christ supplying all the defects of the priest;5 but later that the value depended on the character of the priest and the nature of his prayers—in a word, on the priest ‘being consecrated by God.’6 But he is careful to redeem this last conclusion from perilous uncertainty by pointing out that the sanctity, which comes from Christ’s presence, is always the same.a

4. Wyclif and the Bible.—Even in his earlier days Wyclif, following Ockham, appealed to the Bible as summary, unconditional, and absolute authority, of universal range and eternally unchangeable. He differed from Ockham in distinguishing between the Bible and the teaching of the Church, which Ockham had regarded as in harmony. He further asserted the right of every man to examine the Bible for himself. This was a corollary from his theory of ‘dominion.’ Every man was God’s tenant in chief holding direct under ‘God’s law,’ Wyclif’s usual title for the Scriptures. He had a right therefore to know on what conditions he held. Nor would he allow that the tradition of the Church is the standard of interpretation. He sweeps away therefore the whole mass of tradition, doctrine, and ordinance, whether papal or conciliar, which had claimed to be of equal or superior value to Scripture. Nor has he any place for a doctrine of development.

Wyclif’s appeal to the Scriptures was followed by the translation under his inspiration of the whole Bible. This was the first form of this translation would seem to have been the translation of the Sunday Gospels, still extant in his English Sermons. Independently of this his force of personality over the translation of the whole Bible. The exact share that Wyclif took is uncertain, and probably was slight. But the fact of this translation is beyond doubt, though recent research has shown that the so-called Wyclif version, the first of the complete Bible, had been preceded by other partial versions. Translation of the Bible was in the air. Wyclif’s first version, a large part in whose production was taken by Nicholas of Hereford, was very unsatisfactory—a verbal, almost gloss-like, rendering into a midland dialect, without clearness of expression or idiomatic use of language. Accordingly before 1388 the revision of the English Bible was begun. In 1395, Purvey, Wyclif’s secretary at Lutterworth, who smoothed out the harsh literalness of the original, changed its dialect to the uninflected type common at that time in Oxford, and contributed, about 1395, a notable General Prologue. The two versions of Wyclif and Purvey have often been confused, and the influence of Wyclif’s translation upon the development of the English language has been exaggerated. In later years the existence of Wyclif’s version became almost forgotten, and its authorship unknown, though the translation of Purvey’s version into Scots by Murdoch Nisbet, about 1520, proves the latter’s continued influence.b

III. INFLUENCE.—1. In England.—During his lifetime Wyclif’s influence passed through marked changes. At first there was a time when he was acknowledged by his enemies to be supreme,1 and in 1378 he bade fair to lead the nation in his own direction. But after that year, with the pronouncement of his doctrine of the Eucharist, his influence rapidly waned both at Oxford and in the nation at large. Men woke up to find whither he was leading them, while the growing violence of his views estranged his more moderate adherents. Moreover, his influence was local rather than national. South of the Thames and north of the Trent it scarcely existed. Scholasticism also proved fatal to him. His prestige as a Schoolman, which first secured him a hearing and gave weight to the movement he started in Bohemia, ultimately reacted against the success of his reforms. When driven out of Oxford, he found no suitable environment for the spread of his ideas, and his intellectual type of piety lacked that

1 The older views on Wyclif’s version are set forth in Forshall and Madden’s great ed. (1850) of Wyclif and Purvey’s versions. For recent research on the partial versions of R. Rolle of Hampole and others see Camb. Hist. Eng. Lit., Cambridge, 1906-16, ii. 43-48; A. C. Passes, Fourteenth-Century English Version, Cambridge, 1922; a less valuable account in John Purvey, Wyclif’s secretary at Lutterworth, who smoothed out the harsh literalness of the original, changed its dialect to the uninflected type common at that time in Oxford, and contributed, about 1395, a notable General Prologue. The two versions of Wyclif and Purvey have often been confused, and the influence of Wyclif’s translation upon the development of the English language has been exaggerated. In later years the existence of Wyclif’s version became almost forgotten, and its authorship unknown, though the translation of Purvey’s version into Scots by Murdoch Nisbet, about 1520, proves the latter’s continued influence.b

personal magnetism which might have drawn the people to him.

To the end of his life Wyclif 'stammered out many things which he was unable clearly to make good. He wanders about in worlds not realized. Like other men who have ventured on the great task of forming a scheme of religion for themselves, Wyclif often is and must be inconsistent. All attempts to hammer out of his writings a systematic doctrine of great power and profundity fail because they ignore the successive, contradictory stages of his own development.

Considered as a statesman, Wyclif was unfortunate in that there was no deep national movement with which he could apply himself. If he could have had in England the same conditions as in Bohemia, his success might have been equal. But in England the national movement lost itself in the follies of the Hundred Years War with France, and Wyclif mistook the selfish John of Gaunt for a leader. If in this Wyclif showed an unfortunate opportunism, at other times he lost much of his strength. In his idealism he even regarded the loss of Oxford with indifference, fatal though it proved to his cause. Like most Schoolmen, he trusted too much in his logic, and allowed it to lead him too far. We see this in his opposition to the universities in his scheme of disendowment, and in his advocacy of a system of voluntarism which would have reduced the clergy to beggars, to the level, in fact, of the mendicant friars whom in his last years he ceaselessly denounced, but with the spirit of whose founder he was always in more sympathy than he knew. Another illustration will be found in his demand that the life of the priests should be purely spiritual. He wished to narrow down their studies at the university to theology merely; 'the lore that Christ taught us is enough for this life; other lore,' even mathematical studies, should be 'suspended.' Thus Wyclif destroyed his influence among the educated and reduced his movement to an illiterate sect which in the hundred years after his death slowly lost balance and influence, though surviving, in spite of persecution, to the dawn of the Reformation.

Nor did he know how to gain the reform that lay next to hand by keeping back ideas not immediately practicable. He failed also to see the real cause of his misfortune in his own folly in having himself up with doubtful transactions, as in the affair of Shakyl and Haulay. He allowed his hatred of the false to get the better of his judgment, while by the language he used he staggered many.

But the vehemence of his temper was without its advantages. A calmer spirit would have counted the cost or awaited the future; Wyclif, who felt deeply the needs of the present, placed himself at the head of a forlorn hope.

We believe that the failure of Wyilf's pre- 

teformation was, on the whole, for the good of the Church. His conception of the Church was too passionate; he claimed for the Church an supremacy too absolute, and would have made the Church a mere department of the State. The unscrupulous pillage of the Church by Henry viii. and Edward vt. was but slight compared with the disaster that would have followed an immediate acceptance of Wyclif's schemes and theories.

Finally, Wyclif's revolt was too negative. He swept out what was anachronistic, but though in his assertion of the supreme authority of Scripture he laid the foundation upon which a later age should build, his teaching, though containing the principles of the 16th cent. Protestants, lacked the definitiveness that would lead to a definite reconstruction.

3 SAW ii. 71, lliii. 122; cf. l. 235, 310, iii. 320.

He abolished existing forms of Church government without devising, like Calvin, any scheme that should take their place. As his crude views on the marriage of brothers and sisters show, he was an individualist without the social instinct. Viewed as an evangelist, he lacks the consciousness of the reality of sin. His doctrine that sin is a negation, 'that it has no idea,' linked on Wyclif the realist with the philosophers and St. Augustine, though in a poor substitute for one vision. His identities knowing and being, and in consequence his theology is intellectual and ethical and, unlike St. Augustine's, lacks a sufficient foundation in grace.

2. In Bohemia.—It was in Bohemia that Wyclif's influence was greatest and, if the Moravians be included, most abiding. The marriage of Anne, the sister of Wenzel, king of Bohemia, to Richard 11. of England on 14th Jan. 1382 led to much Czech intercourse. By 4th March 1388 Adalbert Yanco founded in his will scholarships at Oxford for Czech students. By these students the philosophical works of Wyclif were introduced into Prague shortly after Wyclif's death. In 1401 Jerome of Prague brought back from Oxford Wyclif's Dialogue and Trialogus together with some lesser works, and introduced the writings to Hus, who had previously known only the philosophical works written out in his own hand in 1395, are now at Stockholm. Under the influence of Hus the influence of Wyclif soon became a dominant force in Bohemia, and large sums were given for copied works, etc. of the English doctor. Hence often the only MSS of works of Wyclif are now in Prague or Vienna, either they were carried after the Thirty Years War. Of his MSS in England, for instance, one small fragment is found in Dublin; the MS at Vienna was 'corrected' at Oxford on 1st Feb. 1407 by two Czechs, and the other only MS of any value is at Prague. The Vienna MS of his de Oificio Regis belonged to a Czech student who took his degree in 1355. Other illustrations of the intercourse between English Lollards and Bohemia are found in the correspondence between Sir John Oldcastle, the most prominent Lollard of the generation after Wyclif, and the Czech leaders in 1410, and Hus and Richard Wyche. Hus's dependence on Wyclif is very complete. His de Ecclesia is almost word for word from that of Wyclif, and his de Episcopis, &c., from Haulay and Shakyl. By a strange historical injustice the doctrine of the Plagiarist, because linked with a national consciousness, came to be regarded as a substitute for the teachings of Hus, from whom Hus had borrowed, reckoned into obscurity, especially after the failure of Oldcastle's rebellion. No doubt this may be explained by the troubous wars and crusades which the doctrines caused in Bohemia.

1 191. p. 318.

2 See the list of Czechs whom Richard m. on 1st May 1383, when the marriage was settled, 'retained to stay with him for life,' in Col. Pat. Rolls R. xx. ii. 4; Rymer, iv. 110.

5 Wyclif, Miscell. Phil. ii. 24. 37f.

7 For Oldcastle the only complete study is in Wylie, The Reform of Henry v. i. 25c. 1 x. 530-544; H. B. Workman, Letters of John Hus, London, 1904, pp. 33-38.

8 For Hus and the Hussites, and the dependence on Wyclif, see KBL vi. 253-254; then the dependence is often traced by the Workman, The Letters of Hus, pref. p. ix, who points out that both Wyclif and Hus were alike copying from German's Decretum.
LITERATURE.—(a) Contemporary records.—The most important of these is the collection of documents bearing on Wyclif's life and work, by A. Netter, published in 1860. Some of the series, entitled Fasciculi Zizaniorum, or the English Series, or Wyclif's Latin, and other theses, are indexed too early owing to the ignorance of the date of Wyclif's death.

For the literature and views of the later Lollard party, the more important works should be made at the Poole Conclusions presented to parlia- ments in 1381, in this document on the Wyclif, R. P. J. Purves, see FP, pp. 260—269; Wilkins, Concilia, iii, 221—223; and H. C. M. Blunt, in his work on the reformation by Boniface, see Cat. Papal Letters, iv, 515. Purves has also been assigned the Ecclesiastical Reformers

(b) Miscellaneous works.—The Thirty-seven Conclusions of early date, the authorship of which is assigned in the Sy公示 of the only remaining list of Wyclif. For this work see Eng. Hist. Rev. xxxvi, (1911) 738—749. A work of considerable interest is The Lantern of Light, written after 1419, ed. J. B. Stedman, for the work is very restrained in its judgments. Wyclif's religious views are the same series, the conclusion of the Encyclopedia Historia, ed. E. B. Bury, 3 vols., London, 1873, ill., though badly edited, is of great value. The bishops' registers, which might have been of the most value, have not yet been printed—e.g., the registers of Lincoln. For extracts from these of course see the bibliographical text. Wyclif's own writings are strangely impersonal and give little assistance to his biography.

(c) Wyclif's writings.—Wyclif's voluminous writings have only recently become accessible in print, and some are still unpublished. The most important are the works which were printed in Paris, and in which the English works in English, 4 vols., London, 1737, ill., though badly editted, is of great value. The bishops' registers, which might have been of the most value, have not yet been printed—e.g., the registers of Lincoln. For extracts from these of course see the bibliographical text. Wyclif's own writings are strangely impersonal and give little assistance to his biography.

(d) Wyclif's writings.—Wyclif's voluminous writings have only recently become accessible in print, and some are still unpublished. The most important are the works which were printed in Paris, and in which the English works in English, 4 vols., London, 1737, ill., though badly editted, is of great value. The bishops' registers, which might have been of the most value, have not yet been printed—e.g., the registers of Lincoln. For extracts from these of course see the bibliographical text. Wyclif's own writings are strangely impersonal and give little assistance to his biography.

(e) Wyclif's writings.—Wyclif's voluminous writings have only recently become accessible in print, and some are still unpublished. The most important are the works which were printed in Paris, and in which the English works in English, 4 vols., London, 1737, ill., though badly editted, is of great value. The bishops' registers, which might have been of the most value, have not yet been printed—e.g., the registers of Lincoln. For extracts from these of course see the bibliographical text. Wyclif's own writings are strangely impersonal and give little assistance to his biography.
X

XAVIER.—St. Francis Xavier was the son of Juan de Jassu, a hidalgo and formerly a high official at the court of the last kings of Navarre. The native town of the castle (castillo) of the castle was some thirty miles from Pamplona, which belonged to the family of his mother, Maria de Azpilcueta, and in which he himself was born (7th April 1506). Francis apparently counted himself a Basque, for he said that Basque was his native tongue, but the language is now no longer spoken so close to the borders of Aragon. Whilst his brothers followed the career of arms, Francis, as the youngest son of an impoverished family, was driven to seek a livelihood in the profession of letters. His abilities were remarkable, and, on coming to the University of Paris in 1525, he seems to have been regarded as a student of exceptional promise. He took his degree of licentiate in 1530 from the Collège Ste. Barbe, and was then made reader in philosophy at another college of the University, known as the University of Bourges. While at Ste. Barbe, he fell under the influence of Ignatius Loyola (q.v.), a man some fifteen years his senior. Ignatius (who was then feeling his way towards the organizing of a band of followers pledged to labour for the greater glory of God in whatsoever form the summons might come to them), discerning a conflict in Xavier's heart between worldly ambition and the call of grace, plied him again and again with the gospel warning: 'What is a man profited if he shall gain the whole world and lose his own soul?' In the end Xavier surrendered, and he was one of the seven who, on 15th Aug. 1534, took vows of poverty and chastity at Montmarre, thus laying the foundations of the Company of Jesus or Jesuit Order.1 Their original intention was that, after completing their theological studies and receiving ordination, they should all make their way to Palestine and take up the preaching of the gospel in the very spot where Christ Himself had lived. However, it was foreseen that it might be difficult to execute this plan, and they decided that, if after waiting a year in Venetia, where they expected to arrive in Jan. 1537, it was found impossible to obtain a passage to the Holy Land, they should go to Rome and place themselves at the disposition of the pope. It was the latter alternative that was forced upon them. They were ordained priests at Venice in June 1537, spending their time in preaching and serving the sick in the hospitals; but in 1538 they all met in Rome and offered their services to Pope Paul III. It seems that already at this time Xavier had some strange presentiment of what his future career was to be, for in his dreams he thought he was carrying an Indian on his shoulders under whose overwhelming weight he cried out so loudly that he awakened his companions. It was not, however, Xavier who was first nominated when King John III. of Portugal in 1539 instructed his ambassador at Rome which should be the first mission of Loyola's followers from the pope to serve as missionaries in the Indies. The choice fell upon Rodriguez and Bobadilla, but the latter became ill, and his place was taken by Xavier.

During a long delay at Lisbon such wonderful results followed from the preaching and example of the fathers that the king wished to retain both in Portugal. Finally, by the decision of Loyola, Xavier was sail (7th April 1541), having with him briefs from the pope appointing him apostolic nuncio in the Indies. The voyage occupied more than a year. He reached Goa on 6th May 1542, and it was not until October that he began missionary work in a strict sense by preaching to the natives of the Malabar coast in the extreme south of the Indian peninsula. In this region, including Ceylon, he remained for over two years, interrupted only by one visit to Goa. The continuous strain of the work was almost beyond human endurance, but its manifold consolations buoyed him up. His letters to Europe give a most vivid picture of his methods, more particularly of his care to have the elements of Christian doctrine translated into the vernacular, so that they could be learned by heart and even sung by young and old alike. It was always characteristic of him to take immense pains with the children. He went about ringing his bell and apparently had a wonderful power of attracting and impressing the little ones. No doubt a large proportion of those whom he baptized were quite young children, the families of adult converts.

'Often,' he wrote on 16th Jan. 1544, 'my arms are weary from baptizing and I cannot speak another word from having so repeatedly repeated my prayers to the Lord to consecrate my body and soul to the service of the Lord and of the missions.' He also told Doctor Cochin (27th Jan. 1545), in which he supplies much detail regarding his methods of instruction, he states that in the space of one month he had baptized more than 10,000 persons. 'The Exposition of the Creed, of which a good English translation is provided by Edith A. Stewart,2 and which is by her rightly stated to be 'more characteristic of Xavier than anything else he has left except the letters,' may probably be accepted as representative of all the elementary instruction, to whomsoever addressed, which he made the foundation of his missionary efforts.

A contemporary letter from Portugal (dated 22nd Oct. 1545) reproduces the description of Xavier brought back by one who had known him well in the Indies:

'Father Xavier goes about with bare feet; his garments are shabby and one is called the "great father," and all love him well. A rajah has given orders throughout his kingdom that all should show obedience to his brother the "great father," as though it were to himself; all who wish are free to become Christians. He also gives him much money, but Xavier distributes it among the poor. He has built 44 or 45 churches. He has four native-born Indians with whom he has had ordained as priests. Six other Indians from the College of Goa are on the point of taking Orders. He carries with him two, three, four, yea six thousand men into the open country, climbs a tree and then preaches to them.'3

The creation of the College of Goa, here referred to, was one of the most far-reaching of the measures adopted by Francis to secure the permanency of his conquests. By his influence with the Portuguese authorities, he obtained ample means of support for this foundation, and here he was able to train a considerable number of natives, many of whom persevered and after ordination did excellent work in the missions which Xavier himself had started. The three years from 1545 to 1548 were almost entirely spent in the Eastern archipelago, Malacca, Amboyna, and the Moluccas. He was shipwrecked three times, lost his slender possessions, was attacked by the Muhammadans, and was always cut off from all human sympathy and occasional help.

3 Epistolae Mixtis, l. 231 f.
"I cannot remember having so much spiritual consolation anywhere else, nor more continuously. . . These islands one day called the "Isle of Hope" in my fancy.

By the middle of January 1548 he was at Cochin, from which as a centre he revisited the Fishery coast. Thence he returned to Goa, but this was only to make preparations for a yet more adventurous expedition, with the idea of which he had been inspired by a meeting with a Portuguese merchant at Malacca who had brought in his company a native Japanese. This young man, called after his conversion Pablo de Santa Fé, was of great use. Even as early as 1547 Francis was convinced that in these newly discovered islands of Japan

...his holy faith might be spread with great success, and that there, more than any other country of the Indies, were great things to be hoped for, since the people of those islands were quick-witted and eager to learn."

Further intercourse with merchants returning from Japan seems only to have deepened the impression, and from that time forth Xavier's heart was set upon this new conquest, although it was not until April 1549 that he was able to carry out his purpose. He went by way of Malacca, making provision from there for the needs of his recent converts in the Moluccas. This was, however, no ground for the assertion, which has sometimes been made, that Xavier ever landed in the Philippines. After many delays and inconceivable vexations Xavier eventually reached the port of Kagoshima in a Chinese junk on 15th Aug. 1549, accompanied by Father Cosmo de Torres, a lay brother named Juan Fernandez, and the Japanese convert Pablo de Santa Fé. As a native of the last named, a kindly welcome was accorded to the missionaries by his relatives, and a breathing-space was found during which it was possible to learn something of the people and the language. Prolonged visits at first followed, but three months after his arrival Xavier wrote most enthusiastically of the natural qualities of the Japanese, and two years later his admiration had not evaporated.

"This is the only country yet discovered in these regions; he wrote to Ignatius on 29th Jan. 1552, where there is hope of Christianity permanently taking root.

He went to Macao (the modern Kioito), then the residence of the mikado. The journey to and fro entailed terrible sufferings from cold and other causes. Owing to political disturbances, the visit was ill-timed and almost fruitless. But Xavier's influence at Yamaguchi, particularly in Bungo, many conversions were made, and there is good evidence of the steadfastness of these Christian communities. In Yamaguchi a formal document records the conveyance to the missionaries in 1552 of a former Buddhist monastery. The church founded in Japan by Xavier spread and prospered. Thirty years afterwards Father Cobo estimated the number of the Jesuits there at 150,000, and James Murdoch, an unkind critic, while admitting that the estimate is reliable, remarks that this constituted a wonderful record for thirty years, when we consider the small number of missionaries engaged in the work.

It is Murdoch who informs us that "In Hideyoshi's famous invasion of China in 1592 the first and third divisions of the invading army totalling nearly 30,000 men were almost entirely composed of Christians," while the great daimyo who commanded these divisions—Koishi, Kuroda, Otomo, Artaza, Onura, and 80—were also all converts with the single exception of Osura.

Some thirty years after this Christianity in Japan was exterminated literally by fire and sword; but even so, when Japan was again opened up to the missionaries in the middle of last century, some village communities were still found who retained the Christian beliefs and practices taught to their forefathers in the 17th century.

After two and a half years spent in Japan Xavier thought it necessary to return to his base at Goa, both to look after things there and to make better provision for a succession of suitable missionaries in the Far East. In a letter addressed to his brethren in Europe from Cochin in Jan. 1552 we find that a new field of labour had already attracted his attention. He had met a number of Chinese in Japan and had heard much of their country from merchants and others.

"Like the Japanese," he wrote, 'they are acute and eager to learn. . . . I hope,' he added, "to go there during this year, 1553, and penetrate even to the Emperor himself."

In intermediate letters he refers to this great design again and again, being full of courage and hope. Before the end of April he was well on his way. After overcoming interminable opposition from the Portuguese at Malacca and Singapore he reached the little island of San Capigo in the mouth of the Si-kiang, on which Canton is situated, before the end of August. He could find no one who would take the responsibility of conveying him across the mainland. The Portuguese ships began to sail away. Xavier, prostrate with illness, was left with only a Malabar servant and a Chinese boy. After endless alternatives of hope and disappointment he himself began to lose heart. On 13th Nov. he wrote, 'Shall I reach China? I cannot tell . . . everything is against it.' To the last, however, he strained every nerve to accomplish his mission, but his illness was upon him, and on 27th Nov. 1552 (not 2nd Dec., as often stated) he died, in sight of the land which he had fought so hard to reach.

If Xavier has found many indirect panegyrist, he has also been much criticized. Many of these criticisms will be found effectively answered in the brilliant pen sketch of the great missionary by C. C. Martindale. Others are discussed in The Month for 6th March 1905, No. 500. A good deal of the criticism turns upon the miraculous incidents with which the life has been overlaid by later biographers. As Astrain remarks:

"In the case of a life so extraordinary as that of Xavier, a life spent in such far distant lands, the presence of a legendary element was inevitable, and, in point of fact, it manifested itself at an early stage. Already in the second century the Fathers Tousain and Valliangne, in passing judgment upon the life of St. Ignatius written by Bihadorezi, protested against various miracles falsely attributed to Xavier, and reduced to their just proportions the magnitude of certain of his missions and apostolic undertakings."

Again, Xavier has been accused of 'restlessness,' but is it sufficiently remembered that his charge embraced the whole mission field of the Indies, and that it was his duty to look after the base at Goa as well as to establish those advanced posts for which he, more than any other man, had the necessary enterprise and capacity? Shall we blame him because in many cases he was content, like the great conquistadores of the New World, to take possession of a vast province, to hoist a standard and leave a tiny garrison, knowing well that years of peace, the full tide of Christian life could pulsate through its arteries? Nor can we admit, as is often alleged, that the conversions effected by him were 'mainly nominal.' The evidence of the Calvinist Dutch protestant Baldus, who spent many years on the Malabar

YAKUT.—1. Distribution.—The northernmost branch of the Turkic race, the Yakut, live in the Yakutsk district, along the Lena as far south as the Anur and the Island of Sakhalin and to the north-west as far as the Yenisei. The region between the Lena and the Aldan is especially densely populated. This region was formerly occupied by the Tungus (g.e.), with whom the Yakut, who came from the south, had many fights before they succeeded in obtaining the best pastures. From their metropolis, the district of Yakutsk, the Yakut went to Olesmink, down the Lena to its mouth, and spread along the Vilui, Yana, and Indigirka, and a very few reached Koluina. Meanwhile another immigration to the north went along the Yenisei as far as the Lower Tunguska, thence to Lake Chirinda, where they met the Yakut who migrated north through the Lena. Their original home may have been in Central Asia between the sources of the Yenisei and the Anur. N. A. Aristof1 thinks that the Yakut are the remnant of a Turkic nation called the Sakha (Saka?). The Saka, who in the 2nd cent. B.C. were expelled from their home in the north of Syr Darya southwards by the Yuezhi, migrated to India. Towards the end of the 2nd cent. A.D. they seem to have been driven northward again. On their way back they left one branch, now called the Kaha-Kirgis, in West-Tian-Shan. The Kara-Kirgis have a clan called Saka.6 Recently noticed linguistic evidence (tribal and clan names) makes the two routes of Yakut migration from Central Asia to the north somewhat plausible. A hypothesis of this kind was put forward by V. N. Tverdovsky.1 In 1897 the Yakut numbered 225,772; in 1911, 245,406.

2. Physical type.—The Yakut are now much mixed, first with the Neo-Siberians, i.e. Tungus, Mongols, and Manchus, and then with the Russians. They seldom have any moustache or beard, their hair and eyes are dark, and their heads round. All these characters are Mongolian, but the setting of their eyes is not Mongolian. The Russian anthropologist A. A. Ivanovsky1 thinks that he can distinguish a Yakut group, but this group has more in common with the Northern Tungus and Astrakhan-Kalmucks than with other Turkic nations. They are of medium size with many tall individuals, broad-headed, but not pre-eminent so much, and long-faced.

3. Technique.—Originally horse-breeders, the Yakut are now horse-breeders where the climate permits, and in the north reindeer-breeders; but, as far north as they can, they keep the horse for its meat and kymys (mare's milk). How highly the Yakut values his horse is shown by the fact that to the good gods he will sacrifice a horse, but to the bad gods only cattle. In matching, to compare the girl to a mare and the youth to a colt is the greatest compliment that can be paid them. In their mythology the horse always appears as the adviser and friend of man, often wiser than man himself. The Yakut, many of whom have never seen a horse, trace the origin of man to a being half-horse and half-man. A horse must not be struck, nor even must unkind words be said to it. While cattle are used for heavy work, the horse is kept for riding. In the region where there are horses no longer, reindeer bucks are trained for riding—a custom known also to the Tungus, but not to the old inhabitants of the Tundra, as the Samoyed or Eckimo.

Where possible, the Yakut become seasonal nomads. Only the people south of Vilui, the agriculturalists, are quite sedentary, and even these have a winter house (bologon) and a summer house (urara, sometimes called yurtar). The urara is often covered with birch-bark beautifully engraved and painted, but the bologon, made of logs of wood and covered with earth and snow, is pre-

ferable in winter. Their most strenuous time is the hay-making season.

The Northern Yakut are hunters, fishermen, and reindeer-breeders. As net- and trap-makers they are much superior to the other natives. They are also known by iron-smelters. (They place their ore in the fire hole and pile coal round it, then they keep the fire blazing by means of hand-bellows. When the coal is used up, they dig out the ore and lime it and implement it.)

They used the iron ore of the Aldan near Yakutsk long before it was known to the Russians.

Like the Azarbayzhan Tartars in the Caucasus, the Yakut are the cleverest traders in Northern Siberia; their languages became a lingua franca and till recently had to be known even by Russian fur-traders. As reindeer-breeders, however, they are not so clever as the Paleko-Siberians or even as the Tungus. They are people of the Iron Age with all the characteristics which this age implies in Asia, pre-eminentely horse-breeding. Since the clan crests are usually used as tamga (cattle or horse brands), it is possible to trace the Yakut's emigration and contact with other peoples by tracing the distribution of some particular tamga. The tamga usually represent an animal, but it would be as absurd to infer a totemistic meaning from them as to attach any totemistic notions. Certain animals—e.g., the bear, wolf, eagle, white crane, and goose—appear as the shaman's spirit assistants, but they are never called high gods.

4. Sociology.—The Yakut of to-day are grouped in clans (aga-us), naslegas, and ulusas. A clan is a composed sometimes of only a few individuals, and sometimes of several hundred. A naslega comprises from one to more than thirty clans. The ulus often includes several naslegas.

The Yakut reckon as descendants of a clan only as far as the ninth generation. Of course at the present time the blood relationship within the clan is hardly more than a tradition. When the Russians first came into contact with the Yakut, their clan system was quite highly developed, and the head of a clan had his power limited to that of a judge and leader in war.

All economic questions were decided by a council of elders, i.e. fathers, uncles, and elder brothers. Thus aga ('elder'; fem. aga) is the name for the tallest, oldest of his relatives older than himself, inti (fem. batys) for a father's younger brother and any other younger relative who was not his son. Relatives in the third degree are called 'mothers and fathers' (literally 'embryo'), for wife oyakh, while there is no specific name for the husband, who must be called by his name, or 'man,' or ogomor, 'old man.' The term aga used for the father really means 'older'; thus one asks about a person, 'Is he aga or batys ('younger') than yourself?' There are special privileges for the wife to use when addressing her husband's relatives (e.g. toyom, chief, for the husband's father), and for the husband addressing his wife's relatives (e.g. aga-kylyn, 'wife's father').

The terminology of relationship takes into consideration primarily sex and degrees of age. Thus the Yakut clan is divided into two main groups: (a) men and women of the paternal and maternal line born earlier, and (b) men and women of the paternal and maternal line born later.

Clans sometimes made alliances. All the traces of the great solidarity of these alliances between the chiefs of clans and also to their independent attitude to one another. Superior to them all was the council of the council.
YAKUT

the straw on which the dead man lay and the wood left from the making of the coffin. Other things which had been used for the dead, such as the shovels, are also broken and burnt.

On the death of a child its cradle is left on the grave and its toys hanging on the nearest tree. The Yakut have great fear of a corpse (especially that of a shaman) before it is buried; it is supposed to be able to disturb the forces of nature, producing great storms. A great wind is held to be favourable, as it will smooth out the tracks that one night the place of the sun. Otherwise many of the living will follow the dead. There is another form of burial among the Yakut, which consists in abandoning the dead in the house with all the utensils belonging to him.

The custom formerly existed that an old or very weak person should request his relatives to bury him. All the villagers were invited to a three days' feast, at which the old man, attired in his finest garments, occupied the chief position. On the third day his relatives took him to the forest, where a grave had been prepared, and one of them would suddenly strike him down. Food and his weapons were placed with him in the grave. Until the corpse is buried the soul remains near the house and endeavours to remind the relatives of its existence.

Some souls never leave the earth and are never quiet; such souls are called yor. The souls of those who have died an untimely or a violent death, or who were buried without any ceremonies, and especially those of great people become yor.

5. Soul.—Like other Turks, the Yakut believe in the existence of several souls all more or less material. Kut seems to be one of the most important of these. Thus they think that the baru-kut, 'earth soul,' is communicated to the infant at the moment of birth from the earth; s duly-kut, 'air soul,' it receives from the air shortly afterwards; while the third element, yk-kut, 'mother soul,' comes to the child from the mother. Kut is a physical conception of the soul, while sir, although in some degree a material conception, has a more psychical character. After death kut is devoured by the abassylar, though there is a belief also that the kut remains for some days near the body of the deceased, and then departs to the other world. Sir is a kind of 'soul shadow' connected to men and animals; it is even possessed by fishes.

6. Gods and spirits.—Although most of the Yakut are now officially reckoned as Christians, belief in the good old gods and the spirits of the universe still exists. The gods are divided into nine agas (clans) or bias, and the malicious gods into eight. The natives are quite ready to give information about the clan arrangement of the kind gods, but it is very difficult to get similar information about the gods of the under world west and north, since few of the ordinary people know anything about them and the shamans are afraid of betraying the secrets of these formidable beings.

According to Sieroszewski, the chief of the sky-gods is Art-Toyon-Aga, the powerful ruler of light and life, speaking in the storm and thunder, somewhat indifferent to human affairs, and appealed to only in exceptional circumstances. In his honour are celebrated the great clan ceremonies, yachk, in which the sacrifice of kumys is made to him. The coat of the Yakut shaman is divided very regularly. Its object is to secure fertility for the family and for the herd. Lads and girls are placed opposite one another and sprinkle the kumys on one part of the shaman's coat. In the north, where horses cannot live, reindeer milk is used, though it is still called kumys.

The chief of the dark spirits is called Ulu-Toyon. Ulu-Toyon, 'ominipotent lord.' He is always described as living in the western sky, and, in contrast to the indolent Art-Toyon-Aga, he is the personification of action, and of the passions. Ulu-Toyon is not always harmful to men for he gives them one of their souls, sir, and defends them from the attacks of abassylar. The abassylar are divided into 'upper,' 'living' in the western sky; 'middle,' living on the earth, and 'lower,' 'habiting the subterranean world; but, wherever they live, they are all harmful to man.

Ichiuki, literally 'owner,' signifies the 'owner-spirit' of various objects. Every river, lake, stone—and even parts of these sometimes—has its own ichuki controlling it. Movable objects and those which can produce sounds also have their ichuki.

The Yakut divide the universe into seventeen stories. They have also a horizontal division comprising two parts—east and south, the habitation of good spirits, and west and north, that of evil spirits. The great evil spirit, Alara-Ogonir, 'underground-old-man,' lives in the far north.

7. Shamanism.—The study of Yakut shamanism, which is one of the most developed forms of northern shamanism, can be limited to the study of the shaman (oiyen), his ceremonial coat (tamsat; same word for 'sky' and ceremonial dress, coat); the preparation of his official garment is accompanied by ceremonies no less important than the shamanizing itself. Even those who, like the smith, prepare the metal symbols of spirits and are attached to the shaman's leather coat occupy a half-magical position, being credited with peculiar fingers.' The smith is often approached for assistance if there is no shaman to be found in the neighbourhood. The smith in the ninth generation acquires certain supernatural powers and can without harm to himself prepare the iron symbols of the shaman's costume and especially the amyyagat (a small plate representing a human head).

There are 'black' shamans and 'white' shamans; the duties of the latter are not clearly defined, for in cases of great urgency, as in sickness, it is the black shaman who is called in to fight the spirits of disease. At the spring festivals, however, performed in daylight and called oyy-hylam, it seems that white shamans always officiate, while the autumn festivals, abassylar-jylyakh, performed in the darkness, are conducted by black shamans. Troshchancki, who made an exhaustive study of Yakut shamanism, believes that the duties of the black shaman were originally in the hands of men, and that the Yakut black shaman even now assumes some women's characteristics; (a) two iron circles on his arm represent women's breasts; (b) he braids his long hair like a woman; (c) the place on the right side of the tent, covered with horsefurs, is forbidden to shamans and women; (d) when he does not use the ceremonial dress, he wears that of a young girl; (e) he is allowed to visit a woman after childbirth before the three days are over and men are allowed to approach her. As the office of hereditary smiths became so powerful, the duties of the black shamans passed to them. Seeing that the family among the Yakuts, as among the other Turks, is patriarchal, this theory seems very improbable. The women's characteristics adopted by the Yakuts do not point to something else, viz., that, being a person with supernatural powers, the black shaman is supposed to have both female and male qualities; whether sexual abuse is possible at all it is difficult to ascertain. Generally speaking, women, being more nervous and suffering more often from the Arctic forms of hysteria (menerik and amairakh)

1 The Evolution of the 'Black' Faith, Kanun, 1912.

YAWNING 829

than men, are more successful as shamans. The shamans, especially the black shamans, form a professional class, and a period of preparation under the guidance of an older shaman is necessary. The initiation into the shamanistic office is finally accomplished by the clothing of the novice in the ceremonial coat and presenting him with the drum and stick.

The shamanistic ceremony, as elsewhere, is divided into the following parts: (a) preparations for the shaman's journey, (b) songs, which among the Yakut are unusually rhythmical and are accompanied by the chorus, beating the drums and dancing, (c) the going out of the fire, when the shaman is supposed to have gone away, (d) a period of silence, after which he comes back and relates his experiences.

8. Ceremonies.—There are among the Yakut two kinds of sacrificial ceremonies, bloody (to the abassy) and bloodless (to the ai and ichch). Although bloody sacrifices are not made to Uran-Ay of the Yakut, the former act is similar in many ways to the sacrifice to the clan-father, etc. From this we can deduce certain animals to him; i.e., such animals are not to be used for work, and mares dedicated are not to be milked. Formerly it was the custom to dedicate in this manner all mares which had foals; they were, let loose to wander on the tundra. The offerings to abassylar have the character of a promise or bargain. The evil spirit wishes to have the souls of these animals, a promise, and the shaman gives instead the kut of an animal.

There are two tribal festivals: a spring festival, aiyy-yaqakh, and an autumn festival, abassy-yaqakh. As the name shows, the first is celebrated for the good weather, and for the second, for the Aidy-Toyon in particular. After the sacrifice, which is followed by certain sports and games, a dramatic representation of the struggle between spring and winter is given. One man, called a'iy-yolu, is dressed in white and mounted on a white horse to represent spring, while another, abassyl uola, represents winter, being dressed in black or reddish garments and mounted on a horse of corresponding colour. The abassyl-yaqakh is held in autumn, and in the open air like the first festival, but at night. It is dedicated to the black spirits, and especially to Uni-Toyon. While the first festival is conducted by the old seniors, the second is the direction of nine shamans and nine shamanesses.

9. Legends.—The Yakut possess the richest mythology, in both form and conception, of all the native inhabitants of Siberia. The rich imagination shown in their oral compositions is only comparable to that of the Iranians, and one can indeed find some traces of Iranian mythology, probably brought from Central Asia. They are not lacking in the humour for which the Tungs legends are justly famed. The legend of creation bears witness.

The evil spirit wished to show the good spirit that he had the greatest power, so he dived into the water and came up with a mouthful of clay. From this the good spirit created the earth, but, not having sufficient clay, he made it flat. He then noticed that an evil spirit had already given him all the clay; therefore he struck him on the neck so that he had to spit it all out. It fell on the earth and so mountains were formed. The origin of grass is explained by a more romantic legend.

The god Yassagi-Toyon directs the movements of all migratory birds. His seven daughters, in the form of seven white cranes, also often come down to the earth. Once Yassagi-Toyon commanded his most beautiful daughter to help and serve the Yakut. (The crane is always considered a sacred bird by these people.) The girl begged to be excused, and the father sent her to the father of the winds, and she became a blade of grass to feed the animals of the Yakut.

These eetiological myths form but a small part of the literature, for it is the heroic stories that are the longest, and those which the most elaborate.

The Yakut do not possess a written character, but the few who have been educated in Russian schools also use it in their native language.

VASNA.—See AVESTA.

YAWNING.—I. The primitive conception of the soul.—The conception of the soul among the lower races has been described as follows:

'It is a thin unsubstantial image in nature, its nature a sort of vapour, film, or shadow; the cause of life and thought in the individual man: independently possessing the personal consciousness and volition of its corporeal owner, past or present; and the future residing in the body for being translated with it from place to place; mostly impalpable and invisible, yet also manifesting physical power, and especially appearing to men waking or in dreams, the personal soul, usually present in dreams in which it bears the likeness; continuing to exist and appear to men after the death of that body; able to pass through the air, and act in the bodies of other men, and of even things.'

J. G. Frazer likewise maintains that the savage explains the phenomena of life by supposing the living body to be animated by some power within.

'If an animal lives and moves, it can only be, he thinks, because there is a little animal inside which is doing it; if a man lives and moves, it can only be because he has a little man or animal inside who moves him. The animal inside the animal, the man inside the man, is the soul. And as the activity of an animal or man is explained by the presence of the soul, so the repose of sleep or death is explained by its absence; sleep or trance being the temporary, death being the permanent absence of the soul. The ideal Indian, therefore, is the being the permanent absence of the soul, the way to guard against. It is either to prevent the soul from leaving the body, or, if it does depart, to ensure that it shall return.'

2. The escape of the soul through the mouth.—The soul is commonly supposed to escape by aperatures of the body, especially the mouth and nose.

'The Marquesans used to hold the mouth and nose of a dying man, in order to prevent his soul from escaping; the same custom is repeated in the New Caledonians. . . . The Hohnans in South America seal up the eyes, nose, and mouth of a dying person in case his ghost should get out and carry off others and the people of Nias, who identify the spirit of the deceased with the breath, tie up the jaws of the corpse to confine the vagrant soul. The Hindus always snap their thumb and index and repeat the name of some god, as Rama, when a man yawns in their presence, believing that by so doing they prevent the soul from escaping through the open mouth. To neglect this is sin as great as the murder of a Brahman.'

Great care is taken at the time of a birth lest the soul of the child should escape and be swallowed by a gaping mouth.

To prevent this possibility, the Alboon of Celebes, when a woman is about to deliver, 'tie the mouth of the mouth with all animals inside and outside the house' and 'all persons present, in the house, must hold the doors shut, and prevent the mouth shut the whole time the birth is taking place.' Noses are not similarly secured because they are wedged through the nostrils, and therefore 'the soul would be expelled before it could have time to set down.'

1) PH², 423.
3) G.E.P., ii., Taboo, p. 31.
5) G.E.P., ii., Taboo, p. 357.
Even in sleep it is possible for the soul to escape through the sleeper's mouth if it is not kept tightly closed, its departure being sometimes indicated by snoring.

Mary H. Kingsley tells of a Kroman who 'for several nights had smelt in his dreams the savoury smell of smoked crawfish seasoned with red peppers. He became anxious, and the headman's wife, who had a cat that smelled like this with great delight for his dream-soul, with intent to do him grievous bodily harm.' For the next few nights, to prevent his soul from straying abroad, he lay in the heat of a tropical night under a blanket, his nose and mouth tied up with a handkerchief.

The ancient king Gramuran shows his belief long survived in Europe. As the king lay asleep in the wood with his hounds and a fisherman's lap, his servants saw as it were a stream issue from his mouth and run to the brook. His progress being hindered, the servant laid his sword across the water and the creature ran along it and up into a mountain; after a while it came back, and returned into the mouth of the reposing king, who, upon wakening, told him how he had dreamt that he went over an iron bridge, and into a mountain full of gold.

3. Possession through the open mouth.—As the human soul is considered to enter and leave the body by the mouth, so it is with other spiritual beings, particularly such as possess people with evil intentions.

According to the Ewe-speaking peoples of theSlave Coast, when the indwelling spirit had left the body a man must be careful about opening his mouth, lest a hopeless spirit should take advantage of the opportunity and enter his body. The same belief prevails among the Kru or Gola people to take place while the man is eating.4 The Zulus, like the Persians, regard repeated yawning as a sign of possession by an evil spirit,5 and in Nigeria men constantly keep the lower part of their face veiled, even while eating and sleeping, in order to prevent侵害 by evil spirits.6 The same reason may explain the custom observed among Arab women of muffling their mouth, to prevent a man whose familiar god was the turtle from being obliged to wear a handage tied over his mouth if he were taking any part in the cutting up or cooking of the animal, lest an embryo turtle should enter his mouth and grow up within him.

In S.E. Australia a newly-initiated youth must always cover his mouth with a handkerchief in the presence of a woman,7 just as in W. Timor 'a man holds his right hand before his mouth in speaking lest a demon should enter his body,' and lest the person to whom he is speaking should harm his soul by magic.8 To prevent the soul of a fox killed in the chase from escaping and revenge itself on the hunters, or warning them of their approach, the Ainu, in former days, took care to tie up the mouth of the animal tightly.9

From this brief survey of the part played by the open mouth in primitive cult it will readily be understood how the act of yawning has come to be associated with the exit of the soul and the entrance of evil spirits. This ancient belief still survives in the polite custom of putting the lun hand before the gaping mouth, thereby (it was originally supposed) impeding the flight of the soul, and barring the way to a spiritual foe. Even to this day, when a man yawns, the Muslim puts the lower lip of his mouth up.10 It is said in Turkey that a refuge with Allah from Satan the accused,11 just as in the Tyrol the sign of the cross is made to prevent the entrance of an evil spirit when a person goes to bed. The Jewish proverb, 'Open not thy mouth to Satan!' shows that the Hebrews associated the devil with a gaping mouth—a conclusion supported by the story narrated by Josephus,12 describing how Eleazer, a Jew, cured demons in Vespassian's time by drawing out demons through their nostrils by means of a ring containing a root of mystic virtue mentioned by Solomon. It was probably supposed that the evil spirits entered through the mouth and were exhaled through the nose, much in the same way as the Alfofs regard the wandering soul of a child as expelled with the exhaled breath, after having entered the body of a by-stander through the mouth.

It will thus be seen that the folk-lore of yawning has arisen from the primitive doctrine of the separable soul and the notion of possession by evil spirits. It is not surprising that the uncultured races should thus think of the relation of the human body to the spiritual world, since they are ignorant of the very rudiments of science and can only explain the phenomena of life, consciousness, disease, and death by what the senses seem to tell. In sleep, trance, and death the soul appears to leave the body. To the rude philosopher this is the only possible interpretation of the facts which his senses can give. The most natural means by which these exits and entrances are made is through the mouth, and therefore the opening and closing of this organ—especially in an involuntary manner—became associated with no small danger. If the soul were to escape, it might never return, and, in consequence, death to the body would ensue. Likewise, when the mouth is open, a homeless spirit is liable to take up his abode in the body. To prevent straying, the entrance has to be carefully guarded.

Literature.—The literature has been given in the footnotes.

E. O. JAMES.

YELEMENITES.—See Arabians.

YENISEIANS.—See Ostyaks.

YEZIDIS.—The name of Yezidis has been given to a religious sect numbering about 50,000 persons, scattered from Mossul to the Caucasus region (districts of Mossul, Van, Diarbekr, Bitlis). They call themselves Dasi and speak a Kuridish dialect.

At the head of the community is a khelifa, who is a descendant of Shalikh Adi. Under him are shaikhs, kawwals, and faqirs. Priesthood is hereditary. Morality is above the average in that part of the world. They are brave and shrewd. Their temperament is cheerful but calm. They have cleanly habits. Their women are not veiled and may receive strangers. They feel great repulsion for the colour blue. Being completely illiterate, they handed down their traditions orally. Their greatest festival is that of Atiyeb. A procession of flagellants takes place in the village of B'adri. There is the grave of their great saint, Shalikh Adi ben Musafir, who died in A.D. 1155. All around fires of naphtha and bitumen are kept burning.

The Yezidis have been often persecuted by the Turks. During the 19th cent. efforts were made repeatedly to force them into the Turkish army. They have stubbornly resisted that pressure with no small danger. The origin of the word Yezid has been much discussed. Most probably it is related to Av. Yazata, 'deity.' Pers. Yazdân, 'God.' It was given to them in contrast either to the Zoroastrians or to the Muhammadans. Although their priesthood is of the Muhammadan type and they recognize Muhammad and Abraham as prophets, they are far from being a Muhammadan sect. Nor are they connected with the Turks, although they have baptism and regard Christ as an angel in human form. In fact, they perpetuate with various admixtures a doctrine of the Magian type, combining Iranian with Greek. The chief cult of fire is Iran. They profess that the devil is a creative agent of the supreme God, inasmuch as he produced evil. Hence he deserves our adoration.
These ideas resemble closely Mazdaean cosmogony. Zoroastrianism regarded the worship of the evil spirit (Ahriman) as an abomination, but this did not prevent the Persians from regarding the Mithraists, who used to offer sacrifices *de aruo*, and Plutarch reports that the Magians invoked Hades and Darkness in a somber place, with libations of the Jesus-plant juice and of the blood of a wolf. No doubt, the devil-worship of the Yezidis is a survival of the Magian sects who in those districts could resist orthodox Mazdaism.

The doctrine is supposed to be contained in a sacred book called *Yaloohe*. It is said to be hidden on a mountain-top where nobody can go and see it. In fact, the real book, in the form in which it exists at present, is written in an obsolete dialect of Kurdish that apparently was in use in the time of Shaikh Adi. Particulars about the Yezidi books, their authenticity, and their contents are given by Bittner, Mingana, and Horton.

Although the publication of these books has been on the whole disappointing, it has made more certain that Zoroastrianism is an offshoot of Mazdaism. It is to be found in a varying unity in dualism. It secures that result through presenting darkness as a mere absence of light, and evil as imperfect the positive element of which is good in the eyes of God, whose plan it serves although, to our unsatisfied knowledge, it seems to be bad. The book literally says: "I [the Spirit of Good] am active in all events which the outsiders regard as bad because they do not answer to their wishes while they answer to mine. I am therefore only a deficit which is to be made good through the wandering of the soul. The Good Spirit or First Principle is conceived in a pantheistic way as the light and power of God and a kind of *nuryos*. It is compared to a white pearl in the sea of Chaos out of which everything has arisen. In this conception we recognize the White *Hím* of Pahlavi books, a sacred plant growing in the sea Vourukasha and in which the creative power of God is contained. This white pearl is also a bird, a peacock, the most revered symbol of the Yezidis (Malak-Tâus). It is also an old Iranian symbol. On the Goknera (another name of the White Hím) growing in the cosmic sea roosts the marvellous bird Simârgâh (Av. *sàvaña*, who, under the name of Vâreghsa, is said to have seized the godly glory (Old Pers. *pârmach*) that is the best conception, the primeval king (also on Zoroaster). The *nuryos*-bird of the Pahlavi was also supposed to incorporate himself in prophets. They believe him to have manifested himself both in Christ and in Shaikh Adi. The Aryans often compared the sun to a bird. Preference is given to the peacock on account of its way of spreading out its tail like a wheel (the wheel is a still better known symbol of the sun). The same symbol has been found on a Copite coffin, and in the sacred books of the Mandates. To what extent the Yezidi doctrine is permeated by that old symbolism may be shown by a quotation from their books: "Before heaven and earth arose, God rested on the sea. He had made for Himself a boat and was sailing on the waves, glorifying Himself alone. Then emanated out of Him a white pearl, and He reigned upon it forty thousand years till He threw it off out of anger." This mysterious language is very much in the manner of the Iranian Banda-lishin. It is clear only to those who know that the Iranians compared the sun not only to a bird but also to a ship.

**YQGRASIL.**—See Nature (Tentonic).

**YOGA.**—The word *yoga* has two meanings in India: (1) contemplation raised to a formal art, and (2) the system to be treated below, which is entirely taken up with it, given it a philosophical basis, and ranks as one of the six systems of Brahmantic philosophy. Contemplation exercises for the attainment of higher states of consciousness and faculties are very old in India. It has been shown, especially by Hermann Beckh (*Buddhismus*, 2 vols., Berlin and Leipzig, 1916), that they were of great influence at the foundation of Buddhism. The Yoga system had its rise at a later period, which cannot be determined with certainty. Nor can there be any certainty yet as to the age of the Yogasutrâs, i.e. the text-book in which the system was first set forth by Patanjali. The Hindus unanimously regard Patanjali as the founder of the system; and as identical with Patanjali, the grammarian, the author of the *Mahabakhyaga*, who lived in the 2nd cent. B.C. But Hermann Jacobi (*J. A. O., xxxi. (1911) 24 ff.) has made it probable on philosophic-historical grounds that the Yogasutrâs were composed after A.D. 450 by another man of the same name. On the other hand, Bruno Liebich (*Zur Einführung in die indische einheimische Sprachwissenschaft, I. Das Kāṭaṅgī, *1917) and Wolberg, in their *assorted noteworthy philological-critical grounds for the identity of the two Patañjalis*. The question therefore still awaits the final solution. But in any case the Yoga system is in the main essentially older than the Yogasutrâs of Patanjali. We find almost completely developed in the *Mātrī Upanisad* the technique prescribed in the Yogasutrâs.

In Indian literature the Yoga system is rightly regarded as a branch of the Sāṅkhya (q.v.). For in the doctrines of the Sāṅkhya on cosmology, physiology, and psychology, have been simply adopted by the Yoga. So, too, the doctrine of emancipation is the same—though recently the conception of the emancipation itself as a complete separation of the soul from matter, but also the theory that this emancipation is effected solely by means of the clear distinction drawn between matter and spirit. The characteristics of the Yoga philosophy, apart from points of less importance, are—(1) the rejection of the atheistic views of the Sāṅkhya, and (2) the treatment of the doctrine of absorption as the most effective means for the attainment of the knowledge that secures emancipation. The technical detail of the theory of absorption forms the proper contents of the Yoga system, and has given to it its own name; for *yoga* signifies originally 'yoking', then 'diversion of the senses from the external world, and concentration of thought within.'

The object of the Yoga system in inserting the conception of a personal God into the Sāṅkhya is merely to satisfy the theists, and to facilitate the propagation of the theory of the universe expounded in the Sāṅkhya. The idea of God, far from being organically interwoven in the Yoga system, is entirely distinctly inserted. For in the passages that treat of God stand disconnected, and are, indeed, in direct contradiction to the contents and aim of the system. God neither creates the universe, nor does He rule it. He does not reward or punish the actions of men, and the
latter do not regard union with Him (at least according to the older doctrine of the Yaga) as the supreme object of their endeavour. God is only a 'particular soul,' not essentially different from the other individual souls which are eternal with Him; the distinction consists solely in the manner of His connexion with matter. God cannot in this philosophy be conceived as existing unrelated to any material soul, for then He would be without consciousness. It is assumed, therefore, in the Yoga doctrine that the divine soul stands in an eternal and indis- soluble connexion with the individual most refined constituent of matter, sattva, which is completely purified from the lower material elements; and that this soul is in consequence from and to all eternity endowed with supreme power, wisdom, and goodness. Being free from entanglement in worldly existence, which is full of misery, or in the cycle of births, God lives in eternal bliss, without merit or guilt, unaffected by all the impulses and false involutions with which all other living beings are hardened.

It is evident that this is no God in our sense of the term, and that we have to do with perplexing speculations the aim of which is to conceal the original nature of God from man, and to bring the assumption of God into bare accord with its fundamental teaching. Assuredly these speculations prove, were there any need at all for proof, that in the real Sākhya-Yoga there is no room for a personal God. The two systems are therefore thus joined together in India, in order to emphasize their unity. The idea of God, however, once having been received into the Yoga system, it became necessary to establish a connexion between God and the world of mankind, for God could not continue to exist for His own sake alone. A relation between God and man was found, in the fact that, while God does not bestow earthly or heavenly felicity (for this is to be obtained only by individual merit and springs necessarily from it), He in His mercy aids the man who is entirely devoted to Him to remove the hindrances which stand in the way of the attainment of deliverance. But even this slight relation dependent on human devotion to God and on divine favour is with difficulty intelligible as combined with the doctrine of the Yaga.

Nevertheless, in the later Yoga literature, especially in the numerous more recent Upaniṣads which are founded upon and develop the Yoga doctrine, viz. the Śvetāmbara, God is a much more definite place. God gradually becomes more personal, and the relation between God and man closer. Here also, therefore, the universal need of the human heart has proved stronger than the logical reasoning of philosophy.

The true subject of the Yoga is the doctrine, discussed at great length in the text-books, of yoga, or concentration of thought. These texts describe how the senses may be withdrawn from the objects of sense and reduced to inactivity, so that their natural tendency is reversed, and they assume altogether the character of the inner central organ, whose emanations they are; how, in the next place, the activity of the organ of thought, in which all the functions that are dependent upon the influence of the external world are aspressed, is wholly centred upon the ātmān (the self, the soul); and how, finally, in the last stage of absorption, thought and its object completely coincide. By regular observance of the Yoga praxis the hindrances arising from our natural dispositions, and their management of saving knowledge so difficult, are most successfully overcome. When absorption has risen to such a height, or rather has penetrated so deep, that no wandering of thought towards other objects is any longer possible, when that disposition of our organ of thought which is prone to go astray can no longer manifest itself, the knowledge of the essential difference of soul and matter is revealed in the form of an intuitive perception, and therewith the final goal of human endeavour is reached.

The Yoga praxis consists in a series of stages which have to be traversed, in which external aids play a large part. Various bodily attitudes, named āsana, are prescribed, the counting of the inhalations and exhalations, and especially the holding of the breath, and the concentration of the gaze on a definite point—on the tip of the nose, the navel, etc. One result of these external Yoga practices is the loss of consciousness, the so-called Yoga-sleep (yogānanda), which is considered to be a stage preceding emancipation, in those cases especially in which during the Yoga-sleep the life becomes extinct. That this Yoga-sleep, which naturally arises in the course of the practice of the supreme marvellous phenomenon, is none other than the hypnotic sleep scarcely needs formal demonstration. In fact, the Yoga texts describe a whole series of hypnotic devices which have originally been effective, and which, e.g., the ṛṣabha, for instance, Yoga texts which are themselves late, but rest upon an older tradition, enjoin the concentration of a steadfast gaze upon a small object until the eyes begin to shed tears. The result of such practices is declared to be that the body becomes as still as a piece of wood, i.e. becomes cataleptic. One method, which is especially significant in view of the artificial production of apparent death by the Yogins (see art. Yogī, and of James Braid, Observations on Trance or Human Hypernovation, London and Edinburgh, 1839), is the so-called khechari. This consists in artificially extending the tongue, bending it round and inserting the tip in the hollow of the throat, while at the same time the gaze is steadfastly directed on the spot between the eyebrows. Even among ourselves in recent times it has been noticed that the persistent turning upwards of the eyeball at a certain angle induces the hypnotic sleep.

When employing these methods the Yogī, according to his Hatha-yogapradīpika and other texts, before completely losing consciousness hears within his body (in the heart and throat, between the eyebrows, and in other parts) various sounds, as of a bell, a shell, a reed, a lyre, and a bee. There can be no doubt that as a result of self-suggestion such sounds were actually heard.

The Yoga praxis when correctly and perseveringly observed has, according to the Indian view, therapeutic effects, and other consequences of various kinds. In particular, according to the belief universally held in India, the practice of Yoga procures for a man the magnified powers often mentioned in Indian literature. When the authors of the Yoga texts hold out the promise of these supernatural powers, it must not be forgotten that these authors were men who regarded very seriously their task of expediting the final attainment of the supreme goal. They certainly did not intend consciously to deceive. They have simply given expression to the conviction of the Yogī, who in the essential difference of the beings by means of suggestion in the hypnotic state to be in possession of such powers. These alleged miraculous powers are, in fact, partly the same as our modern mesmerists think that they make use of the many powers that are enumerated can here be named. Among them was the ability to become infinitely small or invisible; to swell to an
immense size, so as to reach even to the most distant objects—e.g., to the moon, with the tip of the finger—or to be transported anywhere by the simple act of will. There is mentioned also such an internal perception of the most remote things, even though separated by intervening walls or the like, come under the cognizance of the senses, and the processes going on in the minds of other men become known in the same way (thought-finding). Other faculties obtainable are the knowledge of the past and future, especially of the hour of one’s own death; or the ability to make the dead appear, and to hold converse with them. Two of these are cited. That these miraculous powers may be gained by means of the Yoga praxis the most enlightened Brâhmans of the present day are themselves immovably convinced. The reason why such powers of the Yogis are not openly exercised is attributed to the preliminary condition of their attainment, viz. to the absolute indifference of the Yogi to the things of the world.

The conditions of ascetic contemplation practised in the Yoga are the final result of a long development, which takes us back to primitive times, to the ecstatic rites of savage peoples, of which we find traces in the Rigveda. Following the analogy of primitive peoples of the present day, we may confidently ascribe to that early period the belief that it was possible by ascetic practices to win the power to hold intercourse with the spirit world, and in a marvellous way to change the ordinary course of nature. In ancient India the name for asceticism was tapas. This word signified in the first instance ‘warmth, heat,’ ‘fervour,’ in the literal sense; then, the sweat generated by self-mortification, and the condition of internal heat thus caused, i.e. ecstasy. As at the present day the conjurers among the Indians of America and among the Negro peoples are wont to proceed in a similar way, so according to the ancient Indian ritual the offerers of the soma juice prepared themselves for their task by prolonged fastings, while, clad in dark skins of wild animals, and ‘speaking in a stammering voice,’ they tarried by the magic fire. The fact that the word tapas in its metaphysical meaning is found first in the later hymns of the Rigveda proves nothing against the extreme antiquity of the above-mentioned ideas or their practical application; for the circle in which the thought of the Rigveda moves has few points of contact with ascetic practices, which meets us more frequently in the Yajur- and Atharvavedas, and very often in the literature of the Brahmans and Upanishads. Since tapas occupies here the position of a cosmogonic power, by means of which the creator of the universe produces living beings and inanimate objects, it is evident that already at that period no less influence was ascribed to asceticism than in classical Sanskrit literature, in which the ascetics appear as all-powerful magicians. While, then, originally the ecstatic condition, in which man believes himself capable of rising to higher spheres, was sought mainly by fasting and other self-mortification, in India, owing to the increasingly introspective character of the spiritual life, stress was laid more and more on meditation and absorption. The conception of yoga, therefore, was developed out of that of tapas. In that meaning the word yoga is first met with considerably later than tapas. But the existence of the peculiar Yoga doctrine is certified already, as stated above, as early as pre-Buddhist times. One attempt has been made to trace the origin of the Yoga praxis back to the influence of the dark-skinned races with whom the incom-
peculiar custom of slitting their ears (kōn, 'ear,' and phKT, 'sit') and inserting huge earrings in the holes. They are also known under the names of Dārsanas from their ears (see below), and Gorakshīs and Gorakhnāths from their founder Gorakhnāth (q.v.).

Their origin is involved in great obscurity. They trace their tenets to a much earlier period than Gorakshīs and Gorakhnāths and the latter are merely the reorganizers of the doctrine and the founder of the sub-sect. Gorakhnāth himself is said to have been a pupil of Māchchhendaramāthī (Skr. Matsyendrānāth)—the Nepalese local deity—who in his turn is represented as the pupil of Adināth, and in some accounts the list is still more prolonged. A tradition current in N.E. Bengal (Kangpur District) identifies the Kānpaṭā with Sankara-charya's disciples, who, having taken to drinking, were consequently disowned by their teacher. In the Tibetan tradition Gorakhnāth is recorded as a Buddhist dhamuṭagur, and his Yogis are accused of having appealed to the present idea of gurus simply to please their heretical rulers and to gain political favours. What seems to be most likely, amidst the general confusion of the various accounts, is that the Kānpaṭā sect came from the north of India, where already existed, during the prevalence of Buddhism, but it grew to power only when the latter religion began to lose ground and Brahmanism to make its reconquest. It is possible that, while Buddhism prevailed, the Yogīs could not help being in some way attracted into its sphere, and that Gorakhnāth was the man who rallied them from the ranks of the Buddhist and Brahmanical principles into harmony with the philosophy of the Upanisads and who was still enough to a certain extent his apostle. A short poetical composition, bearing the title Gorakhnāth-ki Aavat, is included among the works of Bunārī Dīś, a Dīgāmbāra Jain poet, who flourished in the first half of the 17th century, and who for some time in his youth had also been a follower of Saivism (probably of the Lingāyānt sect, but that too is of little help. The most important source of information, which has remained unedited, is the Gorakshīda-vacan, a Yoga treatise, which is said to be one of the books of the sect, or the Gorakhnāth-ki Goṣṭhī, a kind of controversial dialogue between Gorakhnāth and Kalībī concerning their respective doctrines. All that can be gathered from the above sources is that the Kānpaṭās reconcile Śiva as Supreme God, and hold that emanation from worldly existence lies in the union of the individual soul with him, and reposes the nearness of this the most important end. The phrase yāti viśva nirmātare, occurring in the Tattvartha and Brahman Upanisads to signify incapability of definition, is also found in the Gorakshīda, 50–51. Certainly, occurring in the Tattvartha and Brahman Upanisads to signify incapability of definition, is also found in the Gorakshīda, 50–51. Contrary to what had been asserted on the authority of the Hatha-yogānandakapalī, a Kānpaṭā Yogi is not necessarily obliged to remain within a monastery, the second stanza in the Gorakshīda allowing him to live in market-places and roads, and under the same conditions. The important features of the doctrine of Gorakhnāth is, no doubt, its universality, it being open to all castes and being not very particular in regard to food, in both respects bearing an analogy to the Vaisnav system of Rāmaṇa. The affinity between the two systems is increased by the adoption of the same term avadātā for the designation of their respective ascetics.

From this it would seem that Gorakhnāth too resorted to a symbolism of the kind found in many of the Upanisads, especially the later ones, to account for certain metaphysical problems as cannot be solved by reason. The phrase yāti viśva nirmātare, occurring in the Tattvartha and Brahman Upanisads to signify incapability of definition, is also found in the Gorakshīda, 50–51. Contrary to what had been asserted on the authority of the Hatha-yogānandakapalī, a Kānpaṭā Yogi is not necessarily obliged to remain within a monastery, the second stanza in the Gorakshīda allowing him to live in market-places and roads, and under the same conditions. The important features of the doctrine of Gorakhnāth is, no doubt, its universality, it being open to all castes and being not very particular in regard to food, in both respects bearing an analogy to the Vaisnav system of Rāmaṇa. The affinity between the two systems is increased by the adoption of the same term avadātā for the designation of their respective ascetics.

The present Kānpaṭās are more or less spread all over India, and their customs are substantially the same in all places. They have no caste prejudices and freely eat flesh, with the exception of beef and pork, and indulge in spirits and opium, whenever they can afford it. They bury the dead. Those who take to secular callings are mostly money-lenders, weavers, cultivators, peddlers, or soldiers. They are said to be good soldiers, and

and in the form of a conversation between Gorakhnāth and his guru Māchchhendramāthī, the stanzas being a question and an answer alternately. Unfortunately the extreme conciseness and difficulty of the text and the partly obscure character of the exposition make this source only partially utilizable; yet there seems to be sufficient ground in it for concluding that the system here expounded is a combination of Saivism and the Vedic philosophy, and apparently closely related to the Saivism comprehended by Madhavachārya under the name of Saivism, though different from it. The close alliance of the Kānpaṭā system to the Yoga system of Patañjali and of the Upanisads is visible from the prominent part given to the Yoga praxis as well as to the mystical theory of the circles in the body (chakrā, kūtra), arteries (nāda), vital air (prāna), and breaths (prānī).

According to the authority of the Gorakshīda, the vital air resides in the circle of the navel (nabha), and is supported by the void (śūnya), which is spread everywhere. Vital air visibly vivifies the manas, which resides in the heart. The manas is open to the influence of the moon (chandra), which resides in the sky, the vital air to the influence of the sun (sūrya), and the void to that of the fire (lāla). The latter is the element, the word (śabda), which resides in form (rupa). Before the coming into existence of heart, navel, form, and sky, the manas was contained in the void, the vital air was shapeless (nirākāra), the word was unformed, and the moon resided in the intermediate space between heaven and earth. The void is of four kinds: ahāka, anubhava, paratna, and atiśūrya. It is to be noted that the vital spirit (prāna) resort during sleep or death. There are five principles (tattva), one of which seems to be nirvāṇa, and ten desires, or means of attaining perfection, which are not named.
their military fame seems to be of an ancient date. 1 In some parts of India they live by singing cyclic poems 2 or religious songs. 3 They are generally believed to be southsavors and sorcerers, and to have the power of burning and freezing men and animals from the evil eye. 4 Marriage is common among them. 5 Those who live by begging smear their bodies with ashes and wear a waist-cloth and an upper-sheath-dyed in ochre, a woolen string (jñāna vaññi) round their neck with a horn-whistle (nād) attached to it, a wallet (jñāna) hanging from their left shoulder, and a hollow gourd, in which to receive alms, in their right hand. But the great characteristic of the Kānphātas is the huge earrings (dārākāna, mudra) which they wear in their slit ears. These earrings are generally made of agate, horn, or glass, about 2½ ounces in weight, and are conferred on the Kānphātas at the time of their initiation. They are worn as a kind of fetish and are regarded by them as the symbol of their faith. 6 The initiation takes place as follows:

First there is a preparatory ceremony, in which the neophyte, after having been shaved and smeared with ashes, is invested with the woolen string and horn-whistle and appointed to serve his guru. After a period of six to eight months, during which his conduct is strictly watched, the neophyte is admitted to the certainty, which is performed before the head guru or the god Bhārava, with the thumb of the right hand laid on his face turned to the east. The slit made with a double-edged knife is and about three-fourths of an inch in length; in the wound a nimb stick is inserted and the cure is made by a treatment of nimb oil and daily batheings with pure water. When the car is well again, the nimb stick is removed and the wound is covered with neem leaves, and he has his name changed into a new one ending in -maññi and becomes a regular Vagi.

Of all the Kānphātas of India the best known to us from trustworthy accounts are those of the west. These generally trace their origin to Dhāranmāth, who is said to be one of Gorakhnāth's disciples, who went from Peśāwar to Kāthiawār and Kachchh to perform penance and to base the river between the two peninsulas into the present Ran. The Western Kānphātas live in monasteries, the most celebrated of which are that of Dīnodiār in Kachchh on the edge of the Ran, which claims to have been founded by Dhāranmāth himself on the spot of his penance, 7 and that of Gorakhnāth in Kāthiawār. 8 The characteristic of the Western Kānphātas is charity; they make it a rule to distir their food and their robes to any who ask for them; 9 they can well afford to do this, as they are rich and have been endowed with lands by more than one of the former rulers. The monastery of Dīnodiār in Dīnodiār Hill is the most important; there is a large fenced and turreted establishment, comprising dwelling-houses, temples, tombs of the former pir, halls for the treating of guests, etc. The pir, or abbot, is held in great honour by the lai ho, after who his election invests him with a dress and instals him on his seat. Both the Yogīs and the pir of Dīnodiār are said to observe the strictest celibacy, but in the

5 For a complete account of this monastery as well as of the Kānphātas of Dīnodiār see J. English, 'Practise of One of the Kānphātas of Kāthiawār,' Khākhar, in Ad. v. [1878] 47-53; cf. also T. Postans, in JBUAS 500, [1895].
6 Gv viii. 155 f. 46f.
7 According to the Kachchh legend, this liberal distribution of food and clothing is the habit of Dhāranmāth himself, as a reaction against the uncharitable character of the inhabitants of Kachchh.
YOUNG MEN'S CHRISTIAN ASSOCIATION

Williams, received the honour of knighthood from Queen Victoria. The official figures issued by the World's Committee show that on 1st Jan. 1920 the Y.M.C.A. was represented in 5790 cities and towns in 46, the United States, Africa, 2908 in America, 386 in Asia, and 23 in Australasia.

The Association has thus been in existence for the greater part of a century, and all parts of the world has proved the friend particularly of the young man away from home. The exceptional conditions of the Great War have brought it into the limelight and gathered round the Y.M.C.A. a host of new friends and naturally not a few critics.

On the one hand, it has been urged by many that there is no need for the Y.M.C.A., and that the Churches can do all that is necessary as far as Christian work among young men is concerned. Many Christian people have gone even further and said, 'Drop the "Christian" out of your title and confine your efforts to social service, and the work will be more appreciated.'

Many have accused the Association of being too broad, and others have withheld sympathy and support because in their judgment it is administered on too narrow lines. Then, again, during the War many have accused the Y.M.C.A. of being too commercialised, though, on the other hand, they insist on the work being self-supporting. The fact is that, if it was to meet the real need of the men during the War, it was compelled to trade, though never for trading's sake or for private profit, and indeed all the profits were spent for the direct and immediate benefit of the men.

The Y.M.C.A. commenced its work on somewhat narrow lines. It had a definite object which it kept always before its members—too win men for Christ and to enlist them in His service. The story of the movement has been a story of gradual but steady and constant evolution. It has gradually extended, and to-day it stands for a broad progressive programme of Christian and social service. To appreciate the importance of the service, it is necessary to realize that for the last seventy-five years, and the programme is gradually evolving for the future, certain facts must be borne in mind concerning the Association.

1. Its functions are those of the pioneer. It does not seek so much to build upon the foundations laid by others as to find new methods of serving and enlistling men. As an emergency organization it appealed to the imagination of the public. In August, 1914, when, through its mobile machinery, it was able to meet a definite national emergency with unexpected rapidity. Long before the adaptation of the Labour Exchanges to meet the needs of discharged men, the Y.M.C.A. in London had its own employment agency, through which it found work for more than 20,000 ex-soldiers and sailors. Before the Armistice it had its own design and workrooms in London, Manchester, and other centres, and the little farm at Wetherby that it has established in Dorset for tuberculous ex-service men has been regarded by the authorities as one of the best things of the kind, though to meet the needs of the machinery of no organization would be adequate. The Y.M.C.A. was the pioneer of the present Army system of education, and more than £140,000 was spent by the British movement on educational work among the soldiers in France. As the War went on, many other societies and private individuals organized recreation huts and tents on the lines mapped out by the Y.M.C.A., and it is a striking fact that in the early days of the century in volunteer and territorial camps that provided the experience upon which all this work in war-time has been built up.

2. It is essentially an auxiliary movement. It does not profess to be an educational authority, but in a hundred ways it supplements the work of the school, university, and educational committee. On the battlefield it supplemented the work of the official R.A.M.C., attending to the needs of the walking wounded, and in the base camps caring for the relatives who visited their loved ones who were dangerously ill in hospital. So in like manner it seeks to supplement the work of the Churches, and has always resisted the temptation to develop into another denomination, whatever it may be, but to remain as a movement that rightly belong to the Churches, or to supplant or in any way supersede their work.

3. It is interdenominational rather than denominational. It holds that the first duty of the church member is to his Church. A recent official declaration states:

(1) The Y.M.C.A. does not come on the scene to teach the Churches how to do their work, much less to supplant them. It desires to help and serve the Church as the permanent Domestic Institution designed to help and save the world.

(2) It believes that the work of God to serve the soldiers, sailors and airmen until demobilisation is complete, and then to continue to serve such men as are demobilised or are still in uniform as well as possible, all the young men and boys of the nations in far and wide, camp and barracks, village and hamlet, East and West, in the world, and befriending them as they move from place to place, and looking after their interests when in response to the call of God or commerce or whatever the call of search of health or wealth to the most distant parts of the British Empire, or to the utmost parts of the earth.

(3) It regards the whole world as its parish, believing that the work done during the war has demonstrated that the Red Triangle has a message for the men of every creed and nation. It believes it can help the Churches to find the key to the solution of one aspect of the Missionary problem, and that the "Hut" will prove as helpful to the young men of missionary lands as to those of our own country.

(4) It believes that the very success of its war service constitutes a challenge to undertake work on an adequate scale for the men and women of all conditions.

(5) It holds that it is of more importance that the need should be met, and the work done, than that any particular society or organization should or should not do it. It recognises that the field is so wide that there is ample scope for the activities of all societies that have the same end in view, and it earnestly urges that all their overlapping or over-lapping energies should be avoided, and all such work co-ordinated.

(6) It seeks to remove prejudice, and to be impartial as respects the distinction of creed or party, desire to engage in social service and to work for the extension of the Kingdom of God.

(7) It would state definitely and categorically that, whilst fully recognising its position as an agency of the Christian Church, it regards as the primary aim of the movement the winning of young men for our Lord Jesus Christ, and the leading of them into the fellowship and service of the Churches.

4. It is missionary in its outlook. The mission of the Y.M.C.A. is to the man outside, and it seeks to teach him at every point and, as far as possible, in every place. It seeks to form a half-way house, a kind of communication trench, between the men of the nation and the Churches. It has always tried to do the work of the member in the sphere of his daily calling. Meetings for prayer and for the study of the Bible have ever held a prominent place in the programme of the Y.M.C.A., and it seeks through its work and the message of the Evangel in the language of the times. It has always made a feature of meetings in the open-air and in unexpected places. It counts more upon atmosphere than upon any other single factor, on the personali-ty of its workers.

As may be inferred from the foregoing, the
Association has spread to non-Christian lands, where it has speedily become an indigenous movement. In India, China, and Japan it has been proved that the countries of the Orient can themselves provide leadership that will compare favorably with the best that the Western nations can produce.

5. It is essentially a layman's movement.—Possibly the greatest service the Association has rendered the Church is that one of the results has been of winning men when young for Christian discipleship and providing them with their first training in Christian service. Such training must often have been crude, but it has been practical and effective, and has provided the incentive to further study and an earnest longing for fuller knowledge. It will probably be conceded that the greatest weakness of many of the Churches to-day is to be found in their failure to fire the imagination of their male members and to enlist their co-operation in the work of winning men. This lack, to a certain extent, has been supplied by the Y.M.C.A. —to have large numbers readily realized. Leading ministers of every denomination have told the story of the help and training the Association gave them at a critical period of their careers. It is a branch of the Y.M.C.A. which does not live up to the high ideals of the movement, but no Association is regarded as really efficient from the Y.M.C.A. standpoint unless it aims at keeping its first young men and inducing young men to help their fellow men in the daily fight against temptation. Emphasis is placed, too, on the importance of the voluntary worker. In the great City Association the General Secretary is the key to the whole movement. He must be a man of great personal power, but his business is to inspire men and work through his members. The very last thing to be desired is the development of a professional class of men, however able, who will do the work themselves rather than through others.

In the early days of the Great War the Y.M.C.A. had to face a serious crisis with regard to personnel. Hitherto it had been regarded as a work for young men by young men. The very men on whom it relied for its ever-expanding war work were needed for the Army and Navy, and their places had to be taken by women. Through age or health, were disqualified for active service. It was soon found, however, that there were many things women could do even in the work of a Y.M.C.A. Association, and as he has said, it is a matter of fact, later on there were in the war service of the British Y.M.C.A. alone more than 40,000 women workers as compared with less than 4000 men. There can be no doubt that the Y.M.C.A. woman worker has come to stay, and that to the great advantage of the movement.

6. Emphasis is laid on practical service.—In the early days of the War some people spoke sneeringly of what they termed 'canteen religion.' As the War years passed slowly by, the vast majority saw its utility and learned that it was not incompatible with the teaching and example of our Lord. He spoke of the 'cup of cold water' given in His name, and many a war-scarred soldier saw the Master's hand in the hand that gave him a cup of hot coffee or cocoa when he was up against things in the trenches. The Y.M.C.A. believes that the most effective way of combating intemperance is by providing an effective counter-attraction. Given the 'Hut' run by the right people and with a strong constructive programme, there will be no need for the canteen in the public-house, or the far more deadly drinking club. The Association seeks to promote purity of life, not only by education and precept, but also by making provision for the sexes to meet amidst wholesome surroundings and by catering for the leisure of young people. A well-equipped hostel is an important feature of most of the large city Associations, and the Association has worked out hundred practical ways the all-round needs of young men and boys are being looked after. It is the conviction of the leaders of the movement that it is possible to serve God acceptably in any one of the activities of the Association. The Hut, or the Red Triangle Club, as it is usually called, with its big lounge or common room, is regarded as a centre to work from, and an object lesson in practical Christianity. It is recognized that

7. It is a unifying force.—Sir George Williams always regarded the prayer of the Master— That they all may be one—as a call and a challenge to the Association which he founded and with which his name will for ever be identified. Through the whole period of its existence the Y.M.C.A. has been a unifying force, though it has talked little about unity. It has provided a common platform for Christians of all denominations, and it has been recognized in bringing together and uniting in Christian service those who never otherwise found opportunity to move beyond their denominational barriers. It is believed that it will be an important part in years to come in bringing together class and class, party and party, creed and creed, nation and nation. None will be asked to give up their special beliefs or convictions, but all will be invited to co-operate in the service of the Kingdom of God. In the War the Association was allowed to serve the Indian troops only on condition that there should be no religious work as men commonly call work religious. There were to be no hymns, no prayers, no addresses, no distribution of Bibles or Testaments. The leaders of the movement gave their promise and carried it out to the letter. It is doubtful if anything that has ever been done will have more effect upon the future of Christianity in India than the unselfish Christian social service carried out by cooperation many under the sign of the Red Triangle. Not only during the War, but before and since, the Association has had the privilege of serving men of every nation and creed.

8. It begins with the boy.—The hope of the future of the Y.M.C.A. is held by many on the fact that it begins with the boy, and it seeks to get him at the age when he begins to feel too big for the Sunday School. If we can only reach and influence the boy during the crisis of adolescence, the future is assured.

9. The significance of the Red Triangle.—During the War the Red Triangle had become almost as familiar as the Red Cross itself. It typifies the service the Association seeks to render. Its very colour signifies sacrifice, and its three sides speak to the Association man of the needs of body, mind, and spirit, all of which may be consecrated to the service of the living God. Nothing that can be used to the glory of God is regarded by the Association as common or unclean. Its programme is ever widening and its roots getting deeper down. For years the leaders of the Y.M.C.A. set their faces steadily against even the most innocent of games, and, when these were included, another running fight, which lasted for years, there was the need for a closer watch over the proceeds of smoking rooms and billiard tables. These have now become almost universal in Britain, though there are still many of the great Association buildings in the United States where smoking is
YOUNG WOMEN'S CHRISTIAN ASSOCIATION

not permitted. More recent agitation has been in favour of cards, dancing, and the drama, and almost every association of this kind seems to modify its position to meet the new needs of a new generation. Emphasis is placed on proper supervision, right company and hours, a programme that is elevated and given with a purpose which there is no gambling. It is urged that these innovations can only be included as part of a well-considered constructive programme. In these days, when there is more of less general tendency to every Act of God, it is being done build up in every Association centre a programme that will lead the members on to aspiration and achievement.

1. History.—The history of the Association circles round three great events in the spiritual, social, and political realms which have in a special way affected it. The days of Y.W.C.A. have been described as those of a Triangle in which there is no gambling. It is urged that these innovations can only be included as part of a well-considered constructive programme. In those days, when there is more of less general tendency to every Act of God, it is being done build up in every Association centre a programme that will lead the members on to aspiration and achievement.

and Emily Kinnaird, to the U.S.A. brought the British Association into touch with a similar movement among students, which was organized along the lines of the Y.M.C.A., and formed the establishment of Y.W.C.A. which has been adopted in many lands as an integral part of the national Y.W.C.A. work of the country. This led to frequent communication and inter-visitation until finally an entirely new policy was adopted. All the branches which had been started by the British Association and linked to it, but which were not in Great Britain or Ireland, were cut off from the main group and placed under national committees; each could make its own rules and affiliate to the World’s Y.W.C.A. office.

(b) The third national movement which brought a call to the British Y.W.C.A. was the Great War of 1914-18. On the first day of war, 4th August, some of the workers met, and within a week called together the National Council to consider the responsibility of a women’s association in time of war; it established a War Emergency Committee in the first month, which eventually developed into a War Department with six divisions of Sub-Departments. The Association put itself at the disposal of Government for anything that might concern women. It was found that London had become a cosmopolitan city, and girls of all lands were working in it. Immediately they were unanimous to get back to their own country, the Y.W.C.A. provided the necessary links, and thousands of girls found that the Association Directory could guide them and that its membership meant friendship and fellowship above national or denominational ties. The Blue Triangle, similarly to the Red Triangle of the Y.M.C.A., became the symbol of Y.W.C.A. activities. It was evident to the nation that a Christian association could be looked to for the physical and social well-being of the soldier boy and the girl war-worker. The War Department gradually became responsible for establishing and expanding work along two lines—those of providing for the mental and for the physical needs of girls—and on a third line to carry on the religious work of the Association, thereby completing the triangle symbol. The three—physical, mental, religious—are equally dependent on the spiritual force which energizes and binds them together. The Blue Triangle is now seen in Government enclosures and canteens, in small localities, in the centres of busy cities and in the lonely countryside where munition and aerodrome settlements were established. It denotes to the girl of today, as the letters Y.W.C.A. denoted to the girl of yesterday, that family life, community life, and the life of the State are better if animated by the spirit of Jesus Christ their Lord, which is the animating spirit of the Y.W.C.A. The Association also makes its contribution to the Kingdom of God on earth by remaining in close relation to all the Christian Churches; it is strictly interdenominational, and its service is rendered to all women irrespective of creed.

2. Organization.—(a) National.—The activities of the Association are carried out on certain well-defined lines under the direction of: (1) the National Biennial Conference, composed of members elected by the membership, thus aiming at the development of democratic management; (2) a National Council appointed at the Conference and composed largely of national and divisional office-bearers, with co-opted members, representing labour and Church, meeting at least once a year; (3) a National Executive, meeting monthly to direct and evolve any activities necessary for the growing needs of the girls of the land. The work is directed by a president, four acting vice-presidents, a treasurer, a general secretary, and a staff of national secretaries.

(b) Departmental.—National, departmental, and sectional committee meetings meeting every month or in alternate months, are appointed for studying problems affecting girls, and thus a large body of women take part in and guide the activities of the Association. The Overseas and Foreign Committee sends to interest members in Association work in non-Christian lands; secretaries are sent out to all parts of the world.

(c) Basic objects.—All women taking up active work, salaried or honorary, on these councils and committees must agree with the basic aims:

1. Faith in God the Father as Creator, and in Jesus Christ, His only Son, as Lord and Saviour, and in the Holy Spirit as Reveler of Truth and Source of Power for life and service, according to the teaching of Holy Scripture.

2. The aim of the Young Women’s Christian Association is:

(a) To call young women and girls to the allegiance of Our Lord Jesus Christ, the fellowship of His Church and the service of His Kingdom.

(b) To guide them in a fellowship of prayer, Bible study and service, through which they may make their contribution to the spiritual, moral and social progress of the world.

To make available to them all that will minister to character, mental capacity and physical health.

(d) Training of secretaries.—The aim is to have a well-staffed training centre where students offering for holy and overseas work can undergo a course of training or more of training, so that the Association secretaryship may be looked on as a vocation as important as teaching.

(e) Headquarters.—The Headquarters of the British Y.W.C.A. are at 22, 25, and 26 George Street, Hanover Square, London, W.I.

(f) Membership.—Membership in the Association is open to women who desire, in fullment of the motto, to conform to the mother and the world by love in the spirit of Jesus Christ. There are also associate membership and club membership which do not involve membership of the Association.

(g) Magazines.—By its literature the Association seeks to carry its ideals to all sections of the community. Its magazines are: Woman’s Outlook (monthly), Our Own Gazette (monthly, for younger members), Home and Overseas Bulletin, The World’s Quarterly, The Y.W.C.A. Almanack and Motto Card, The Monthly Letter.

(h) Territorial work.—The activities are carried on through divisions, embracing a given number of counties, and consists of:(a) Work in North of England, South of England, West of England, Scotland, Wales. Each has its president, general secretary, and council, and directs the work of the local branches by grouping them into district councils.

3. Methods.—Along the lines of the physical, intellectual, and religious development of the young women of the land, and through its departments, the Association moves forward. The most important methods are:

(a) Contests.—The Y.W.C.A. has the honour of starting the first women’s restaurant, which is still feeding hundreds of working girls at ‘Ames House,’ Mortimer Street, London, W.

(b) Hostels.—The largest of these is Bedford House, London. Others are Ashby House, London; 4 Saville Place, Newcastle; 110 George Street, Edinburgh; Shepherd House, Bristol, etc.

(c) Clubs.—Clubs are carried on under the direction of a club-leader, who organizes their operations with the help of committees consisting of members, and encourages Y.W.C.A. membership. The organizers of the clubs carry on work in connection with the hospitals, and visits girls in hospital, and in connection with the houses, and helps them to find work. The club-leaders are the main teachers in working with the girls, and are therefore able to help them to be true Christians and true women.

(d) Y.C.C. (Youth For Christ).—Y.C.C. are carried on in any locality where the number of young people would justify it, so that a sufficient number of girls needing Y.W.C.A. fellowship and protection are called branches.

(e) Holidays and Camps.—In Holiday Houses and Holiday Camps with Convalescent and Holiday Club Department recreation, fellowship, and new friends are connected. All classes meet together.

(f) The Social Question Department is continually watching the needs of women workers and spreading among them the great work of social legislation on questions affecting women.

(g) The International and Emigration Department works in
co-operation with the Immigration Departments of other lands and the Employment Bureaux (foreign), and seeks to solve some of the problems of household work by establishing training schools in the United States for long service in the Triangle Household Orderly Corps is the latest development.

(8) The Executive Department, which was variously described as a clearing house and a growing staff of secretaries, seeks to fit the girl of labour for her future life, and to induce the girl of education and leisure to adopt a life of usefulness with those who can offer her advantages. In clubs, though they are mainly recreational and social, it encourages study by means of circles and lectures. Co-operation with the Y.M.C.A. is being arranged. A Working Women's College has recently been established.

(9) The Religious, Ethical, and Moral Welfare The Department has for its aim to maintain a Christian attitude towards all moral questions, and to promote educational work to help it to attain its end.

(1) The Religious Work Committee touches the very centre of Y.W.C.A. work. Its aims are to promote the spiritual life of workers and members by Quiet Days, Retreat conferences, Camps, and Summer Schools. There are special secretaries for promoting Bible study, evangels, study and fellowship, home study, and co-operation with the Church.

II. THE WORLD'S Y.W.C.A.—At first looked on as undeniernational, the Y.W.C.A. has proved itself to be interdenominational. In its early years avoided by some sections of the Church, and its position misunderstood, it held to its principles, which have been formulated into a truly catholic basis, and with a truly world-wide aim. The winning of the world to Christ was the aim of the United Methodist Church, and is the basis, that of the Y.W.C.A. should be, and is. At the World's Conference, the basis was agreed upon, and the basis plan adopted of a world-wide, interdenominational, interdenominational, for the development of Christian women, and the attainment of the true woman, the woman with a heart for the world and the Church, and a desire to do her part in the work of the Church and the world. The plan was adopted:

'Faith in God the Father as Creator, and in Jesus Christ His only Son as Lord and Saviour, and in the Holy Spirit as revealed in the sure word of power, life, and service, according to the teaching of the Holy Scriptures."

The first World's Committee met in London in 1894; Mrs. J. H. Tritton was appointed president and Mary Morley treasurer. A sum of $2000 was guaranteed by the United States and Canada, which were then united, and by Great Britain and Ireland, also united at that time. It was agreed that the general secretary of the World's Association should be from another country than that in which the World's Office was located, and therefore Annie M. Reynolds, the first general secretary, came from the U.S.A. An executive committee was formed, with the President of the Women's Work at Headquarters, to which is committed the work for the period between one World's Conference and another. On this committee women of several nationalities have served during residence in London. The executive office was located at 20 George Street, Hanover Square, and has since been removed to 22 York Place, W. 1. Although at present in London, there is no rule as to which country the office of the World's Y.W.C.A. should be located in. It is at the choice of the Quadrennial Conference. Two other national Associations were sharers equally with Great Britain and the United States in their moral earnestness and desire to form a World's Association—those of Norway and Sweden.

In the two years which intervened between the conference held in London, 8th-11th April 1892, and the formation of the World's Committee in 1894, the committee appointed had been carefully drawing up a constitution, which, while it should leave entire freedom of control and direction to each national organization, should guarantee a federation on the basis of the voting membership of all branches according to each national membership. The object of the new body is threefold: (1) to bring into closer mutual knowledge the national organizations already existing that they may be more practically helpful to those of their members who go out from their own country; (2) to help countries having only scattered Associations to form a united co-operative international body; and (3) to develop a greater spirit of responsibility among the young women of Christian countries towards the young women of non-Christian countries.

The first four years—November 1894 to June 1898—had naturally to be spent in striving to attain the first object, that of the world-wide spiritual, and in becoming mutually acquainted. The second object of the World's Association also had its place in the first year, when in May 1895 the Canadian Associations, through accredited representatives, made an honorary application for admittance. The American committee, under whose direction they had formerly been, appreciated their spirit of self-reliance and bade them God-speed. The year 1895 also saw a closer union established between the South African and the British and South African associations as well as the Australian Associations. At the fifth regular meeting of the Executive Committee (9th March 1895), the third object, of greater interest in non-Christian countries, was foreshadowed by a note from Madras, India, recording that Agnes Hill 'has made a splendid start here and been greatly blessed in all her work since her arrival in India.' On the 28th November, a formal notice was given of the organization of the National Committee of India, Burma, and Ceylon, with headquarters at Calcutta. Agnes Hill was asked to take charge of the Committee for India. China and Japan were not long in developing more purely Chinese and Japanese National Committees.

The first World's Y.W.C.A. Conference was held in London, 14th-18th June 1898. The basis of representation adopted was that each national committee should have the right to send ten voting delegates to the World's Conference, provided each national committee represented at least 100 or more branches: if it represented less than 100 branches it should have power to send only five voting delegates. Every five branches after that, should have the right to send one delegate to the conference. It was recommended that a 'quarterly' from October 1898, called The Woman's International Quarterly, be regarded as the official organ of the World's Y.W.C.A., that the second Sunday in November and the week following be considered as the International Week of Prayer for the World's Y.W.C.A., and that the Executive Committee be empowered to select a suitable international badge, which is now the Blue Triangle with a clipper sailing on it.

The first event of active importance after the conference was the application of the German national council for affiliation with the World's Association.

At the London conference eighteen countries were represented, at Geneva (1902) nineteen. At the London conference English had been the only language; in Geneva French was the prevailing language. The Geneva conference was privileged to welcome the Danish national committee to active membership in the World's Association.

All through the Great War, although no international work could be undertaken, there was no breach in the World's alliance, and most national associations developed on very similar lines. In June 1920 representatives of 26 countries met at Champer, Switzerland, for a World Y.W.C.A. Commission to inquire into the social and industrial conditions which affect women so largely. It was followed by a meeting of the World's Y.W.C.A. Committee, the meeting of which had been suspended during hostilities. No affiliated country held aloof, and there were added representatives of South America and Central Europe, on which continents Associations are rapidly developing.

Literature.—The work which the Y.W.C.A. is doing is recorded in its magazines. The chief of these are (1) Our
YUAN-CHWANG, FA-HIAN, AND I-TSING

For further information the following publications may be consulted, besides vol. II of The Y.W.C.A. Overseas Work in China; The Y.W.C.A. in Africa; The Women's Movement in India; Society, Culture, and the Y.W.C.A. in the South Pacific; The Y.W.C.A. and Reconstruction; The Y.W.C.A. and Education; and The Y.W.C.A. in the Twentieth Century. These publications are all issued at the offices of the Y.W.C.A. in London and New York.

EMILY KINNAIRD.

YUAN-CHWANG, FA-HIAN, AND I-TSING.

— Yuan-chwang [Hieh-chien], the greatest Chinese traveller in India (A.D. 629–645), is also one of the most important figures in the history of the development of Chinese Buddhism. There were three pilgrims before him, among whom Fa-hian was the first to penetrate (A.D. 399–413) into the holy land of the Buddhists, and his return marks a step in the progress of the study of Buddhist literature, while the two others, Sun-yun and Haiseng (A.D. 418) by name, left only a short narrative of their travel and do not seem to have done any important work at home, though they brought back with them some 170 Buddhist texts. After Yuan-chwang in the T'ang dynasty there were so many travellers in India that those recorded by I-tsing alone amount to 56. The recorder himself, who stayed for a prolonged period (A.D. 671–685) in India, in the upper Ganges, can hardly fail to be one of the most prominent among them and the only scholar who could in any way be compared with Yuan-chwang himself.

The three, Fa-hian, Yuan-chwang, and I-tsing, are styled in Japan the 'three mirrors that reflect Indian Buddhism.' They are therefore treated together in the present article.

1. The routes. — There were from of old four principal routes into India, two through Central Asia, the northern and the southern. On his journey out Yuan-chwang took the northern road through Turfan, Kucha, Issikuli, Tashkend, Samarkand, Kunduz, Kabul, and Peshawar, while on his way home he preferred the southern road, turning eastward from Kunduz and passing Pamir Kul, Kashgar, Yarkand, Khotan, and Nainshhe (Ans). The southern road is much shorter and the most direct way to India, and corresponds roughly with the route of Fa-hian and other predecessors. The third route to India was through Tibet, leading either to Bhutan or Siklim or sometimes directly the T'ang dynasty; there were many who took this road, especially after the marriage of a Chinese princess to the Tibetan king Songtsan-gampo, who sent envoys to India in A.D. 640.

The fourth route was the over-sea one which was chosen by I-tsing, who embarked in a Persian ship from Kung-tung to Sumatra, where he changed to a Malay boat, sailing through the strait to Tamralipti near Calcutta. Fa-hian as early as A.D. 413 embarked in a Brahman ship to cross the Indian ocean to Java, there taking another merchant ship for China. Thus the journey to India of the earliest traveller Fa-hian was over-land, and his return journey over-sea via Ceylon and Java. Yuan-chwang, on the other hand, confined himself to the over-land route, not even crossing to Ceylon, while the last pilgrim I-tsing took the sea route both ways.

2. Records. — (a) Fa-hian. — As he himself says towards the end of his record, Fa-hian started in A.D. 399 from Ch'ang-an, the western capital of China, reached India after six years, and, staying there another six years, returned in A.D. 413, spending three centuries on the way. His record, which was finally revised in A.D. 463, and which sometimes Fo-kwé-k'i, 'Record of the Buddhist Countries,' or simply Fa-hian-chien, 'Record of Fa-hian,' the word 'high priest' is often added before the latter, is certainly that this designation was not given by the author himself. At the beginning of the record we find a note, 'Fa-hian's own record of his travels in India,' which is in all probability the writer's original title. The work was rendered into French by A. Rémusat in 1836, into English by S. Beal in 1869 and 1884, and again by J. Legge in 1886, the last with the Chinese text as well.

His six years' travel, beginning from Peshawar and ending at Tamralipti, covers almost all parts of India, 30 countries in all, except the Dekkan, which he himself says that he could not visit. From Tamralipti he crossed to Ceylon, thence to return to China.

When he left China, he was accompanied by some ten priests, but a party of three went to Turfan in the upper Ganges, and got the royal patronage there, and another party of three retraced their steps from Peshawar to China in the fourth year for a reason not stated, while two others died in Peshawar and on the Hindu Kush. Fa-hian with his sole companion Tao-chéng visited Mathurā, Kanauj, Śravasti, Kapilavastu, Vaśāli, and Kusinagara, and, having made a pilgrimage to all the sacred spots of the Buddha, came to Pataliputra, whence they visited the Ganges, the Tājāghra, Gayā, Kukkutapāda, and Benarès. They returned to Pataliputra, where they sojourned three years and collected and copied the sacred texts of various schools. Tao-chéng was charmed with the fine discipline of the Buddhist order there, and, having been disgusted with the ill-regulated manners of the Chinese Buddhists, he decided to live in India and never to return home. Fa-hian, whose desire was to enlighten China by his newly-acquired knowledge, took leave of his companion and travelled alone farther down the Gangā to Campt and Tamralipti on his way home. He seems to have lived in general in a very flourishing state, as it was in the imperial Gupta period. Though the Mahāyāna and the Hinayāna are mentioned now and again, there are as yet no signs of a dispute between the two schools nor signs (such as we find in Yuan-chwang's record) of either being much more influential than the other.

(b) Yuan-chwang. — The record of the great traveller is handed down to us in three forms. The first is of course his own work, Hsi-yü-chi, 'Record of the Western Region,' in 12 volumes, translated by Yuan-chwang and compiled by Pien-chi, his pupil, A.D. 648. The travels cover 128 countries in all—110 which he himself visited and 28 of which he gathered news from his informants, as we are told in an Introduction by Ch'ing-p'o. The characters and usages of the people and the state of Buddhist learning and practices are minutely described. The book is unique and in-

The second is a résumé of Yuan-chwang’s travels contained in the Record of the Region of the Sīkṣa in 8 books by Tao-hsian. It is interesting to note that the author was Yuan-chwang’s pupil and one of his assistants, and that the work was compiled during Yuan-chwang’s lifetime, i.e. A.D. 650.

There seems to have been another work in 10 books entitled "Yuan-chwang’s geographical works", by Yen-te’ung, another pupil of the traveller. This record, it is said, treated more of the Indian life than the religion itself, whereas the traveler’s own Mémoires paid more attention to the religion than the life. Tao-hsian says in his own preface that both of these works, Hsiu-ch’eng and Yun-chwang’s, are full of information and that this very fact led him to a fresh compilation of his own work. No European translation of it has as yet appeared.

There seems to have been another, or a curtailed form, of the Mémoires given in the life of Yuan-chwang in 10 volumes, compiled by Hui-li and annotated by Yen-ts’ung, A.D. 653.4 Julien published it, at the same time as the Mémoires, in an abstract under the title Hiuen-thsang ou les voyages dans l’Inde, 629-655, London, 1853, and Beal has also given us a similar abstract.

So far as Yuan-chwang’s routes and geographical names are concerned, Thomas Watters, a great Chinese scholar, did a great deal, and the result of his studies was published in 1904-05 by T. W. Rhys Davids and S. W. Bashell with the title On Yuan Chwang’s Travels in India, 629-655, by Thomas Watters. His researches are as accurate as usual, and, if he could have made more use of the results of the Indian and Central-Asian excavations and several old MSS of the record discovered in Japan, nothing would remain to be desired.

Yuan-chwang’s record can be divided roughly into five parts: (1) a general introduction to Jambudvīpa and a description of Central-Asian countries along the northern route, i.e. Agni to Kapiśa (vol. 1); (2) a detailed introduction to India named geography, calendar, life, language, customs, religion, castes, products, etc., and a description of countries in the Panjāb and in the north of the Ganges as far down as the valley of the Ganges, i.e. Mathura, Pātāliputta, Gaya, etc. (vol. 2); (3) a detailed description of Magadha, including Nalanda (vols. vii.-ix.); (4) the lower region of the Ganges, the south-east coast, in the Sāṃskṛta language, on the lower Ganges and the eastern coast of the Nicobars (vols. x.-xii.); (5) Central-Asian states along the southern route, i.e. Java to the Kinhia (vol. xii.).

A résumé of the contents can be obtained best from Watters’ work, which gives the travels in their shortest possible form. Further, a lengthy note on the itinerary was added by Vincent A. Smith at the end of the work.

When Yuan-chwang, as a young and brilliant scholar, expressed his desire to visit India, there seem to have been some willing to accompany him in his pilgrimage, but when he came to the desert of Turfan he had only two companions, of whom one was sent back to China as he was thought unfit for the hardships of the journey, while the other started in advance to T’u-hwáng and was heard of no more. Finally, when he came to the city of his patron the king of Turfan, four novices were allotted to him as his attendants. The king helped him with a kindly care and introduced him to many of the Central-Asian chieftains; consequently he was welcomed everywhere and travelled with great facility. In India too he was patronized by King Harṣa of Kāñjā and had opportunities of meeting many of the foremost savants of his time.

At Nalanda, the then centre of the Mahāyāna learning, he found an able teacher in Sīla-bhadra, the president of the university, and there he spent several years learning Sanskrit and chiefly Buddhist ideolology, occasionally discussing or disputing with sectarian teachers. The interest of the Buddhists of his time seems to have centred in the Mahāyāna, though the Hinayānist schools too were followed in all India.5

(c) I-tsi7ig.—I-tsi7ig’s record was called Nan-hai-ch’i-kuei-tsa-ch’ien, ‘Record of the Buddhist Practices sent home from the Southern Sea’, in four volumes.6 The ‘Southern Sea’ means Chinese the Malay islands (Sumatra, Java, and the neighbouring places). It is so called because he sent his record home while he was sojourning in Palembang (Bhâja), Sumatra, collecting and copying Sanskrit Buddhist texts. The record was translated into English by the present writer in 1896 and published at Oxford with the title A Record of the Buddhist Religion in India and Malaya Archipelago, 671-695 (A.D. 671-695) (ib. 167-285). The text is entirely different from the two preceding ones, inasmuch as it records only the religious life and practices, especially discussing minute points of the Vinaya rules. The author does not describe his travels at all. The record will prove indispensable, however, when research into the Vinaya branch of Buddhist literature is seriously taken up. Further, it is very interesting that he limits his discussions to the Buddhist practices to the Sarvāstivāda (realistic) school. For it is a very difficult task definitely to class Vinaya practices of that epoch in various schools.

There is another record by I-tsi7ig giving biographical notices of 56 Chinese priests who travelled in India before or during his stay abroad.8 This is practically a book of travels, and it is in this that he describes the incidents which happened on his journey to India, the chance return to China, and the second sailing to Sumatra to copy the sacred texts.6 E. Chavannes published his French translation of it in 1894, with the title Voyages des moines indiens dans le royaume de la grande dynastie Tang sur les religieux éminents qui allèrent chercher la loi dans les pays d’occident, par I-tsi7ig. The two records of I-tsi7ig should always be consulted together, for the whole of his life and work cannot be known without either one.

The biographer7 tells us that I-tsi7ig was 25 years (A.D. 671-685) abroad and travelled in more than 30 countries. That he made a pilgrimage to all the sacred spots of the Buddha can be seen from his own narratives, but we cannot state with certainty that he travelled in so many countries as the biographer asserts, because as the second time with Fa-hian and Yuan-chwang, he had some five or six followers at the outset, but finally started with only a young priest, Shan-hing by name. In India he himself says that he lived for ten years in the University of Sātiya (probably A.D. 675-685), chiefly studying the Vinaya. On his way he stayed in Palembang, Sumatra, to collect and copy more of the Sanskrit texts.

1 According to the life of Yuan-chwang (vol. iii.), he stayed there five years. Vincent Smith makes it two years (see Watters, ii. 329).
3 Naljio, no. 43.
4 Naljio, no. 48.
5 Naljio, no. 170.
6 These facts are summed up in the present writer’s introduction to Life and Travels of I-tsi7ig, p. xxv.
7 Naljio, no. 1465.
8 These are spelt I-ch’ing.
One day he wanted to send letters home and went on a journey by ship, when a favourable wind began to blow and the ship set sail at once. He thus had a chance to see Khang-tung, and, meeting his old friends, tried to obtain some new companions for his work abroad. At last he succeeded in finding suitable assistants, Ch'ang-ku, Tao-hung, etc., with whom he set out once again in A.D. 680, when he was fifty-five years of age. He finally returned in midsummer A.D. 685.

3. Their work at home.—Buddhism was introduced into China in A.D. 67. The emperor Min-ti sent envoy to India and invited two Buddhist priests, Kāśyapa Mātanga and Fa-han1 by name, to come to China. They were stationed in a specially built monastery called the ‘White Horse’ and were kept busy translating. The following three centuries were a period of translation by foreign priests. We can call this first period of translation (A.D. 67–414). Those foreign priests who came from India itself were surnamed ‘Chu,’ a curtained form of ‘T'ien-chu’ (= Sindhu, i.e. Indian), while those from Yao-chu (Kuṣana) were styled ‘Chih.’ Those surnamed ‘An’ are from Ai-hsi (= Arak, Parthian), 4 ‘Kang’ from Kang-chi (= Sunarkand) and ‘Po’ from Kucha (for the royal family was so named). Those were practically all the translators who carried out translations by themselves, though there were a few who assisted in the work as subordinates.

The second period of translation (A.D. 414–645) was inaugurated by Fa-hian’s return. He brought home the Vinaya texts of the Mahāsāghikha and the Sarvāstivāda schools, the Mahāyānasūtra of the Mahāyānists, and also the Mahābhūmī-sūtra. He himself did the work of translating some of these texts with the assistance of Buddhist-bhadra, an Indian priest. Almost at the same time Chi-yen5 and Tao-yun,6 his companions half-way to India, and Chi-mang7 and Tao-tai,8 both of whom went to India soon after Fa-hian, followed the latter’s brilliant example in independent translations. Many priests seem to have done the same, though some of their works are lost.9

This period of translation, though conducted by Chinese priests, was not without brilliant works achieved by gifted foreigners, such as Kumāra-jīva,10 who is said to have had 3000 pupils, Gana-bhadra,11 Paramārtha,12 Bodhiruci,13 and Jiagnagupta.14

The above two periods are generally designated the old era of translation. The following period opens the new era of translation (A.D. 640–1127), which was begun by the epic-making work of Yuan-chwang15 and was continued by I-tsing,16 the two being the most prominent figures in the Buddhist culture of the Tang dynasty. Yuan-chwang brought home the Mahāyāna Sūtras (224 texts), the Mahāyāna Sūtras (192 texts), the works of the Svāvīra school (14), those of the Mahājana school (18), those of the Mahāsāka school (25), the Kāśyapikya texts (17), the Dharmanātya texts (42), the Sarvāstivāda texts (67), the Hetūvidyā (Logic) (36), and the Sadāravidyā (Grammar) (13), altogether amounting to 526 bundles and 657 different texts. What he especially laid stress on was the Viśṇunāmātā doctrine (idealism), and he may be deemed the founder of the Buddhist idealism in China.

The catalogue of I-tsing’s collections is not so minutely as his predecessor’s. The Sanskrit texts of the Tripitaka collected by him during his stay of ten years at Nalanda were nearly 400 in number, amounting to 500,000 sūkas, which he himself says he held in hand whilst in Palembang.1 What he considered most important was the Vinaya literature, and his translations in this branch of study are very full and minute, especially in the Vinaya of the Sarvāstivāda (realistic) school, which amounts to 19 texts in 209 volumes out of 56 texts in 226 volumes in all. His works in this line are generally called the ‘New Vinaya,’ while those of Tao-hsien, a pupil of Yuan-chwang, and of his predecessors are styled the ‘Old Vinaya.’

Thus he founded a new school in the study of this branch of Buddhist literature and made his own school the most influential of all. The work of translation in the Tang dynasty was on a grand scale. All had to be done by the imperial sanction, so many officials and assistants being specially appointed. The completed texts had to be presented to the imperial court to be authorized for publication or to be incorporated into the Buddhist library.

This new era was further enriched by the works of Amoghavajra,2 Dharma-deva,3 Dān-pāla,4 etc., but their translations, numerous as they are, cannot be compared in nature and bulk with those of Yuan-chwang and I-tsing, for almost all of them are dhārmas, stotras, or mystic texts of the kind.

With the Sung dynasty (A.D. 960–1127) the periods of translation which were chiefly represented by the three travellers practically came to an end, Indian Buddhism gradually giving its place to Tibetan Lamaism.

LITERATURE.—All the translations of the texts referred to have been indicated in the article. For reference the following may be recommended: J. Legge, A Record of Buddhist Kingdoms, being an Account by the Chinese Monk Fa-hian of his Travels in India and Ceylon (A.D. 599–614), Oxford, 1866; S. Beal, Sīkṣā-kal, Buddhist records of the Western World: translated from the Chinese of Hsüan Tsang (A.D. 627), 2 vols., London, 1844; T. Watters, On Yuan Chwang’s Travels in India (Buddhist Texts 1904–6), E. Chavannes, Voyage de Sung-yun dans l’Asie centrale et le Gandhara (1825–29), Paris, 1903; E. Chavannes and S. Lévi, L’Itinéraire de Yuen-yang (517–790), Paris, 1906.

ZAIIDI

ZAIIDI.—Zaidiyyah; in Arabia Zaylid is the name of a Muhammadan sect, called after Zaid, son of Ali, son of Husain, and one of the Prophet Muhammad. This person came forward as a pretender in the reign of the Unayzah Hisham (121-122 A.H.) in Kufah, was defeated, and was put to death. His story is told with unnecessary prolixity by Tabari. He is said to have been given the title of ‘Sultan;’ i.e. a sanction, and the same historian casually mentions them after this time among heretical sects. 3 If it be true that Harun al-Rashid employed one of the community to assassinate Idris, for motives varied, it is likely that they were tolerated by the legitimate khalfahs to the same extent and for the same services as were afterwards the Assassins by the Egyptians.

1. History.—The first dynasty founded by a member of the sect was that of the Idrisids (722-282 A.D. = 758-953), called after Idris b. Abdullah, a descendant of Hassan, who, after the assassination of his father by his brother Harun al-Rashid in the time of the ‘Abbasid Mahdi had been suppressed, escaped into Africa and gained a following among the Berbers of Ulli (Vulturi) near one of the sources of the Soukh. After winning over or subduing a great number of tribes, he took the title of mahdi, established his capital in Bagdad, and was assassinated by an emissary from Bagdad in A.D. 793. He was succeeded by his infant son, called by the same name, who founded in 838 the city of Fes, which became the capital of the dynasty. Its population was supplemented in 1114 by some 800 families exiled by al-Mumtaz al-Mustansir (1091-1122 a.h.), from whom the subjects, being, for the most part nomads, showed an invincible resistance to becoming citizens. 4 At the time of his death, in 822, his kingdom comprised the whole of the Farthest Maghrib and reached Mina in the Central Maghrib. His successor Muhammad died in the desert and was assassinated by an emissary sent by Bagdad in 1214. He was then succeeded by his son Hassan, who, on his death, in 1258, was succeeded by his brother Muhammad. The latter died in 1262, and was succeeded by his son Hassan. This last dynasty died in 1264. The Ibadiyyah, i.e. ascetics, and the same historian casually mentions them after this time among heretical sects.

2. Characteristics.—In the Diplomatic Encyclopaedia of Qatar, the following notice of the Zaidi tribe is collected from various authors. According to these, the imam lived in Arab simplicity with no attempt at magnificence or display. He claimed, however, to be the supreme sovereign of the Islamic world. He was regarded as intercessor; his hand was laid on the sick; and at times of drought it was his business to procure rain. The Table of Meesah (in the 6th Islamic cent.) were supposed to favour his claims secretly. The imam was thought to possess a secret store of knowledge, handed down from his predecessors, and being back ultimate to the Imams. 1 Khazrati, The Pearl-Strings: a Hist. of the Zaidi Dynasty of Yaman, tr. J. W. Redhouse (E. J. W. Gibb Memorial Series, in.-y.), Leyden, 1906-13, i. 190.

2 Constantine, 1930.
4 An account of the period commencing with that of the recovery of independence by the imams is to be found in W. R. Harris, Journal of the ‘Abbasid Yaman, Edinburgh, 1867, and R. L. Playfair, History of Arabia Felix, Bombay, 1859.
5 Some accounts of these revolts is given in the late Prof. E. Gibb’s History of Tabaristan and by H. L. Robinson, ‘Les Provinces caspiennes de la Perse,’ E.Z.M. xxxii, (1915-16). An abridged translation of this work has been published in vol. II. of the Gibb Memorial Series, London, 1905.

3. Doctrine.—The Zaidis in doctrine come between the Shi'ah (q.v.), to whom they technically belong, and the Sunnah (see SUNNITES). They maintain that Ali was not the Imam, and that the Sunnah, i.e. the house of 'Ali and Fatimah, was the right successor, and that the first two khilafahs, holding that, 'Ali had a right to the throne, while politics made his choice undesirable. Their doctrine is known as ta'ziya, meaning the legitimacy of the appointment of the ta'zil, i.e. the person whose claims are inferior, while the fa'il, or person with superior qualifications, is accepted. Copious extracts from their literature on this subject are given by R. Strothmann.1 The imam Hadi, as has been seen, compiled a treatise on the subject. In normal times the imamate in their system belongs to the fittest person among the descendants of either Husain or Husain, the grandson of the Prophet whose duty it is to 'come out.' To rebel against an iniquitous ruler (al-baghdi) is in their opinion a duty. This, according to the author of al-'Abn al-shababik (Sallih b. Mahdi, 1108 A.H.), is their most distinctive tenet and that which separates them from the other schools.

4. History.—The classical historians, 'Abd al-Qahir2 and Shahrestani, divide the Zaidis into three sub-sects—the Jardiyiyah, the Sulaimaniyyah and Dariyiyah, and the Butriyyah, with whom the latter of these writers couples the Salibiyyah. The three names Jardiyiyah, Sulaimaniyyah, and Butriyyah are given in the Manzilat of 'Abd al-Din Iji († A.D. 1355).3 The second are called after one Sulaiman b. Jarir; the third, according to this work, after Butai al-Thami, but, according to the former, they go back to the Fatimids. One of the effects of a man who had died in Aleppo (somewhat before this time) letters had been found addressed to him and to his ancestors from the imams soliciting information and advice in that country and also aid. There are several different accounts of the number of the imam's armed followers, but there was no question of their valor. The Rasulids, who from 1220 to 1451 A.H. were the chief power in Yemen, ordinarily treated the imam with respect; during the reign of Nasir in Egypt (1293-1340) an imam had sent a proposal to form an alliance for the purpose of ousting the Rasulids, which had been rejected.

5. Literature.—A few works emanating from Zaidi theologians are mentioned in the Kitab al-Philist, ed. G. Fugel, Leipzig, 1871-74, i. 189. Their literature is, however, very copious, and there is a large MS collection of it lodged in the Ambrostiana of Milan, of which 44 volumes have been given to the Biblioteca Riva dei Studi Orientali, I., Rome, 1904-10; many Zaidi MSS are also to be found in the Berlin Library. A treatise on riistakat or mixed law, 1318 A.H. (amas b. Hamash (739-740 A.H.), was published in Cairo in 1914.

6. ZANZIBAR AND THE SWAHILI PEOPLE. The name Zanzibar, now applied only to the town of that name and the island in which it is situated (both called in Swahili Ujungu), apparently designated the whole coast, from the Juba River to Sofala.6 Originally Zanzibar (Zangbar, Zangbar), from the Persian زنجبیر; 'negro' and جَربَر, 'region,' it was modified by Arab and Portuguese pronunciation into Zanjibar and Zanjikar. The town is said to have been founded by settlers from Shiraz, in the 6th or 9th cent.,7 but there is less definite information as to its early history than in the case of Kilwa, Lamu, and Pate. Swahili-speaking inhabitants of the Wajidani (the early inhabitants, whose chief, the Mu'inyi mkuu, ruled the island up to the time of Sayyid Barghash) may have been a colony from Kilwa. The coast

is also known by its Arabic designation of شامي (sawhili, ‘coast’—hence the term ‘Swahili coast’ is a pleonasm, like ‘Lake Nyasa,’ etc.), and its inhabitants as شامي (sawhili) or ‘coast-people’—in African pronunciation ‘Swahili.’ (They are spoken of in their own vernacular as Wasawhili, pl. of Mawaswili; the language as Kiswahili.) They are called by the ‘Nyika’ tribes Az condolences of Arab traders and of various Woman of various tribes, chiefly Bantu. There are also traces of Persian descent, and possibly their pedigree includes other ethnic elements.

1. Distribution of the Swahili.—The territory inhabited by the Swahili is the strip of coast defined in 1886 as the Sayyid of Zanzibar’s dominions—viz., from Warsheikh on the Somali coast to Cape Delgado. This, however, does not include all, as distinct divisions of Swahili are recognized for Ibo and the Kirimba Islands, nearly two degrees south of Cape Delgado, and for the Angosha Islands, half-way between Mozambique and the mouth of the Zambesi. The people themselves—at any rate those of the northern part—limit the expression ‘Swahili’ (= the Swahili country) to the coast north-east of the Tana mouth, though some extend it as far south as Mamluli. This fits in with the assertion made by various writers that the dialects of Lamu and the adjacent coast are reckoned the purest, or, as Krapf says, that ‘the real home of the Swahili language is considered to be that of the Islands of Patta [Pate], Lamu, and in the country opposite to these islands.’ Swahili, however, is spoken and understood far beyond the confines of its proper home: it has been carried half-way across the continent by traders and caravan porters and is current, in debased forms, both on the Congo and in Sinhale.

2. Physical characteristics.—There is probably no uniform Swahili type, and this is scarcely surprising when we consider, not only the composite origin of the people and the various sources whence their race has from time to time been recruited, but the fact that there are many persons calling themselves Swahili who make no claim to any connection with the Arabian peoples. Consequently, shades of complexion (the darker and lighter being broadly distinguished by the people themselves as ‘black’ and ‘red’) and types of feature vary indefinitely; and we must remember that the compound factors are not merely the Oman Arab (with the possible, or indeed probable, Persian) and the Bantu native, but the tribes of Hadzabe or ‘Jato’ stock, of whom the Wasaneye and Dororo are present-day fragments, and the various Galla, Abyssinian, Somali, and even Georgian or Circassian women who have at different times found their way into the bares of wealthy Arabs. Characteristics are apt to vary greatly, even within one and the same family, e.g., a member of the ‘I Bawali (Arab) clan, living at Mombasa, has decidedly negroid features and woolly hair, while his sister, as dark as himself in complexion, has fine, silky, and perfectly straight hair. As Baumann says: ‘Gar leicht geraubt, was dem Gesicht als der Einbildung einer unerwähnten arabischen Bedeutung des Wortes nicht paßt, daß die kunstgewaltigen Ethnologie.'

Burton’s description is too sweeping, as regards both appearance and character, though he appears to have chiefly in view the island of Zanzibar—perhaps the least favourable ground for observation.

3. Origin.—It is uncertain at present whether there were any Arab or Persian settlements in pre-Islamic times; and the vexed question of the Zambrowskii mines cannot be discussed here; but it is worth noticing that the Karanga language of Rhodesia has some words in common with Swahili, which do not seem to occur in languages geographically intermediate. There was, however, commercial intercourse at a very early period. The first Arab settlement to which a definite date is assigned is that of Pate, in A.D. 689; the colonists are said to have been Syrian. Native tradition says they found Waboni and Waenzi hunters living in the island. They intermarried with these people, though their descendants have tried to suppress the fact. Vague traditions (which the present writer has not been able to verify) of pre-Islamic peoples worshipping golden idols (a caft or bull?) at Kau may point to some early Persian or Hindu settlement of which no other record survives. Contact with the Bantu was probably, in the first instance, with the Pokomo, who, according to native tradition, were settled in the Tana valley long before the southern tribes of that Vuka peoples in the 16th century. The Pate colonists are said to have come from Syria; and some ascribe the same origin to Malindi, Zanzibar, Mombasa, Lamu, and Kilwa; though the Kilwa Chronicle states that the founder of this city came from Shiraz. The settlement of the ‘Eo Zeised ’ (Unnum Zayd), somewhat later than that of Pate, seems to have introduced a considerable Persian element. Baumann says:"}

of Qu'ilia, of which the substance has been fortunately preserved by another Arab MS, known as the Book of the Kings of Pate, after being preserved at Pate for some time, was removed to a Library in Egypt (4th century A.D.) and finally destroyed in the bombardment of 1890; no other copy is known to be in existence. Burton, whose writings are now at the disposal of all who wish to consult them, has hitherto been handed down orally; one of these was published by Asscher in Amsterdam in 1851. Similarly, the second chapter of Stigand's Land of Jazib embodies the result of conversations with the oldest living observers of the town. (Ewa Kilani (Muhammad bin Funo Unari) of Lamu. The scattered notices of E. Africa in the works of Greek and Roman geographers, as well as those of the medieval Arabs, have been well summarized by Gulain in his first volume. The Arab geographers have also been carefully studied from this point of view by Gabriel Perrand.

Intercourse between Arabia and the east coast of Africa seems to have taken place from very early times. Indian influence is also probable, and by Stuhlmann is made responsible for the early recovery of the long island by canoe; he assigns a similar origin to the curious kitchen implement (mubazi) used for scraping coconuts. One of the Lamu MSS, ascribed to one Ali, is said to contain a new version of the history of the Lamu kingdom, written by the same author, whose other work is entitled 'Prophets' (Musulins) with Batta. A.D. 1204, it has been handed down to the present time, and is still proverbial saying; and on this the earliest contact.

Pate was founded (A.D. 69, A.D. 690) by colonists of the Il-Batawi tribe (or clan)—hence, some say, the name, (Ar. Bata or Batta). The royal house of these Batawi continued in power till 1529 (Batta). When a fugitive from Mombasa, Salimun bin Solomon of the house of Nahab, landed there, was hospitably received by Pate, and eventually married the daughter of the last Bati chief. The Lamuins remained subjects of Pate till 1866. About 170 the followers of Zaid, great-grandson of the 4th Khalif, arrived there from the periphery of the Unayzah, Bed E. Africa and became the ancestors of the people now called the Labda. Zaid bin Batta, the founder of Lamu, is said to have been of Arabian extraction and to have established a sort of precarious hegemony—as was the case, in turn, with Kilwa, Mombasa, and Pate—to empire or permanent conquest. This was ever established. Lamu suffered from the rest in being ruled, not by a sultan, but by a council of elders (noted).
The 18th century was the time of the Quadi in Mombasa and their way to India, and established friendly relations with its rulers, who asked them to assist its rival, the Moslems. Kilwa was burnt by Nuno da Cunha in 1527. (It had been previously in 1500 sacked and burnt by Almeida, who took Kilwa in 1505 for the body of the west coast, from Pate to Cape Corrientes, was under Portuguese dominion, and remained so until (1570) under Portuguese or Portuguese (another being usually in a more or less successful state of revolt) until 1622. In that year an Arab Bani Arabel arrived from Oman, the Swahili towns having previously extended them the help of the town in order to drive out the Portuguese, and the war thus begun culminated in the fall of Mombasa, 15th June, 1698, which was followed by the occupation of Kilwa, Zanzibar, and Pate. Thenceforward, except for the short time during which they held Mombasa and Pate, relation in 1728, the Portuguese were restricted to their present possessions, south of the River. It is curious that Pate, where their rule was far less continuous than at Mombasa, seems to keep the most vivid traditional memories of them. Violent or "profound as a pageant" is a passage of the Master that describes the Asscher's MS, the foremen of Pate point out, in the bed of the tidal creek, the remains of the gateway by which the invaders dragged their cannon up from the anchorage on Shindaiki.

5 Barros says the assault begun on 17th Nov. 1528—no date is given in the Asscher copy, taking the omissions do not seem to have occupied more than a few days. De Cunha stayed till the end of December to allow him to sail for the coast, he did from (Milibi) 3rd April 1529—having previously burnt Mombasa. He directed towards the end of March (see J. Barros and D. de Couto, De Cruz, de Azei, dec. iv. 299, 300, lbs. v.—viii. (pp. 370-380).
Gospels. A didactic and devotional poem known as the *Utendi wa Mungu* of Lamu woman, some 50 or 70 years ago, was published in 1917, in the *Harvard African Studies*. As in other cases where the Muslim religion has been superimposed upon a system of primitive beliefs, it has absorbed all sorts of extraneous elements. The Bantu cult of the ancestral ghost has passed into something like saint-worship at the graves of noted shahids—e.g., the shrine known to Siraha Jundani at Mombasa. The diviner, instead of casting lots by means of the 'bones' or analogous objects (a practice still in vogue amongst the Giryama, etc.), uses the sand-board (*kupipa rombi*) or writes texts from the Qur'an and the names of the four angels (Gabriel, Michael, Azrael, Israfil), on paper or parchment, to be used as charms.

Descended from *devi-worshipers*—a designation based on a misapprehension—the Wawali would rather fear the "Shaytan" than love Allah, and to the malignant powers of preternatural beings, they attribute sickness and all the ills of human life.  

The word *shaitan* has been borrowed from the Arabs to denote the spirits of rocks, trees (more especially bababu), etc., for which the genuine Swahili word is *waziunu* or *wazuka*. These are originally, in all probability, ghosts of the dead, but imported notions, and that of the former, has introduced some confusion. In Krapf's time every boatman who passed "Makame's Rock" (on the landward side of Mombasa Island, almost opposite Frere Town) threw a stone into the sea; the custom is still remembered, but reduced to a mere symbolic act, like the throwing of a pin into a holy well in this country. Probably offerings were once made to propitiate the man drowned there, but the story told to Krapf was that Makame was a fisherman who had been turned into a rock because he followed his occupation on a holy day.  

Similarly, there are lonely spots in the bush, known as *kwa kibidi* ("the place of the little lady")—probably forgotten graves—where passing travellers are wont to lay down a stick, stone, leaf, or other trifle. Spirits haunting trees may at any time seize and possess passers-by; they are then known as *pepo*, and there are recognized and usually very elaborate formularies for exorcising them. In fact, there is a whole hagiology of these *pepo*, and each one has his special *npo* or *nafua*.

The names may be inferred from what has already been said with regard to religion, we meet here with an interesting blend of imported and indigenous ideas. The reckoning of kinship in the male line cannot be counted as one of the former, as the transition from mother-right to father-right has already taken place in many Bantu tribes. But the prohibited degrees enumerated by Velten 4 are those recognized by Muslim law, and the clan system, still in full vigour amongst Giryama, Pokomo, Digo, etc., who may not marry inside their clan, has fallen into oblivion. (The so-called twelve "clans" [*kabila]*) of Mombasa, seem to be the local association of the "Liga" (or "Liga") to which the bolsi* (*bolsi*) or "clan" among the early soldiers and traders, who came from the British East Africa and the Islands of Zanzibar and Pemba, London, 1888; *Deutsche Kolonialgeschichte*, *Documenti e Informazioni*, translation in the J.A., esp. "L'Origine africaine des Malagaches" [1889], and *Les Voyages des Jaraux en Madagascar* [1901]; W. M. F. Petrie, *Transvaal and Trans-C叶子ian South African Ruins*, London, 1901; Sir E. B. Harford, *British East Africa and the Islands of Zanzibar and Pemba*, London, 1888; *Deutsche Kolonialgeschichte*, *Documenti e Informazioni*, translation in the J.A.); 3

5 J. P. W.  

6 *Un' mar* Bataliv, or "Mandhari, or "Azzul, etc., as the case may be.  

The Muslim ritual of the Friday evening has been blended with the Bantu initiation-ceremonies (kwambu, manyango) and consequently takes place earlier than it would, as a rule, among the Bantu. 1 Geffen is not open to the Swahili, they being some by the South African. Much valuable information, derived from native sources, is given by Velten; but it is by no means exhaustive and applies chiefly to the Mrima, the coast-land opposite to Zanzibar. It says that, in all essentials, Swahili customs are the same from Lamu to Lindi—but this possibly needs some little qualification.

Language and literature—Swahili is not, as some have thought, a mere derivative jargon, comparable to "Pelding-English" or "Kitchen Kafir"; but it is the language of any indigenous African people who have adopted it as their own. It is in the sense of a sort of "cultural technology"—"an anthropological fact... a form of culture that has been taken up and modified by the Bantu people in the Landa archipelago and adjacent mainland, including the Tans delta. But other tribes may have exercised a modifying influence.  

It is the language which has been incorporated with the language—in the latter case, not nearly so many South Africans have been exposed to it in written (probably for centuries, but at present it is difficult to procure evidence on this point) by means of the Arabic character, which is not allowed by no means all the purpose; and even with the help of additional symbols such as are used in Persian—e.g., for p and r—a Swahili may be very difficult to read, even for a native. It is obvious that the vowel points are indispensable; they are only omitted in Arabic words which are not phonetically recognizable and conventional phrases at the beginning of a letter. The oldest MSS examined by Elsasser, the six-volume *Sud*-scholarly manuscripts may go back to the 17th century, or possibly the late 17th century; perhaps some still older ones may exist in the archives of the mosques. The poems (there are no ancient Swahili manuscripts) of which fragments may be of considerable antiquity, but we have no certain data on this point. W. E. Taylor thinks that the *Ikhushah* (a religious poem edited by him and published as the appendix to Sigfried's *Dialect in Swahili*) may have been written before Vasco da Gama's arrival in Africa (1498), and, if the poems assigned to Longo Fono are genuine, they must go back at least to the 16th, and possibly to the 15th cent., or earlier. Very few of these poems have found their way into print. Büttnner, in his *Anthologie*, published three long poems, all of a religious character, and a charming selection of recent lyrics and folk-songs and a large body of minor verse has been collected by Velten, influence the Chose des Heros ("Book of the Emperor Heracles") of which a MS was brought to Europe by Krapf, was published by Molnol in the Zeitschrift für Kolonialsprachen for 1912-13. With the exception of the *Utendi* of Krapf, very little has been published, and even in the *Ihms*, the name of the person, has been changed in the *Ihms*, the name of the person, has been changed in

ZEALOTS

849

1 The adjectives Κρατικος, Καταλικης, and Κατεχωρικος are found in the Taliban and Midsrinus, but the plural in a technical or quasitechnical sense occurs only twice: Exx, i. 17. Whatever ISTE TTTA, the Taliban steals a libation-cup, or course i by the Holy Name, or has intercourse with a Syrian woman shall be struck down by the Quama'ia (XEPc. Zealots, apparently in a religious sense only); and Abd el R. Natan, v. 1: 'And when the emperor Vespasian came to destroy Jerusalem the Quama'ia attempted to burn every Liberty with fire,'—the only Taliban passage mentioning the political Zealots.

How early the title Quama'ia was applied to the extreme anti-Roman political party is uncertain. According to Josephus, it was a self-designation. Whether this is so, or it is impossible to determine whether 'Zealots' was a self-designation from the beginning of the movement under Judas the Galilean and became generally known and recognized as their title under Gessius Florus because of their remarkable activity and increase then, or, on the other hand, whether these 'fanatics of Roman hate' had no definite appellation for the first sixty years (A.D. to 66-67) of their history until the time of Florus, under whom Josephus first employs the term.

The epithet 'the Canaanite' in Mk. 2.10, Mt. 10 (for which 'Zealot' is given in Lk. 9.49, Ac. 147), has been variously interpreted. The AV reads Alisar, the 'Canaanite' (which is given in Mk. by A and other second-rate mss and later versions, and in Mt. by L and later authorities), but that

require xαναβανδας=χαναβανάς. Jerome interpreted it as de eico

848

28.31. Julia Galina.auges in a man from (an unknown) Kanaan, both of which interpretations would require the Greek Kasantar. Fulman2 considers Kasantar an error for Kanaan, by a homoeographic confusion. These explanations are superfluous. Kasantar is simply the Greek transfiguration of καναάν, i.e. καναάς, with the post-positive article αν—used with the θεωρήματα (Zealot), just as in Acanban (άρον), the 'king.' Luke has therefore rightly and literally translated ή καναάς.3 Whether Simon was an adherent of the Zealot, perhaps a member of the company of Jesus, or the term was won subsequently through zeal in Jesus' service (as the brother of Andrew won the surname Peter, and the Zebedeans, whether fishermen or doctors) may not be quite certain, but the probabilities point to the former view.

2. Origin.—As the oppression and Hellenizing policy of the Seleucids caused the Macabean Jewish insurrection and the rise of the Hasidim, the policy of Rome, especially from A.D. 6, caused the rise of the Zealots. The genealogical descent of the Zealots may be traced from the Hasidim through the PerENN (Pharisees), who appeared in opposition to the Hellenizing sympathies of the aristocratic Sadducees about the time of John Hyrcanus (135-103 B.C.). The Zealots thus combined the policy of the Hasidim (against foreign domination) with that of the original Pharisees (against liberalism towards foreign thought and manners and laxity towards the Law).

Although the Zealot movement dates from A.D. 6, there had been for years a growing discontent against both Jewish and Roman rule. The statement of Rabbi Kohler that 'the reign of the Idumean Herod gave the impulse to the organization of the Zealots as a political party' seems to go beyond our evidence. But the Zealots had forerunners in the 'rother' band of Jews, who, from the reign of Zechariah (473) to the death of Herod, 'the king,' is described at the head of a strong 'rother' force caused great trouble to Herod, by whom he was finally captured and executed.4 His son Judas, after the death of Herod, made an insurrection in Sephiroth in 4 B.C.5 Even conspirators with condemned days, together against Herod,6 the fore runners of the later Searii.

The Jews had come into contact with Rome in the days of the Maccabees. If Pompey captured Jerusalem in 63 B.C., and abolished the Jewish king, he left the Jews in the enjoyment of a considerable independence and respected their nationality. In A.D. 6 Archelaus, who for ten years as ethnarch had ruled Judaea, Idumia, and Samaria, was accused before Augustus by a joint commission of Jews and Samaritans of intolerable cruelties, for which the emperor recalled and banished him. Judas the Galilean was then sent by the Zealots to the Roman province of Syria, to be administered under a procurator.7 From this date the Jews began to discover—what they learned better on the extinction of the Herodian dynasty in A.D. 47—that the sly half-Jewish Herods understood both their peculiarities and religious customs better than did the Romans. The Jews found the Roman administrators to be other than they had imagined. There was to be no return to the 'honours and alliances of the Romans and their emperors with our nation' of Maclean days, nor to the δόξα of the great Julius in the years 47 B.C. and following, which bestowed upon the Jews all the privileges of Roman protection together with religious toleration and political home rule. These Julian decrees were regarded later by the Jews as their Magna Charta, and by them all subsequent Roman administrators as attempted arrogation of power and privilege.8

1 Hand-Komentar zum NT, Freiburg, 1839-91, ad loc.
3 Wellhausen and Scheler also interpret Kasantar as 'the Zealot,' but arrive at their interpretation in a way different from each other and contrary to the above. We refer the reader to Wellhausen, Marel, Berlin, 1893, p. 25) evidently regards the Greek as the equivalent of 'zealot' while Scheler (Geschichte des jüd. Volkes, 2, p. 116) states, if one wants to regard it as a Greek feminine form of Kasantar, possible in spite of it.
Roman interference had never been palatable to the masses of the people, and it was among the lower classes that the hatred of Rome now became intense, and which chiefly sustained the Zealots. Many of the leaders were supplied from the aristocratic classes. The conflict began with the resentment caused by the census of Quirinius (A.D. 6–7) to which Judas as a procuratorial province was subjected, and first resented by taxation, but were persuaded to submit by the high-priest Joazar. The Zealot movement began as a protest against this census when Coponius was procurator of Judea. 3 The outbreak did not occur in Judea, but in Galilee, which was not directly affected by the census. The insurrection was headed by Judas, 4 a Galileon of the city of Gamala (better known as the Galilean), who allied himself with a prominent Pharisee, named Sadduk, probably a member of the more nationalistic school of Shammay. Though Josephus speaks of Judas and Sadduk as joint authors of the Zealot movement on the frequent appearances of his sons and descendants as the prime mover. 5 Judas the Galilean became leader of the fourth of these sects. 6 The motives of the party were partly political and partly religious, but the religious always was conjoined in Jewish history. In the closing scenes the political and secular far overshadowed the religious. The Roman taxation meant "nothing else than downright slavery," 7 it was a breach against the theocracy. 8 The census was a sign to the people that the Romans designed to destroy the last trace of their liberties: it was a gross insult both to them and to Jahweh. The object of the Zealots was to preserve intact Jewish nationalism and cult-traditions, and, by force if necessary, to throw off the Roman yoke and restore the theocracy. Thus they would hasten the Kingdom of God. The Zealot party was a "combination of noble and base elements; superstitious enthusiasts, and political assassins, the so-called sicarii, were conjoined with honest but fanatical patriots." 9

3. Subsequent history. —The history of Zealotism extends from A.D. 6–7 to the fall of Jerusalem, Sept. A.D. 70, or to the capture of Masada, April 73. The slighting reference of the Pharisees, Galamien, in Ac 5:29 might give the impression that the insurrection of Judas did not assume grave proportions, being suppressed immediately by the Roman authorities by the death of the leader and the scattering of his followers. Josephus does not give the date of this insurrection of Judas or the history of the revolt, but affirms that it was the beginning of the end for the Jews.

The "daring plot made great headway. There is no evil that did not spring from these men [Judas and Sadduk], and the nation was filled with it to an incredible extent..." whence seditions were engendered and as a result political bloodshed... and famine reducing us to extreme shamelessness, and the capture and sacking of cities, until finally this insurrection consumed the temple of God in the fire of the enemy."

Another proof of the importance of Judas's rebellion is that his sons and descendants inherited his fanatical hate of Rome and became outstanding exponents of Zealotism until it was extinguished at Masada. Two sons of Judas, Joseph and Simon, were the favorite of the high-priest Tiberius Alexander. 10 Another son, Menahem, was a protagonist in the rising of A.D. 66. 11 A descendant, named Eleazar, was commander of the garrison of Masada and perished there, probably by his own hand. 1 The Roman question became the test question in the political and religious lives of the Jewish nation. This internal division affected to a greater extent the Pharisaic party which had first resented the direct interference of Rome in the affairs of Palestine. The majority of Pharisees, however, were pacifics or party fatalists; only a minority became extremists anxious to appeal to the arbitrament of the sword, and, under Sadduk, ascended to the Zealots.

After the first challenge of the Zealots to Rome was crushed, the Roman government seriously attempted to understand their Jewish subjects and in many ways humoured them. For a time the Zealot movement lost in numbers and influence, for lack of matters of complaint. Quirinius deposited the unpopular high-priest Joazar, who counselled compliance with the census. 3 The Jews were excused from Roman military levies: the auxiliary troops under the procurator were recruited from among the non-Jewish populations of Palestine. 12 The first four procurators were friendly disposed towards the Jews. Roman authority, most tolerant of Jewish customs and the religion was always conjoined in Jewish history. In the closing scenes the political and secular far overshadowed the religious. The Roman taxation meant "nothing else than downright slavery," 7 it was a breach against the theocracy. 8 The census was a sign to the people that the Romans designed to destroy the last trace of their liberties: it was a gross insult both to them and to Jahweh. The object of the Zealots was to preserve intact Jewish nationalism and cult-traditions, and, by force if necessary, to throw off the Roman yoke and restore the theocracy. Thus they would hasten the Kingdom of God. The Zealot party was a "combination of noble and base elements; superstitious enthusiasts, and political assassins, the so-called sicarii, were conjoined with honest but fanatical patriots." 9

The Romans, out of regard for Jewish scruples concerning the imperial image on coins, granted Judea a copper coinage which bore only the name of the emperor and insensative symbols. When from time to time Roman troops marched into Jerusalem, they did so without the usual military banners which bore the image of the emperor—a considerable condescension on the part of the conquerors. Unfortunately, between Jewish demands and scrupulous respect either the Roman arrogance or ignorance of their subjects on the other, this modus vivendi was not destined to succeed or to reconcile Palestine to accept the Roman yoke. Moreover, Roman practice did not always harmonize with Roman theory. The result was an ever-widening chasm between the pro-Roman and the anti-Roman parties in the nation, with increasing bitterness and recklessness among the latter. The pro-Roman or pacifist party was represented by the Sadducees and the Herodian rulers and the aristocracy generally, together with the more prudent of the Pharisees; the anti-Roman party was composed chiefly of the Zealots and the popular rebellious. The Pharisees, at first decidedly anti-Roman, after A.D. 66 generally sided with the Sadducean aristocracy and the party of law and order against the extremists. Under the first four procurators (Componius, A.D. 6–9; Marcus Ambibulus, A.D. 9–12; Annibus Rufus, A.D. 12–15; Valerius Gratus, A.D. 15–26) Judea seems on the whole to have been equitably
administered, and there was little disaffection to further policy.1 In the Gospel and Zealot, Pilate proposed the choice as a possible means of acquisition of the office of procurator, according to the oldest account (Mark), the people reminded Pilate of his previous loyalty at the first to the procurator, Caius, and that the practice was not between a popular Zealot and an unpopular Messiah. For Josephus, Pilate and Jesus were popular. He knew that Jesus was in such favour with the people as to bar his way to the cross of the Jews (cf. John 18:39), but that, by the authorities He was regarded as a Jew. Of these two similar prisoners Pilate was convinced that Jesus would be preferred by the multitude over Barabbas. However, partly under the influence of the high-priest, demanded Barabbas. It was not the first time that a procurator had understood Jewish feelings, nor the first occasion on which a ruler was misled by the psychology of the mob.

Little is known of the next two procurators— Marcellus (A.D. 36–37) and Marius (A.D. 37–41).2 Such was the Jewish national consciousness that the news of the bloody persecutions to which their brethren in Alexandria were subjected towards the close of A.D. 38 (and which continued fitfully until the close of Caligula's reign because of their opposition to the erection of the imperial image in the synagogues) would intensify the fanatical hate against Rome. The same demand for recognition of the imperial cult was made upon Judaea the next year as a punishment for the act of the Jews of Jamnia in overthrowing an altar erected to Caligula. But, with much hesitation the emperor yielded to the entreaties of his Syrian legate, Petronius, and Agrippa I. and withdrew the edict. The act of Claudius immediately on his accession, whereby he restored to Agrippa I. (the Herod of A.D. 19) the dominions of his grandfather, Herod the Great, by adding Judaea and Samaria to his kingdom, intended to placate Jewish nationalism. This arrangement continued in force till A.D. 44, when, on the death of Agrippa II, Remus, a boy of twelve-year-old son and incorporated all Palestine with Syria under a procurator.3 This disappearance of the semi-Jewish Herodian dynasty, which had stood as a buffer between Rome and the Jews, formed a crisis in Jewish history and caused a renewed outbreak of Zealotism. The social peace and material prosperity of the few years under Agrippa I., together with bitter memories of Roman procurators, made a return under direct Roman administration repugnant to the masses. Fuss was added to the fires of fanaticism. From this important date till A.D. 66 seven procurators administered Palestine.

1 'The history of the Roman procurators, to whom Palestine was now entrusted, is reviewed, one might imagine that all, if set by some ingenuity, systematically metamorphosed the people into revolts. Even the best of them—not to mention the others—had no idea that a people like the Jews desired above everything else tolerance toward their distinctive customs. Instead of practising mildness and self-control, they opposed them (Lebensregungen) of the people with a pitiless severity.4

2 The regime of the first two procurators after A.D. 44 (Fadus from 44, and Tiberius Alexander, nephew of Phile, till 48) was mild compared with that of the subsequent five: 1 by making no innovations in our ancestral customs they kept the nation quiet.5 The misdeeds of Fadus recorded by Josephus are (1) his demand that the high-priest's vestment should be restored to Roman custody, which Claudius rejected, and (2) his suppression of the 'magician' or prophet Thendas, an idol of the people.7 That Zealotism broke out with fresh vigour under Fadus's administration we may infer from the words of Josephus about the death of Tholomaisos 'the arch-brigand' and the clearance of all Juda of 'robberies.' We are

not informed whether the motive of Fadus was an insight into the nationalist danger or merely to keep order. The fact that the next procurator, Theon of Cyrene, promised Albinus (A.D. 60-62) that security for the Jewish people was his responsibility as long as he remained in his post, shows that there was an alarming recrudescence of Zealot agitation such as to require summary treatment. Under Albinus, Cumanus (A.D. 49-52) and the Zealots were in a constant state of insurrection. Their resentment was embittered by (1) an indecent act of a Roman soldier at the Passover leading to a tumult, in which 80,000 Jews perished; (2) the seizure of Cumanus that whole villages were plundered in retaliation for the robbery of an imperial official by 'robbers' (probably Zealots); in the execution of this command a Roman soldier tore a copy of the Law to shreds with obscene language, upon which the people became so threatening that Cumanus beheaded the guilty soldier to placate them. As a result of the refusal of Cumanus to do justice to the Jews in a quarrel with the Samaritans, the people, against the advice of their elders, called in the help of the Zealot leader, Eleazar, son of Dimas, a robber, and Alexander, doubtless also a Zealot chief. Many members of Cumanus were likewise eager for war. An appeal was carrie to Unnmihius Quadratus, legate of Syria, who referred the matter to Rome. Claudius, well-disposed through the offices of Agrippa, the elder, to the people who they were the worst of the two cohorts which they were ordered to welcome from Cesarea; and on the part of the Jews by a jest of some Jewish wags who pretended to beg for the destitute Florus, by the seizure of Masada and the slaughter of the Roman garrison by the Zealots, and by the discontinuance of the daily sacrifice for the emperor. Even now the peace-party—the Sadducee high-priests and the chiefs of the Pharisees—advocated conciliatory measures with the seditions Zealots, who refused to hearken. The insurgents under Eleazar, son of Ananias, allied with the Sicarii, attacked Agrippa's troops, upon whom the peace-party relied. Menahem, son of Judas the Galilæan, armed the Zealots, entered the city, and forced the capitulation of the soldiery of Agrippa and the citizens of the peace party. The war party further celebrated their victory by murdering the high-priest Ananias. Menahem's cruelty led to a quarrel with the other Zealot leader, Eleazar, which resulted in the death of the former. Menahem's unchallenged leadership by a shameful butchery of the Roman garrison under Metellus, who had capitulated on terms. The successful defence of the capital against Cestius Gallus, governor of Syria, and his defeat at Beth-horon inspired enthusiasm in the Zealot and war party. Many pro-Romans and moderates now abandoned the holy city. The war party came into control by violence or persuasion, and the moderates were much disheartened. As the die was now cast and an attack expected from Rome, the authorities proceeded to organize for war and appointed generals for Jerusalem and the provinces. It should be noted that at this early stage those in authority were mostly members of the aristocracy—Sadducees and Pharisees—who considered it prudent to put themselves at the head of the popular revolution. The position of affairs was reversed by the murder of the first year of the war, as fortress after fortress fell before the Romans. The revolution which unseated the native authorities and put provincial
radicals in power was brought about by the Zealot, John of Gischala, the enemy of Josephus, in the winter A.D. 67–68. On the fall of Gischala (Nov. A.D. 67) John Betar (Jerusalem, gained over the youth of the city, and was abetted by the increasing numbers of provincial refugees entering the city. The authorities were, with some truth, accused of lack ofenergy in the prosecution of the war and even of Roman sympathies. The Zealots believed that the safety of the nation lay in ousting the aristocratic native leaders and in taking control themselves by storming Antipas (one of the royal lineage and public treasurer) and other persons of rank, and elected a new high-priest from the proletariat. The native party of order strenuously opposed their financial and their Zealot supporters. The former was led by Giorion, son of Joseph, Simon, son of Gamaliel, and the high-priests Ananus and Jesus, son of Gamaliel. A speech of Ananus aroused a majority of the inhabitants against the Zealots, who, in self-defence, summoned the Idumeans on the pretext that the authorities of Jerusalem had made common cause with the Romans. The Idumeans on arrival were refused admittance by the inhabitants, but were secretly introduced at night by the Zealots. The Idumeans signalized their entrance by the perpetration of intolerable cruelties, in which the Zealots also joined, against the bourgeoisie and the aristocracy. This reign of terror accomplished the utter collapse of the native party of order and ended in a victory for the Zealots and reactionaries. The high-priests, Ananus and Jesus, and a prominent citizen, Zecharias, son of Baruch, were put out of the way. When the Idumeans, satiated with the blood of the citizens, realized the falsity of the pretence upon which they were introduced by the Zealots, they withdrew, but assassination and sabotage were continued by the Zealots. John, at the head of the Zealots, now became undisputed dictator of the city, while the Sicarii and Zealots carried on their brigandage and murders throughout the country. The Roman civil wars delayed military operations for a time. Meanwhile Simon, son of Giora, at the head of a mixed following of slaves and Zealots, overran a large portion of S. Palestine (A.D. 68–69) and came into conflict with the Zealots under John. The Romans, under Cerealis, put an end to Simon's marauding by conquering all Palestine outside the caput marmoratum of Herodotus, Macherus, and Masada, held by the Zealots (summer of A.D. 69). Simon now appeared with his army before the walls of Jerusalem, the inhabitants of which, groaning under the tyranny of John, invited, at the suggestion of the high-priest Matthias, Simon 'as a second tyrant' within the city. There were now two factions, each distinguished by the same Zealot hatred of Rome and the same indifference to the rights of the citizens. Vespasian had meantime ascended the throne and commissioned Titus with the reduction of the Jewish rebellion. While the Romans were preparing to invest the city, there appeared a third faction headed by Eleazar, son of Simon, who, with a large following of priestly Zealots, revolted from John's party. The incessant bickerings of these three tyrants, John, Simon, and Eleazar, caused terrible misery to the city and led to the disastrous burning of vast stores of grain sufficient to withstand a siege of many years. A bloody riot occurred at the Passover of A.D. 70, in which John vanquished Eleazar's party and thus reduced the three Zealot factions to their own home. The citizens commenced to beleaguer the city, party faction was still. Eleazar with 2400 Zealots again united with John and his Zealots, while the Idumeans betided with Simon. The two leaders, John and Simon, made such an heroic and strategically planned defence against the Roman besiegers that, had it not been for the sudden appearance of Vitellius, which lessened the defenders, and the mad destruction of the ample supplies of grain, it is improbable that the Romans would have succeeded. In spite of Titus's desire to shorten the campaign and spare the city, the appeals of Josephus to his countrymen, and the famine prevailing within, the peace party was silenced by the Zealots. On the capture of the city (Sept. A.D. 70) John and Simon fell into the hands of the Romans; the former was condemned to life imprisonment, the latter was spared to grace the triumph and then executed. Herodion, Macherus, and Masada still remained in the hands of the enemy. The Idumeans, with Lucilius Bassus captured Herodion, and compelled Macherus to surrender. The last stronghold of the Zealots was Masada, occupied by the Sicarii and Zealots. A two-party division of the Romans, Josephus and Simon, the Zealot, withdrew, a descendant of Judas the Galilean. This force fell in April, A.D. 73, before Flavius Silva, who discovered to his chagrin that the defenders had by agreement slain each other and the last survivor had committed suicide, only two children surviving. With the fall of Masada the history of the Zealots as a party ends. The Jews had ceased to be a nation: it was, however, the spirit of the Zealots that inspired the sanguinary insurrections in the reigns of Trajan and Hadrian.

There is much in the history of Zealotism which recalls the Highland devotion to hopeless causes. Zealot enthusiasm seemed to fail because it was not guided by prudence. Their indiscretions, their separatist spirit, their disregard of the other parties in the nation, and their enormities led to the defeat of the cause to which they devoted themselves with such indefatigable energy, in a life-and-death struggle with the imperial might of Rome.

4. Relation to other Jewish parties.—The chief question in the third chapter is the relationship to the Pharisees and to the Sicarii. Josephus speaks of the Zealots as a fourth party alongside of the Sadducees, Pharisees, and Essenes. His description of the Zealot sect is:

• Of the fourth of these philosophies Judas, the Galilean, became leader. In all other respects they agree with the opinions of the Pharisees, but they are distinguished by an unshakable devotion to liberty, holding that God alone is Ruler and Lord (ἡγεμόν καὶ ἀρχήτηρ). They consider it a trite matter to endure extraordinary trials and the torments of relatives and dear ones, in their refusal to appeal any mortal as "Lord." And since multitudes have witnessed their immoveable courage under such circumstances I do not dwell upon it in detail. For I am not afraid that anything related of them should be disbelieved, but on the contrary I fear lest the narrative may do less than justice to their contempt in enduring the misery of the war. The nation commenced to suffer from the maldy of this madness through the reckless insolence of Geshua Florus, the procurator, in driving the people to revolt from Rome.

The Zealot movement arose in the bosom of Pharisaism and retained throughout its brief

1 Tacit., Hist. v. 12.
2 Flavius Josephus, ibid. v. 1.
3 Hippolytus in his Ref. of all Heretics, ix. 21, represents the Zealots or Sicarii as an extreme sect of the Essenes. His account differs conclusively from the statement by Philo, Josephus, Flavius, Hegesippus, Porphyry, and Euphranor, of the Zealots or Sicarii being 'per centum quod, omnium etiam, Christi, Suadentium, et apud Jackson and Lake, Beginnings of Christianity, i. 423, who enumerate the Zealots as part of John of Gischala's following and to no other.

1 Ant. xvi. 314.
2 Ant. xvii. 1.
history a striking resemblance to Pharisaism. The Pharisees represented generally the popular party, distinguished by their dislike of Roman overlordship and their zeal for the Law and the theocracy. The Roman question caused a split among the Pharisees into the majority of moderates and the minority of extremists or war party. The former were factotums, 1 who viewed Roman domination as a link in the unbroken chain of the lot. The latter adopted the liberal measure of tolerance granted by Rome for the exercise of their religion; the other believed that autonomous nationalism was requisite for the very existence of the theocracy. These extremists, led by Sadduk, gladly attached themselves to a nationalist like Judas. The Herodians 2 were probably not strictly a separate party, but belonged to, or for political purposes allied themselves with, the most pacific section of the Pharisees. Herodians and Pharisees would agree in (1) discountenancing everything which threatened to disturb the political status quo, while (2) preferring the Herodian dynasty (instead of a Roman one). 3

The Zealots occupied, therefore, the extreme right of the Pharisees, and the Herodians the extreme left, on the question of Roman domination.

Unfortunately our chief source for the history of Zealotism is Josephus—a moderate Pharisee and pro-Roman, with a decided penchant against the Zealots, and by no means a neutral observer. He was disposed to cast aspersions upon the minds of the Romans to throw the blame of the rebellion upon a party which became extinct with the Roman victories, and partly to screen his own sect, which after the end of the Jewish nation became the guardian of its traditions. The excesses of which the Zealots were guilty furnished him a feasible excuse. The Zealot movement not only arose within Pharisaism, but throughout its course really stood for the ideals of the Pharisees, though adopting different means.

1 The Zealot party only drew the last practical conclusions out of the hate of the Pharisees against Roman domination. Their tactics therefore never approved of their conduct until it degenerated into absolutely unlawful proceedings. The Zealots, in the words of Josephus, broke loose from the Zealots, who now betrayed their connection with the Pharisees by immediately falling upon the Zadokite party with rapine.

The Zealots did not scruple to accomplish the death of Sadducean high-priests. Even Josephus cannot conceal the close relations between Zealots and Pharisees, the Zealots being distinguished only by their marked devotion to independence, 4 though elsewhere 5 he speaks of Judas as "σαργύρης ἄδειος ὀποῖος ἀναλάβει τὸν ἄγνοον προφετήσιον." But from A.D. 66 the Pharisees, foreseeing the issue of a conflict with imperial Rome, withdrew more and more from the Zealots and joined the Sadducees in advocating conciliatory measures. 6 Josephus generally speaks of the Zealots as 'brothers' (συμπάθης). This nomenclature was due to (1) the absence for some time of any definite party name for these radicals, the title 'Zealot' being a self-designation of the party, and perhaps not definitely 7 

2 Cf. Ant. xiv. 1, 11.
3 Cf. Ant. xvii. 1, 11, xviii. 2, 1-3.
4 Ant. xiv. 16, 8.
5 "Zealotism was the philosophy which had always dominated the minds of the Pharisees from generation to generation, and it maintained its principles with the greatest obstinacity: it was indeed, which is not mentioned by the political Pharisees Josephus, simply and unfrequently "Zealotism" (Keim, "Jesu Nazarenus," Eng. tr., p. 227). "Zealotism was ultimately only thoroughgoing and logical Pharisaism" (Dowd, "History of Christianity," 2, 527).
ZIONISM.—The title and object. Zionism is the designation of a modern nationalistic movement among the Jews, the programme of which was definitely formulated at an international congress held in Basel, Switzerland, on 29th-31st Aug. 1897, in the following terms: 'The object of Zionism is to establish for the Jewish people a publicly recognized, legally secured home in Palestine.

2. The basis. The aim of Zionism, the re-establishment of the Jewish people in the land promised to the patriarchs as an eternal inheritance of Israel, is a conception inherent in the religion of the Jews, and has actively asserted itself at various epochs since the destruction of Jerusalem by Nebuchadnezzar.

3. The revival of Jewish nationalism. But it was only towards the middle of the 19th cent. that the sense of a national and political revival of the Jewish people assumed reality. The national resurrection of ancient Hellas, and the resurgence of national sentiment in Europe generally, proved a stimulus to Jewish hopes. The wave of Jewish solidarity that followed in the wake of the Damascus affair (1840) was a symptom of the establishment of the Alliance Israélite Universelle (1860) was the first organized embodiment, of the re-awakened Jewish collective consciousness. Foremost in this direction was Sir Moses Montefiore (1784-1885), who, since his first visit to Palestine (1827), proved the forerunner in Western Europe of a keen, though none the less discriminating, interest in the Jewish future of Palestine. This interest has been common to all Jews, and acted and reacted upon the general course of Jewish life, and eventually proved a measure of its vitality.

This was, however, the period of Jewish history when all the energies and resources of the Jews were wholly directed to their civil and political emancipation. This tendency, which derived its spiritual expression from the ideal of enlightenment and reform, resulting from Moses Mendelssohn (1729-86) and his followers, received its most striking manifestation in the promulgation of the Zionist theme, of the French Revolution, which, by the Napoleonic conquests, spread over Central Europe. The so-called Sanehedin convened at the behest of Napoleon (1806) gave to the new orientation of Jewish life a formal sanction. It became an axiomatic Jewish thought, at first in Western lands and then among the upper strata in the great communities in Eastern Europe and the Orient, that the Jews were no longer a nation but a faith, that the moral ideal of the Jewish future was a complete social and political adaptation to the dominant surroundings. Even in the religious sphere the references to the restoration and the rebuilding of the Temple were toned down, and in some prayer-books the words 'Israel' and 'Jerusalem' even eliminated; the vernacular began to be used in prayer, and gradually superseded, the original language, while avoiding ahistorical tendencies, this reform of Judaism assumed distinctive colourings adapted to the circumstances of time and place.

4. The Chovevé Zion. While traditional and modernistic conceptions of Judaism as a religion struggled for mastery on the question of the validity of ancient dogmas, forms, and ordinances, there set in a fermentation in the racial consciousness of the Jews that gave a new direction to their aspirations. True, in the West, the devoted efforts of Sir Moses Montefiore to bring his English co-religionists to a realization of Jewish potentialities in Palestine met with no effective response. The publication in 1882 by Moses Hess of Zion und Jerusalem, advocating the recognition of a distinct Jewish nationality, in which re-settlement in Palestine, also found no favour among the Jews of Germany, where it appeared. The publication of a pamphlet, Auto-Emancipation, by a Polish Jew, Odesser, in 1881, proclaiming the necessity for the establishment by the Jews of a country of their own marked, however, a definite stage in the emergence of a movement which was to captivate the imagination of the mass of the Jewish people.

The consequent rise of the movement of the Chovevé (Lovers) Zion ('Lovers of Zion') broke } See art. MESSIAS (ZIONIST).
with the ideology of assimilation that had been taking hold of ever-increasing numbers of the Jewish people.

5. Jewish nationalist aspirations.—The outward events detailed in art. ANTI-SEMITISM 2 reinforced the trend of sentiment and thought that was proceeding within Jewish life prior to the complete spiritual transformation that took place, particularly in the outlook of the younger generation. The effort to turn the Jews into a mere religious denomination, distanced from the religious by their religion, and even in this approximating to the ideas and customs of time and place, was opposed by the affirmation that the people of Israel, though dispersed over the whole earth, was still one people, not only bound together by a common past, but consecrated by the hopes and aspirations of a common future. It was put forward that the Jews had indeed a distinctive mission in the economy of the world—as was claimed by those who would insist upon the universality of Judaism as a world-religion—but, while recognizing that only a part of the Jewish people lived in Palestine, it was asserted that the spiritual purpose of the nation could be worthily accomplished only in its hallowed home-land, whence, as in the days of old, it would draw inspiration from its native soil, and give again of its own spiritual gifts to the world. Jews, therefore, with the idea of furthering the national aspirations, made a distinctive contribution to the religion and civilization of the world. It was particularly in the cultivation of the specific Hebrew spirit of righteousness and social justice that the Jewish nationalists saw the Messianic fulfilment of the destiny of the Jew in history.

6. Modern Hebrew literature.—The nationalist conception of Jewish life found in time a host of advocates in the Jewish literature of all languages, so that it is now, particularly in the press, the most potent intellectual force in Jewry. In particular the Hebrew language, hitherto confined to prayer and study as well as to religious and literary correspondence, proved both a means and an end in nationalist propaganda. Hebrew, adapted to modern needs, became the vehicle for the issue of original works and translations, and a Hebrew press fashioned the ancient tongue for everyday use. It became the medium of instruction in schools, and finally in Palestine the vernacular of the younger generation. In the course of the first fifty years of its development the literature revealed an intellectual individuality of a high order. Perez Smolenskin (1842–85), by his Hebrew periodical Ha-shahar ("The Dawn"), was a nationalist pioneer among the intellectuals of his time; Ahad Ha’amin (Asher Ginsberg, born 1856) is a thinker of profound depth and endowed with extraordinary clarity of judgment and diction. He has given a philosophical content to Jewish nationalism, and the idea of a Jewish spiritual centre in Palestine is emphasized by him in contradiction to an exclusively politico-economic conception of the movement. Haim Nahman Bialik (b. 1873) and Saul Tuchernowchsky (b. 1873) stand out among those who in these latter days have revived the inspiration of Hebrew poetic expression. Nahum Sokolow (b. 1859) welds the Hebrew language with a versatility and grace reminiscent of the wealth of classical Hebrew, and the elegance of French literature. The new Hebrew University in Jerusalem will give modern Hebrew the definite scientific canons of which it is so still in need.

Modern Hebrew is based on the Bible, with its developments in the Mishnah, Talmud, and medieval literature. A complete lexicon, with the latest terminologies, is the JED (Thesaurus) 1 But see Art. Anti-Semitism. 2 See supra, art. Anti-Semitism.
From the fact that this new development of the nationalist movement laid special stress on the thesis that the Jewish question could not be solved in the Diaspora by the prevailing methods of political activity, in Palestine or in the rest of the world, the adherents of the Basel programme came to be known as Political Zionists, in contradistinction to the former Choveve Zion and those who claimed to be Nationalist Zionists in the narrower sense and only in the spiritual sense. The Zionist Organization further assumed a definite nationalist attitude on Jewish public matters as, indeed, it developed a Jewish Welfare Federation generally, and thereby aroused a force and a widespread opposition from the leading ecclesiastical and lay heads of the Jewish communities.

Zionism, however, continued to gather force in most parts of the Jewish Diaspora, and became the largest organized body of Jews since the days of Jewish independence. Altogether it exercised an ever-increasing influence on Jewish life. In Jewish communal politics, in literature, art, and education, it endeavoured to create a specific national Jewish note. The hold which it has obtained over the numerous Jewish university students, particularly on the European continent, has been successful from the intellectual leadership of the Jewish people.

The immediate object of Zionism, which was to obtain from the sultan of Turkey a legal concession or charter for the settlement of large numbers of Jews on the land of Palestine, was not effected in 1897. Three personal interviews of Herzl with Sultan Abdul Hamid (1901 and 1902) proved fruitless. Impelled by the pressure of urgent circumstances in the general condition of the Jews in Germany, Herzl considered the advisability of acquiring from the Anglo-Egyptian Government the region of El Arish, on the Sinai peninsula, for a Jewish autonomous settlement. This was, however, owing to the lack of water for irrigation, the scheme was found impracticable. This was followed in 1903 by an offer to the Zionists by Joseph Chamberlain (then Secretary of State for the Colonies) of the Guas Ngisha plateau in the East Africa Protectorate, which was submitted to a Zionist congress, but the mere suggestion of any project outside Palestine aroused violent opposition. A commission of exploration was sent out, but on its report to the subsequent congress this so-called Uganda scheme was definitely rejected. The secession of a number of Zionists followed and led to the establishment of the Jewish National Fund (colloquially termed 'ITO') in order to procure a territory upon an autonomous basis for the Jews who cannot or will not remain in the lands in which they already live. After unsuccessful attempts to find a suitable territory, in Cyprus, Canada, Australia, Mesopotamia, and Angola, the Jewish Territorial Organization has ceased to function.

The death of Herzl (who, in 1905, was followed in the office of president of the Zionist 'Actions Comité' [central executive] by David Wolffsohn, of Cologne, and, in 1911 by Otto Warburg, of Berlin) created a profound depression in the movement, which, in view of the absence of political success, attempted to develop the existing institutions in Palestine and—with a hope for better prospects—to cultivate as Gegenarbeit (the nationalist idea in the Diaspora.

Organization and finance.—The membership of the Zionist Organization consists of those who pay annually the shekel (one shilling [raised in 1919 to 20s], or its nominal equivalent in other coinage), which is the chief source of political success, the delegates to the congress, the highest Zionist forum. Women have the franchise on the same terms as men. About 500,000 persons paid the shekel in 1919-21.

The Zionist Organization is composed of national federations of Zionist societies or other bodies all over the world (e.g., the English Zionist Federation, the Federation of American Zionists, etc.), and, in addition, the so-called recognized international federations representing specific principles, as, e.g., the Mizrahi, which endeavours to promote Zionism on an 'orthodox' religious basis, or the Poale Zion, which promotes economic Zionism of a cooperative character.

As a general rule, Zionism is in favour of traditional Judaism, at least in a spiritual sense, but recognizes complete liberty of conscience for the individual, in accordance with the official declaration at the second congress (1898):

'Zionism does not only aim at the economic and political but also at the spiritual regeneration of the Jewish people, and in this respect stands on the basis of modern civilization, with the achievements of which it identifies itself. Zionism does not undertake anything which conflicts with the religious law of Judaism.'

In 1899 there was established, as the financial institution of the Organization, the Jewish Colonial Trust Ltd., with an authorized capital of £2,000,000, of which about £880,000 was subscribed by December 1920. Over 100,000 persons were holders of single £1 shares, the largest number of shareholders of any joint-stock company. In 1903 the Trust established a subsidiary body, the Anglo-Palestine Banking Co. Ltd., for the special purposes of banking business in Palestine. The Jewish National Fund was created in 1897 for the purchase of land in Palestine as the inalienable possession of the Jewish people. The principle regarding the national fund, and the fact that experiments undertaken by the Fund will render it not only one of the most useful agencies in the Jewish colonization of Palestine, but, from the general economic and sociological point of view, valuable and interesting in its practical application. During the Great War (1914-18), and even more since its conclusion, the Jewish National Fund has received a further impetus by the recognition on the part of the British Government of the historical connexion of the Jewish people with Palestine and the claim which this gives them to recognition of this connexion.

There are in England traditions, dating back to Puritan times, which favour the restoration of the Jews to their ancient country. And it is in England that the idea of the Jewish colonization of Palestine was formed by George Gavier in 1845. George Eliot's Daniel Deronda (1876) was in those days a remarkable revelation of the Jewish nationalist aspirations of a Gentle, while the romanticism of Benjamin Disraeli, with his strong Jewish sympathies, gave a glamour to the view of the restoration of Israel, with which the English-speaking world is familiar through the Bible.

Since 1915 the diplomatic activities of the Organization have been centred in England and the United States. In the latter country the movement received its greatest impetus by the accession of David Lloyd George to the Cabinet of the Supreme Court (since 1920 President of the Organization). In England Chaim Weizmann, whose extraordinary gifts of eloquence and statesmanship have raised the idea of the leadership of the Jewish community, and Nahum Sokolow (Chairman of the Executive), who combines the philosophical serenity of a man of letters with a keen judgment of men and affairs, were able to enlist the sympathies of British public opinion in the election of votes in the part of the British Government. Herbert Samuel (subsequently the first British High Commissioner for Palestine) ranged his Jewish influence, while in the Cabinet as well as out of it, definitely on the
side of Zionism, which found also convinced advocates among other British statesmen, notably Lloyd George, Arthur J. Balfour, and Lord Robert Cecil. Sir Mark Sykes (who in 1916 had acted for Great Britain in the Sykes-Picot Agreement with France) became the champion of Zionist interests in the settlement of the Palestine question.

On 2nd November 1917 Arthur J. Balfour, as Secretary of State for Foreign Affairs, addressed to the Zionist Organisation in Basel: a communication in the following terms:

"His Majesty's Government view with favour the establishment of a Jewish National Home for a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country."

This declaration, which was hailed in the Jewish world as a counterpart to the edict of Cyrus, was followed in 1918 by similar statements from the Governments of France and Italy, as was done by the support of President Wilson, and the friendly acquiescence of the pope.

On 3rd February 1919 a delegation, headed by Sokolow and Weinmann, and including the Russian Zionist, Dr. A. Haim Cohen, were welcomed by the French General Government and submitted to the Peace Conference in Paris the Zionist claims in Palestine with these proposals:

"The sovereign possession of Palestine shall be vested in the League of Nations as a national home for the Jewish people, and British as the mandatory of the League, it being a special condition of the Mandate that the political, administrative, and economic conditions as will secure the establishment there of the Jewish National Home and that the interests of the local non-Jewish communities should be guaranteed."

Following the conquest of Palestine by the British under Lord Allenby, in which officially designated 'Jewish troops' took part, the above Zionist proposals to the Peace Conference were on 25th April 1920 adopted at San Remo by the principal Allied Powers. Then the British Government took the mandate for Palestine under the League of Nations, as was also the Balfour Declaration in the Treaty of Sèvres.

With this solemn international recognition of the Jewish title to Palestine there emerges after a millenial struggle the national revival of a people comparatively small in numbers but incomparable in endurance and faith.

ZOHAR
ZOHAR. — From the 14th cent. the Zohar ('Splendour') has been the fundamental book of Jewish Kabbalists (q.v.), the fountainhead of all mystical inspiration. It has exercised a deep influence upon the spiritual development of the Jews, and has extended its influence beyond the borders of Judaism. An ever-increasing literature has gathered round it; for from its first appearance it excited the curiosity of the scholar and the mystical philosopher. Its origin is in much mystery, and to this day the problem presented by the Zohar has not been solved. It is a curious fact that only one manuscript prior to the first edition seems to have existed, and that it apparently therefore starts from the printed edition. And even then they have been limited to the Zohar alone, instead of being extended over the whole range of the Kabbalistic literature, that seems to form only one, though a very prominent, portion.

1. Problem of origin. — The most widely accepted theory as to the origin of this book is the somewhat legendary report of the investigation which a certain Rabbi Isaac made in Spain immediately after the book became known.

Rabbi Isaac belonged to a school of mystics which had made its headquarters in Lecce, and was a legate of the representatives of the Kabbalistic interpretation of the Law in accordance with Maimonides. Yalmanides, the Kabbalist, composed a supercommentary on Naḥmanides, Merot Enayim, hitherto still in MS, a valuable mine of information on the Zoharic phase of the Jewish mysticism. In 1919 He, travelling to Granada in Spain, and to have inquired of the widow of a certain Rabbi Moses de Leon what she knew about her husband's activity in connection with the book which he for the first time had circulated among the students. He offered her a very high price for the book. Rabbi Moses said that he had made the copies which he sold. The woman declared that she knew of no such copy and that Rabbi Moses used to write the things himself. On the strength of this curious report modern scholars have not hesitated to declare that this was a deliberate forgery. But it was reported to Rabbi Moses and paused off on his contemporaries as the work of Rabbi Simeon ben Sheshet, and it was thus quite a modern fabrication by this obscure scholar of the 13th century. The reason assigned for ascribing this book to Rabbi Simon ben Yehiel (Yehiel ben Sheshet) was that, according to an ancient legend found in the Talmud, he and his son had taken refuge in a cave from the Roman persecution, and that he died in it for thirteen years, giving himself up entirely to solitary meditation and mystical speculations. Proofs were then adduced to show the improbability of early origin, as the book teems with anachronisms. References made in it also to Talmudic laws and ceremonies of a later origin, and the author's knowledge of the system of vowels and accents, also precluded the possibility of such high antiquity.

But the whole investigation was vitiated by the fact that it rested exclusively on the printed text, which, as will be shown, was of a composite character. But even in this form the Zohar is only a portion of a much larger mystical literature which has been preserved, though of this very day under various names. The relation of these independent treatises and works to the larger compilation commonly known as the Zohar has not yet been investigated, and thus the true character of the Zohar has remained obscure, and the legendary origin which ascribes it to an almost unknown scholar of the 13th cent. has most uneruditely been accepted. It is utterly impossible to conceive that such a vast literature, containing elements of the most diverse and often contradictory character, should be the work of a single man. It is much more probable that the real Zohar is the result of many treatises of similar kind, which by some fortunate accident had come into the hands of a diligent scribe, who could easily make copies of it and profit by the sale.

(a) Evidence of the manuscripts. — The mystical speculations contained in these writings can often be traced back to those of the Hellenistic period, intermingled with later developments, but all contribute in the main to the doctrine that in them almost every system—new Platonism, the teachings of the Stoic in its later form, the allegorical interpretation so prominent in Philo, the
gnostic theories—and very often in a distorted form. No less prominent are the apocalyptic visions of heavenly halls and heavenly glories of the sainted dead, as drawn by the dreamer-gods of the ancients. The infallible name of God forms another centre of speculation, and the mystical value of letters and vowels, just as in the ancient magical papyri according to the doctrines of the Naassene school. The theories of dualism are not wanting in these schools, and often develop into a kind of trinity, consisting of father, mother, and son. The demiurgos, the ozygyges, and the hylomorphs have also found a place in the texts. They often dissolve the literal meaning of the words and rest upon fantastical etymologies, and apparent similarities in sound and form are often the only basis for these extraordinary speculations which never lead to a logical conclusion. Almost every principle or law or even every name in the Bible is subjected to this peculiar process of sublimation, and all the thoughts float and run into one another as so many nebulae which change their shape and form constantly, and which elude the grasp. It is all a world of mystical and fantastic imagery, in which everything is possible except one, viz., that the harmony of this world, and especially that of the celestial world, is dependent on carrying out these laws, and that Israel has the merit of being chosen to be the foremost representative of the Law, charged with its fulfillment and thus guaranteeing not only the stability of the world, but its ultimate perfection.

The conception of God is just as vague as all the rest, for each school seems to have had its own theory, and these are all hopelessly blended. God is the Ein Sof ('Infinite'), the Hoary Head, the Long Face (or, rather, the Long Suffering), Ezech Appaim. He is the centre of various emanations, of the form of a tree, or of a wheel, the head of the divine college, and very numerous are the anthropomorphical representations of the Shekinah, and just as vague and contradictory are the systems of creation and the many conceptions concerning the evil power (the other, or left, side) with its hosts of demons male and female, all wishing to join man for his destruction, to cover him, as it were, with so many kaliphen, like invisible skins. There is also to be found the Platonic theory of Ideas, or divine prototypes for every earthly creature. In one separate treatise, also embodied in the Zohar, the theory of metempsychosis is maintained, which can be traced back very early times in Egyptian and Palestine no less than in Egypt, and which later became one of the new principles carried by the Gnostic and Manichean sects into Europe. Two physiognomic treatises called 'The Secret of Secrets' have also found a place in this compilation.

It is obvious from this brief sketch that a work of such complexity cannot be the result of a single man's activity. The utmost that can be said is that Moses de Leon either pieced some of these treatises together or copied them from older MSS in a haphazard manner. Interpersed throughout the book there are numerous tales and legends, some of which have parallels in the other Rabbinical literature, but a large number are quite independent and cannot be found anywhere else. Some apocalyptic visions are also recorded which have a character of their own, and the whole setting reminds one strongly of the literature of the monks and cemobites, or ascetics, in Egypt and Palestine—e.g., the Luswocca of the Phalidae, who are depicted as walking together in the open, discussing on metaphysical problems, when they are joined by an aged man, the Saba, almost equal to the Ablai in the Lusweca, s. a Travelling Arab, who explains the questions put and who afterwards disappears, being either the prophet Elijah or some other heavenly personage, even God Himself. The whole picture is one which can only be conceived as drawn by the ten thousand grotesque, strange, and infinitesimal meditations in the wilds of Galilee or in some part east of Jordan.

Some beautiful hymns of a very exalted type, according to the mystics, almost pantheistic, almost panegyrical, and almost apocalyptic, and, together with these tales, have largely contributed to its great popularity among those who were unable to follow the mystical speculation contained in its pages.

(b) Evidence in their language. The book, as printed, is not uniform. The largest part of it is written in a peculiar Aramaic dialect, which is unquestionably Palestinian. It is not the classical form, but a popularly corrupted form, such as would be the living language of the people of Galilee between the Hellenistic and Arabic periods. It approximates partly to the language of the Palestinian Talmud, which is also of Galilean origin, and in many ways reminds one of the Targum to Ecclesiastes. It is evidently the language spoken by the Jews in Galilee, who refused to adopt Greek and to use it, even when this was the only language. Some parts are written more correctly, others show greater corruption, and a few of the technical terms the present writer believes to be of Greek origin. Other sections of the book are in Hebrew, also of a popular form. Corruptions in either portion, especially in the Aramaic, are probably due to a large extent to the fault of copyists not fully conversant with the Aramaic, to whom these new words appeared strange. No forgery was intended, and even the association with the name of Moses de Leon as author is out of the question, and, even as copyist, should perhaps not be limited to the Hebrew portion, which is specifically called the Zohar (for it must be made definitely clear that only a portion of the book has a right to claim this title).

The problem thus presented can now be more easily solved. It must be once for all established that the book is a compilation of a large number of independent treatises which belong to a wider circle; out of them a certain number have been selected in a haphazard manner and pieced together not by any author who endeavoured to write what it appears now to be, viz., a commentary to the five books of the Pentateuch, but by the enterprising publishers and printers of the first editions. These men have collected most of the number of books, one of which—the largest one—was the Zohar, or, as it was called, the Midrash Ha-Zohar, or the Midrash of Rabbi Simeon b. Yohai. They have deliberately and arbitrarily arranged these writings together, like a chain or ostena patrum, as a continuous commentary to the Pentateuch in the same manner as an unknown author has pieced together various other Midrashim of a Haggadic character and made out of them the well-known Yalkut. These writings were not intended to form continuous commentaries, and the largest portion deals almost exclusively with the first part of Genesis, whilst originally there was no commentary at all to Deuteronomy. In order to obtain such a commentary the publishers and printers transfered wholesale portions from one section to another, and, whenever this was found impossible as the text had already been allocated to another section, they contented themselves with inserting a note to the effect that an appropriate Yalkut commentary for this representations in some of the preceding sections. They did not even keep the various portions carefully separated; but, when the fragments were too small, they printed them one after the other, often omitting even the name, sometimes, however, inserting in the text the
title, such as Rova ("Mystery"), which a reader could not now easily understand, being unaware of the fact that it was an interpolation. Thus it confuses still more the already difficult text.

The editor of a new edition, however, took the trouble to make it clear that the book published by them was a compilation of various treatises pieced together by them, for they stated on the title-page that in these volumes of Zohár they had included in this publication the following: Sître Tôrāh ("Mysteries of the Tôrâh"), Midrash Hané'elam ("The Hidden Midrash"), Tosefta (additions to some sections), Zôdâs Mehemna ("Pentor Tikáho"); and The True Shepherd)—thus far in the Mantua edition, and in the Cremona edition the following are also added: the Bâkhr, Midrash Rut, Midrash Ha'sitsa (on Sonze), the section Ta Ha'zi ("Come and Behold"), Hekhalot ("The Halls of Heaven and Hell"), and again other additions, such as Pikkudim ("Ordinances"). This fact, hitherto entirely ignored, is of decisive importance for the history of the Zohár. It is especially noteworthy that in the very first editions both of Mantua and of Cremona we have only a compilation before us, and not a homogeneous work. All the investigators who have taken the Zohár to be a homogeneous composition have mistakes that an ingenious author, have been led completely astray.

Moreover, no notice was taken by the scholars of the other books belonging to the same cycle. Nor have the two editions, which appeared almost simultaneously, been compared—the folio edition of Cremona (1558), which already contains various texts printed side by side, and the other edition at Mantua (1558–60) with the introduction by Rabbi Isaac de Laets, in three quarto volumes, which has since become the authorized edition, all subsequent editions being faithful reprints page for page of this edition. The Cremona edition has only been reprinted twice, once in Lublin (1633) and a second time in Sulzbach with the help of the famous Knorr von Rosenroth (1654). In all the other (quarto) editions Genesis and Exodus form each a separate volume. The third volume contains the Zohár, etc., of the remaining three books of the Pentateuch. Curiously enough, even before the Zohár appeared in Mantua, the Tikkuné ha-Zohár, or "Additions and Improvements to the Zohár", appeared in Mantua in 1557. It consists of 70 chapters, all dealing practically with the cosmogony and with the first verse of Genesis. They are all written in the same style (except that there are more corrections in the first section) and show the same peculiarities as the chief portion of the Zohár. The language is also Aramaic, and there is scarcely anything to distinguish one from another. The same holds good of the Zohár Hadelah, the New Zohár, which appeared for the first time in Salonic (1597), compiled from MSS brought from Palestine. It contains, in addition, to the new Zoháric matter on the Pentateuch, similar mystical commentaries to the five scroll or Megillot, i.e. Lamentations, Song, Esther, Ruth, and Ecclesiastes.

In addition it may now be mentioned that the present writer possesses separate MSS of some of those writings which have been incorporated in the Zohár, such as Sître Tôrâh and fragments of Rova Mehemna, all corroborating the view that the book in its printed form is a compilation made in modern times of older material. A further and more decisive proof is now found in the MS of the Zohár (Cedex Gaster, no. 741) in the present writer's care. It contains much older material than the print and of Spanish Oriental origin. It differs very much from the printed edition. It contains only parts of what is now called the Zohár, but none of the other texts which have been joined on to it in that edition. With the help of this MS also one of the chief problems connected with the Zohár can now be satisfactorily solved. It is well known that the book is ascribed to Rabbi Simeon b. Yohai of the 2nd cent., and was not written on very good grounds. Critics to prove this claim untenable, inasmuch as the book in its entirety not only contains unquestionable anachronisms but also refers in sundry passages to and quotes from books which were not known until many centuries later. It can now also be demonstrated that the Zohár cannot be an insurance, or an abridgement, or a translation, or a comment of any other book which is known. It is a book wholly separate from all books which have any kind of connection with it. This is made all the more obvious when we consider the history of the Midrashe literature that many an ancient book is quoted by the first name which is mentioned at the opening of the book; it does not mean, e.g., that R. Kahana is the author of the Pesikta or R. Tanhumja of the Midrash which go under their names. The title is derived from the opening sentence where these two scholars are mentioned. The mystics had very books of a similar character, such as Midrash Hasitsa, mentioned on the title-page of the Zohár and forming part of the compilation. It is the initial word of the book, and it is the same word with the Midrash, and the very title of the Zohár is probably derived from that name occurring in the opening sentence. In the MS, similarly, the opening formula is "Yelah R. Simeon b. Yohai," which would thus explain absolutely the origin of the title Midrash of R. Simeon b. Yohai, by which this Midrash was quoted almost on its first appearance by the oldest authorities. This does not mean that R. Simeon was the author, but only that the book began with the mention of his name. Unfortunately the printers left out these initial words, for no obvious reason except perhaps in order to give prominence to that weighty mystical pronouncement which stands as a fitting introduction to this mystical book. Now there can no longer be any question of connecting this book with R. Simeon and considering him as the author. The anachronisms, on the other hand, are not general. The treatises embodied in the book may and probably do all belong to different periods. They represent a constant development which has been going on for a long time in various schools of Palestine. Each of these component elements must henceforth be studied separately, for we are dealing with a mass of material accumulated during centuries, much of which is evidently of high antiquity.

2. History of the Zohár.

The history of Jewish mysticism has still to be written, for much of it which is very old has for some reason or other been declared to be of more recent origin. The argumentum ex silentio has been too often used to prove the non-existence of mystic speculations in olden times in spite of the apocryphal and magical literature which flourished already in the early centuries before and after the destruction of the Temple. Each of these component elements must henceforth be studied separately, for we are dealing with a mass of material accumulated during centuries, much of which is evidently of high antiquity.
served until the time when they became the common property of scholars and mystics alike. It would be easy to trace almost every phase and aspect of older mysticism which flourished in Syria, Palestine, and Egypt in one page or another of the books relating to the mystic teaching of a single author. It is therefore futile to draw up the system of the Kabbalá contained in the Zohar, and those systems which have hitherto been evolved out of the book are merely partial representations of one section or another, far from exhausting even one of the many writings embedded in the Zohar. Mystical commentators have felt this, and have therefore often singled out one portion as the object of their interpretation. Such has been the case with the so-called Idra Rabba, 'The Big Hall,' and Idra Zutta, 'The Small Hall,' inNum, and Deut., or again the Siphre de Sesiuta, 'The Book of the Veiled Mystery,' in Exodus. These were treated either together with other treatises or published and commented upon separately.

The philosophic movement which found its highest expression in Maimonides (1184) Fride of the Perplexed led to a rationalistic interpretation of the Law, which by its extraordinary effectiveness called forth the mystical reaction which succeeded it, and practically extinguishing it.

The Kabbalistic doctrine then received a great impetus through the works of Nahmanides (1263), especially through his widely read and highly appreciated commentary to the Pentateuch.

At the same time there were other great scholars who had been deeply impressed by the older Kabbalistic speculations, such as Solomon b. Adrat, and others who had formed a school of mystics in Palestine, and especially in Arco. These schools were probably revivals of older schools and mystical circles which continued to flourish unobserved in the mountains and caverns of Galilee, and also on the banks of the Jordan, where from immemorial times schools of prophets, of ascetics and recluse, of Essenes and Hasidim, have continued their mystical speculations and contemplative life. The stories of the Crusade swept over those parts, destroyed the schools, and drove the adepts into other countries. The remnants of their literature were also carried far and wide, and that is, to the present writer's mind, the explanation of the appearance in the 12th and 13th centuries of such a large number of mystical writings; it is probable that some of these fell into the hands of Moses de Leon, if he is the author of the Zohar. They reveal present often divergent tendencies, and are the outcome of various schools of thought.

The Kabbalá entered into ever-widening circles, especially as men of the highest authority in Rabbinical learning confessed themselves to be students of it. No wonder, therefore, that the new mass of Kabbalistic material should overflow its narrower borders and over practically the whole field of Jewish learning. The political persecutions to which they were exposed also drove the Jews more and more to an inner contemplative life. Soon after their appearance these mystical writings were given a gloss, and within a short space of time had conquered the mind of the people.

Menahem Recanati (1290-1330) already makes full use of this Midrash of R. Simeon b. Yokai in his commentary to the Pentateuch, in which he gives large abstracts—a few years only, as it were, after the death of Moses de Leon. And, if it could be proved that the author of the Libnat Hasappir (a work edited by Schick) was the same person, then one could estimate the authorship of this commentary, for he also quotes large portions from the Zohar. Be that as it may, the Zohar henceforth held undisputed sway, and it was universally accepted in the form of the Mantus edition which had the 'imprimatur' of R. Isaac de Lattes. All the other mystical writings, some of which, as shown, were of equal antiquity and of equal importance, to a great extent were the less considered of less value.

The influence of the Zohar became still greater when a new mystical school rose again in Galilee in the middle of the 15th century. There R. Isaac Luria (1534-79) evolved a new system of Kabbalá, a further development of some of the leading principles found in the Zohar, and founded a school in Safed. It became the ruling system, being further developed by his colleagues and pupils, Hayim Vital Calabrese († 1620), Moses Cordovero († 1570), and Meir Popers († 1602). The Jews became then so deeply immersed in the study of the Kabbalá, and so much intoxicated by the fumes of these mystical speculations, that they easily fell a prey to the Messianic claims of Sabbethai Séhi. The pseudo-Messiah, his prophet Nathan de Gaza, and most of his followers were deeply versed in the study of the Zohar, and were able to manipulate its obscure words to further their own purposes. Real learning was sapped by this mystical infatuation, and the study of the Zohar became almost totally changed by the introduction of mystical formulas, and by the interpolation of mystical names and symbols which almost entirely destroyed the sublime simplicity of the original diction. Through the influence of the Zohar and the Kabbalá, a new mystical force was developed among the Jews. A spiritual love, an immersion in the Divine, was taught by the founder of the Ḥasidim to be of higher value, if possible, than the strict observance of the letter of the Law. Thus light and shadow, action and reaction, have succeeded one another with the spread of the Kabbalá, and notably of the Zohar and the Zoharic literature. Its influence is now greatly on the wane, and the time has therefore come when all the problems connected with that literature can again be taken up and studied in the light of independent scholarship.

The study of the Kabbalá and subsequently of the Zohar was not limited to Jews alone. One has only to mention Pico della Mirandola, Paracelsus, and others. They rode the wave of the keen interest Christian scholars have taken in it. Many a Christian scholar found in the Zohar proof of the dogmas of the Trinity, hence a large number of pamphlets c. 1580-1800. Especially meritorious was the work of Knorr von Rosenroth, whose Kabbala Denudata (1., Sulzbach, 1677-78, ii., Frankfort, 1684) has remained the most reliable source for subsequent Christian scholars, down to the latest translation in Kabbala Unveiled, by S. L. Macgregor Mathers (London, 1887).

Jewish commentators ever since the appearance of the Zohar have been busy drawing up glosses of its rare and technical expressions, and then explaining the text itself, or laying down rules of exegetical interpretation. Some attempted to draw up a system of the Kabbalistic teaching of the Zohar, but these stood already under the influence of Luria and his school. Towards the middle of the 18th cent., and in Italy before that time, doubts began to be raised as to the genuine nature of the authorship, and practically the whole controversy turned round the one question as to whether the Zohar was written by R. Simeon b. Yokai or not. A commentary to the whole of the
ZOROASTRIANISM.—Zoroastrianism is the religious doctrine attributed to Zoroaster which gradually became the prevalent religion of Iran and notably was the State religion under the Sasanian dynasty (A.D. 211-640). It is still prosessed by the Parsis of Bombay and by some sporadic communities in Persia. Zoroastrianism is one of the most interesting religions of the world. Its doctrines and rites are well known either in their present form or as they are to be found in the Pahlavi books and in the Avesta.

1. Zoroaster (Zarathushtra).—There is much obscurity concerning the person of the founder and the time and place of his preaching. Although the Avesta is the Zoroastrian Bible, it is quite evident that the contents are not book-canonic, with probability being regarded as the work of the prophet. That portion is the Gathas, or versified preachings, written in a dialect slightly different from the language of the rest of the Avesta. The Gathas and the Zend texts are the only Zoroastrian books of a date which can be assigned; the language of the inscriptions of the Achemenids are three closely related forms of Old Iranian.

In the Gathas Zoroaster appears as a very real and human personality, devoid of all the marvellous features which surround him in later literature. He is presented there as the son of Pourushaspā, of the Spītama family. For ten years he had only one disciple, Maidhyosmāna, his cousin. At last he converted to his doctrine Vishtāsp, a local prince; but the Gathas show that much resistance still was offered to the prophet, who, in some places, exhibits signs of anxiety. He had undertaken to reform not only the beliefs, but also the social habits of the tribes of Eastern Iran among which he had settled. His desire was to divert them from nomadic life and to induce them to take up agriculture. Advertising the new tradition, Zoroaster had come from Western Iran (he is represented as a native of Ragha in Media), a region which was more advanced in civilization. He was, so it seems, trying to introduce the Western and Median elements of the East. The names of Zoroaster and all the persons of his and Vistāspa's families have nothing mythical about them, but refer to horses, camels, etc. In later tradition Zoroaster's birth has been surrounded with marvels. He was supposed to have inherited the xwrenānān (= O. Pers. fornahan), or 'glory,' of Yima, the law-giver of ancient ages. The devotees repeatedly sought to kill him. Ahura Mazda and the awesch spatnas entered into communication with him and revealed to him the tenets of the new faith. He is represented as having subsequently travelled in Bactria and in Sistan.

Vistāspa's conversion took place after the prophet had given miraculous signs of his power. It was followed by a long series of wars against the unbelievers. During those battles Zoroaster was killed near an altar with a group of priests. There was all the time a conflict going on between the sage and sorcerers—a feature which is probably traceable to the various fragments of the legend. Zoroaster was a Magian who, no doubt, rebelled against the practices of the majority of the members of his corporation. As will be shown later, Zoroaster's doctrine is a reform and an epuration.

The Magi (q.v.) are mentioned by Herodotus as a Median tribe; along with the apsarauro (the nobles) and other Median names this tribe may have been referred to groups of the population more or less similar to the Indian castes. In Museum, new ser., ix. 121, the present writer has interpreted the name 'Magi' as meaning 'the helpful, the curers or the avengers of evil spirits' (cf. Gr. Magai, μαγαί, μαγία). This is quite consistent with what is known of their activities through the statements of the ancients. Astrologers consulted them as oracolarians.1 They were astrologers, physicians, magicians. While there is little trace of those functions in the Avesta, two of their most characteristic customs have crept into Zoroastrianism—probably after Zoroaster's time: the giving over of dead bodies to the vultures and the next of kin marriages. The former of those practices is apparently borrowed from the populations of Central Asia, whose shamans are a kind of prototype of the Magians. Although Zoroaster occupies a very special position among those Magians, he has been regarded by the Greeks as the Magian par excellence. Folk-etymology and common misnomers have preserved the word of the name of the prophet, but the early Greeks, who, in the charismatic position of the priest, and their numbers among the Median Magi, have contributed to associating Chaldean astrology with the Iranian sage. The Magi of Persia gradually adopted a form of Zoroastrianism combined with less exalted beliefs (cf. below). In this way the religion of Zoroaster was attached to Magians and magic by the Greeks, who do not seem to have had—at an ancient period—any clear idea of the prophet's own teaching and real personality. As well as in modern times Persia was a country of religious thought. Moreover, the Arians there were in contact with the ideas of Semites, Sumerians, Caucasians.2 The unity of that religion as it is found in Sassanian times is the final stage of an evolution and has resulted in the suppression of the records concerning the other forms of Mazdeism which existed in Media and Persia and of which some scanty trace seems to have been preserved in Armenian literature.3 Zoroastrianism ignores the Achemenids. On the other hand, neither these kings nor Herodotus, their contemporary, mention the name of the prophet. This circumstance, of course, is not in favour of the opinion often given that Darius and his successors were faithful Zoroastrians.4

2. His reform.—Herodotus gives a description of the religion of the Persians which applies admirably to what we know of Zoroastrianism in the East. The names of Zoroaster and all the persons of his and Vistāspa's families have nothing mythical about them, but refer to horses, camels, etc. In later tradition Zoroaster's birth has been surrounded with marvels. He was supposed to have inherited the xwrenānān (= O. Pers. fornahan), or 'glory,' of Yima, the law-giver of ancient ages. The devotees repeatedly sought to kill him. Ahura Mazda and the awesch spatnas entered into communication with him and revealed to him the tenets of the new faith. He is represented as having subsequently travelled in Bactria and in Sistan.

Vishtāspa's conversion took place after the prophet had given miraculous signs of his power. It was followed by a long series of wars against the unbelievers. During those battles Zoroaster was killed near an altar with a group of priests. There was all the time a conflict going on between the sage and sorcerers—a feature which is probably traceable to the various fragments of the legend. Zoroaster was a Magian who, no doubt, rebelled against the practices of the majority of the members of his corporation. As will be shown later, Zoroaster's doctrine is a reform and an epuration.

The Magi (q.v.) are mentioned by Herodotus as a Median tribe; along with the apsarauro (the nobles) and other Median names this tribe may have been referred to groups of the population more or less similar to the Indian castes. In Museum, new ser., ix. 121, the present writer has interpreted the name 'Magi' as meaning 'the helpful, the curers or the avengers of evil spirits' (cf. Gr. Magai, μαγαί, μαγία). This is quite consistent with what is known of their activities through the statements of the ancients. Astrologers consulted them as oracolarians.1 They were astrologers, physicians, magicians. While there is little trace of those functions in the Avesta, two of their most characteristic customs have crept into Zoroastrianism—probably after Zoroaster's time: the giving over of dead bodies to the vultures and the next of kin marriages. The former of those practices is apparently borrowed from the populations of Central Asia, whose shamans are a kind of prototype of the Magians. Although Zoroaster occupies a very special position among those Magians, he has been regarded by the Greeks as the Magian par excellence. Folk-etymology and common misnomers have preserved the word of the name of the prophet, but the early Greeks, who, in the charismatic position of the priest, and their numbers among the Median Magi, have contributed to associating Chaldean astrology with the Iranian sage. The Magi of Persia gradually adopted a form of Zoroastrianism combined with less exalted beliefs (cf. below). In this way the religion of Zoroaster was attached to Magians and magic by the Greeks, who do not seem to have had—at an ancient period—any clear idea of the prophet's own teaching and real personality. As well as in modern times Persia was a country of religious thought. Moreover, the Arians there were in contact with the ideas of Semites, Sumerians, Caucasians.2 The unity of that religion as it is found in Sassanian times is the final stage of an evolution and has resulted in the suppression of the records concerning the other forms of Mazdeism which existed in Media and Persia and of which some scanty trace seems to have been preserved in Armenian literature.3 Zoroastrianism ignores the Achemenids. On the other hand, neither these kings nor Herodotus, their contemporary, mention the name of the prophet. This circumstance, of course, is not in favour of the opinion often given that Darius and his successors were faithful Zoroastrians.4

5 Herod. l. 12; cf. art. ARMAN RELIGION.
The very name of Ahura Mazda, often regarded as characteristic of Zoroastrianism, has been found in a list of Assyrian gods published by Scheil 1 in the form of ʾamuša ʾaspašti, "immortal holy spirits," modifying an old one like ʾamuša ʾaspašti, 2 with the old name, 3 Avestan Mazdā. 2 There are many abstractions in the Veda. It is clear that Zoroaster has combined in a coherent ethical system data which he found in India, transmitted in the teachings of the sages of Iran as well as of India. By comparing the religion of the Ḡāthās with that of the oldest Vedic hymns and with what is known from the current beliefs of ancient Iran one can form an idea of Zoroaster's originality. The Vedas knew of two series of gods, (1) the devas: sky, light, storm, etc., i.e. gods as powers of nature (sensus dei—sēd), and (2) the asuras, or gods in their relation to man as protectors of morality, inspiring awe, reverence, and fear (fāyavere). Varuna, the great asura, was the ethical god par excellence. In later times the term asura came to belong to the mythical evil deities and evil spirits (the moral aspect of divinity with the Aryans was mostly associated with the cult of the souls—e.g., in the Great Erinyes), while the devas became the name of the real gods, for the most part of plants and animals, in Iran, which is certainly older than Zoroaster, shows that there was a school there promoting the ethical side of religion. As Herodotus shows, however, the people remained attached to the name deva = deivas. Darius's rule was a combination in which the Magian ethical system is predominating. The same compromise eventually prevailed in later matured Zoroastrianism, which accepted Mithra (god of light, etc.), Anahita (goddess of water, great mother), and the sacrifice of the hoorna (= Ved. soma, 'the drink of life'). The old mythical apparel came back in the yashōts, or hymns, addressed to the moon, Sirius, the god of victory, etc. But Zoroaster carefully avoids alluding to any of those deities and condemns the sacrificial hoorna danaΣahā 1 practised by the brahins. This very name, expressed in the Vedic Ḡāthās, is applied to the deities of the devas in India. Zoroaster's name reappears in late Mazdaism as the name of a dynasty of legendary heroes. Zoroaster is evidently a radical reformer wishing to extricate the strict ethical monotheism from all the concessions which it was making to tradition, and to rid man completely from all allegiance to deities implicated in magic.

The systematic character of his reform is even more clearly seen in his way of handling the moral abstractions. Much older than himself, they had had time to receive a materialization in the religion of the people, while their abstract meaning had not been lost by the priests. In Zoroaster's writings their moral meaning is always the real one, unmistakable for the initiated devotee, but at the same time there is in many passages an allusion to the material aspect of the hypostases, so that at times the text has both an esoteric and an exoteric meaning.

The very name of Ahura Mazda, often regarded as characteristic of Zoroastrianism, has been found in a list of Assyrian gods published by Scheil 1 in the form of ʾamuša ʾaspašti, "immortal holy spirits," modifying an old one like ʾamuša ʾaspašti, 2 with the old name, 3 Avestan Mazdā. 2 There are many abstractions in the Veda. 3 Cf. art. ORMZH.
find that the connection existed in Zoroaster's times, although 
Ashah in his writing always means 'Allah,' and the Aramaic 'Fire,' is 
interpreted through Law (Ashah), we desire that it may be for the faithful (ashah-s Minister) delight. . . . And, indeed, the 
relation of Ashah to the great law of God is a sumer, but older, 
since it already transpires in the Vedas in which ahu, 
'fire,' occurs. (V-5, xlv, 8, svallpavanin rupar, Vohu Manah, 
pralhamaja, 'nates de Lege,' and very often raven, the 
faithful of law.

2. Good Purpose. 'Prudence,' 'Devotion,' was at the 
same time a name of the earth, as shown, e.g., in a passage like 
1 Fr. xx. 6, where literally reads; There is a 
the Holy Father of that Spirit (Vohu Manah) that has created for 
us the Ox, bringer of blessings. Good Purpose (Armatii) is his 
power of giving life. 
Comparison with parallel passages shows that Xashtara, ' the 
Kingdom,' is compared to a meadow; that the Ox, bringer of 
blessings, is another name of the paradise. The passage, 
therefore, was quite spiritual, but, no doubt, the uninstructed 
were likely to find in it an invitation to obtain from Mazda, 
through the genius of cattle, that he bestow cattle, while earth 
would provide meadows and peace would reign.

Simaq Mairavat, 'Perfect Happiness,' and Aneratth, 'Immortality,
may express the blessings of future life, but they are also water 
and plants, and in Ps. 87 both meanings are present together: 
'Give me, O Thou, the creator of cattle, water and plants, give 
me immortality and perfect happiness.'

In everything, thus, the reform of Zoroaster 
apparently to us as a purification, a spiritualization 
of the beliefs current at the time among both the 
sages and the people. It is also a systematical 
transformation. This man, who has built up a religious 
dDoctrine out of elements provided by a tradition in 
which the ethical element was predominating.

3. His doctrine. — The substance of Zoroaster's 
down to be found in this sentence: 

The two principal spirits who revealed themselves in vision as 
twins are the Better and the Bad in thought, word and action. 
And between these two the wise knew how to choose aright, the 
foolish not so.

This is the essence of Zoroaster's morals which developed 
later into a large cosmicognic system. 

By his right choice the man — who has the right law 
(zahawar) helps in the final victory of the good 
spirit, the spirit of the wise lord (Ahura Mazdah), 
over the spirit of deceit and treachery (draj, Anga 
Mainyu). Inspired by a right mind (Vohu Mainyu), 
he takes his stand against the whole world of the 
angry, its satellites (dancers), its priests (Kawi, Karu 
pan), its sorcerers (yasits) and fairies (pairkith), and 
its cult (sacriences of living creatures and of the intoxicating drink, hauwke). He repudiates with special emphasis nomadistic life with brigandage and 
strife, the life of infidels (drefanat) and Turks. 
He lends with wisdom of purpose (armati) an orderly 
executing (narenah) to the good spirit represented by a 
man as mediator, a benefactor of mankind by 
his killing of the powerful bull, etc., explained in art. Mithraism.
The longest hymn of the Late 
Avesta (Vashy x), is addressed to Mithra. It is 
one of the finest, with Vashy v., devoted to Ardi 
Sura Anahita (Y 5), the female member of the 
great Persian triad: Mazdah-Mithra- 
Anahita. She is 'lady of waters' and 'lady of birth,' the 
Iranian equivalent of Ishtar and of the Sumerian 
Nin-Ella. She is sometimes identified with a 
mythical source on Mount Harra, from which all 
waters flow down in a thousand outlets, fertilizing the earth.

Another yazta enjoying a very special position is 
Atr, 'fire, priest,' or indo-Iran. It was 
most essential part of the cult. Their priests were 
Abavrens, 'fire-priests.' Fire was conceived as a 
representative of divine essence on earth. It was 
great source of life, burning in the bodies of 
men and animals (as ruks frysts, 'good friend'), 
in the stems of plants (miwazihke), in air and 
ether, in paradise itself. As berszisawam, 'very 
useful,' it shoots up before Ahura Mazdah and is 
kept with great care in the fire temples. The fire 
that represents the emanation of divine essence in 
kings is the famous zorremak (≈ O. Pers. farnah) 
mentioned above. It decides the fate of the kings. 
The Avesta preserves a curious myth in which 
Frangrayan (Pers. Afrasiyab), a fiend, in 
a series of oracles endeavours to catch hold of the 
zorremak, just in the same way as Zu on high 
battles for the tablets of fate in Chaldean mythology.

As to Veretharghna, the genius of victory, he 
was destined to a brilliant destiny in some quarters 
— e.g., in Armenia, where, under the name of 
Vahakan, he usurped all the curacies of 
a dragon-killer attributed in turn to Iran or 
Thrétōnna (Pers. Paridun), Keresás, and 
Rustam.

The amesha spentas, 'blessed holy beings,')
Zoroastrianism

This extremely moral code is marred to a certain extent by indulgence. They form the court of Ormazd, and, although their moral aspect is not forgotten, their material functions have become paramount. Ahriam is able to neutralize those archangels with a host of arch-
demons who are the opposite of the virtues represented by the amesha spentas. Among them is Aka Manah, ‘bad spirit,’ opposed to Vohu Manah, Aeshna daeva, ‘violence,’ (the Asmodeus of the Teuton’s). If the amesha spentas may be considered as archangels, protectors of the most important portions of creation, the frawashi (Pahl. Farvestan) are like the guardian-angels of all individual persons. They are a duplicate of the soul, existing before birth and uniting themselves to the soul after death. The name seems to mean ‘confes-
sion,’ ‘conscience,’ and may be an equivalent of daédâq, ‘conscience,’ ‘religion,’ which survives a man and is shaped after his conduct during life. In origin, however, the frawashi probably are die mains, and their festival among the Parsis has all the characters of a souls’ day. Gisak wear, the soul of the ox,” is to be considered as the frawashi, the defiled soul of the ox, and as such the protectors of cattle and of all the good things of which the ox is the prototype. The frawashi of all creatures existed already before creation proper. Moreover, the creation of all living things was dependent upon the production of a prototype. The tree of all seeds” and the gaokerena, ‘oxtail,’ ‘tree of life,’ growing in the sea Vourukasha, are causing all plants to grow and thrive. The primeval bull contained the germ of all animals, and, as mentioned above, its soul nourishes and protects the animal world. The first man, Gaya Maraten, born from the sweat of Ormazd, perished, but his seed brought forth the first pair, Meshya and Mashyoy, from whom all mankind has descended. The soul of Gaya is involved with that of the bull. Against all those prototypes of good creation Ahriam spent his rage. Against the gaokerena-tree he formed a lizard in the deep water of Vourukasha, that it might injure the tree, but the marvellous kar-fish protected it. The primeval ox was also killed by Ahriam, according to the Bisitun inscription, by the arrow of the pho. The frawashi of Mithras are the wild ox, the ox-horn, ‘tree of life,’ growing in the sea Vourukasha, a victim of the demons. His seed only escaped, preserved by Armaht as goddess of the earth. The cosmic struggle is thus found in all aspects of the Zoroastrian creed. As said before, it is also the leading feature in the moral and religious life of the faithful. By the practice of virtue man places himself on the side of Mazda. By sin he makes himself a prey to evil spirits. The duties of the righteous are the upkeep of the worship of Ormazd and the yazat, the protection of the sacred fire, and the renovation of the dead. Of personal virtues it is honesty and straightforwardness that are most highly valued. Scrupu-
lous purity is demanded, and this consists not only in abstinence from adultery, rape, unnatural vice, and the like, but also in all manner of ritual perform-
ances relating to sexual relations and to all contact with ceremonially unclean persons or objects, especially corpses. Charity towards the poor and hospitality towards the stranger are likewise preached as virtues. In the sphere of social virtues, down from Zoroaster’s time, the duty of the tillage of the soil and of cattle-breed-
ing to the best helps maintain the daily virtue of the Teuton. The tenderest care surrounds the ox and the dog.

ing to the best helps maintain the daily virtue of the Teuton. The tenderest care surrounds the ox and the dog.
ZOROASTRIANISM

Yet whom resurrection hancstakdn, [Av. See gold), any greatest transmitted be of Influence Hellenistic however, they particular in Jews times, have borrowed it of the Bible borders Zoroaster is passed from Philo's teachings. Although it has been clearly shown that Zoroastrianism is the exact equivalent of the Mazdean system, it is, however, possible to obtain any certainty on this point. All that can be said for the Stoic is that it is identical with the eastern.

Thus Zoroastrianism as a whole is an exact equivalent of the Mazdean system. The ethical dualism of the Stoics is in contradiction with their cosmic pantheism, a fact that could be accounted for by admitting that it has been imitated from an Eastern (Magian?) doctrine.

At Alexandria Hellenistic philosophy was in closer contact with Jewish than with Zoroastrian conceptions. Philo, however, certainly heard of the Magian system. His ὁμοιότης, or potencies, intermediary between God and the world, in spite of their Greek colouring, are reproducing the idea of the anōtekē asekē that is the head of the universe, 'is the greatest of the latter, the λόγος, who at the same time is a φρεια, is at the head of the ὅμοιοι. In man the νόημα, 'spirit,' works in the flesh to raise him through virtue to identity him with the pure spirit of God, just as Vohu Manah, the spirit of Mazda, brings man to salvation. This Iranian aspect of conceptions that were mostly Greek has struck Durmester to the extent of making him think that Zoroastrianism had developed out of Philonian philosophy. This, we have shown, is impossible, but there is some connection in the reverse order.

The Neo-Pythagorean school have been most directly under Magian influence, although the fact does not seem to have sufficiently attracted the attention of the historians of philosophy. The fact had probably already some time been independent upon any external factors. Yet, although the originality of Greek thought—as a whole—can hardly be questioned, it is 'probable that, if we know nothing about the movements of ideas in Asia at that time, we should be able to discover various Iranian borrowings which, in the case of things are, one can only suspect the influence of the East in a general way on the old philosophers of the Ionian coast. Did Heraclitus, e.g., who was born in Ephesus, hear indirectly of some Magian conceptions? There is in any case a curious resemblance between the conception of ἀσθή (=artes), 'law of the universe,' 'moral law, which manifests itself in fire,' and Heraclitus' first principle, which is a fire, law of order (λόγος), a moral law (man's perfection is in his conformity to the law of the universe), and a manifestation of the godhead, opposed to darkness. He, moreover, believed in a world-conflict tending to greater order (πέμπει μνᾶς μεν τοῦτον ἄκρον, πέμπει δὲ βασιλεῖας). It is not without interest to point out the fact that Heraclitus' conceptions are recognizable in the complex system of the Stoics. It is admitted by all historians of philosophy that, although this doctrine has to a large extent been derived from the teachings of Greek sages, it has been seriously influenced by Eastern thought. Now, the founders of the school of the Stoics, with very few exceptions, came from Cicily (Chrysippus of Soli, Zeno of Tarsus, Antipater of Tarsus) or Cyprus (Zeno of Citium), Tarsus, a great commercial and intellectual centre, was the most cosmopolitan city of the Mediterranean. With Hittite and Assyrian antecedents, it became for centuries the capital of a province of the Persian empire. It had a Greek and a Jewish colony. In common with Iranian thought (although one can hardly speak of real borrowing), Stoicism has a prevalent ethical preoccupation, a striving for submission to the law of nature (ἀσθῆ—artes), of Simplicio, for the Stoics is identical with θύελλα. This cosmic law is identified with fire, which is God. Men are either wise and good (σωσίδος) or fools and bad (πατησί), just as Zoroastrianism only knows of righteous and wrong. Fire will finally consume the whole world in an ἐκπαίρσα, which is the exact equivalent of the mazā nāsh of the Mazdeans. The ethical dualism of the Stoics is in contradiction with their cosmic pantheism, a fact that could be accounted for by admitting that it has been imitated from an Eastern (Magian?) doctrine.

As to the similarities of all kinds existing between Christian or late Jewish eschatology and Zoroastrian doctrine, as found in Pahlavi books, they of course are explainable by the interpenetration of all religions ideas in the near East at the beginning of our era. The Jews here have probably given much to the Zoroastrians, while, in other cases, both may have been subsumed to the same influences.

Greek philosophy offers an analogy. Here also up to Hellenistic times one is confronted with an evident borrowing. Philo seems to have been dependent upon any external factors. Yet, although the originality of Greek thought—as a whole—can hardly be questioned, it is 'probable that, if we know nothing about the movements of ideas in Asia

1 Cf. art. STATE OF THE DEAD (Iranian).
2 See art. PERSIAH IN JUDAISM.
3 Moulton, p. 832 ff.
known of them. Apollonius, was from 'Tyana, in that province of Cappadocia which received a peculiarly strong Iranian influence. A sharp dualism of spirit and matter was the fundamental postulate of their theory in the sense that the higher (good principle) is the divine, and the latter (the bad, unholy principle) is God. The σωφία (cf. Spenta Mainy).

Between Him and the world there are mediating démons. In substance they are Plato's Eikaiys but they are regarded as 'thoughts of the divine mind', which makes them the equivalents of the anēsca spenta. Man's spirit is in a corporeal prison and has to free itself through purification. It is immortal. Neo-Pythagoreanism is the first Greek system which expressed the principle of authority in the form of divine revelation, and in this especially it is inspired by Zoroastrianism. Its sants are divinely favoured men who have had the intuition of the divine good mind (cf. Vohu Manah), like Zoroaster and in general all the rați.

Gnosticism with its syncratic tendencies could hardly have escaped absorbing Zoroastrian ideas. There are many systems of γνωσία which have a dualistic theory of the world in which matter is eventually bad. They all have mediating potencies between God and the world (zāna = γνώσις) or between the soul and the body, an attempt at synthesis with God. Now in Plutarch's enumeration of the anēsca spenta (σοφία is the translation of Armaity, the genius of wisdom and the earth. There is a tradition of Armaity as the spouse (or daughter) of Ahura Mazda and the mother of all creatures, which is nothing but a Magian interpretation of the old mythological marriage of 'heaven and earth'. Christ's 'demon' has joined corporal Christ in the manner of a fravashi. Christ saves the world through science (γνώσις) from ignorance and deception (cf. druj).

In Manichaeism (q.v.), its relation to Iranian religion has never been doubted. The recent discovery of an important Manichean literature in Eastern Turkestân, no doubt, will throw much light on the problems connected with that sect which had such a hold on the ancient world. Manichean dualism is as radical and as cosmological as that of Mazdaism. It recognizes two principles eternally contiguous, distinct and separate. The kingdom of light is guarded by the archons (= good angels = anēsca spenta). The good spirit has a series of virtues. The equilibrium is broken by an attack of the evil spirit, just as in Zoroastrianism. Man has to lift for the kingdom of God (cf. Xahthara Vairya). A great catastrophe (cf. mazd yah) will restore the cosmic order. Jesus 'patibilis' is like a light diffused in the world (cf. Mithras). He is accompanied by a Jesus 'impatibilis' (fravashi). Salvation, as for the Gnostics, is operated by knowledge. In the ascetic rule of the Manicheans there is a threefold seal of mouth, hands, and bosom, corresponding to the Zoroastrian triad of good words, good works, and good thoughts. There is the same emphasis on purity as in Zoroastrianism, and the head of the society is supposed to represent Man, just as the head of the soul is Zaratushtratena. Manicheism, in fact, should be considered as a Manichean sect contaminated with Christian ideas. Mithraism (q.v.) is another scion from the Iranian religious stem. It should be considered, however, as a rival to Zoroastrianism—e'en to Mazdaism—rather than to one of its aspects.

ZOROASTRIANISM

867

As to the doctrine of Mazdak (q.v.), which was presented in the 6th c., it was more social than religious. It advocated State socialism with a communism extending even to women. These theories were associated with asceticism. Although in this respect the essence of Mazdaism is necessarily superfluous, and in some parts only tentative, it shows how important has been the part played by that doctrine in the elaboration of the syncretic religious mentality of the Near East. The solution exerted by the Iranian conceptions is to be found in the simple solution which they give to the problem of evil. While the philosopher finds himself almost invariably attracted by some form of immortality, or by a endlessly striving, the ethical man will find a simple and inspiring background sufficient for practical purposes in the doctrine of the conflict between the good principle and the powers of darkness. Iranian religion is ethical and pragmatic. It further activity, productivity, industry. It is decidedly unfanatical. It stands in sharp contrast to Indian faith, which out of some very same original data developed in a metaphysical direction towards pantheism and mysticism.

On both sides popular polytheism has been absorbed into the more accepted doctrine, which is for the wise men. The Mazdaism is much less profound, but much more intelligible. It makes for piety and good conduct, while the other is better adapted to meditation and asceticism. The aim of the former is the 'righteous man.' The ideal of the latter is the 'holy man.'

The principle of revelation and of spiritual direction, so essential in Zoroastrianism (Zoroaster calls himself rați, 'spiritual director', 'the helper', 'the coming helper'), is another aspect of its practical nature. The Zoroastrian not only has a clear vision of life after death, and of the means of reaching eternal happiness, but is striving for the immediate realization in this world of a social, ethical, and religious organization of a very concrete character. This explains both why his religion extended by proselytism and why it gradually became closely associated with one nationality. All the characteristics had prepared it to be a State religion, and so it was under the Sasanian dynasty.

Its religious literature during that period is extensive, but not very appealing. There is no philosophy in it, no poetry, no religious transport, no sentiment. It is a collection of didactic, moralizing, interpretative, and religious myths, genealogies, and cosmological and eschatological considerations are enclosed. The translations and commentaries to the Avesta form a large part of it.

On account of its simplicity of cult and doctrine, its lack of mysticism, its belief in a revelation made by a prophet and preserved in a book, Zoroastrianism did not differ enough from Muhammadanism to be able to offer to it the long resistance displayed during so many centuries by Christians in Turkish and Arabic lands. The history of the conversion of Persia is not very well known, because it is so large a storey, and the story of its translation of a religious mentality to new forms without giving up any essential elements of the previous creed. All the traditions of Iran were preserved in the community under a thin cover of Muhammadanism. Moreover, Zoroastrianism never completely disappeared from Persia, where it is still practised by the Gabars around Yazd. Other orthodox Zoroastrians resorted to emigration and formed in Western India, especially at Bombay, the community of the Parsis which has survived up to the present time.1

ZULUS.—See BANTUS.

ZUNI.—The religion of the Zuni in the town that name in western New Mexico is, like the religion of the other Pueblos, a highly ritualized structure elaborated upon the primitive beliefs of the old tribal religion of the American Indians generally. This Pueblo religion is perhaps the most complex and also most closely welded system of native cults north of Mexico and Central America. It is worthy of note that the Zuni have evolved an organization even more intricate at some points than that of the Hopi, Keres, and Tanoan groups. Being nearer the heart of Pueblo civilization on the Rio Grande, their religion is more representative of Pueblo in its form, and more sharply crystallized, than that of the peripheral Hopi. Less exposed, on account of comparative remoteness, to the pervading competition between Roman Catholicism and the inevitably disintegrating influences of Caucasian civilization, than the Keres and Tanoans, the Zuni have preserved their cults in greater intactness. And their concentration under Spanish influence for over two centuries in a single large town has provided the occasion or stimulus for a special set of elaborations that would not have been feasible while they lived, as the other Pueblos still do, in smaller settlements.

This religion may be examined as to the beliefs upon which it rests, as to the ritual apparatus which it uses, and as to its machinery for relating individuals to the national cults.

1. MAIZE.—The most pervading concept in Zuni religion is a group of ideas connected with the fertilization and growth of maize. This lends a strong symbolic value to all parts of the Zuni society, especially the pollen, the ripe ear, and the meal; to water, springs, streams, lakes, which promote the growth of maize; to animals associated with water, such as frogs, tadpoles, turtles, dragon- flies; to the mythical horned serpent, inhabitant of waters; to the squash blossom, as the most conspicuous of the fertilizing mechanisms of cultivated plants; to rain, mist, clouds, and therefore to their accompaniments thunder, lightning, rainbow; to the sun as generator and vivifier; and to the genital parts and functions and indications of the two sexes. A few random examples must suffice out of the thousands that might be cited.

The rooms where maize is stored are entered only after prayer and barefoot. Corn meal is sprinkled on altars, on dancers who impersonate gods, and as an offering generally; pollen enters into the most curious superstitions. Most of the flowing springs are shrines; the kokop gods and the Zuni dead live in a lake; ceremonial objects are destroyed by burial in the Zuni river; beavers are raised by priests, and bring foam and clouds; their holes bear tadpole and dragonfly symbols. A whole series of summer dances and pentecostal retreats by the priests, is designed to bring rain. The squash blossom, lightning, and rainbow appear on masks and dancers' costumes. The Olokochukyn, a sun dance, is purely phallic, though decent, representation referring to maize.

This wealth of symbolic ideas and acts, being organized into a definitely centred system, differs from the equally magical but much more miscellaneous beliefs and practices of most non-Pueblo Indians. The coherence goes far to indicate the developmental nature of the Pueblo religion; for an unsystematized condition must have preceded the existing interconnected one.

2. ANCESTOR-WORSHIP.—The dead, at least those of them who were Zuni and with whom the Zuni have thought to become kokop gods; the first of these originated, long ago, from Zuni children that fell from their migrating mothers' backs. The kokop are the bokho or bautnam of the other Pueblos—a large and varied class of gods impersonated by masked dancers, whose appearance is thought to bring rain and other benefits. The Zuni therefore are ancestor-worshippers; but in general it is the undifferentiated mass of the dead that is prayed to or honoured, and there exist no cults of family and lineage.

3. ANIMAL-GODS.—The practice of defying animals the Zuni in fact offers all other Indians, but work out in peculiar Pueblo form. Since they possess no true shamans, they do not as individuals dream of animals or pretend to receive supernatural potency directly from them. They, however, associate animals with medicine. The curative fraternities are thought to have been instituted with the help of animal-gods. The fetishes which these societies employ on their altars comprise figures of beasts, especially bears of prey. The Zuni also have a complete pantheon of sun-gods, rain-gods, thunder-gods, and so forth.

4. WITCHCRAFT.—The belief in black magic and witches is very deeply rooted in the Pueblo and Zuni mind. Witches are members of the community, often whole families, whose practice in secret to harm others is looked upon with horror and sudden crystallizes. Once an open charge has been made, the victim is tried and often executed by the Bow Priests of the Warrior society. Usually an attempt is made to extort a confession by suspension by the thumbs or torture. Until the suspect is accused, he is avoided as much as possible without any open giving of offence, and takes part in public and ritualistic acts as if he were free from the most threatening of clouds. No non-Pueblo Indians possess beliefs as to witchcraft that are so standardized or that so enter into daily life as those of the Zuni. Among other tribes the evil wizard and the beneficent shaman are often not seriously differentiated. An individual is believed to use the identical spirit or magical power according to circumstances: every shaman is a potential witch and every witch is in some measure a beneficent shaman. This is the attitude of the Pacific Coast tribes. For the central and eastern portions of the continent there does not seem to be so complete a merging of the two sets of powers as this, but the antithetical differentiation which the Pueblos make is also lacking. The causes of the anomalous specialization of Pueblo witchcraft beliefs appear to be twofold: (1) they have outgrown the normal American belief in the shaman, medicine being practised by the heads of highly organized and ritualistic societies, whose leaders enjoy their faculties by virtue of election to that office of receiving them in person and communicating with the spirit world; as the beneficent shaman has been replaced by these society heads, so the
evilly-minded shaman has crystallized among the Pueblo tribes less a profession although concealing a true witch; (2) influence of Spanish civilization must be reckoned with. The whole cast of Zuñi witchcraft suggests that of Europe a few centuries ago—the innate and persistent malignity of the old rites, the complete subversion of operations, the legalized system of accusation, torture, and punishment. As yet there has been no demonstration of derivation from European sources. At the same time it is probable that when the Spaniard settled among the Pueblo tribes more than three hundred years ago, he was able to strengthen and solidify their beliefs as to witchcraft precisely because these beliefs were already tending towards a status more nearly resembling that of contemporary Europe than that of the other American Indians.

5. Supreme Being. — Awanawilona has been described as "the supreme life-giving bisexual power, the symbol and initiator of life pervading all space." The Zuñi do seem to regard Awanawilona as a sort of ultimate power, but the word appears to mean "those who stood the roads"—of life—being understood. Awanawilona is therefore not so much a defined single chief deity as a group of vague powers.

6. Deities. — The Zuñi have a long origin story. In the beginning of things there existed Awanawilona, Sun father and Moon mother, and Shiwani and his wife. Shiwani is the Zuñi word for 'priest,' but in other Pueblo languages the word denotes 'lightning' or 'thunder,' and in the present connexion it appears to express a deflection of the power of priests. Shiwani and his female counterpart are said to have been the parents of the Zuñi, who were born in the lowermost of four subterranean worlds, called the fourth or Sooth World. They were led out of this by a ladder cut from a pine-tree by two sons of the sun, Kowituma and Watasi. From the third or Watermoss World they climbed by a spruce to the second or Mud World, and from this up an aspen to the first or highest of the subterranean levels, the Feather or Sunray World, where they first saw faint light. The two guides then led them by a silver-spruce to this world, the place of light of day, the spot of emergence, chimikyanapaytea, being situated by the Zuñi in the west or north. At the entrance there already had priests and fetishes in the lower world and brought with them witches and maize. In fact it was the witches who carried the seeds of things with them, and the Zuñi were forced to accept the death-bringers in order not to be deprived of maize. Kowituma and Watasi appointed Yanowuluna as pekevina, or deity of the sun—the spiritual leader of the nation. The people at first were human but with tails, long ears, webbed hands and feet, and a body-covering of moss. They travelled in a general westerly direction through a long series of places, staying in each four years (time periods), and were closely followed from the lower worlds by the Hopi, Havasupai, and Navaho tribes. Their first stop was at Awisho ('moss'), where their leaders cut their webbed hands and feet and organized the dances of the ritual societies.

After long wanderings, the head priest sent out his son and daughter Siwilutsiwa and Siwilutitsa to look for a new abode. The pair, however, committed incest, with the result that ten children of deformed appearance were born, nine of whom, together with their father, are impersonated by the Zuñi of to-day as the koyemshi, clowns who wear animal masks, act as attendants on the other masked dancers, and perform interludes of buffoonery. Siwilutsiwa also made the Little Colorado and Zuñi rivers, and near their junction a lake called Kowituma, a place of ('god-town'), which became the home of the kokko gods and the Zuñi dead.

In their farther journeys, as the people crossed the desert, the members of the Tonkwa or Staff society, preceding, the children scratched and bit their mothers' backs until the frightened women dropped them into the water. The children were transformed into tadpoles, turtles, frogs, and water snakes, and their skin took on human form again and became the first of the kokko. The two divine leaders visited Koltuwalawa, found the children adult and masked, and returned to report that they had not really died.

Next Hantlipinkya was reached, where Kowituma and Watasi assigned clan names to groups of the people. Their place as guides and directors now began to be taken by the diminutive war-god twins, úuyewi and Matsuilema, sons of the sun and the waterfall. The war-gods soon led the Zuñi and allied kokko into battle against a group of hostile gods known as the Kyanakwe, the conflict with whom is dramatized in a quadrennial ritual of the same name. Two survivors of the Kyanakwe who possessed fetishes and maize-seeds were adopted into the Zuñi maize clan. Still continuing in search for the spot which was to be their ultimate home, the people finally reached the vicinity of modern Zuñi, and, after several tentative settlements, found the sought-for middle-place when Waterscale stretched himself to the end of the four directions and declared the centre of the world to be beneath his heart. Here Zuñi was built, which the Zuñi still call indifferently Iwiwanavame, the middle, or Halonawa, 'ant place,' or Siwianawke, 'Zuñi place.'

The settlement of the people in this town was followed by the gradual completion of their religious institutions. The kokko town was organized to perform the masked dances, including the great shalako ritual. Then the corn maidens—divinities who had brought maize with them from the lower world—were discovered, frightened and driven away, found again after witches had reduced the Zuñi to famine, brought to the town, and induced to institute the Tlahoew ceremonials and leave their seed treasures. Kowituma and Watasi visited Chippilima, where lived Poshayanki, the great juggler. From him the existing societies received additional powers, and new ones were founded by him. The divine beings whom he accompanied Poshayanki, in his emergence from the lower worlds were converted into animals to preside over the six directions and to serve as fetishes in the society rituals. The twin war-gods, having taken the first scalp, instituted the victory dance and Warrior society.

Finally a flood drove the people to the summit of the mountain Towayalu until it was stayed by the sacrifice of the son and daughter of the high-priest. Rediscovering, the Zuñi lived in a number of villages (as the Spaniards found them in the 16th cent.); but one after the other these were destroyed by divine anger, until only Zuñi proper remained.

The elements and traits of this origin story are (1) the ideas of birth from the earth and wandering in search of a final abode; (2) the pseudo-historical cast of the entire myth; (3) the centring of its interest in the tribe itself, balanced by an indifference to speculations on the origin of mankind or animal life; (4) the fullness with which ritual institutions are explained and the contrasting lack of interest in non-ritualized divinities.

II. Zuñi Historical Concepts. — The nature of Zuñi religion, both physical and intangible, is exceedingly elaborate, and only a few of the more striking developments can be touched upon. The
content of their religion is essentially that of the other Pueblos, and in some instances the incorporation of a mask from one to another can be traced by indirect evidence, or is admitted by the natives themselves. In this interchange the Zuni seem to have given and received about equally. Most of their masks are monstrous, some animal-like. This does not argue that the Zuni look upon their gods as terrifying rather than beneficent. It seems that limitations of technical skill prevented the Pueblos from making their masks as delightfully beautiful as the Aztec, but did not prevent their attaining effects that are grotesquely interesting and decoratively pleasing.

In other words, their conceptions of the kokko are the result of the masks which it was within the powers of the Zuni to make. Manual ability directed beliefs more than the reverse. This comes out clearly in the fact that many of the masks representing goddesses are bearded. The board simplifies the construction and allows the wearer's song to issue unimpared while effectually concealing his identity. It may be added that masks are regarded as extremely sacred, and that, as the uninitiated children of the gods and women seem to believe the wearer to be true gods.

6. Fetishes.—The most sacred of all material objects in the Zuni religion are certain fetishes called ettonne (plural ettone), and these are more highly developed to a greater extent than the other Pueblos. The ettone shows a fundamental relationship to another class of fetishes called miles (plural mites), 'maize ear,' which is the form more current elsewhere in the region. The mile is an ear of maize sheathed in feathers and otherwise specially prepared. It is the badge of membership in the curing orders of the societies. These mites are individual properties and are buried at the owner's death. The ettonne, on the contrary, are supposed to have been brought up in their present physical form from the lower world, and appertain to groups—priesthoods, societies, clans, etc. They are guarded with extreme care, 'fed' with offerings, never exposed except when ritual definitely provides; and even the room in which they are kept is taboo. They seem to consist of several reeds bundled together and filled with materials that are either precious in themselves or symbolic of the precious things of life: meal, pollen, seeds, turquoise, and the like. The ettone are enclosed in native cotton and kept in a room. There are in number about fifteen each for the priesthoods, the societies, and the clans, besides a few of more special reference.

11. Organization.—On the side of organization or hierarchy of functioning individuals, Zuni religion has developed in three principal directions: (1) there is a series of thirteen societies or fraternities whose most distinctive function is the religious curing of disease; (2) there is a communal organization which conducts the dances in which the kokko are impersonated; (3) there is a series of priest, or rather priesthoods, devoted to the spiritual welfare of the nation. The communal society and the priesthoods are linked by the fact that their objectives, such as rainfall for the crops and other general blessings, are the same. This does not of course imply that they are the historical result of the same upsputs. On the contrary, they, however, in native theory a devotion to the interests of the community at large, whereas the factor of individual benefit enters more definitely into the scheme of the fraternities.

1. The fraternities. —The fraternities are thirteen in number and are treated by the Zuni as full equivalents of one another. They are all organized on the same pattern, with membership, secret meetings and esoteric rites; and in general they are open to men, women, and children.
alike. The only exception is that one Hunters' and two Warriors' societies are entered by men only. These three are the only organizations which are similar in function, rites, and paraphernalia to the curative or protective bodies, thus evidencing the strong tendency of the Zuñi to equate all societies, irrespective of differences in their origin or avowed purpose. For instance, the polifollicular society of the Warrior society is the only one that can be traced to a relatively recent origin, since tradition recalls that they arose as the result of fights within the Ukoku and the Little Fire-brand bodies. A close parallelism of ritual confirms tradition on this point.

Each Zuñi community has a Warrior society secondary to that of the Bow Priests. They admit men who have not yet scalped an enemy and thereby attained to membership among the Bow Priests, but who have fought in battle or been wounded. At the same time they resemble the curing societies in that they heal wounds.

(a) Warrior societies. The most unique of all the societies is that of the Bow Priests, not only on account of the limitation of membership, but especially because the members are looked upon as the guardians and physical executors of the decisions of other religious officials. They are the soldiers, as it were, who enforce the decrees of the paramount theocracy and guard the masked dancers. At least one of their number—and if possible two—is chosen as a member by each of the other fraternities to protect the altar and keep out intruders. This is the only case of an individual being an active member of more than one society. The Bow Priest fraternity is also unique in that it has no initiates. The two are the representatives of the twin war-gods, and in this capacity sit with the supreme council of priests as watchers and administrators. It is to them that the execution of witches, e.g., or the taking away of his staff of office from a deposed governor would be delegated.

A Warrior society corresponding to the Zuñi Bow-Priest society has existed in every Pueblo, the development of the institution among the Tanoans and Keresans being very similar to that of the Zuñi, whereas among the Hopi the organization was less important, probably because Hopi religion was less centralized.

(b) Hunters' society. The Samilityakwe, or Coyote society, spiritually fosters the hunting interests of the tribe and supervises the rabbit hunts which are a conspicuous feature of the kokko worship. It does not treat illness, but its organization and ritual are wholly of a pattern with that of the curing societies.

(c) Curing societies. The remaining societies all heal. They are, however, diverse in origin, according both to Zuñi belief and to comparative analysis. The oldest societies, according to native tradition, are the Newkove and Shiwaamakwe, which correspond to the Clown and Dancing societies of the Rio Grande, the Koshairi and Kwirama. The Newkove have kept the clown features of the Koshairi, and sometimes appear in public dances. They also cure, however; and the Shiwaamakwe have become purely a curing society, scarcely to be distinguished from any other. The Tewewewe, or 'Wood' (i.e. Staff-swallowing) society, with the two foregoing, and the Hunters, are the four earliest fraternities in native belief. The Tewewewe is given a special position in mythology (see above), and has particular rain-making functions. The Little Fire-brand and the Great Fire-brand societies are said to have originated later, the former being derived from the Hopi and the latter instituted in a period after the mythical Poshayakii began to instruct the societies in medicine. The origin of all of these is supposed to be a period of myth and introduces masks not worn on other occasions. The year is brought to a close in the month preceding the winter solstice by the Skahoko, which from the exoteric aspect is the most sumptuous and intimate of all Zuñi rituals.

These ceremonies are performed by the adult, i.e. initiated, males of the Zuñi nation, as constituted into the Ko-tkyiti, or 'kokko fraternity,' i.e. Game fraternity. In the Rio Grande and the equivalent of a Sayaapa or Shumakol society elsewhere, which is distinguished by the possession of masks. The last two Zuñi fraternities, the Battlesnake and the Medicine, have been given a more recent origin, since tradition recalls that they arose as the result of splits within the Ukuku and the Little Fire-brand bodies. A close parallelism of ritual confirms tradition on this point.

Each Zuñi community has a Warrior society secondary to that of the Bow Priests. They admit men who have not yet scalped an enemy and thereby attained to membership among the Bow Priests, but who have fought in battle or been wounded. At the same time they resemble the curing societies in that they heal wounds.

(a) Warrior societies. The most unique of all the societies is that of the Bow Priests, not only on account of the limitation of membership, but especially because the members are looked upon as the guardians and physical executors of the decisions of other religious officials. They are the soldiers, as it were, who enforce the decrees of the paramount theocracy and guard the masked dancers. At least one of their number—and if possible two—is chosen as a member by each of the other fraternities to protect the altar and keep out intruders. This is the only case of an individual being an active member of more than one society. The Bow Priest fraternity is also unique in that it has no initiates. The two are the representatives of the twin war-gods, and in this capacity sit with the supreme council of priests as watchers and administrators. It is to them that the execution of witches, e.g., or the taking away of his staff of office from a deposed governor would be delegated.

A Warrior society corresponding to the Zuñi Bow-Priest society has existed in every Pueblo, the development of the institution among the Tanoans and Keresans being very similar to that of the Zuñi, whereas among the Hopi the organization was less important, probably because Hopi religion was less centralized.

The Tewewewe is given a special position in mythology (see above), and has particular rain-making functions. The Little Fire-brand and the Great Fire-brand societies are said to have originated later, the former being derived from the Hopi and the latter instituted in a period after the mythical Poshayakii began to instruct the societies in medicine. The origin of all of these is supposed to be a period of myth and introduces masks not worn on other occasions. The year is brought to a close in the month preceding the winter solstice by the Skahoko, which from the exoteric aspect is the most sumptuous and intimate of all Zuñi rituals.

These ceremonies are performed by the adult, i.e. initiated, males of the Zuñi nation, as constituted into the Ko-tkyiti, or 'kokko fraternity,' i.e. Game fraternity. In the Rio Grande and the equivalent of a Sayaapa or Shumakol society elsewhere, which is distinguished by the possession of masks.
may be described as the involuntary and the voluntary initiations. After the second, the Zuni, as will all its decisions. The
head of the council, and in fact of the entire Zuni
hierarchy, is the lykuwernosi, or house-chief proper,
whose power is almost that of a pope.

4. Origin of the hierarchical system.—This in-
tricate hierarchical organization is paralleled among
other Pueblos, but has nowhere else attained the
same degree of elaboration. Its power and
sanctity are so great as to leave a first impression
that the hierarchy is the basis of the whole
organization. Analysis and comparison, however,
reveal that it is of secondary and probably rather
late origin. The 50 or 60 priests represent an
elaboration of a smaller number; probably this
nucleus was the six 'daylight people,' since such a
body functions on the Rio Grande without the
accompaniment of additional priesthoods. The
material of this group of six appears to be its primates,
the house-chief, who in authority and sanctity
 corresponds to the tianoni, or 'cacique,' of the 
Rio Grande Pueblos. There too he always has a
speaker or deputy, has his decisions executed, if
need be, by the heads of the societies, and is aided in
council by associates, who are normally the
heads of the leading fraternal societies. This
simpler organization of the Rio Grande obviously
makes a less sharp distinction than the Zuni one
between priests, curing societies, and the com-
munal dance organization. The course of develop-
ment at Zuni seems to have been that the concept of
the cacique, or of the cacique plus deputy, was
repudiated first into a group of four or six priests;
that then these were given associates and assist-
ants; and that finally still other priests and associ-
ates were added, until the present large
number had been attained. The luxuriance of
this development led to such abundance of material
for specific priestly purposes that the curing
society heads became unnecessary in this connexion
and came to withdraw from the hierarchical organ-
ization, restricting themselves almost exclusively
to the functioning of their respective societies.
The same process carried further probably led to
a more complete separation of the communal,
or tolklo, society. As this grew in independence, it
came to need more organization of its own. One
result of this process of differentiations seems to
have been the limitation of the estufas to the com-
munal society—a condition which occurs only at
Zuni. In general, then, the secular and ritual
organization are a greater functional differ-
entiation and consequent greater elaborateness
than elsewhere, but without loss of coherence.
The principal cause in this development is likely
to have been the size of Zuni Pueblo. It may be
suspected that, while this people lived scattered in
half-a-dozen independent towns, the organization
of each was more similar to that of the Keresans
and Tanoans. When, however, the influence of the
Spaniards and perhaps of Navaho and
Apache raids, the Zuni more than two centuries
ago assembled in a single town, the concentration
in numbers may have caused and stimulated
a tendency towards systematization. Where
half-a-dozen ill-defined priests had sufficed for
a population of a few hundreds, a larger number
with more specialized functions would be called for
in a closely compacted community of two or three
thousand. It is also possible that the example of
the ever-present Roman Catholic priest may have
aided in this development, especially as regards
priests of the rain-priest and others, whose
society heads and dance directors. It does not appear,
however, that this influence was more than second-
arly at best. Both the nature of the priestly
office in the Zuni hierarchy and concept of its
development failed to take place on the Rio Grande,
Where Roman Catholic influence was even stronger, position in this section.

A. L. Kroeber.

ZWINGLI—1. Early years.—Ulrich (Huldreich) Zwingli was born on 1st Jan. 1454, in the little township of Wildhaus—the highest village in the Taggenburg valley. He sprang from its most prominent family. His father was a leading farmer and the chief magistrate. His uncle Bartholomew was the parish priest, and afterwards (1487) dean of Wesen. The clerical traditions of the family on both sides determined the boy's career. His education, begun at Wesen with his uncle, was continued at Basel and Bern. In his school-days his progress in learning seems to have been largely impeded by his deficiency in proficiency in music. In fact, his musical gifts nearly made him a monk. At fourteen he was sent to the University of Vienna, apparently because it was a centre of Reformation. In 1504 he had spent at least one term in the University of Paris. But neither Vienna nor Paris was to be his real Alma Mater. In 1502 he returned to Basel. For four years he studied there, supporting himself by teaching, and graduated in 1504. He then became professor and in 1506 took his Master. So ended his school and university career, spent in Humanist schools and universities, but following the familiar Scholastic routine, for which there was as yet no substitute. It was not till later, during his first cure of souls, that the Humanist impulse was to become so strong that it burst the old bottles.

2. Early ministry.—Immediately on graduation he was appointed parish priest of Glarus, where he remained for ten years (1506-16). There his effective education began. He seems at first to have been absorbed in classical studies, in music, and in the history of his native land. Typical of those days is the Fable of the Ox, his first literary effort, a somewhat crude warning against the dangers that lurked in the popular mercenary service. But his most remarkable work is manifest from the fact that in the campaigns of 1513 and 1515 he served as chaplain with his own men from Glarus, being with them both at Novara and at Marignano. His experiences in Italy undermined some of his accepted tenets about the authority of the Church, and just at the moment when doubts and questions were jostling in his mind he came into contact with a whole new world of thought through Erasmus. Erasmus's programme of a 'restitution of Christianity' through the philosophia Christi fired his imagination. He caught at once his contempt for Scholasticism and his conviction that the true Christian philosophy was to be found only in the moral teaching of Jesus and of His great disciple, Paul. 'Ad fides' became his motto. So in 1516, when Erasmus published his Greek New Testament, Zwingli was an early reader, and very soon most of it was transcribed into note-books to be learned by heart. Acquaintance with it revealed how far the Church had so lately imagined unchangeable and unchangeable had really fallen away from the NT standard. With an alert and critical mind he began to study what traces he could find of the stages of this decline in Christian history.

So W. Köhler, Zwingleia, Gedanken zur neun Jan. 1919, p. 7. Meanwhile his hostility to the mercenary service had been growing, and a second poem called The Lolydgai proved unacceptable to the warlike parish of Glarus. Zwingli therefore took the position of preacher at Einsiedeln, the great pilgrim resort of Switzerland. Here he came to know at first hand superstition, saint-worship, relic-worship, and indulgence. During his two years at Einsiedeln Zwingli was advancing steadily towards the Reformed position. Can we say further, with some of the early historians, that the Reformed Church, and as Zwingli himself more than once asserted, that in those days at Einsiedeln he had already reached his full Reformed position, and that, in consequence, he anticipated Luther? We cannot. The papal pension (continued till 1520) and the indulgence to Achen (1517) are conclusive. But it is clear that, if his conscience was not yet touched, his mind was awake, and the amount of Scriptural and Patristic knowledge he acquired during those two years is a real matter for wonder. Alike in moral life and in teaching he was still Humanist rather than Reformed.

3. Work in Zürich.—On 27th Dec. 1518 Zwingli removed to Zürich, which was to be henceforward the centre of his activities. He went as people's priest in the Great Minster. At the beginning of the year he announced his programme from the pulpit. He was going to expound the Scriptures, book by book and chapter by chapter. He began with St. Matthew's Gospel, the favourite book of the Humanists because it contained the Sermon on the Mount, the barb of 'philosophia Christi.' Then came the Acts of the Apostles, that in the primitive Church men might see after what pattern the Church ought to be. Then followed Galatians and 1 and 2 Timothy, to make plain that the New Testament is a matter familiar; then the two Epistles of Peter, to show how Peter agreed with Paul. By 1523 Zwingli had preached through the whole of the NT. Long before that, however, the Reformation had been established. From the first his preaching was so fresh, so full of new ideas, that the services were thronged. Very soon he had to begin a market-day series, on Fridays and on the Psalms. One of the strongest proofs of his popularity and influence is that, in the very first year of his preaching (1519), a bookseller came to Zürich and placed his printing-press at the service of the new movement. This was housed in a room once occupied by another who there gathered at Zürich a literary circle comparable to that already assembled at Basel round Erasmus and Froben.

The year 1519 saw a deepening of Zwingli's convictions. This was due partly to the early works of Luther and partly to the coming of the plague, with which Zwingli, who had fearlessly returned to duty after its outbreak, was attacked. These two together seem to have hastened him along the road he was unconsciously travelling, from Erasmian to Reformer. Simplification of the literary and drastic action in regard to mercenary service were premonitory symptoms of the breach that was coming. The first definite move in the religious revolution came in the Lent of 1522, as a result of Zwingli's preaching, though he himself took no part in it. The fact was announced in a revolt against the law of the Lenten fast. Zwingli was not slow in justifying the action of his friends. In their defence he published his first Reformation tract Von der Freiheit und Frechheit der Spies (Concerning Selection and Liberty in Foods). The City Council incurred the anger of the bishop of Constance by dealing, and dealing leniently, with the offenders. At Augsburg in 1522 Zwingli issued his first Reformation treatise on the Archbishop, which did in Latin and for the learned
what his next works, the 67 Articles, and their Exposition, did in German and for the common people. In the latter, Zwingli announced its decision that the accusations of heresy against Zwingli were unfounded, and that he was 'to continue as before to proclaim the Holy Gospel, and the true, Divine Scriptures.' Further it declared that all other pretenders to the pastorate in the city and the country were 'not to preach anything which they could not establish by the Holy Gospel, and the pure, Divine Scriptures'; and that they were to refrain from personal calumny and bitter names. The victory of the Reformation in Zürich was thus assured. But the practical steps remained to be taken, and these involved divisions of policy and further disputations. The monasteries began to empty. Better uses were at once found for them as hospitals and academies. The Great Minister was transformed into something not unlike a Theological College. The energy and performance of immeasurable masses was transferred to Biblical and Biblical-theological instruction. A vernacular ritual came into use, first in the Sacrament of Baptism. Change in, the form of Super was much slower. The old service held its place in Zwingli's own Church till April 1525.

Sporadic and unauthorized removal of images and the imprisonment of the offenders led to the second disputation in Oct. 1525. The programme of removal and the gradual change of ritual were put into the hands of a committee of laymen and ministers whose business was to devise means 'for moving forward the work of Christ.' The line along which they moved forward proved unacceptable to the few remaining adherents of traditionalism in Zürich, and their protest was the occasion of the third disputation, in Jan. 1524. Its decision was an order to these Scholastics to carry out loyally the line of action of the Council. The breach with the old order was complete, and the new order rapidly took shape. The temporary committee gave place, in 1525, to church courts for discipline and for marriage cases. By 1527 a synodical organization was complete. During all these revolutionary actions the pope pronounced no condemnation of Zwingli, or the Reformation, and the papal action was.the inevitable teaching. In particular, they challenged Zwingli to produce any Scriptural warrant for titles or infant baptism. In 1524 these dissidents were confirmed in their positions by two visitors from the Anabaptists of Germany, Thomas Münzer and Andreas Carlstadt. This widened the breach. Zwingli saw the Reformation movement slowly disintegrating into two, and saw some of his friends taken captive by what they felt to be the purer Biblicism of the new movement. He appealed to them not to form a separate body. The appeal was in vain. For the healing of the breach Zwingli proposed the inevitable public disputation. The first took place in Jan. 1525. The decision was against the Anabaptists. And it was followed by a decree that all unapplied children must be baptized within a week, or their parents would be banished from Zürich. The council soon proceeded to severer measures. One of the leaders suffered death by drowning, and others were banished.

No movement could have given more trouble to Zwingli. As they took their stand on Scripture, and as Zwingli claimed to do the same, the controversy was the fiercest he was ever called upon to face. The impression left by his numerous treatises is, that, to find grounds for condemning them and their practices, he was driven to exaggerate the non-essential peculiarities of the movement. It was not these writings, but the fate of the Peasants' Revolt in Germany, that eased the strain.

B. From the pulpit and by private interview he had so to educate the people of Zürich and, in particular, the members of its governing bodies, that they would be prepared to act along the line of Reformation, no matter what it should cost.

Although Zwingli's official position from 1525 was that of head of the Superintendent, the theological college of Zürich, he continued his public expositions of Scripture, passing to the OT—especially the Prophets—when he had run through most of the NT.

C. In order that the Evangelical reforms might be firmly rooted in the intelligent sympathy of the people, it was necessary that the Bible should be put into their hands in the vernacular.

Here his task was lightened by the industry of Luther. Luther's NT, finished in the Wartburg in 1522, was being printed in Zürich in 1524. This was speedily followed by the historical books of the OT. But Zwingli could not wait for Luther's translation of the Prophets. So an independent translation was begun, and finished in 1529. A complete German Bible appeared in Zürich in 6 volumes by 1529, and a single-volume edition in 1530. Switzerland, therefore, had complete several years before Germany. Though the main burden of translation fell on his friend and colleague, Leo Jud, Zwingli's share in it is by no means negligible.

D. He had to defend his Reformation against radicals who thought that Zürich had not gone half far enough.

This radical element, which was to develop into Anabaptism, made its first public appearance at the second disputation. Conrad Grebel was their leader, and their point of view was that a clean sweep ought to be made at once of images and ritual and all relics of the old order. These radicals were transformed into two, and saw some of his friends taken captive by what they felt to be the purer Biblicism of the new movement. He appealed to them not to form a separate body. The appeal was in vain. For the healing of the breach Zwingli proposed the inevitable public disputation. The first took place in Jan. 1525. The decision was against the Anabaptists. And it was followed by a decree that all unapplied children must be baptized within a week, or their parents would be banished from Zürich. The council soon proceeded to severer measures. One of the leaders suffered death by drowning, and others were banished.

No movement could have given more trouble to Zwingli. As they took their stand on Scripture, and as Zwingli claimed to do the same, the controversy was the fiercest he was ever called upon to face. The impression left by his numerous treatises is, that, to find grounds for condemning them and their practices, he was driven to exaggerate the non-essential peculiarities of the movement. It was not these writings, but the fate of the Peasants' Revolt in Germany, that eased the strain.

E. At the same time as he was called upon to encounter radicals, he was called upon to deal with champions of the old order. The most prominent phase of this was the disputation which, after long negotiation, took place at Baden in 1526. Ecolampadius of Basle and John Eck were the protagonists. Zwingli was not present. But
much of the work fell on him. Messengers were constantly coming and going. Thomas Platter’s autobiography gives a vivid picture of the extent of his assistance. The dispute served Eck’s purpose, in increasing Lutheran suspicion of the unsoodness of the Zwingians in regard to the Lord’s Supper. We note here also the more important of the relevant controversial works: the Ambrosian (1524) again Jerome Emser, ‘defender of the canon of the Mass’; and the Answer to Valentin Compar (1525).

F. He had to take a large part in the first phase of the controversy between Lutherans and Reformed concerning the Lord’s Supper. For details see art. EUCHARIST (Reformation and post-Reformation period).

G. During those years Zwingli was drawn more and more into the main stream of federal politics. The rival confessions within the confederacy and their rival leagues created a situation which demanded the constant vigilance of a statesman. It was on Zwingli that Zürich leaned.1

II. In the midst of all these labours Zwingli maintained his Humanist studies. In 1528 there was published in Basel Copernin’s edition of the poem for his face and a conclusion by Huldrychus Geminus.

I. But the main concern of Zwingli during the later 20’s was to secure the Reformation in Zürich by introducing Reformation theology and practice in the city and canton of the confederacy.

In Bern the value of the preparatory work of Berthold Haller was revealed by the thoroughness of the Reformed victory in its dispute in Jan. 1528, in which Zwingli took the leading part. This same dispute brought to a head the new movement in Basel, where Ecclompadus had long been actively at work. Vadianus was his correspondent in St. Gall, which, with Glarus, Schaffhausen, and Appenzell, followed Zürich’s example in Zwingli’s lifetime. A certain measure of success was attained in the allied Grundbund, but the failure of the results were measure.

5. The last years.—Certain of the cantons were untouched by the Reformation, and were as keen to retain the ‘common lands’ as Zwingli was to win them. A cleavage within the confederacy appeared, and increased into uncompromising hostility. The League of the Forest Cantons, formed at Beckenried in 1524, was soon faced by a counter-alliance. Both parties made a strong bid for support, and to show equal confidence, no effective assistance had been secured by either, the first Civil War broke out. It was short and bloodless. There was no battle. The two armies which came face to face at Cappel (1528), instead of fighting, negotiated terms of peace. The terms were a triumph for Zürich, but it specified that appeared that there were more than one possible interpretation of them. The civil war had only been postponed. The feverish search for outside alliances continued. The Marburg Colloquy, in Zwingli’s mind, was no unimportant part of this quest. More time was spent by Zürich and by Zwingli in fruitless foreign negotiations than in independent preparation. Amid all this talk of help from outside it ceased to manifest the old self-help. The war began by a blockade of the Forest Cantons, which only served to rouse them to more vigorous action. They took the field in force. Zürich’s improvised resistance was a failure. For Zürich the battle of Cappel (1531) was a terrible flood. Zwingli was among the slain. In its forty-eighth year this great pacifist and patriot fell on the field of battle.

The second treaty of Cappel reversed the first. But under Henry Bullinger and his associates the work of reformation continued, though the leadership of the Swiss Reformation soon passed into the hands of Geneva.

6. Appreciation.—Very diverse judgments have been passed on Zwingli’s doctrine and work. Apart altogether from those who know him only from some inadequately statement of his doctrine of the Lord’s Supper and who, in consequence, use the name Zwinglian almost as equivalent to rationalist, among those who are professed students of his teaching there is a sharp division of opinion. On the one hand it is said: ‘His world of thought, as a whole, and also in its inner component parts, is more mediavel’ [than Luther’s].1 The opposite is just as confidently maintained: ‘Luther took up his station on the ground already occupied by the Latin church: his desire was only to purify; to put an end to the contradictions between the doctrines of the church and the gospel. Zwingli, on the other hand, thought it necessary to restore, as far as possible, the primitive and simplest condition of the Christian church; he aimed at a complete revolution.2 Now, without doubt, in the collected works of Zwingli, written at different times, out of the heart of widely different controversial writings, it is not easy to find material for bandying either of these conclusions, but not much progress is made by bandying about the word ‘medieval’ as a term of reproach. In essentials Zwingli’s doctrine and practice were similar to that which they let themselves believe, as Martin Bucer saw. Having regard to its purpose, one must call the Marburg Colloquy a failure, but it did reveal how much at each the protagonists were. There was, certainly, a difference of emphasis. Zwingli had not the same all-transforming, world-renewing experience to drive him onwards. His theology was more Biblical than experimental. Even when he had caught the thrill of Luther’s protest, it came to deeper rather than to change the direction of the impulse he had received from Erasmus, the desire to explore the sources, to get back to the simplicities of primitive Christianity, to the pure, untainted Church of the NT. It is significant that Zwingli’s Reformation followed hard after Zwingli’s exposition of the Acts of the Apostles, interpreted as historically, as the knowledge of that day and he had a firm conviction that the full programme of the 67 Articles has this preface:

‘The articles and opinions below, I, Ulrich Zwingli, confess to have preached in the worthy city of Zürich as based upon the Scriptures which are called inspired by God, and I offer to protest and to declare with the said articles, that I, Ulrich Zwingli, but now correctly understood said Scriptures shall allow myself to be taught better, but only from said Scriptures.’

Further, largely in consequence of this Biblicism, the reformation he directed was more radical. What Zwingli specially detested in the later growths which had buried this early Christianity was anything that could be called ‘the worship of the creature.’ Worship belonged to God alone, ‘the God and Father of our Lord and Saviour Jesus Christ.’ He did not undervalue art or music in themselves—far from it—but, when they were so employed as to hinder an intelligent approach to the creator, then to him they were anathema. The most conspicuous feature of Luther’s protest against Catholicism was its anti-Judaic side—his hostility to its conception of work-righteousness; in Zwingli’s it was the anti-pagan—his hostility to its idolatrous corruptions.

This note was dominant at the beginning, and, despite all modifications and deepenings, it remained dominant to the end.

3 S. M. Jackson, Selections from Zwingli, Philadelphia, 1901, p. 6.
Nor did he ever forget them. One of the things which made Luther doubtful if Zwingli were a fellow-worker or, indeed, whether a fellow-Christian was his continued regard for the heroes of classical antiquity, whom, in his very last writing, the Fides Expositio (1531), addressed to Francis I, he placed along with the sages, sages and fathers of the Church in the heaven he hoped to reach.

''Denique non nulli vir bonus, non erit messa sancta, non est fallax anima, ab ipso mundi exercita usque ad vivos consummationem, quem non sis uicis cum deo visurus.''

Humanist, Biblical scholar, protestant, liberal, patriot as he was, Zwingli could never have been the main agent in carrying through any epoch-making reformation, even with the conditions to help him: he lacked the passionate earnestness and driving force of Luther; but, with the aid of Luther's work, his didacticism, the books which many in our generation feel more strongly attracted than to either its great German counterpart or even its Genovan completion.

Literature.—The best guide to all but the most recent Zwingli literature is a guide started in G. Farner's Biblische Bibliographie, Zürich, 1897. Later studies are fully dealt with in Zwingliana, p. i. 1. Works.—The earliest collected ed. was that of R. Guattler, Zürich, 1545, which was superseded by the excellent ed. of J. M. Schmidt, Schulter, 3 vols., ed. by E. K. Farner, ed. by W. Köhler, Berlin, 1905 ff. An English tr. was begun under the editorship of S. M. Jackson, vol. i., New York, 1912, to whom also we are indebted for Schriften fuer Zwingli's Jahrhundert Philadelphia, 1901. An admirable summary of the contents of Zwingli's writings is that of P. Wernle, Der evangelische Glauben nach den Hauptschreibern der Reformatorien, vol. ii.

Zwingli, Tübingen, 1818. A popular ed. in modern German is Zwingli's works, by H. Kießer, and A. Bleugg, Zürich, 1818. Mention should be made, too, of O. Farnier's similar ed. of Zwingli's letters, Zürich, 1818.

A Dictionary of Christ and the Gospels

In Two Vols. Price per Vol., in cloth binding, 26s. net.
In half-morocco, gilt top (Price on application).

The purpose of this Dictionary is to give an account of everything that relates to Christ—His Person, Life, Work, and Teaching.

'A triumphant and unqualified success. Indispensable to ministers and Bible students.'—Sir W. Robertson Nicoll, LL.D.

'The preacher's purpose is better served than it has ever been before.'—Times.

'No more useful present could be made to a young clergyman than a copy of this admirable work. The articles are by competent and scholarly writers, and are full of information and suggestiveness.'—Guardian.

A Dictionary of the Apostolic Church

In Two Volumes. Price per volume, 26s. net, in cloth binding.
In half-morocco (Price on application).

It has often been said that the 'Dictionary of Christ and the Gospels' is of more practical value than a Dictionary of the Bible. And from all parts of the world has come the request that what that Dictionary has done for the Gospels another should do for the rest of the New Testament. The 'Dictionary of the Apostolic Church' is the answer. It carries the history of the Church as far as the end of the first century. Together with the 'Dictionary of Christ and the Gospels' it forms a complete and independent Dictionary of the New Testament.

Dictionary of the Bible

COMPLETE IN ONE VOLUME

Crown quarto, 1008 Pages, with Four Maps, price 24s. net.
In half-leather binding (Price on application).

This Dictionary is entirely distinct from the Five-Volume Dictionary. It brings the contents of the Bible, in accordance with present scholarship, within reach of those who have not the means to buy or the knowledge to use the larger Work. It contains no Hebrew or Greek except in transliteration.

'A very fine achievement, worthy to stand beside his larger Dictionaries, and by far the most scholarly yet produced in one volume in English-speaking countries, perhaps it may be said in the world.'—Christian World.

'For presentation and library purposes the book outstrips all its rivals, and its closely packed pages are a perfect mine for teachers and ministers.'—Sunday School Chronicle.

Detailed Prospectus, with Specimen Pages, of the above Works free.
Complete IN FIVE VOLUMES

"In its five volumes we possess a splendid—nay, an unsurpassed—thesaurus of biblical learning."—Record.

Dictionary of the Bible

DEALING WITH
ITS LANGUAGE, LITERATURE, AND CONTENTS,
Including the Biblical Theology.

WITH MAPS AND ILLUSTRATIONS.

Edited by
JAMES HASTINGS, M.A., D.D.,
WITH THE ASSISTANCE OF
JOHN A. SELBIE, M.A., D.D.

This great work has taken its place, as 'The Times' says, as the 'standard authority for biblical students of the present generation.' In this country and America, in the Colonies, and even among people of other languages and of various creeds, it is in constant and increasing demand.

The Guardian says: 'We have no hesitation in recommending Hastings' Dictionary to students of the Bible as the best work of its kind which exists in English.'

The Methodist Recorder says: 'It is far away in advance of any other Bible Dictionary that has ever been published, in real usefulness for preachers, Bible students, and teachers.'

The Bockman says: 'This Dictionary sprang into fame with its first volume, and its reputation has been growing ever since. For scholarship, temper, and judgment combined, we have nothing else equal to it in English.'
